The *Towle*. Full name is USNS *Private John R. Towle* (AK-240). An ice-strengthened vessel of 12,450 tons, built for the Maritime Commission by the Oregon Shipbuilding Corporation, and launched (as the *Appleton Victory*) on Jan. 19, 1945, in Portland. In 1946 she was transferred to the Army Transportation Service, and renamed on Oct. 31, 1947. Pvt. John Roderick Towle won the Medal of Honor for heroic action in Europe in 1944. In 1950 the vessel transferred to the U.S. Navy. She re-supplied McMurdo in the summers of 1956-57 (Capt. John Wiis),

1957-58 (Capt. Charles Barrett), 1960-61 (Capt. Thomas W. Malone), and then again at McMurdo in 1963-64 (Capt. W. Bondeson), 1964-65 (Capt. Frank A. Giovinco), 1965-66 (Capt. Allen W. Webb), 1966-67 (Capt. Webb), 1967-68 (Capt. J. Crampon), 1968-69 (Capt. A.F. Green), 1969-70 (Capt. Webb), 1970-71 (Capt. Webb), 1971-72 (Capt. Webb), 1972-73 (Capt. Clifford D. Henry), 1973-74 (Capt. Henry), 1974-75 (Capt. Henry), 1975-76 (Capt. E.A. Lanni), and 1979-80 (Capt. J. Areus).

Towle Glacier. 76°38' S, 161°05' E. A glacier, the head of which formerly occupied the lower part of a Towle Valley, and which flows NE between Eastwind Ridge and Elkhorn Ridge, into the head of Fry Glacier, 10 km S of Fry Saddle, in the Convoy Range of Victoria Land. Discovered and mapped in Dec. 1957, by the NZ Northern Survey Party of BCTAE 1956-58, and named by them for the *Towle*, which carried south a large proportion of the NZ stores in Dec. 1956. US-ACAN accepted the name in 1962.

Towle Point. 77°27' S, 169°14' E. A point, 1.5 km N of Post Office Hill, it marks the NE extremity of Ross Island. Named by NZ-APC for the *Towle*. US-ACAN accepted the name in 2000.

Towle Valley. 76°41' S, 160°44' E. A large, deep valley, formerly occupied by the head of Towle Glacier, but now ice-free, immediately W of the present-day Towle Glacier, and 10 km N of Greenville Valley, in the Convoy Range of Victoria Land. Discovered and mapped in Dec. 1957, by the NZ Northern Survey Party of BCTAE 1956-58, and named by them in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Towles Glacier. 72°25' S, 169°05' E. Flows from the W slopes of Mount Humphrey Lloyd and from the S slopes of Mount Peacock, to enter Tucker Glacier close NW of Trigon Bluff, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. William Julian Towles (b. Sept. 30, 1932, Los Angeles), USN, medical officer and officer-in-charge at Hallett Station in 1960. NZ-APC accepted the name.

Townrow Peak. 76°38' S, 159°35' E. A prominent outlier of Tilman Ridge, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for John A. Townrow, University of Tasmania paleobotanist with the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965, as did ANCA on Aug. 10, 1966.

Townsend, James *see* **USEE 1838-42**

Townsend, Walter Henry. FIDS/BAS meteorological assistant who wintered-over at Halley Bay Station in 1960. He wintered-over at Base F, as a builder, in 1961, and at Signy Island, again as a meteorological assistant. He lives in the Midlands.

Toynbee, Patrick Arnold "Pat." b. Jan. 23, 1920, Worthing, Sussex, son of Capt. Frank Arnold Toynbee, adjutant of the Royal Sussex Regiment, and his wife Renée Susanne Rolland. On May 1, 1936 he entered the Naval College as a probationary midshipman, and during World War II was on the *Queen of Bermuda* when that vessel went to Deception Island. In 1947, as a lieutenant, RNR, and living at Barnham, Sussex, he joined FIDS as an air pilot, and on Dec. 19, 1947 left Tilbury on the *John Biscoe*, heading for Port Stanley. He wintered-over at Base E (Stonington Island) in 1948 and 1949, being one of the Fids trapped in Antarctica that last season. He left Santos, Brazil, on the *Andes*, and arrived back in Southampton on April 16, 1950. In 1951 he took part in polar exploration demonstrations in the Dome of Discovery, during the Festival of Britain, and on Sept. 29, that year, in London, married New Zealander Justine Lundon. In 1955 he went to NZ, and died in Auckland on Dec. 16, 1964.

Toynbee Glacier. 69°38' S, 69°40' W. A glacier, about 28 km long and 8 km wide, between the mountains of the Douglas Range on the W and Mount Tyrrell and Mount Tilley on the E, it flows N from Mount Stephenson to George VI Sound, in the NE part of Alexander Island. First photographed aerially on Feb. 1, 1937, by BGLE 1934-37. Re-photographed aerially in 1947 by RARE 1947-48. Surveyed from the ground in its lower reaches in 1948 by Fids from Base E, and named by them for Pat Toynbee. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. In 1959 FIDS cartographers mapped it over its entire length from the RARE photos, and plotted it in 69°35' S, 69°35' W. It has since been replotted.

Trabucco Cliff. 76°37' S, 118°01' W. A cliff at the tip of the broad spur which forms the NE extremity of Mount Rees, in the Crary Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for William J. Trabucco, USARP ionosphere physicist at McMurdo in 1969, and at Siple Station in 1973.

Tracey, M. A graduate of the Marine Wireless School in Wellington (NZ), he was with ByrdAE 1928-30.

Trachyte Hill. 77°17' S, 166°25' E. A prominent, steeply conical hill, rising to 466 m, and resembling Observation Hill (at Hut Point), on the S side of Shell Glacier and the N side of Harrison Stream, in the center of the ice-free area on the lower W slopes of Mount Bird, and about 10 km S of Cape Bird, on Ross Island. It is one of a line of linked trachyte plugs trending from Harrison Bluff through this feature to the W edge of the Mount Bird ice-cap. Most distinctive and curious laminar flow structures, forming shells resembling the layers of an onion, are developed in the bulbous plugs, and particularly in those between this hill and the ice-cap. A secondary survey station marked by a rock cairn was placed on the summit of the hill by members of the Cape Bird Party, during NZGSAE 1958-59, and the hill was named by them for the rock type composing it. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Tracked vehicles *see* **Tractors, Sno-cats, Caterpillars, Nodwells, Cletracs, Logan Sprytes**

Tractor Corner. 77°28' S, 162°56' E. A feature SW of Wright Lower Glacier, in the Asgard Range of Victoria Land. Named by NZ-APC on Jan. 30, 1998. It commemorates the passage of tractors over the Wright Lower Glacier, en route to the Wright Valley, in 1967. The name was accepted by US-ACAN later in 1998.

Tractors. Scott was the first to use tractors in Antarctica, during BAE 1910-13. He brought 3 crawler-tracked tractors, developed by Reginald Skelton (q.v.). These had then been built by the Wolseley Company. One fell through the ice off Cape Evans, and is still there, while two were used to unload the *Terra Nova*. They failed 60 miles south of base, on the Ross Ice Shelf. From 1928 tractors became an accepted part of the Antarctic landscape. The one Byrd took on ByrdAE 1928-30 was a very powerful Ford "Snowmobile," with skis in front and caterpillar tracks in the rear. It had an average speed of 25 mph over the ice, and did the work of 5 or 6 dog teams. It failed at 81°S, and was abandoned. During ByrdAE 1933-35 Byrd had 4 tractors which covered 12,500 miles in a year. Two of them were light Ford tractors, and King White's Cleveland Tractor Company manufactured the heavy Cletracs. Citröen also furnished 3 trucks. During USAS 1939-41, West Base had a T-20 International Harvester for base work, and East Base had an Army artillery tractor. Tractors proliferated in Antarctica during the IGY period (1957-58). McMurdo had two D4 tractors, and Little America had one. Altogether the USA used 12 D8 tractors and 9 D2s, as well as the D4s mentioned above. Ten of the D8s were of the "low ground pressure" type, 23½ feet long (the ordinary D8 was 15½ feet long), and weighing 35 tons, but the width of their caterpillar tracks reduced the pressure to a maximum of 14.2 pounds per sq inch. During the same period the USSR used the C80, which weighed 11.4 tons with 93 hp; Kirovets KD35s, which weighed 3.7 tons with 37 hp; while the GAZ47s played the largest part in the creation of Pionerskaya Station. This was the era of the great tractor traverses over the continent, probably the most celebrated being Fuchs' crossing of Antarctica during BCTAE 1957-58. During that same expedition, but working from the other end of the continent, Hillary took 3 overhauled Ferguson farm tractors with him to the Pole, a feat that did the tractor company an enormous amount of good.

Tracy, William Owen "Bill." b. 1929, Birkenhead, Cheshire, the last of four children of Owen R. Tracy and his wife Nora Barlow. He joined FIDS in 1959, as a meteorological assistant, and wintered-over at Base D in 1960, and, as a general assistant, at Base E in 1961. In 1964 he married Elizabeth L.F.C. Coleman, in Watford, and they lived in the Wirral, in Cheshire, moving from there to Appleby, Westmoreland.

Tracy Glacier. 65°57' S, 102°20' E. A channel glacier flowing to the Shackleton Ice Shelf, 6 km SW of Cape Elliott. Delineated by U.S. cartog-

rapher Gard Blodgett in 1955, from air photos taken during OpHJ 1946–47, and named by US-ACAN in 1955, for Lt. Lloyd W. Tracy, USN, pilot on OpW 1947–48. *See also* **Lednik Angraskij** and **Lednuik Kiselëva**.

Tracy Point. 66°18' S, 110°27' E. The most westerly point on Beall Island, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946–47, and in 1948, during OpW 1947–48. Named by US-ACAN in 1963, for Gordon F. Tracy, USN, radioman at Wilkes Station in 1958.

The *Tradewind*. NZ yacht, skippered by Mark Hammond, which visited the South Shetlands and the Antarctic Peninsula, in 1991–92.

Trafalgar Glacier. 72°28' S, 168°25' E. A tributary glacier, about 50 km long, it flows E in the Victory Mountains, to join the S side of Tucker Glacier below Bypass Hill, in Victoria Land. Named by NZGSAE 1957–58, in association with the Victory Mountains and the Battle of Trafalgar, 1805. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Traffic Circle. 68°37' S, 66°03' W. A roughly circular, glacier-filled expanse of confluent ice in the form of a depression, 500 m above sea level, on the peninsular upland of the Bowman Coast, on the E coast of Graham Land, overlooking Marguerite Bay, between that bay and Mobiloil Inlet, S of Mount Ptolemy. Hub Nunatak rises from its center, and from this point 5 glacial troughs radiate like spokes of a wheel (hence the name). One connects on the N with Gibbs Glacier and Neny Glacier, leading to Neny Fjord. Another connects on the W with Lammers Glacier and Windy Valley, leading to Mikkelsen Bay. A third, Cole Glacier, trends SW along Godfrey Upland toward the area of what used to be the Wordie Ice Shelf. The fourth, Weyerhaeuser Glacier, trends southward toward the Wakefield Highland and connects with glaciers leading westward to the late Wordie Ice Shelf. The fifth, the Mercator Ice Piedmont, is fed by the overflow from the Weyerhaeuser, the Cole, and the Gibbs, and broadens as it descends eastward to the head of Mobiloil Inlet. Discovered and photographed aerially in 1940, during USAS 1939–41, and visited on the ground by members from East Base who used this system of troughs in traveling across the upland in Jan. 1941. Named descriptively by them, it appears as such (and also as The Traffic Circle) on a 1943 U.S. Hydrographic Office chart, and also on Ronne's map of 1949. It was surveyed by Fids from Base E in Dec. 1958. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Tragic Corner. 68°00' S, 66°48' W. A bluff rising to about 750 m, it marks the NE end of Boulding Ridge, between Todd Glacier and McClary Glacier, on the Fallières Coast, on the W coast of Graham Land. Surveyed by BAS personnel from Base E between 1967 and 1969. It was here that Tom Allan and John Noel died (*see* **Deaths**, 1966), hence the name given by UK-APC on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Ensenada Trail *see* **Trail Inlet**

Mount Trail. 67°12' S, 50°51' E. On the NE side of Auster Glacier, at the head of Amundsen Bay, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for David Scott "Dave" Trail (b. Aug. 23, 1931), ANARE geologist from Canberra, who wintered-over at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Trail Bay *see* **Trail Inlet**

Trail Glacier. 73°34' S, 61°35' E. A broken mountain glacier, 9 km long and 6 km wide, on the S side of Mount Menzies, about 4 km from the summit of that mountain, it flows from a snowfield at about 2750 m down a steep slope for at least 900 m vertically, then spreads out and merges with the ice sheet a few km from the S side of the mountain. Mapped by Australian cartographers from ANARE ground surveys and air photos taken during surveys of the Prince Charles Mountains in 1960–61. Named by ANCA for Dave Trail (*see* **Mount Trail**), who led an ANARE field party to this feature in Dec. 1961. US-ACAN accepted the name in 1970. *See also* **Seavers, James**.

Trail Inlet. 68°03' S, 65°20' W. A Larsen Ice Shelf inlet indenting the Bowman Coast for about 24 km between (on the one hand) Cape Freeman and (on the other) Three-Slice Nunatak and Joerg Peninsula, on the E coast of the Antarctic Peninsula. Probably discovered aerially by Wilkins on Dec. 20, 1928, and probably seen again by Ellsworth on his flight(s) of Nov. 1935. In 1940, USAS 1939–41 photographed it aerially, surveyed it from the ground in 1940, and named it Fleming Glacier Bay, in association with Fleming Glacier (*see* **Daspit Glacier**). It appears as such on a 1943 U.S. Hydrographic Office photo. The width of Graham Land is reduced to about 30 km between the head of this inlet and that of Neny Fjord, and this feature was renamed Trail Bay because it was a natural trail for flights and sledge parties across the Antarctic Peninsula, from East Base to the Bowman Coast during USAS 1939–41. It appears as such on a 1947 USHO chart. In Dec. 1947, it was re-surveyed by Fids from Base E, who found it to be an inlet, rather than a bay, and named it Trail Inlet. It appears as such on a British chart of 1952, and that was the name acepted by UK-APC on Jan. 28, 1953, and by US-ACAN later in 1953. It appears as such in the 1955 British gazetteer. Apparently, on a Finn Ronne map of 1950, it appears as Billbukten (i.e., "Bill's bay"), in association with Bills Gulch. But this must be treated with some caution. Likewise, in a 1953 Argentine atlas it appears as Bahía Eva Perón. It appears on a 1954 Argentine chart as Bahía Ruta, and on one of their 1957 charts as Ensenada Trail, that latter name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Trainer Glacier. 72°34' S, 167°29' E. A glacier, 11 km W of Rudolph Glacier, flowing NE into Trafalgar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Charles Trainer, meteorologist and senior U.S. representative at Hallett Station in 1960. NZ-APC accepted the name.

Trajan Gate. 63°36' S, 58°35' W. A flat saddle, at an elevation of about 850 m, extending 4.3 km, between Malorad Glacier to the N and Russell West Glacier to the S, it links Mount Ignatiev and Srednogorie Heights to the W with the Louis Philippe Plateau to the E, on Trinity Peninsula. Mapped by the Germans and British in 1966. Named by the Bulgarians on June 3, 2010, for the pass with the same name in western Bulgaria.

Trajer Ridge. 68°34' S, 78°30' E. A rock ridge rising to about 125 m, at the S side of the base of Breidnes Peninsula, about 6 km N of the E extremity of Krok Lake, in the E part of the Vestfold Hills. The area was photographed aerially during OpHJ 1946–47, by ANARE in 1954, by SovAE 1956, and by ANARE again in 1957 and 1958. Named by ANCA on June 28, 1962, for Frank Louis Trajer, weather observer who wintered-over at Davis Station in 1961. He and Malcom Hay visited this ridge on foot on Nov. 4, 1961. Trajer was back, this time at Mawson Station, for the winter of 1964. US-ACAN accepted the name in 1970. The Australians established a field camp on Trajer Ridge.

Trakiya Heights. 63°45' S, 58°31' W. Heights rising to 1336 m, and extending 10 km in a NW-SE direction and 5.9 km in a NE-SW direction, they are bounded to the N by Russell West Glacier, to the NE by Russell East Glacier, to the SW by Victory Glacier, and to the NW by Zlidol Gate, and surmount the Prince Gustav Channel and the Weddell Sea to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the historical Bulgarian region of Trakiya (i.e., Thrace).

Caleta Trampera *see* **Fishtrap Cove**

Tramway Ridge. 77°31' S, 167°06' E. Rising to about 3450 m, in the NW part of the summit caldera, at the top of Mount Erebus, on Ross Island. It is formed by the levees (banks on the side) of a young lava flow. Named by US-ACAN in 2000, for its resemblance to a set of tram lines. NZ-APC accepted the name on Feb. 20, 2001. It was designated SSSI #11.

Tran Crag. 62°41' S, 60°14' W. A nunatak, rising to 490 m, it projects from the tributary glacier draining the W slopes of Friesland Ridge between Simeon Peak and St. Boris Peak, 1.94 km WSW of the latter peak, 1.39 km NNE of Stambolov Crag, and 3.7 km SE of Willan Nunatak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004–05, and named by them on Nov. 4, 2005, for the town of Tran, in western Bulgaria.

Le Tranchant *see* **Mount Tranchant**

Mont Tranchant *see* **Mount Tranchant**

Mount Tranchant. 65°14' S, 64°06' W. Also called Edge Hill. A hill, rising to 285 m, N of Waddington Bay, and quite literally on the Gra-

ham Coast, on the W coast of Graham Land, it marks the S side of the terminus of Wiggins Glacier. First roughly mapped in March 1909, by FrAE 1908-10, and named by Charcot descriptively as Mont Tranchant, or Le Tranchant (i.e., "the cutting edge") (it appears both ways on his maps). On English language versions of Charcot's charts, apparently, it appears as The Edge, or Edge Hill. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC accepted the name Edge Hill, and that is how it appears on a 1960 British chart. US-ACAN accepted the name Mount Tranchant in 1965.

Trangsholmen. 68°48' S, 90°43' W. A islet, 1 km off the front of Nils Larsen Glacier, on the N portion of the coast the Norwegians call Lazarevkysten, on the W part of Peter I Island. Named by the Norwegians ("the narrow island").

Tranquil Lake. 60°42' S, 45°39' W. A cirque lake fed by meltwater from the local ice cover, lying SW of the Snow Hills, between those hills and Amos Lake, on Signy Island, in the South Orkneys. BAS conducted freshwater biological studies here from 1970. So named by UK-APC on Dec. 9, 1981, in reference to its sheltered position. US-ACAN accepted the name.

Tranquil Valley. 60°42' S, 45°39' W. A valley exposed by a rapidly retreating sheet of ice, E of Tranquil Lake, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the lake.

Tranquillity Valley. 82°36' S, 52°55' W. A snow-covered valley running ESE-WNW between Hannah Peak and Cairn Ridge, near the W end and on the N side of the Dufek Massif, in the extreme N of the Pensacola Mountains. Surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project. Named by Art Ford for its typical weather conditions, the valley being protected from strong winds most of the time. The USGS Snowmobile parties coming from cold, windy areas, found welcome refuge in this valley. It was also named in association with nearby Enchanted Valley, to indicate the general beauty of this part of the Dufek Massif. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979.

Trans-Globe Expedition. 1979-82. An unusual round-the-world trip, unusual in that it went from north to south, rather than from east to west. It was a 3-man expedition comprising Sir Ranulph Fiennes, Oliver Shepard, and Charles Burton. They set out in Sept. 1979, and completed their mission in Aug. 1982. In between they had to cross Antarctica. This leg of their journey was 2600 miles long, and only one group in history had ever made a successful Transantarctic land crossing before — Fuchs during BCTAE 1955-58. The party arrived near Sanae Station in the *Benjamin Bowring*, and four of the party stayed for the winter, while Fiennes led his 3-man party (himself, Shepard, and Burton) out of Ryvingen Base, in Queen Maud Land, on Ski-doos pulling sledges, on Oct. 26, 1980. They reached the South Pole at 4.35 A.M., on Dec. 15, 1980, and then Scott Base, on Ross Island, on Jan. 11, 1981, after a total of 66 days of Antarctic trekking. They had aircraft support.

Transantarctic Mountains. Also called the Transantarctic Horst. This is the great, sinuous, 1900 mile-long range, centering on 85°S, 175°W, and which separates East Antarctica from West Antarctica. The mountains are composed of Precambrian to early Paleozoic metamorphic, sedimentary, and granite rocks, dating from 500 million years ago. These are overlaid by flat-lying Devonian to Jurassic strata known as the Beacon Group. The horst runs, with some interruptions, from Cape Adare (in northern Victoria Land) to Coats Land (on the Weddell Sea). Included are the Theron Mountains, the Shackleton Range, the Pensacola Mountains, the Thiel Mountains, the Horlick Mountains, and the ranges along the W and S sides of the Ross Ice Shelf, and those along the W side of the Ross Sea. Scott saw a small part of them in 1902, during BNAE 1901-04, and named them the Western Mountains. Renamed (in toto) by US-ACAN in 1962. UK-APC accepted the name on Nov. 20, 1963. They are completely surveyed now.

Transit Hut. One of Mawson's Huts, at Cape Denison.

Transit Islands *see* **Pabellón Island**

Transit Ridge. 77°56' S, 163°05' E. A ridge, 6 km long, extending E from the Royal Society Range between Spring Glacier and Mitchell Glacier, in Victoria Land. In keeping with the practice of naming several features in this area after things surveying, this particular ridge was named by NZ-APC in 1992 for the transit theodolite, a telescope that can be rotated through the vertical position. US-ACAN accepted the name in 1993.

Transition Glacier. 70°26' S, 68°49' W. A glacier, 13 km long and 3 km wide, on the E coast of Alexander Island, it flows E into George VI Sound along the N side of Block Mountain and Tilt Rock. First photographed aerially on Nov. 23, 1935, by Ellsworth, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Re-photographed on Feb. 1, 1937, by BGLE 1934-37, and again in 1947 by RARE 1947-48. Surveyed in 1949 by Fids from Base E, who so named it because this glacier marks the transition between igneous rocks to the N and sedimentary rocks to the south. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955. The British plot it in 70°26' S, 68°54' W.

Zaliv Transkripcii *see* **Transkriptsii Gulf**

Transkriptsii Gulf. 66°15' S, 100°33' E. To the NW of the Bunger Hills, between that feature and Edisto Glacier. Charted by SovAE 1956, and named by them as Zaliv Transkripcii. ANCA translated it.

Transportation. Many experiments have been made with travel across the ice, snow, and crevasses, but, as yet, there is no perfect answer. The Canadians developed the Foremost Delta Two, a large, low ground pressure "taxi," with 4 large wheels, which shuttles personnel between Williams Field and McMurdo Station. The Logan Spryte was the most common medium-tracked vehicle used by USAP. *See these entries*: **Aircraft**, **Air-cushion vehicles**, **Airplanes**, **Amphibious vehicles**, **Autogiros**, **Automobiles**, **Caterpillar tractors**, **Cargo ships**, **Cletracs**, **Dogs**, **Helicopters**, **Icebreakers**, **Ponies**, **Railroads**, **Refrigeration ships**, **Ships**, **Ski-doos**, **Skis**, **Sledges**, **Sno-cats**, **Snowcruiser**, **Snowmobiles**, **Tractors**, and **Weasels**.

Promontorio Transporte Angamos *see* **Angamos Promontory**

Transposition Point. 67°26' S, 48°50' E. An isolated group of rocks at the W end of the S margin of Khmara Bay, in Enderby Land. So named by ANCA, because a prominent feature of the geology of these outcrops is transposed layering.

Transverse Island. 67°20' S, 59°19' E. An island, about 1.5 km across, between Fold Island and Keel Island, on the E side of Stefansson Bay, off the coast of Enderby Land. Photographed aerially by LCE 1936-37, and mapped from thee photos in 1946 by Norwegian cartographers who named it Tverrholmen (i.e., "the transverse island"). First visited by Peter Crohn's ANARE party of 1956. ANCA accepted the translated name on Feb. 18, 1958, and US-ACAN followed suit in 1965.

Tranter Glacier. 82°32' S, 161°45' E. In the N part of the Queen Elizabeth Range, it flows into the Nimrod Glacier between Mount Chivers and Mount Boman. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for David L. Tranter, USARP glaciologist at Roosevelt Island in 1962-63.

Islote Trapecio. 62°46' S, 61°15' W. The more northerly of 2 small islands immediately off Punta Serrucho (what the Chileans call Punta Pisano), in Ivaylo Cove (which indents the E coast of Snow Island), in the South Shetlands. Named by the Argentines. The other small island is Isote Plano.

Roca Trapecio Negro. 63°35' S, 55°59' W. A rock just off the W end of Cape Purvis (the S point of Dundee Island), off the N tip of the Antarctic Peninsula. Named by the Argentines.

Trathan Coast. 72°30' S, 78°20' W. The N coast of Smyley Island, between Cape Smyley to the W and Cape Marchesi to the E, at the mouth of the Ronne Entrance, off the SW part of Alexander Island. It comprises ice cliffs, and is home to a large emperor penguin colony at its NW extremity. Named by UK-APC on March 17, 2010, for Philip N. Trathan, BAS ecosystems scientist since 1990.

Gran Glaciar Traub *see* **Traub Glacier**

Traub Glacier. 62°29' S, 59°47' W. Flows E into the NW part of Discovery Bay, W of Punta Riquelme, on Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, as Gran Glaciar Teniente Traub, for 2nd Lt. contador Norberto Traub, a member of the expedition. In 1951, in order to avoid (as much as possible) compound names, the Chileans shortened the

name to Gran Glaciar Traub. UK-APC accepted the name Traub Glacier on July 8, 2003, and US-ACAN followed suit that year. The latest plotting of this feature was done by the British in late 2008.

Travel Dynamics. New York tour operator, servicing Antarctica. It used the *Illiria* in 1988-89.

Montañas Traverse *see* **Traverse Mountains**

Traverse Mountains. 69°57' S, 67°54' W. A group of almost ice-free mountains, rising to about 1550 m, and extending NW-SE at the S side of Eureka Glacier, between that glacier and Riley Glacier, 10 km inland from George VI Sound, E of the Warren Ice Piedmont, in western Palmer Land. They include McHugo Peak, Mount Noel, Mount Allan, and Mount Eissinger. First photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Photographed aerially on Aug. 16, 1936, during BGLE 1934-37, partly surveyed from the ground by the same expedition in Sept.-Oct. 1936, and so named by them because the mountains are an important landmark in the overland traverse from (the now non-existent) Wordie Ice Shelf, down Eureka Glacier, to George VI Sound. It appears on Stephenson's 1940 map of the expedition. Partly re-surveyed from the E by Fids from Base E in 1948. The name was accepted by UK-APC on March 31, 1955, and by US-ACAN later that year, plotted in 69°51' S, 68°02' W, but applied only to the N part of the feature we know today. Re-surveyed by BAS personnel from Base E between 1970 and 1973, and re-defined. With the new definition, and new coordinates, the feature appears in the British gazetteer of 1986. The Argentines call this feature Montañas Traverse.

Traversegletscher. 70°44' S, 162°12' E. A glacier flowing NE of Frolov Ridge, in the Bowers Mountains. Named by the Germans. Name means "traverse glacier."

Traverses. Crossings of Antarctica, or of any part of Antarctica, by sledge, ski, tractor, etc. Strictly speaking, this sort of crossing is called a land traverse. According to the above definition, there have been thousands and thousands of traverses in Antarctica, but in order to qualify for a capital "T," a traverse has to be of substantial length or notoriety. Scott pioneered the land traverse in 1902, and in fact, most of the subsequent expeditons featured land traverses, either toward the Pole or not. Shackleton, Scott again, Amundsen, Byrd (or rather Larry Gould and Quin Blackburn), BGLE 1934-37, USAS 1939-41, and RARE 1947-48, those are the ones that spring to mind. But there is another type of traverse, and that is the one this article is mainly concerned with. This type of traverse started happening during IGY, in the 1950s. The first was probably the great overland trek from Little America to establish Byrd Station (q.v.), and the most famous is, without question, the crossing of the Antarctic continent by Fuchs (i.e., the BCTAE 1955-58), the picture indelibly impressed upon the memory of the great tractor train setting out on a journey of hundreds of miles across the frozen wasteland. **1957-58**: The Marie Byrd Land Traverse (q.v.), led by another great specialist, Charlie Bentley. **1957-58**: The first Ross Ice Shelf Traverse (q.v.), led by yet another great specialist, Bert Crary. **1958-59**: The second Marie Byrd Land Traverse, better known as the Horlick Mountains Traverse (q.v.). **1958-59**: The Executive Committee Range Traverse (q.v). **1958-59**: The Ellsworth-Byrd Traverse (q.v.). **1958-59**: The first Victoria Land Traverse (q.v.). **1958-59**: The second Ross Ice Shelf Traverse, led by James Zumberge. **1959-60**: The second Victoria Land Traverse, led by Frans van der Houwen, from Hut Point to the Outback Nunataks. **1959-60**: The third Marie Byrd Land Traverse. **1959-60**: The third Ross Ice Shelf Traverse. **1960-61**: The Ellsworth Highland Traverse (q.v.), led by Charlie Bentley. **1960-61**: Byrd-South Pole Traverse (q.v.). **1960-61**: The McMurdo-Pole Traverse (q.v.), led by Bert Crary. **1961-62**: The Antarctic Peninsula Traverse (q.v.), led by John Behrendt. **1962-63**: The Vostok Traverse (q.v.), led by Bob Thomson. **1962-63**: The South Pole Traverse, led by Eddie Robinson. **1962-63**: The Byrd Station Traverse, led by Arthur Brandenberger. **1964-65**: The South Pole-Queen Maud Land Traverse I (q.v.). **1965-66**: The South Pole-Queen Maud Land Traverse II (q.v.). **1967-68**: The South Pole-Queen Maud Land Traverse III (q.v.). **1967-68**: The Showa to Pole Traverse, led by Masayoshi Murayama. Syd Kirkby has been the greatest of all the Australian traverse specialists.

Punta Traverso. 63°33' S, 59°46' W. A point. Named by the Argentines. This point shares the same coordinates as Cape Dumoutier, the point which forms the E tip of Tower Island, at the NE end of the Palmer Archipelago. Cape Dumoutier is called Cabo Dumoutier by the Argentines, so it is likely that Punta Traverso is a small point on this cape.

Tre Sten *see* **Sørlle Rocks**

Mount Treadwell. 77°01' S, 144°51' W. Rising to 820 m, at the SE extremity of the Swanson Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, but not named by them. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Capt. Thurman Kelso "T.K." Treadwell, Jr. (b. June 6, 1920, Roff, Oklahoma. d. April 1, 2003, Bryan, Texas), USN, submarine officer during World War II, and commander of the U.S. Naval Oceanographic Office, 1945-68.

Treadwell, Cyrus. b. 1794, NY. He moved to New Haven, Conn., and was the mulatto steward on the *Huron* in the South Shetlands in 1820-22.

Mount Treatt. 68°00' S, 56°48' E. The easternmost of 3 peaks rising sharply from the ice plateau, about 14.5 km SE of Mount Cook, in the Leckie Range, in Kemp Land. Plotted from ANARE air photos, and named by ANCA for George V. Treatt, helicopter pilot with the 1965 ANARE party led by Phil Law from the *Nella Dan*. Mr. Treatt was also air controller for the *Nella Dan*'s voyage of 1966-67. US-ACAN accepted the name in 1967. *See also* **Cook Nunataks**.

Treble, George *see* **USEE 1838-42**

[1]**The *Treern***. Name means "the third" in Norwegian. A 247-ton, 115 foot 7 inch Norwegian whale catcher, built in 1929 at Akers Mek., in Oslo, for Chris Nielsen's Atlas Company. She was catching for the *Solglimt* in 1929-30, and in 1930 Thor Dahl's Odd Company acquired Atlas, and *Treern* became a Dahl catcher. She was working for the *Thorshavn*, 1933-34. She was requisitioned by the South African Navy in 1941, as a minesweeper, and was sunk by a mine off Greece, on Jan. 12, 1945.

[2]**The *Treern***. A 383-ton, 137 foot 1 inch Norwegian whale catcher built at Nylands Verksted, in Oslo, in 1941, for the Compañía Argentina de Pesca, as the *Capitán Nunes*. However, the Germans seized her, and renamed her *Steiermark*. After the war, the Norwegians acquired her, and renamed her *Capitán Nunes*, but in 1947 Thor Dahl bought her and renamed her *Treern*, after his earlier catcher of that name. She caught for the *Thorshøvdi* from the 1947-48 season until 1961, when she was sold to the Compañía Ballenera del Norte, in Lima, and renamed the *Don Cristóbal II*. In 1971 she was sold for scrap.

Trees. There used to be masses of trees in Antarctica (*see* **Flora**). The first trees to be planted by humans in Antarctica were 25 six-foot-high fir trees on the McMurdo Base runway, at the beginning of Nov. 1956, so that pilots could identify the runway as they flew in.

Mys Trëh Valunov *see* **Tri Valunov Point**

Gora Trëhglavaja. 71°28' S, 67°49' E. A nunatak in the E part of the Fisher Massif, in the Prince Charles Moutnains. Named by the Russians.

Gora Trëhsklonovaja. 73°00' S, 68°23' E. A nunatak, E of Dolinyy Glacier, NE of Manning Glacier, in the Mawson Escarpment. Named by the Russians.

Treklyano Island. 62°22' S, 59°25' W. An island, 330 m long by 250 m wide, off the NE coast of Robert Island, 3.8 km NW of Kitchen Point, and 6.6 km SE of Newell Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the settlement of Treklyano, in western Bulgaria.

Glaciar Trench *see* **Trench Glacier**

Trench Glacier. 70°12' S, 69°19' W. A deeply entrenched glacier, 10 km long and 3 km wide, on the E coast of Alexander Island, it flows ENE into George VI Sound, immediately S of Mount Athelstan. The mouth of this glacier was first photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. The entire glacier was surveyed in 1948-49 by Fids from Base E, who gave the descriptive name. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart. In 1959, FIDS cartographers mapped it from air photos taken in 1947 by RARE 1947-48. They plotted it in 70°12' S, 69°11' W. It has since been replotted. The Argentines call it Glaciar Trench.

Trenholm Point. 75°26' S, 142°23' W. An ice-covered point, 13 km NW of Eldred Point, between Holcomb Glacier and El-Sayed Glacier, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for William T. Trenholm, glaciologist at Byrd Station in 1967-68, 1968-69, and 1969-70.

Cordón Trenque Lauquen *see* **Cordón Esmeralda, Hutton Mountains**

Nunatak Trenque Lauquen *see* **Nunatak Crispín**

Zaliv Treoshnikova. 63°15' S, 92°00' E. Name also seen spelled Zaliv Tryoshnikova (which is probably a better transliteration; however, the best transliteration is Trëshnikova; *see* **Trëshnikob, Aleksei**). A gulf in the S part of the Davis Sea, between Mys Maksimova (the northernmost cape on the NE margin of the West Ice Shelf) and the cape the Russians call Mys Vize (at the NW edge of the Shackleton Ice Shelf), it extends from the entrance of Mirnyy Station to Drygalski Island. Named by the Russians, for researcher A. Treoshnikov.

The *Trepassey*. A 360-ton wooden-hulled motor sealing vessel, named for a town near Cape Race. She was chartered by FIDS in 1945-46 from the Newfoundland government as a relief vessel for Base D, replacing the *Eagle*. With Captain Bobby Sheppard in command, and with a crew of 12 Newfoundlanders, she first went to Labrador, picked up huskies, then headed south. 8 puppies were born on that trip. **Feb. 10, 1946**: The *Trepassey* arrived at Port Lockroy. **Feb. 23, 1946**: The *Trepassey* arrived at Stonington Island, with a FIDS crew headed by E.W. Bingham. This group would build Base E on that island. **Feb. 25, 1946**: The *Trepassey* left for the winter. The ship was chartered again in 1946-47 in order to conduct a survey of Antarctic Sound. This time Captain Eugene Burden was in command of a Newfoundland crew of 13. H.W. Stone was 1st officer. There was also a Canadian photographer on board named Bob Moss, there to get shots of the Antarctic Peninsula for the movie *Scott of the Antarctic*. **Nov. 8, 1946**: The *Trepassey* left London. **Jan. 2, 1947**: The *Trepassey* left Port Stanley, heading to Antarctic waters. **Jan. 5, 1947**: The *Trepassey* was off Livingston Island, in the South Shetlands, and then moored at Deception Island. She would be in and out of Deception and the various other bases for the next month. **Feb. 5, 1947:** The *Trepassey* arrived at Stonington Island. She carried a FIDS complement of 11, led by Ken Butler. **Feb. 7, 1947**: The *Trepassey* left Stonington Island (*see also* **Falkland Islands Dependencies Survey**). **March 1, 1947**: She was in at Port Lockroy. **March 26, 1947**: She arrived at Port Lockroy, with E.W. Bingham and Jack Ewer aboard. **April 1, 1947**: As the *Trepassey* was preparing to leave Stonington Island, she caught fire. The fire was put out, but it meant a delay in the departure. **April 5, 1947**: The *Trepassey* and the *Fitzroy* left Stonington Island.

Bahía Trepassey *see* **Trepassey Bay**

Islotes Trepassey *see* **Trepassey Island**

Trepassey Bay. 63°28' S, 56°58' W. A bay, 1.3 km wide, on the NE side of Tabarin Peninsula, 5.5 km SSE of Hope Bay, Trinity Peninsula. First surveyed by both FIDS and Capt. Eugene Burden of the *Trepassey* on Jan. 23, 1947. Resurveyed by Fids from Base D in Aug. 1955. Named by UK-APC on Sept. 4, 1957, for the ship. US-ACAN accepted the name in 1963. The Argentines call it Bahía Trepassey.

Trepassey Island. 68°12' S, 66°59' W. A small rocky island in Neny Bay, S of Fitzroy Island, and therefore 0.9 km SE of Stonington Island, off the Fallières Coast, on the W coast of Graham Land. Several islands were roughly charted in 1936, by BGLE 1934-37, and in 1940, by USAS 1939-41. They were surveyed by FIDS in 1947, and this particular feature was charted by them as 2 islands, which they named the Trepassey Islets, after the *Trepassey*. That name was accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956, and appears on a 1956 British chart. The term "islet" fell out of use in the late 1950s, and on July 7, 1959, UK-APC changed the name to Trepassey Islands, and it appears that way on a British chart of 1960. In 1961-62, FIDS re-surveyed it as a single island, and UK-APC changed the name yet again, on Feb. 12, 1964, to Trepassey Island, with US-ACAN following suit that year. It appears, still pluralized, on a Chilean chart of 1969, as Islotes Trepassey, and on a 1973 British chart, as Trepassey Islands. The Chilean gazetteer still has Islotes Trepassey, but plotted in 68°12' S, 66°48' W.

Trepassey Islands *see* **Trepassey Island**

Trepassey Islets *see* **Trepassey Island**

Trepidation Glacier. 78°46' S, 162°21' E. A small glacier entering the E side of the lower Skelton Glacier, between Moraine Bluff and Red Dike Bluff. Named by the NZ party of BCTAE for the Jan. 1957 effort by an aircraft to land on the exceedingly broken ice at the foot of the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962. In actual fact, the name was originally applied, by mistake, to a very minor feature in 78°48' S, 162°15' E, so minor that no name has subsequently been given it. However, with this wrong feature thus named, it did appear in the 1958 NZ provisional gazetteer.

Trerice, Burton James. b. Jan. 15, 1913, St. John's, Nova Scotia, son of carpenter William Tweedie Trerice and his wife Mabel Edna Chapman. He had been a transport pilot in Canada before becoming a reserve pilot and flight engineer on Ellsworth's 1938-39 Antarctic expedition. He died on Aug. 28, 1987.

Trerindane. 72°17' S, 24°38' E. A mountain formed of 3 ridges, S of Tvihøgda, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians ("the three ridges"). The Russians call it Gora Dostoevskogo, presumably for the writer Dostoevsky.

Isla(s) Tres Chanchitos *see* **Three Little Pigs**

Punta Tres Hermanas *see* **Three Sisters Point**

Cerro Tres Hermanos *see* **Three Brothers Hill**

Punta Tres Mellizos *see* **[2]The Triplets**

Nunatak Tres Tajadas *see* **Three Slice Nunatak**

Trëshnikov, Aleksei Feodorovich. b. April 14, 1914, Pavlovka. Russian geographer, oceanographer, and polar scientist, he was in the Arctic in 1940-41, and during World War II was part of the Northern Sea Route defence force. In 1948 he took part in the Russian expedition to the North Pole, and was in the Arctic again in 1954-55. In Antarctica he led the second SovAE (1956-58) and the 13th SovAE (1967-69). He was director of the Arctic and Antarctic Institute, and president of the Russian Geographical Society, from 1977 until his death on Nov. 18, 1991.

Tressler, Willis L. b. Sept. 30, 1903, Madison, Wisc., son of Prof. Albert W. Tressler (later a banker) and his wife Arlouine. An oceanographer, from 1930 to 1940 he was a professor at the University of Buffalo, and from 1940 to 1946 at the University of Maryland, from where, during World War II, he was extracted for OSS work, going into the CIA after the war, until 1950, when he joined the U.S. Naval Oceanographic Office, in Washington, DC. After Arctic experience in 1954, he was with the U.S. Navy Antarctic Expedition, on the *Atka*, in 1954-55, and back in Antarctica during OpDF II (i.e., 1956-57). On Jan. 30, 1958 he took over from Carl Eklund as scientific leader of Wilkes Station, and during the period 1959-61 was at McMurdo. He married Eleanor. He retired from the Oceanographic Office in 1965, and died after a stroke on Sept. 9, 1973, at Grand Lake, Colo.

Tressler Bank. 65°00' S, 95°00' E. A submarine feature extending between 94°00' E and 96°00' E, in the E part of the Davis Sea. It ranges from 56 fathoms deep and greater. Discovered during OpHJ 1946-47. Sounded by the *Burton Island* and the *Edisto* during OpW 1947-48. Named by US-ACAN in 1958, for Willis L. Tressler. ANCA accepted the name on July 22, 1959.

Trethewry Point. 67°23' S, 59°47' E. Also called Hamrehovden (by the Norwegians). A rocky promontory, rising to 120 m above sea level, it projects from the coast 6 km (the Australians say about 9 km) E of William Scoresby Bay, on the coast of Kemp Land. Discovered and named in Feb. 1936 by the personnel on the *William Scoresby*. US-ACAN accepted the name in 1947, and ANCA followed suit. As for the origins of the name Trethewry, that is a puzzle.

Mys Tret'jakova. 69°32' S, 159°45' E. A cape at the NE side of the Gillett Ice Shelf, off the Wilson Hills, on the coast of Oates Land. Named by the Russians.

Tretoppen. 66°42' S, 54°47' E. A peak with three tops (hence the name), SW of the Newman Nunataks, W of Aker Peaks, between those peaks and the Napier Mountains, in Enderby Land. Apparently, this peak was named by the Russians, which is odd, given its very Norwegian name. It is possible, but not likely, that it is the Norwegian name for the Newman Nunataks.

Gora Treugolka. 71°16' S, 66°56' E. A nuna-

tak, NE of Mount Collins, and due S of Mayman Nunatak, in the Prince Charles Mountains. Named by the Russians.

Nunatak Treugol'nyj. 70°26' S, 66°11' E. Due E of Mount Leckie, in the Prince Charles Mountains. Named by the Russians.

Treves Butte. 84°43' S, 114°20' W. A prominent, partly ice-covered butte, rising to 2100 m, immediately NW of Discovery Ridge, in the Ohio Range. Named by US-ACAN in 1962, for Samuel B. "Sam" Treves, geologist long associated with the University of Nebraska at Lincoln, in Antarctica during several seasons, including 1960-61 and 1961-62 in this area.

Trevillian Island. 67°38' S, 62°42' E. A small, humped, oval-shaped island, about 1.75 km S of Nøst Island, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Rundöy (i.e., "round island"). Re-named by ANCA on Oct. 11, 1960, for T. Trevilian, Australian mapper in Canberra for ANARE. US-ACAN accepted that name in 1965.

Banka Trevozhnaja. 67°39' S, 46°05' E. A bank in the bay the Russians call Bukhta Vechernjaja, W of Vechernyy Hill, at the E end of the Thala Hills, in Enderby Land. Named by the Russians.

Trey Peaks. 80°36' S, 28°52' W. Three conspicuous rock peaks, the highest rising to 1810 m (the British say 1160 m), 3 km N of Mount Homard, and W of Blaiklock Glacier, they form the summit of the Otter Highlands, in the W part of the Shackleton Range. Surveyed and mapped in Oct. 1957, by BCTAE 1956-58, and named descriptively by them. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Mount Trezubec. 70°37' S, 67°24' E. Named by the Russians. It is without question one of the Amery Peaks, in the E part of the Aramis Range, in the Prince Charles Mountains. The question is, is it the Russian name for another mountain, already named by someone else? If so, the most likely candidate is Mount Seaton.

Ostrova Tri Brata *see* **Three Brothers Islands**

Gora Tri Sestry. 74°11' S, 66°30' E. A nunatak, NE of the Blake Nunataks, in Mac. Robertson Land. Named by the Russians.

Tri Valuny Point. 67°38' S, 46°01' E. A point projecting into Groznaya Bay, on the coast of Enderby Land, about 8 km E of Molodezhnaya Station. Named by the Russians as Mys Trëh Valunov. ANCA translated it into English.

Gora Tri Vershiny. 72°12' S, 68°43' E. A nunatak on the Clemence Massif, to the E of the Lambert Glacier. Named by the Russians.

Triad Islands. 65°36' S, 64°28' W. A group of 3 small islands, 2.5 km E of Chavez Island, in Leroux Bay, off the Graham Coast, on the W coast of Graham Land. First charted by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in Aug. 1957. Named descriptively by UK-APC on July 7, 1959. They appear on a British chart of 1960. US-ACAN accepted the name in 1971.

Punta Triangle *see* **Triangle Point**

Triangle Peak. 64°58' S, 62°56' W. A high, triangle-shaped peak, rising to about 1200 m, S of Hauron Peak, on the W margin of the Petzval Glacier, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named descriptively by the Poles on Sept. 1, 1999.

Triangle Point. 62°31' S, 59°50' W. A black triangular headland, 2.5 km NW of Spit Point, W of Yankee Harbor, on the SW side of Greenwich Island, in the South Shetlands. The point was known to early 19th-cenury sealers. Charted and named descriptively by personnel on the *Discovery II* in 1934-35. It appears on British charts of 1942 and 1948, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer. It appears on a 1948 Argentine chart as Punta Triangle, and on a 1953 Argentine chart as Punta Triángulo, the latter name being the one accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. The Chilean gazetteer of 1974 accepted the name Punta Triangle. Last plotted by the UK, in late 2008.

Punta Triángulo *see* **Triangle Point**

Triassic Nunatak. 74°21' S, 73°07' W. A small nunatak, 2.5 km SW of Jurassic Nunatak, in the W extremity of the Yee Nunataks, in Ellsworth Land. Named by US-ACAN in 1987, after the Triassic Period in geological time, and also in association with Jurassic Nunatak. The name does not imply the age of the rock constituting this feature.

Tribble, David Thomas. b. Jan. 20, 1931, Hendon, Mdsx, son of Frederick Thomas Tribble and his wife Mary B. Lee. Meteorologist, glaciologist, seismologist, and geomagnetician on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957 and 1958. He died on June 16, 1993, in Stevenage, Herts.

Tribby Peak. 71°56' S, 97' 48' W. A peak, 2.5 km W of Mount Bubier, on Edwards Peninsula, on Thurston Island. Named by US-ACAN in 2003, for Osborne Mead Tribby (b. 1913, Pa. d. June 1967, Sarasota, Fla.), USN, pharmacist's mate in the Eastern Group during OpHJ 1946-47, an air crewman on the Martin Mariner flight of Jan. 11-12, 1947, which rescued the survivors of the Mariner crash of Dec. 30, 1946.

Trice Islands. 72°25' S, 99°26' W. A group of small, ice-covered islands, just W of Evans Point, and rising above the general level of the Abbot Ice Shelf, which occupies Peacock Sound, at Thurston Island. First mapped from air photos taken during OpHJ 1946-47, and plotted in 72°25' S, 99°48' W. Named by US-ACAN in 1968, for Jack Lynn Trice (b. Oct. 13, 1936, Marietta, Tex., to J.R. Trice and his wife Josephine Trumble, sharecroppers who farmed land owned by Lady Bird Johnson. d. March 8, 2008, Portland, Me.), meteorologist who wintered-over at Byrd Station in 1965. He worked for 30 years for the National Weather Service. The feature has since been replotted.

Trickster Rocks. 65°36' S, 64°36' W. Several small rocks emerging from the sea less than 1.5 km NW of Chavez Island, in Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57. So named by UK-APC on July 7, 1959, because when Fids from Base J did their 1957 winter survey here they thought that these rocks were icebergs and failed to chart them. They were charted not long afterwards, by an RN Hydrographic Survey unit in 1957-58. They appear on a British chart of 1960. US-ACAN accepted the name in 1965.

[1]**Mount Tricorn** *see* **Tricorn Mountain**

[2]**Mount Tricorn**. 73°58' S, 61°43' W. A distinctive massif whose vertical rock faces rise to 1120 m and surround a snow-covered interior which is lower except for a peak, rising to 1615 m in the NW portion, it stands on the Lassiter Coast, between Swann Glacier and Waverly Glacier, overlooking the head of Wright Inlet, on the Lassiter Coast, on the E coast of the Antarctic Peninsula. Discovered and photographed on Dec. 30, 1940, on a flight from East Base, during USAS 1939-41, and so named by them because it looks like a gigantic tri-cornered hat. However, due to an error in navigation, it was mapped 88 km to the SSE of its true position. Consequently, it appears on a 1942 USAAF chart plotted in 74°40' S, 60°30' W, as it does also on Finn Ronne's 1945 map. It appears on an Argentine map of 1946 as Monte Tricorn. US-ACAN accepted the name in 1947. In Dec. 1947, a combined sledging team of personnel from RARE 1947-48 and Fids from Base E identified and surveyed the mountain, and fixed it where it should be. It appears on Dougie Mason's 1950 FIDS map. UK-APC accepted the name and the new coordinates on Jan. 28, 1953, and US-ACAN followed suit. It appears as such on a 1954 British chart, and in the 1955 British gazetteer. There is a 1948 Chilean reference to it as Monte Acevedo, named after Luis Alberto Acevedo, a pioneer of aviation, killed in an air crash in 1913. On an Argentine chart of 1953 it appears as Monte Tricorno, but on one of their 1954 charts as Monte Tricornio, that latter name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was re-mapped by USGS from USN air photos taken between 1965 and 1967, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land.

Tricorn Bluff *see* **Trigon Bluff**

Tricorn Mountain. 85°03' S, 173°27' E. Also called Mount Tricorn. A distinctive peak, rising to 3475 m above a high plateau ENE of Mount Clarke, and 6 km E of Graphite Peak, about midway between the heads of Falkenhof Glacier and Leigh Hunt Glacier. Named by the Southern Party of NZGSAE 1961-62, for its resemblance to an admiral's tricorn hat. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Tricorn Peak. 82°59' S, 156°48' E. Rising to

2320 m, and snow-covered, on the ridge between Astro Glacier and Skua Glacier, at the extreme N of the Miller Range. Discovered by the Northern Party of NZGSAE 1961-62, and so named by them because of its resemblance to a three-cornered hat. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Monte Tricornio *see* **[2]Mount Tricorn**

Monte Tricorno *see* **Mount Tricorn**

Mount Tricouni. 78°30' S, 161°57' E. A prominent peak. with an elevation of 1630 m (the New Zealanders say 1658 m) above sea level, rising steeply 3 km N of Hobnail Peak, on the E side of Skelton Glacier, in Victoria Land. Surveyed by the NZ party of BCTAE in Feb. 1957, and named by them. A tricouni is a saw-toothed nail used on the sides of alpine boots. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Mount Trident. 72°26' S, 169°14' E. A prominent peak, rising to 2480 m (the New Zealanders say about 2667 m), and with 3 closely-spaced summits (hence the name given by NZGSAE 1957-58), above Trigon Bluff, on the N side of Tucker Glacier, in Victoria Land. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Trident Lake. 68°32' S, 78°14' E. The more easterly of 2 small lakes NW of Club Lake, on the route between Davis Station and Platcha, in the Vestfold Hills. Named by ANCA. Lake Tassie is the other one.

Trident Peak. 67°26' S, 68°10' W. An isolated, triple-peaked, snow-capped mountain, rising to 738 m, S of Stokes Peaks, Wright Peninsula, Adelaide Island. Named descriptively by UK-APC on Dec. 16, 2003.

Trifid Peak. 67°51' S, 67°09' W. A 3-sided peak rising to 645 m, at the head of Shoesmith Glacier, in the W part of Horseshoe Island, Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS between 1955 and 1957, and named descriptively by them for its three-sided Matterhorn-type appearance. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. The Argentines call it Pico Trífido. Trifid is an adjective, meaning divided into 3 narrow parts. Not to be confused with John Wyndham's 1951 novel, *The Day of the Triffids*, which, of course, has nothing to do with it. The name is also a play on "three Fids."

Pico Trífido *see* **Trifid Peak**

Trighügel. 70°28' S, 162°06' E. A hill on the NW side of Mount Belolikov, in the Bowers Mountains. Named by the Germans.

Trigon Bluff. 72°29' S, 169°09' E. Also called Tricorn Bluff. A steep, triangular bluff, rising to 1245 m, and forming the termination of the SW ridge at Mount Trident, 16 km W of Football Mountain, on the N side of Tucker Glacier, in Victoria Land. Named doubly descriptively by NZGSAE 1957-58. They placed a triangulation station on its summit. US-ACAN accepted the name in 1962.

Islote Trigonia *see* **Trigonia Island**

Trigonia Island. 66°01' S, 65°41' W. A small, three-sided island, immediately off the S tip of Beer Island, in the Biscoe Islands, 13 km W of Prospect Point, off the W coast of Graham Land. Charted in Feb. 1936, by BGLE 1934-37, and named descriptively by Rymill. It appears on his 1938 map of the expedition. It appears on a 1947 U.S. Hydrographic Office chart as Trigonia Islet, as it does on a British chart of 1950, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC renamed it Trigonia Island, and it appears as such on a British chart of 1960. US-ACAN accepted the new name in 1963. The Argentines call it Islote Trigonia.

Trigrad Gap. 62°38' S, 59°55' W. A saddle, rising to over 500 m in Delchev Ridge, bounded to the SW by Spartacus Peak and to the NE by Yavorov Peak, it is part of the divide between the glacial catchments of the Sopot Ice Piedmont to the NW and Strandzha Glacier to the SE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Trigrad.

Trigwell Island. 68°33' S, 77°57' E. An island, about 1.5 km long, immediately W of Flutter Island, between that island and Anchorage Island, and 1.5 km W of Breidnes Peninsula, in Prydz Bay, in the area of the Vestfold Hills, about 3 km N of Davis Station. Photographed by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946 (apparently they did not name it). Re-mapped in 1957-58, by Australian cartographers, who did name it, for Elliott Sydney "Trig" Trigwell (b. April 17, 1918), radio supervisor who wintered-over at Davis Station in 1958, and who was officer-in-charge for the 1958-59 summer. US-ACAN accepted the name in 1965.

Trilling Bay. 69°31' S, 39°41' E. A small bay, just S of Skarvsnes Foreland, along the E side of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Trillingbukta (i.e., "the triplet bay"), in association with the nearby Trilling Islands. US-ACAN accepted the name Trilling Bay in 1968.

Trilling Islands. 69°30' S, 39°38' E. Three islands at the S side of Skarvsnes Foreland, in the N part of Trilling Bay, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Trillingøyane (i.e., "the triplet islands"). US-ACAN accepted the name Trilling Islands in 1968.

Trilling Peaks. 67°58' S, 62°45' E. A group of linear nunataks, comprised of 3 main peaks, 5 km S of the South Masson Range, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Trillingnutane (i.e., "the triplet peaks"). US-ACAN accepted the name Trilling Peaks in 1953.

[1]Trillingane. 66°12' S, 53°12' E. A mountain, due N of the peak named Knausen, in the W part of Enderby Land, NE of Molodezhnaya Station. The SCAR gazetteer says this feature was named by the Russians, and, indeed, the same gazetteer has several Norwegian-sounding features in this area supposedly named by the Russians. It is also called Mount Trillingane. Cataclased biotite granites are found here.

[2]Trillingane *see* **Trillingane Nunataks**

Mount Trillingane *see* **[1]Trillingane**

Trillingane Nunataks. 71°50' S, 27°25' E. Three nunataks, 10 km NE of Balchen Mountain, E of Byrdbreen, at the E end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Trillingane (i.e., "the triplets"). US-ACAN accepted the name Trillingane Nunataks in 1966.

Trillingbukta *see* **Trilling Bay**

Trillingnutane *see* **Trilling Peaks**

Trillingøyane *see* **Trilling Islands**

Trilobite Promenade. 84°49' S, 116°21' E. A narrow, steep-sided ridge, projecting 3 km W from the main part of Lacky Ridge, and separated from that ridge by a 100-meter steep snow slope, in the Ohio Range. Named by NZ-APC after the numerous trilobite trackways found in the Horlick Formation in this locality by the first-ever NZ party here, in 1979-80, and studied in greater detail by the second NZ party here, in 1983-84.

Mount Trimpi. 75°21' S, 72°48' W. Rising to about 1400 m, 5 km WNW of Mount Brice, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast of Ellsworth Land. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Michael L. "Mike" Trimpi, radio-science researcher at Eights Station in 1963. He was also scientific leader at Byrd Station for the winter of 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Punta Trineos *see* **Lair Point**

[1]The *Trinidad*. Argentinian privateer which, in 1815, found itself blown off course into 65°S. Captain Walter Diego Chitty. *See* **Brown, Guillermo**, for further details.

[2]The *Trinidad*. Argentine patrol ship, under the command of Captain Fernando Muro de Nadal, which was in the Melchior Islands in Dec. 1950, along with the *Hércules*, in an expedition led by Gaston C. Clemente. *See* **The *Hércules*** for more details.

Isla Trinidad *see* **Trinity Island**

Península Trinidad *see* **Trinity Peninsula**

Cape Trinity *see* **Cape Dubouzet**

Trinity Church. The world's most southerly Eastern Orthodox church, it was built out of Siberian pine in Russia, by carpenters from the Altay Mountains led by K.V. Khromov, then dismantled and brought to Antarctica on the *Akademik Vavilov*, and re-assembled close to

Bellingshausen Station, by members of that station, on King George Island in the South Shetlands. On May 29, 2004 the church was opened and blessed by Kallistrat, head monk of St. Sergius, the spiritual center of Russian orthodoxy. 15 meters high, it is a wooden structure built in Russian style, and can accommodate 30 persons. Father Georgy became permanent head of the church, and lived near it.

Trinity Island. 63°45' S, 60°45' W. An island, 24 km long and 10 km wide, its highest peak is 3600 feet. The island is separated from the Antarctic Peninsula by Orléans Strait, in the N part of the Palmer Archipelago. First seen by Palmer on Nov. 16, 1820, although there is a good chance that Bransfield saw it before that, in the previous Austral summer. Bransfield had named a portion of land in this area as Trinity Land. It was either this island or Trinity Peninsula (as we know them today) that he saw (however, *see* **Tower Island** for a history of the island at this time, and for subsequent years). In Capt. Davis's log of Oct. 20, 1821, the name South Land Whale Island appears, probably in reference to this island. Similarly, Capt. Pendleton's log of Nov. 13, 1821, refers to it as Shoe Land. Dallmann, in 1873-74, passed through Orléans Strait, and discovered that this island is a separate island. It appears as Trinity Island on Arctowski's 1901 map of BelgAE 1897-99. SwedAE 1901-04 clearly defined it in 1902, and charted it as Trinity Ön. On Irízar's 1903 Argentine map it appears as Isla Trinidad, and on Charcot's 1910 map it appears as Île Trinité. In 1919-20 Capt. Johannessen, the whaler, made up a chart, on which Trinity Land seems to be composed of Sven Rock, Ryge Rocks, and Oluf Rocks. The actual island appears as Trinity Island on British charts of 1921 and 1937. Lester and Bagshawe, during the British Imperial Antarctic Expedition of 1920-22, charted it as Tower Hill Island, saying that was the name used by whalers in the area. US-ACAN accepted the name Trinity Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It was photographed aerially by FIDASE in 1956. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Trinidad. The Chileans rejected the proposed name Isla Trinity.

Trinity Land *see* **Trinity Island**, **Trinity Peninsula**

Trinity Nunatak. 76°26' S, 160°38' E. A large nunatak in the stream of the Mawson Glacier, about 5 km N of the Convoy Range, and about 22 km WNW of Mount Douglas, in Victoria Land. It stands relatively little above the ice surface on the W, but downstream, on the E side, it has towering black cliffs which make it a prominent landmark from the sea-ice N of the Nordenskjöld Ice Tongue, about 80 km to the NE. Mapped in 1957 by the NZ Northern Survey Party of BCTAE, who named it for its three summits. On Dec. 9, 1957, they established a survey station on one of the summits. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Trinity Peninsula. 63°37' S, 58°20' W. The very northeasternmost part of the Antarctic continent, it extends northeastward for about 130 km from an imaginary E-W line across Graham Land connecting Cape Kjellman to Cape Longing. This may be what Bransfield called Trinity Land (but equally well it may have been Trinity Island — see that entry) in Jan. 1820. In the 1820s there was a tendency to use the name Palmer's Land, to describe the N part of the peninsula together with the N part of the Palmer Archipelago. It was discovered for sure on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Louis Philippe Land (actually Terre Louis-Philippe), for the king of the French, Louis-Philippe, who had suggested the voyage. This name has been seen variously as Louis Philippe Coast, Louis Philippe Peninsula, and Palmer Peninsula. It was renamed in favor of Bransfield's naming, and appears as Trinity Peninsula on a British chart of 1921. That was the name accepted by UK-APC on Sept. 8, 1953, with US-ACAN following suit in 1964. Apparently, the Argentines translated it as Península Trinidad.

Pasaje Trinquete *see* **Pasaje Cabrales**

Islotes Trío *see* **Tau Islands**

Picos Trío *see* **Triune Peaks**

Trio Glacier. 71°21' S, 68°23' W. Flows SE into Uranus Glacier, between Khufu Peak and Mount Ariel, at Fossil Bluff, on Alexander Island. Named by UK-APC on Feb. 21, 2005, for Cliff Pearce, John P. Smith, and Brian Taylor, who formed the first wintering-over party at the FIDS' Fossil Bluff Station, and who were the first people to spend the winter at Fossil Bluff, in 1961-62.

Trio Nunataks. 75°30' S, 159°42' E. Three large nunataks (the Australians call them small nunataks) at the S side of David Glacier, between the upper reaches of that glacier and Ricker Peak, just W of the terminus of Hollingsworth Glacier, in Victoria Land. Discovered by the Southern Party of NZGSAE 1962-63, who named them for obvious reasons. NZ-APC acepted the name, and US-ACAN followed in 1966. ANCA also accepted the name.

Trioen *see* **Trioen Nunataks**

Trioen Nunataks. 72°25' S, 3°59' W. An isolated group of 3 small nunataks, about 13 km W of Borg Mountain, on the N side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Trioen (i.e., "the trio"). US-ACAN accepted the name Trioen Nunataks in 1966.

Île Triple *see* **Triple Islands**

Triple Islands. 66°46' S, 141°12' E. Three small rocky islands in a closely-spaced chain close E of the tip of the Zélée Glacier Tongue, 0.6 km SSE of the Double Islands. This area was photographed aerially by OpHJ 1946-47, and this particular feature was charted and named by Liotard as Île Triple, in 1949-51. US-ACAN accepted the translated name in 1956.

Triple Lake. 68°32' S, 78°15' E. An irregular-shaped lake consisting of 3 connected basins, oriented NE-SW, just W of Sheild Lake, on Breidnes Peninsula, in the Vestfold Hills. It was one of several lakes investigated by biologists wintering-over at Davis Station in 1974. Named descriptively by ANCA on Aug. 27, 1975.

[1]The Triplets. 69°23' S, 98°40' E. Three small rock outcrops at the N extremity of David Island, off the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named descriptively by them. ANCA seems to be the only one who recognizes this term.

[2]The Triplets. 62°23' S, 59°41' W. A 3-pointed hill rising to 135 m at the very end of a mountainous peninsula that forms the W entrance of Mitchell Cove, the peninsula separating Mitchell Cove from Coppermine Cove to the NW, near the NW end of Robert Island, in the South Shetlands. Surveyed and named in 1934-35 by the personnel on the *Discovery II*, it appears on their chart of 1935, and also on a British chart of 1942. It was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer, and also on a British chart of 1962. It appears on an Argentine chart of 1948 as Punta The Triplets, but on one of their 1953 charts translated as Punta Tres Mellizos, that last name being the one accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. It appears on a 1961 Chilean chart as both Triplets and Cabezo Triplets, but on one of their 1962 charts as Cerro Triplets, and that last name was the one accepted by the Chilean gazetteer of 1974. Last plotted by the UK, in late 2008.

Cerro Triplets *see* **[1]The Triplets**

Tripod Island. 64°19' S, 62°57' W. A small island close S of the W extremity of Eta Island, it marks the N side of the W entrance to Anderson Harbor, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed, and named Tripod Islet, by the personnel on the *Discovery* in 1927. It appears as such on their 1929 chart. It was further charted in 1941, by USAS 1939-41, and appears as Tripod Island on their 1941 chart, as it does also on a 1943 U.S. Hydrographic Office chart. It was re-surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948. On an Argentine chart of 1946, it appears as Islote Trípode, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. There is also a 1955 reference to it as Isla Trípode. The name Tripod Islet was accepted by UK-APC on Sept. 20, 1955, and also by US-ACAN. However, on July 7, 1959, UK-APC redefined it as Tripod Island, and it appears as such on a British chart of 1960. The new name was accepted by US-ACAN in 1963.

Tripod Islet *see* **Tripod Island**

Isla Trípode *see* **Tripod Island**

Islote Trípode *see* **Tripod Island**

Mount Tripp. 83°17' S, 166°53' E. A massive, cone-shaped, ice-covered mountain, rising to 2980 m between Hoffman Glacier and Hewitt Glacier, 11 km WNW of Rhodes Peak, in the

Holland Range, to the W of Lennox-King Glacier, in the Transantarctic Mountains. Discovered by Shackleton during BAE 1907-09, and named by him for solicitor Leonard Owen Howard Tripp (1862-1957) of Wellington, NZ, who assisted Shackleton on this expedition and again, on BITE 1914-17. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Mr. Tripp was 69 years with the law firm Chapman Tripp.

Tripp Bay. 76°37' S, 162°44' E. A bay, about 8 km long and wide, formed by a recession in the ice between Oates Piedmont Glacier and Evans Piedmont Glacier, along the coast of Victoria Land. First charted by BAE 1907-09, and named by BAE 1910-13, in association with Tripp Island, which lies within the bay. US-ACAN accepted the name in 1948, and NZ-APC followed suit.

Tripp Ice Tongue. 76°34' S, 162°45' E. An ice tongue occupying the N part of Tripp Bay, on the coast of Victoria Land. It is fed by several glaciers (including Fry Glacier and Hedblom Glacier), as well as by ice from the Oates Piedmont Glacier. Named by NZ-APC on Nov. 4, 1999, in association with the bay. US-ACAN accepted the name in 2000.

Tripp Island. 76°38' S, 162°42' E. A dark, glaciated island in the central part of Tripp Bay, about 3 km from the shore on either side, along the coast of Victoria Land. Discovered by BAE 1907-09, and named by Shackleton for Leonard O.H. Tripp (*see* **Mount Tripp**). US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Mount Trishui. 70°46' S, 11°40' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

The *Trismus*. Belgian yacht in the area of the South Shetlands and the Antarctic Peninsula area in 1975-76, skippered by Patrick van God. She was accompanied by the *Gedania*. Mr. van God wrote *Pour l'aventure*.

Île Tristan *see* **Tristan Island**

Tristan Island. 66°44' S, 140°54' E. Also called Rocher Noir. A small rocky island, 1.1 km W of Yseult Island, and about 320 m N of the W point of Cape Jules. This area was photographed aerially by OpHJ 1946-47. This particular island was charted by Barré in 1951-52, and named by the French at that time, as Île Tristan, in association with Yseult Island (with reference to the Yseult of "Tristan et Yseult"). US-ACAN accepted the name Tristan Island in 1956.

Triton Point. 71°42' S, 68°12' W. A rocky point forming the E end of the high ridge separating the termini of Venus Glacier and Neptune Glacier, on the E coast of Alexander Island at George VI Sound. Photographed aerially by Ellsworth on Nov. 23, 1935. Roughly surveyed in 1936, by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. More accurately defined by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for one of the satellites of the planet Neptune. US-ACAN accepted the name in 1956, and it appears that year on a U.S. Hydrographic Office chart.

Tritoppen *see* **Mount Tritoppen**

Mount Tritoppen. 67°59' S, 62°29' E. Also called Tritoppen Peak. A triple-peaked mountain rising to 1350 m, about 5.5 km S of Mount Hordern, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Tritoppen (i.e., "the three-peaked mountain"). ANCA accepted the name Tritoppen Mountain on Feb. 15, 1958, and US-ACAN followed suit in 1965.

Tritoppen Peak *see* **Mount Tritoppen**

Tritton, Alan George. b. Oct. 2, 1931, son of George Henton Tritton and his wife Iris Mary Baillie. His father died when the boy was 3, and his mother married again, in 1937, to Major Arthur Barnes-Gorell. After Eton, he was in the Arctic in 1949. He was an officer in the Seaforth Highlanders in Malaya, joined FIDS in 1952, and was base leader and meteorologist at Signy Island Station in the winter of 1953. He became an investment banker and insurance executive. On March 22, 1958 he married Elizabeth Clare d'Abreu (known as Clare), and in 1972 Diana Marion Spencer. He was a director of Barclay's Bank, 1974-81, and high sheriff of Essex in 1992-93. His term as deputy lord lieutenant of Essex ended in 2007. His autobiography, *The Half-Closed Door*, came out in 2008.

Triune Peaks. 69°08' S, 66°52' W. Three prominent, sharply-pointed rock peaks, the highest rising to 1130 m, 20 km NE of Mount Balfour, and overlooking the E part of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936-37, during BGLE 1934-37, they appear on Stephenson's 1940 map of that expedition. Photographed aerially on Dec. 22, 1947, by RARE 1947-48, and re-surveyed from the ground by Fids from Base E in Nov. 1958. Named descriptively by UK-APC on Aug. 31, 1962. US-ACAN accepted the name later that year. The Argentines call them Picos Trío.

Rocas Triunvirato. 68°09' S, 69°18' W. An isolated group of rocks, NW of the Kirkwood Islands, off the W coast of the Antarctic Peninsula. Named by the Argentines.

Trivelpiece Island. 64°44' S, 64°09' W. An island in Wylie Bay, NE of Halfway Island, off Anvers Island, in the Palmer Archipelago. Named by UK-APC on April 23, 1998, for fisheries biologist Wayne Z. Trivelpiece (b. 1948) and his wife Susan Green "Sue" Trivelpiece, who (both) studied seabird ecology in the area of the Antarctic Peninsula for over 20 years. US-ACAN accepted the name later in 1998. In 1977-78, Mr. Trivelpiece and Nick Volkman were guest ornithologists at Arctowski Station, and, in fact, they named various features in the vicinity of the station.

Trivial Islands. 65°31' S, 65°13' W. A group of small islands, 2.5 km E of Lacuna Island, and 11 km N of Vieugué Island, in the Pitt Islands, in the Biscoe Islands. In 1956-57 these islands were photographed aerially by FIDASE, and surveyed from the ground by Fids from Base J, and in 1958-59 FIDS cartographers mapped the feature from these efforts. So named by UK-APC on July 7, 1959, because they are small, boring, and insignificant (and therefore of interest). They appear on a British chart of 1960. US-ACAN accepted the name in 1971.

Trögergletscher. 70°42' S, 162°57' E. A glacier, SW of Astapenko Glacier, in the Bowers Mountains. Named by the Germans.

Cabo Trois Pérez *see* **Cape Pérez**

Cape Trois Pérez *see* **Cape Pérez**

Punta Trois Pérez *see* **Cape Pérez**

Trojan Range. 64°32' S, 63°23' W. Rising to 2135 m, it extends northward from Mount Français to Cassandra Nunatak, along the E side of Iliad Glacier, on Anvers Island, in the Palmer Archipelago. The Range also incudes Mount Priam, Mount Hector, and Paris Peak. Surveyed from the W by Fids from Base N in 1955, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 4, 1957, for the Trojans of Homer's *Iliad*. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Gora Trojnik. 74°07' S, 66°37' E. A nunatak, NW of (but not one of) the Blake Nunataks, near the head of the Lambert Glacier. Named by the Russians.

Troll Station. 72°01' S, 2°32' E. A Norwegian summer station of 3 buildings, at an elevation of 1298 m above sea level, built by NorAE 1989-90 in the W part of Jutulsessen Mountain, in the Gjelsvik Mountains, in the Muhlig-Hofmann Mountains of Fimbulheimen, about 220 km S of the coast of Queen Maud Land, and opened in Feb. 1990. NorAE 1984-85 had set up an AWS here. Norwegian parties wintered over in 2005, 2006, 2007, 2008, and 2009.

Trollberg. 62°13' S, 58°59' W. A peak on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Trollguten. 72°02' S, 2°35' E. In the area of Troll Station, in the W part of Jutulsessen Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegian on Oct. 12, 2007. Name means "the troll boy."

Trollhaugen. 72°01' S, 2°33' E. A hill immediately to the E of Troll Station, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Troll Station. Name means "the Troll hill."

Trollisen. 72°01' S, 2°30' E. A blue area in the area of Troll Station. Named by the Norwegians ("the troll ice") on Oct. 12, 2007.

Trollkammen. 72°00' S, 2°37' E. A jagged ridge, near Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, the name means "the troll's comb."

Trollkjelen *see* **Trollkjelen Crevasse Field**

Trollkjelen Crevasse Field. 71°17' S, 0°50' W. About 20 km long, in the Fimbul Ice Shelf, immediately off the NE side of Trollkjelneset Headland, on the Princess Martha Coast of

Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Trollkjelen (i.e., "the troll's cauldron"). US-ACAN accepted the name Trollkjelen Crevasse Field in 1966.

Trollkjell Ridge. The crest of Jutulstraumen Glacier, in the W part of Queen Maud Land. It is a volcanic area, and was named by the Norwegians. It is, however, an unofficial name.

Trollkjelneset *see* **Trollkjelneset Headland**

Trollkjelneset Headland. 71°25' S, 1°00' W. A snow-domed headland rising between Krylvika Bight and the mouth of Jutulstraumen Glacier, in the Fimbul Ice Shelf, in the NE part of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Trollkjelneset (i.e., "the cape of the troll's cauldron"), in association with the Trollkjelen Crevasse Field. US-ACAN accepted the name Trollkjelneset Headland in 1966.

Trollkjelpiggen *see* **Trollkjelpiggen Peak**

Trollkjelpiggen Peak. 71°35' S, 1°09' W. A peak in the Stein Nunataks, 8 km SW of Utkikken Hill, on the E side of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during he long NorAE 1956-60, and named by them as Trollkjelpiggen (i.e., "the peak of the troll's cauldron"), in association with the Trollkjelen Crevasse Field. US-ACAN accepted the name Trollkjelpiggen Peak in 1966.

Trollryggen. 72°41' S, 27°00' E. A group of nunataks, on a glaciated ridge, in the SE part of the Sør Rondane Mountains. Name means "the troll ridge" in Norwegian.

Trollslottet *see* **Trollslottet Mountain**

Trollslottet Mountain. 71°56' S, 7°14' E. A high, ridge-like mountain with several prominent features (the 2 most prominent being Rakekniven Peak and Rakebosten Ridge), it forms the NW limit of the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Trollslottet (i.e., "the troll castle"). US-ACAN accepted the name Trollslottet Mountain in 1967. The Russians call it Gora Zabor.

Trolltinden. 72°02' S, 2°35' E. The middle and highest of 3 peaks, in the area of Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007.

Trolltunga. 69°30' S, 0°30' W. An ice tongue northward of the Fimbul Ice Shelf, forming the northward extension of Jutulstraumen Glacier, in the Fimbul Ice Shelf, on the Princess Martha Coast. In fact, this tongue marks the E limit of the Princess Martha Coast. Name means "the troll tongue" in Norwegian. The Russians call it Shel'fovyj Lednik Bellingsgauzena (i.e., "Bellingshausen glacier tongue").

Trollveikja. 72°02' S, 2°35' E. In the area of Troll Station, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with the station. The name means "the troll girl."

Trolval Island. 67°36' S, 68°13' W. A small rocky island about 300 m long, between the N tip of Anchorage Island and Lagoon Island, in the Léonie Islands, in Ryder Bay, Adelaide Island. Named by UK-APC on Feb. 24, 2004, for Trolval, the devil-whale in Harrison Matthews' book *The Whale*.

Punta Tronador. 64°19' S, 62°55' W. A point on Eta Island, in the East Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Punta Troncoso. 62°27' S. 59°41' W. A point between Punta Hermosilla and Punta Serrano, on the NW coast of Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1947-48, for Arturo Troncoso Daroch (see immmediately below).

Troncoso Daroch, Arturo. 2nd Lt. in the Chilean Navy, part of ChilAE 1946-47. He was back on the *Rancagua*, for ChilAE 1947-48. He was later a vice admiral, and the Chilean minister of education. He died of a heart attack on Oct. 30, 2008.

Tronstadhallet. 70°49' S, 11°35' E. An ice-covered slope between the S part of the Schirmacher Hills and the nunatak the Norwegians call Lingetoppane, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Major Leif H. Tronstad (b. 1903), a professor who organized anti-Nazi Resistance in Trondheim during World War II. Working out of Britain, he was one of the leaders of the Linge Company, and was the mastermind behind the raid on the heavy water plant at Telemark. A few months before the German surrender, he parachuted into Telemark, but was caught by the Nazis, and shot.

Cap de Trooz *see* **Cape Pérez**

Glaciar Trooz *see* **Trooz Glacier**

Trooz Glacier. 65°20' S, 63°58' W. A glacier, 24 km long, and 2.5 km wide at its mouth, it flows W into the N part of Collins Bay, N of Clapp Point, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in Jan. 1909, by FrAE 1908-10, it appears (unnamed) on Charcot's 1912 map. It was surveyed in its lower reaches in Aug. 1935, by BGLE 1934-37, and appears on Rymill's 1938 map as Berthelot Glacier, named in association with the nearby Berthelot Islands. US-ACAN accepted the name Trooz Glacier in 1950, named for Jules de Trooz (1857-1907), Belgian minister of the Interior and Public Information, who signed the royal decree of Dec. 4, 1899 which appointed the Commission for the *Belgica*, and who helped raise funds in order to produce the scientific results of BelgAE 1897-99 (*see also* **Cape Pérez**). UK-APC accepted that name on Sept. 22, 1954. It appears as such on a 1955 U.S. Hydrographic Office chart, and also in the 1955 British gazetteer, and on a 1957 British chart. Photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1962 as Glaciar Trooz, and that was the name accepted by the 1974 Chilean gazetteer. The British plot it in 65°20' S, 63°44' W.

Trost Peak. 67°52' S, 62°48' E. A peak, appearing as a short ridge when seen from E to W, but as an inverted "V" when seen from the N or S. It rises to 980 m, 2.5 km NE of Mount Burnett, and is the northern peak of the South Masson Range, in the Framnes Mountains. Photographed aerially by LCE 1936-37, and mapped (but, seemingly, not named) from these photos in 1946 by Norwegian cartographers. Re-mapped by Australian cartographers from ANARE air photos taken between 1957 and 1960. Named by ANCA on July 22, 1959, for Peter Albert Trost (b. Aug. 1, 1925), cosmic ray physicist at Mawson Station in 1958, and electronics engineer at the same station in 1962. He had also wintered-over at Macquarie Island in 1956. US-ACAN accepted the name in 1961.

Trost Rocks. 69°45' S, 68°58' E. Two rock outcrops rising to 91 m above the W side of the Amery Ice Shelf, at the NE end of Single Island. Photographed aerially by ANARE in 1956, an astrofix position was obtained on Dec. 8. 1962, by an ANARE field party led by Dave Carstens, surveyor at Mawson Station that year. Named by ANCA for Peter Trost (*see* **Trost Peak**), a member of the field party that visited the rocks. US-ACAN accepted the name in 1967.

Mount Trott. 70°42' S, 66°23' E. A ridge-like mountain with a jagged sawtooth appearance, between 1.5 and 2 km NW of Mount Bunt, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Norman Edward "Norm" Trott (b. Jan. 20, 1934), weather observer who wintered-over at Davis Station in 1962 and 1964 (the second of these years also as officer-in-charge). US-ACAN accepted the name in 1967.

Mount Troubridge. 71°08' S, 167°44' E. Also spelled Mount Trowbridge. A prominent peak, rising to over 1000 m, it surmounts the E end of Hedgpeth Heights, in the Anare Mountains, in the Admiralty Range, in northern Victoria Land. Discovered and rudley charted by Ross on Jan. 11, 1841, and named by him for Rear Admiral Sir Edward Thomas Troubridge (1787-1852; succeeded his father in 1807, as 2nd Baronet), junior lord of the Admiralty. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Trough Lake. 78°17' S, 163°28' E. A permanently ice-covered proglacial lake in the Pyramid Trough (in association with which it was named by NZ-APC on Dec. 1, 1993), just W of The Bulwark, on the W side of Koettlitz Glacier, in Victoria Land. US-ACAN accepted the name in 1994.

Troughs. The main one are: Adare, Anschütz-Kämpfe, Balleny, Bransfield, Dawson-Lambton,

Dubinin, Filchner, Healy, Hespérides, Hofmann, Iselin, Lazarev, Lichte, Möller, Penck, Princess Elizabeth, Pyramid, Rennick, Rinner, Shaw, South Orkney, South Shetland, and Thiel.

Trousers. Tourists should wear good quality, pull-on waterproof trousers, with other warm trousers (jeans, etc.) underneath them.

Trout Island. 66°01' S, 65°27' W. Just E of Salmon Island, in the Fish Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed by Fids from Base J in 1959, and named by them in continuation of the fish motif. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1971. It appears on a British chart of 1960.

Trouton, Rupert de Burgh. b. 1897, Ireland, son of physicist Professor Frederick Thomas Trouton and his wife Anne Maria Fowler. After Winchester (he had to leave after a year, in 1911, with a weak heart) and King's College, Cambridge (1919-21; economics), he became a stockbroker and ship owner, a great friend of Keynes, the economist (he had served under Keynes at the Treasury, 1916-19), and in 1928 founded the Hector Whaling Company (not to be confused with Hektor). In 1935 he and Erling Naess founded United Whalers, Ltd., as a subsidiary of Hector. United Whalers had a floating factory named *Terje Viken*, and 9 whale catchers, *Terje 1* through *Terje 9*. All of these ships were requisitioned by the British government for World War II, and the *Terje Viken* was lost to enemy action in 1941. In 1946-47 and 1947-48 Trouton led the *Balaena* whaling expeditions into the waters of East Antarctica. In 1953 Hector legally acquired United Whalers, but on Aug. 15, 1960, following several bad seasons, the *Balaena* fleet was sold to the Japanese. Trouton spent most of his last years in declining health, either at his home in Cape Town, or on his wife's island in Norway. He died on May 10, 1965 in Cape Town.

Islote Trowbridge *see* **Trowbridge Island**

Mount Trowbridge *see* **Mount Troubridge**

Trowbridge Island. 62°00' S, 57°38' W. An island, 3 km NW of Cape Melville, in Destruction Bay, off the E coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958. Named by UK-APC on Sept. 23, 1960, for the *Lady Troubridge* (sic). US-ACAN accepted the name later that year. It appears on an Argentine chart of 1977 as Islote Trowbridge, and that is still the name the Argentines use today. Last plotted by the UK, in late 2008. Someone should change the name from Trowbridge to Troubridge. The change would be so minor that it would affect nothing but the truth.

Troyan Peak. 62°42' S, 60°15' W. A peak, rising to 810 m, and with a steep, snow-free W slope, in Friesland Ridge, 1.55 km WNW of St. Cyril Peak, and 1.8 km N of St. Methodius Peak, it sourmounts Ruen Icefall to the N, W, and S, in the Tangra Mountains, on the E side of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Troyan.

Truant Island *see* **Vázquez Island**

Truant Islet *see* **Vázquez Island**

Gora Trubeckogo. 72°07' S, 3°40' E. A nunatak, just W of Festninga Mountain, at the W end of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians.

Gora Trubjatchinskogo *see* **Trubyatchinskiy Nunatak**

Trubyatchinskiy Nunatak. 68°20' S, 49°38' E. A nunatak, about 12 km S of Alderdice Peak, in the Nye Mountains of Enderby Land. Named by SovAE 1961-62, as Gora Trubjatchinskogo, for magnetician N.N. Trubyatchinskiy (1886-1942). ANCA accepted the translated name on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Trudge Valley. 76°43' S, 159°45' E. On the S side of Windwhistle Peak, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for the many trudges along it. NZ-APC accepted the name, and US-ACAN followed suit in 1965, as did ANCA on Aug. 10, 1966.

True Glacier. 74°38' S, 111°45' W. On the W side of Bear Peninsula, it flows SW into the Dotson Ice Shelf S of Hunt Bluff, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from air photos taken by USN in 1966. Named by US-ACAN in 1977, for Lawrence E. True, USN, radioman who, up to the time of naming, had served 3 deployments with OpDF.

True Hills. 80°13' S, 26°51' W. A group of rock hills, rising to 850 m, 1.5 km SE of the Wiggans Hills, it is the most northeasterly feature of the La Grange Nunataks, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Anthony "Tony" True (b. 1945), BAS surveyor who wintered-over at Halley in 1969, and worked in the Shackleton Range. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Truelare, Charles *see* **USEE 1838-42**

Trueman Terraces. 80°43' S, 22°41' W. Ice-free terraces rising to 1520 m, on the E side of Goldschmidt Cirque, near the E end of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Sir Arthur Elijah Trueman (1895-1956), professor of geology at Glasgow University, 1937-46. US-ACAN accepted the name.

Truman Nunatak. 72°44' S, 75°01' E. A small, partly snow-covered nunatak, 12 km (the Australians say about 15 km) N of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Plotted by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for M.J. Truman, electrical fitter at Mawson Station in 1962. He did not winter-over. US-ACAN accepted the name in 1967.

Islote Trumao. 66°31' S, 65°55' W. One of the McConnel Islands, off Erskine Glacier, opposite the N coast of Darbel Bay, off the Loubet Coast, on the W coast of Graham Land. The name first appears on a 1947 Chilean government chart, named probably by the ChilAE led by Federico Guesalaga Toro, and appeared as such in the 1974 Chilean gazetteer. The name "trumao" is descriptive, being the name given by the Chileans to the type of soil found on this island, deriving as it does from volcanic ash. The name is not synonymous with McConnel Islands, the island being only one of the group. Occasionally the name Islotes Trumao has been applied to the group, however.

Islotes Trumao *see* **McConnel Islands**, **Islote Trumao**

Isla Trump *see* **Trump Islands**

Islote(s) Trump *see* **Trump Islands**

Trump Islands. 66°02' S, 65°57' W. A small group of islands, 6 km S of Dodman Island, between that island and Extension Reef, in the Biscoe islands, off the Graham Coast, on the W coast of Graham Land. Discovered in Aug.-Sept. 1935, by BGLE 1934-37, and named by them (it was the first name that came to mind). It appears on Rymill's 1938 map of the expedition. It appears on a Chilean chart of 1947 roughly translated as Islotes Triunfo. It appears on a 1948 British chart as Trump Islets, plotted in 66°02' S, 66°05' W, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On a 1953 Argentine chart the largest of the group appears as Isla Trump, and on one of their 1957 charts it appears as Islote Trump. The group was photographed aerially by ArgAE 1955-56, and appears on an Argentine chart of 1957 as Islotes Trump, a name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On July 7, 1959, UK-APC, having done away with the term "islet," renamed the group as the Trump Islands, and US-ACAN followed suit in 1963.

Trump Islets *see* **Trump Islands**

Truncated Cones. 77°32' S, 167°05' E. Unofficial name for a feature on Ross Island.

Isla Trundle *see* **Trundle Island**

Trundle Island. 65°23' S, 65°18' W. An island, 1.5 km NE of Jingle Island, in the NE sector of the Pitt Islands, in the Biscoe Islands. Roughly surveyed by ArgAE 1954-55, it appears (unnamed) on their 1957 chart. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for the Dickens character in Pickwick Papers. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Isla Trundle.

Trundy Island. 64°47' S, 64°28' W. An island, 0.6 km WNW of Robbins Island, in the SW part of the Joubin Islands, off Anvers Island, in the Palmer Archipelago. USARP personnel

from Palmer Station worked here from 1965. Named by US-ACAN in 1975, for George Benjamin Noyes "Penny" Trundy (b. 1937. d. March 19, 2008, Stonington, Maine), able seaman on the *Hero*, during that vessel's first voyage to Palmer Station in 1968. He also served on the *Eltanin*. UK-APC accepted the name on Dec. 20, 1974.

Tryavna Peak. 62°37' S, 59°51' W. Rising to over 300 m in Delchev Ridge, 400 m NE by N of Shabla Knoll, 930 m E of Kaloyan Nunatak, and 700 m WSW of Mesta Peak, it surmounts the Sopot Ice Piedmont to the N and NW, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian town of Tryavna.

Mount Tryggve Gran *see* **Mount Gran**

Tryggve Point. 77°39' S, 166°42' E. A point, projecting from the W side of Ross Island into McMurdo Sound, 1.5 km NW of Turks Head, between that feature and Cape Evans. Although this area was first explored during BNAE 1901-04, this feature was not charted until BAE 1910-13, when it was named by Scott for Trygve Gran. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Tryne Bay. 68°24' S, 78°28' E. An open bay, about 5 km wide, between the Tryne Islands and the coast, this is the northeasternmost part of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Trynevika (i.e., "the snout bay"). ANCA accepted the name Tryne Bay on Sept. 4, 1956, and US-ACA followed suit in 1965.

Tryne Crossing. 68°30' S, 78°18' E. A low, but rather rough and steep pass across Langnes Peninsula, at about 10 m above sea level, between Langnes Fjord and the SW arm of Tryne Fjord, in the N part of the Vestfold Hills. It has been used for portage of sledges, and is probably suitable for tracked vehicles. The area was photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. It was photographed again, aerially, by OpHJ 1946-47. On May 13, 1957, this pass was first traversed, by Bruce Stinear's ANARE party, and on April 29, 1958, ANCA named it in association with the fjord. US-ACAN accepted the name in 1961.

Tryne Fjord. 68°28' S, 78°22' E. Also called Tryne Inlet. An irregular-shaped fjord indenting the N side of Langnes Peninsula, in the N part of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it (name means "the snout fjord"). ANCA accepted the name without modification, on Sept, 4, 1956, and US-ACAN followed suit that year. In 1983-84 the Australians established a summer field station here.

Tryne Inlet *see* **Tryne Fjord**

Tryne Island. 68°26' S, 78°21' E. A low, rocky island, about 3 km long, and with a marked indentation on its W side, it is the largest and most southerly of the Tryne Islands, lying in the entrance to Tryne Fjord, in the W limit of Tryne Bay, at the NE end of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who thinking it was part of Langnes Peninsula, named it Langnestrynet (i.e., "the Langnes snout"). ANARE determined it to be an island, and ANCA named it on Sept. 4, 1956, in association with the group.

Tryne Islands. 68°24' S, 78°23' E. A group of numerous small islands and rocks, about 6 km in extent, which forms the W limit of Tryne Bay and also of Tryne Sound, at the NE end of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who called them Trynøyane (i.e., "the snout islands"). ANCA accepted the name Tryne Islands on Sept. 4, 1956, and US-ACAN followed suit in 1965. The Russians call them Ostrova Soglasija.

Tryne Peninsula. 68°26' S, 78°23' E. To the immediate W of Tryne Sound, in the Tryne Islands, in the NE end of the Vestfold Hills. Named by the Russians (apparently), in association with the other features in the area with a similar name.

Tryne Point. 67°18' S, 59°03' E. Also called Trynet Point. A rocky point at the E extremity of Law Promontory, it forms the W side of the entrance to Stefansson Bay, in Kemp Land, in Enderby Land. Photographed aerially in Jan.-Feb. 1937, by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Trynet (i.e., "the snout"). US-ACAN accepted the name Tryne Point in 1956, and ANCA followed suit on May 18, 1971.

Tryne Sound. 68°25' S, 78°25' E. Also called Tryne Strait. A short, narrow passage connecting Tryne Bay and Tryne Fjord, on the N side of Langnes Peninsula, between the E side of Tryne Island and the mainland at the N end of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Tryne Sund (i.e., "the snout sound"). ANCA accepted the name Tryne Sound on Sept. 4, 1956, and US-ACAN followed suit that year.

Tryne Strait *see* **Tryne Sound**

Tryne Sund *see* **Tryne Sound**

Trynet Point *see* **Tryne Point**

Trynevika *see* **Tryne Bay**

Trynøyane *see* **Tryne Islands**

Zaliv Tryoshnikova *see* **Zaliv Treoshnikova**

Trzy Stawy. 62°05' S, 57°56' W. Three small lakes, W of Three Kings Cove, on the Bransfield Strait, King George Island, in the South Shetlands. Named by the Poles in 1981, after a feature in the Tatra Mountains of Poland. Name means "three small lakes."

Tsamblak Hill. 62°38' S, 61°00' W. A rocky hill trending N-S, in the E part of Byers Peninsula, on Livingston Island, in the South Shetlands. Its highest point, 100 m above sea level, is 1.6 km N of Negro Hill, 1.5 km S of Sparadok Point, and 4.2 km E of Chester Cone. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for the Bulgarian scholar and metropolitan of Kiev, Grigori Tsamblak (1365-1420).

Tsarigrad Peak. 63°01' S, 62°35' W. Rising to 1760 m in the Imeon Range, 550 m S of Sleveykov Peak, 600 m NE of Neofit Peak, 2.5 km SW of the summit of Mount Foster, and overlooking Armira Glacier to the SE, on Smith Island, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for the conference held by the Great Powers at Constantinople in 1876, that determined the Bulgarian ethnic borders as of the second half of the 19th century. Tsarigrad is the Bulgarian name for Constantinople.

Tsarporten. 68°49' S, 90°44' W. A natural tunnel on the N side of Cape Ingrid, on the coast the Norwegians call Lazarevkysten, on Peter I Island. Named by the Norwegians after Tsar Peter I of Russia.

Tschaffert, Helmut A. *see* **Tschuffert Peak**

Tschuffert Peak. 67°28' S, 60°54' E. A prominent, isolated peak, rising to 244 m, between Taylor Glacier and Chapman Ridge, and about 3 km SSE of Taylor Rookery, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Svartpiggen (the black peak). Renamed by ANCA for Helmut A. Tschaffert (b. Jan. 26, 1931, Austria), noted skier and mountain climber, Australian meteorologist at Mawson Station in 1958. Unfortunately, the Australians didn't do an accurate job with their naming, not a unique distinction for ANCA, by any means, or anyone else, as witness US-ACAN accepting the name in 1965, without any form of independent checking.

Gora Tsentral'naya *see* **Tsentral'naya Hill**

Tsentral'naya Hill. 70°45' S, 11°40' E. A bare rock hill rising to 205 m in the center of the Schirmacher Hills, in Queen Maud Land. Mapped by SovAE 1961, and named by them as Gora Tsentral'naya (i.e., "central hill"). US-ACAN accepted the translated name in 1970.

Tsiolkovskiy Island. 70°30' S, 3°00' E. An ice-covered island in the Fimbul Ice Shelf of Queen Maud Land, close NE of the similar (but smaller) Kroshka Island. Its summit rises to about 200 m above the general level of the ice shelf. Mapped by SovAE 1961, and named by them as Ostrov Tsiolkovskogo, for Konstantin Eduardovich Tsiolkovskiy (1857-1935), Russian scientist and inventor. US-ACAN accepted the name Tsiolkovskiy Island in 1970.

Tsiolkovskogo *see also* **Ciolkovskogo**

Ostrov Tsiolkovskogo *see* **Tsiolkovskiy Island**

Tsuchiya, Tomoji. b. 1878, Yamagata, Japan. 2nd mate on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12. For the second half of the expedition he replaced Zensaku Tanno as 1st mate. He died in 1931.

Rocas Tu *see* **Tu Rocks**

Tu Rock *see* **Tu Rocks**

Tu Rocks. 62°13' S, 58°53' W. Two low rocks and an outlier (making 3 rocks altogether) in Maxwell Bay, 3 km E of the SW end of King

George Island, and about 11 km ESE of Ardley Peninsula, in the South Shetlands. The 2 main ones (rising to 6 m and 1.5 m above sea level respectively) lie about 5.4 km from each other, and all three are difficult to see (especially the outlier), and thus a danger to shipping. Charted in 1935 by the personnel on the *Discovery II*, and named phonetically by them (Tree Rocks, for example, did not sound as good as Tu Rocks). They appear as such on British charts of 1942 and 1948, and Tu Rocks was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. They appear in the 1955 British gazetteer, and on a British chart of 1962. On an Argentine chart of 1947, the feature appears as Rocas Tú (i.e., with an accent mark, thereby altering its meaning completely to "rock you"). This was accepted by the 1970 Argentine gazetteer. The Chilean gazetteer accepted the name Rocas Tu, but without the accent mark. On a 1961 U.S. Hydrographic Office chart, it appears as one rock, and named Tu Rock. The name appears in the 1976 British gazetteer. Last plotted by the UK, in late 2008.

Tua *see* **Tua Hill**

Tua Hill. 72°05' S, 1°12' E. An isolated rock, 5 km W of Brattskarvet Mountain, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tua (i.e., "the tussock"). US-ACAN accepted the name Tua Hill in 1966.

Tuanjie Hu *see* **Stepped Lake**

Mount Tuatara. 80°34' S, 158°20' E. Rising to 1640 m, 11 km N of Mount Hamilton, on the S side of Byrd Glacier, between that glacier and the Ross Ice Shelf. Discovered and mapped by the Northern Party of NZGSAE 1960-61, and so named by them because its long, spiny summit ridge resembles the shape of a lizard found only on some small islands near NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1961. ANCA accepted the name on Nov. 24, 1961.

Tuati Peak. 77°57' S, 162°49' E. A peak of cathedral-like rocks, rising to 2595 m above the N wall of Mitchell Glacier, at the head of that glacier, in the Royal Society Range, in Victoria Land. Named by NZ-APC in 1993, for John Sac (q.v.). US-ACAN accepted the name later in 1993.

Tubor, Henry *see* **USEE 1838-42**

Isla Tucapel *see* **Sooty Rock**

Mount Tuck. 78°29' S, 84°50' W. A pyramidal mountain rising to 3560 m, at the head of Hansen Glacier, in the Sentinel Range. First mapped by USGS from ground surveys, and USN air photo staken between 1957 and 1959. Named by US-ACAN in 1961, for John Tuck.

Tuck, John "Jack," Jr. Also known as "Bob." b. Aug. 15, 1932, Auburn, Mass. He was an ensign with the Navy's Civil Engineering Corps, a 1954 graduate of Dartmouth, and was on the *Edisto* in the Arctic. In 1955 he was at Wonalancet, NH, studying dog-driving under Dutch Dolleman and Tom McEvoy, and also learning how to parachute, but broke a leg on his first jump, and didn't qualify. He shipped out of Norfolk., Va., in 1955, on the *Glacier*, bound for Christchurch, NZ, then on from there to McMurdo Sound, to help build AirOpFac McMurdo (which was later expanded into McMurdo Station). He and Dick Prescott were in charge of the 2 dog teams that had come down on the *Glacier* (dogs managed by Tuck) and the *Wyandot* (dogs managed by Prescott), for use at McMurdo, and (later) at the Pole, as search and rescue. He wintered-over at McMurdo in 1956, as 2nd-in-command of the construction crew, flew out with the first advance party of Seabees to the Pole on Nov. 20, 1956, and on Nov. 28, 1956 Paul Siple picked him to be the military leader for the wintering-over at Pole Station in 1957. He then flew back to McMurdo on Dec. 1, and arrived back at the Pole on Dec. 29, 1956 to take up his new role. On Nov. 19, 1957 he handed over to Lt. Vernon Houk, returned to the U.S. and became something of a celebrity (he was on *What's My Line*, for example). He wrote the foreword to Paul Siple's book, *90 S*. When he left the Navy he became a professor of geography at the University of Wisconsin, and then the University of Georgia. In 1976 he moved to Deerfield, Mass, where he became an educational consultant and investments manager. He died on Aug. 14, 1984, at University of Massachusetts Hospital, Worcester, Mass., two days after an accident, and one day before his 52nd birthday. It would have been very odd for someone of Tuck's experience with firearms to shoot himself accidentally in the mouth while cleaning a .22 rifle.

Mount Tucker. 64°20' S, 59°16' W. A distinctive rock mountain mass, rising to about 1020 m, 14 km NW of Longing Gap, overlooking the E part of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Tucker Sno-Cat Corporation, of Medford, Oregon, manufacturer of Sno-cat vehicles. US-ACAN accepted the name later in 1964.

Tucker, Charles T. Master of the *Erebus* during Ross's expedition of 1839-43.

Tucker Glacier. 72°32' S, 169°15' E. A major valley glacier, about 140 km long, which flows SE between the Admiralty Mountains and the Victory Mountains, into the Ross Sea at the Borchgrevink Coast of northern Victoria Land. There is a snow saddle at the head of the glacier, just W of the Homerun Range, from which Ebbe Glacier flows northwestward. The glacier is remarkably free from major icefalls or other obstacles to travel, although its gentle gradient is broken by 2 small, easily negotiated features, Biscuit Step and Pemmican Step. It was explored by NZGSAE 1957-58, and named by them in association with Tucker Inlet. NZ-APC accepted the name, and US-ACAN followed suit in 1962. Originally plotted in 72°40' S, 169°00' E, it has since been replotted.

Tucker Inlet. 72°37' S, 169°45' E. An ice-filled inlet, about 14 km wide, indenting the coast of Victoria Land for an undetermined length at the mouth of Tucker Glacier between Cape Wheatstone on the N and Cape Daniell on the south. Discovered by Ross in Feb. 1841, and named by him for Charles T. Tucker. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Originally plotted in 72°39' S, 170°00' E, it has since been replotted.

Tucker Point. 73°57' S, 114°49' W. An ice-covered pioint on the W side of Murray Foreland, on Martin Peninsula, 20 km SW of Cape Herlacher, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN in 1977, for Robert L. Tucker, USN, meteorologist on nine OpDF deployments up to 1976.

Cabo Tucumán. 64°41' S, 63°12' W. A cape, immediately NW of Cape Astrup, in the NE part of Wiencke Island, in the Palmer Archipelago. Named by the Argentines.

Tudor, Hugh Marsen Hough. b. Oct. 6, 1922, Chester, son of Hugh M. Tudor and his wife Constance Hough. While at Manchester University, he joined the RAF, was shipped out to Florida for flight training in 1941, and graduated on June 17, 1942. He flew 43 missions over Europe, and was awarded the DFC. He was promoted to squadron leader at the age of 22, but after the war reverted to his substantive rank of flight lieutenant. In 1949, he married Audrey M. Turner in Surrey, and later that year became one of the two flyers in the RAF Antarctic Unit during the first season of NBSAE 1949-52. He died in Surrey in Jan. 2002.

Tuff Bluff. 78°02' S, 165°27' E. A small, though prominent, light-colored bluff on the N slopes of Brown Peninsula, Victoria Land. The bluff is significant geologically as a locality for trachytic tuff, hence the name given by NZ-APC in 1966, following work done here by NZGSAE 1964-65 and VUWAE 1964-65. US-ACAN accepted the name in 1970.

Tufft, Roger William. b. March 6, 1932, Newport, Monmouthshire, son of Arthur Tufft and his wife Margaret R. Groves. After university (history and economics), he did his national service as a paratrooper in the Army, then joined FIDS in 1955, as a meteorologist, in October of that year sailing from Southampton on the *John Biscoe*, bound for Port Stanley. He wintered-over at Base G in 1956, and at Base D in 1957 and 1958. In Feb. 1957, he was a member of the reconnaissance party to the Detroit Plateau. In late June 1959 he returned to Southampton on the *Shackleton*, and was met by sailor Bill Tilman, who recruited him for a round-the-world trip on the *Mischief*. He began teaching in 1961, and was in the Arctic several times in the 1960s. In 1966-67 he, Wally Herbert and Allan Gill spent 4 months living with the Eskimos, to prepare themselves for their 1969 crossing of the Arctic. Tufft pulled out, however, before the famous

crossing, unhappy with Herbert's leadership style. As a sort of protest, he, Dr. Hugh Simpson, and Myrtle Simpson, set out on their own (unsuccessful) ski trek to the North Pole. In 1972, in Penrith, he married Maud Oliver. He now lives in Plockton, very near the Isle of Skye, and has Parkinson's Disease. Note: The gazetteers say his name is Ronald, yet he was born Roger, was married as Roger, and seems to know nothing of ever having been called Ronald.

Tufft Nunatak. 63°55' S, 58°42' W. A small nunatak, rising to 330 m N of Aitkenhead Glacier, and 5 km SW of Mount Bradley, on Trinity Peninsula. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by Fids from Base D in 1960–61. Named by UK-APC on Feb. 12, 1964, for Roger Tufft. US-ACAN accepted the name later in 1964.

Tufsane. 72°19' S, 24°49' E. A group of nunataks, in the S part of the Dufek Massif, in the S central part of the Sør Rondane Mountains. Name means "the insignificants" in Norwegian. The Russians call them Piki Bunina.

Tufts College Valley *see* **Nichols Snowfield, Palestrina Glacier, Tufts Pass**

Tufts Pass. 69°25' S, 70°35' W. Runs E-W between the Rouen Mountains and the Elgar Uplands, and connects the Hampton Glacier to the Nichols Snowfield, in the N part of Alexander Island. Discovered aerially and roughly mapped in 1937 by BGLE 1934–37. During RARE 1947–48, Finn Ronne named an area here as Tufts College Valley (or just Tufts Valley) which included this pass, as well as Palestrina Glacier and part of Nichols Snowfield. Named for Tufts University, Medford, Mass., Dr. Robert Nichols's university. UK-APC individualized this pass as Tufts Pass on March 2, 1961, and US-ACAN followed suit that year.

Tufts Valley *see* **Tufts Pass**

Tuitate-iwa. 71°30' S, 35°35' E. A nunatak, rising to 2066.3 m, with a conspicuous cliff, 3 km NNW of the peak the Japanese call Tyo-gatake, on Mount Eyskens, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, it was named by the Japanese on March 22, 1979. A tuitate, or tsuitate, is a single-lead wooden screen used to partition a room.

Tukeri Peak. 77°17' S, 161°42' E. Rising to about 1400 m at the head of Ringer Valley, midway between Mount Majerus and Spain Peak, on the principal ridge of the Saint Johns Range, in Victoria Land. Named descriptively by NZ-APC on Sept. 12, 2005. The word "tukeri," apparently, is a Maori word meaning "force of wind." US-ACAN accepted the name in 2006.

Tukey Island. 64°46' S, 64°26' W. Near the center of the Joubin Islands, off the SW part of Anvers Island, in the Palmer Archipelago. Work was done here by USARP personnel from Palmer Station from 1965. Named by US-ACAN in 1975, for Claude C. Tukey (b. March 1947), messman on the *Hero* on that vessel's first voyage to Palmer Station in 1968. UK-APC accepted the name on Dec. 20, 1974.

Tukhchiev Knoll. 62°38' S, 60°10' W. A solitary, ice-covered knoll rising to about 650 m, about 1.3 km E of the midpoint of Wörner Gap, 3.6 km ENE of the summit of Pliska Ridge, 4.03 km NNE of the summit of Mount Friesland, and 2.9 km SE of the highest point on Mount Bowles, it is a conspicuous landmark in the area of Wörner Gap, overlooking Huron Glacier and the upper Perunika Glacier, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, as Mogila Kuzmanova, for mechanic Kuzman Tukhchiev (b. 1945). This was translated into English as Kuzman Knoll. However, on April 29, 1997, UK-APC accepted the name Tukhchiev Knoll, and US-ACAN followed suit that year. This feature was plotted by the UK in late 2008. Kouzman Touhchiev (as his name is also transliterated) took part in BulgAE 1993–94, and was base leader at St. Kliment Ohridski Station in 1994–95 and 1995–96.

Mount Tukotok. 72°17' S, 164°43' E. A red granite peak, rising to 2540 m, 8 km ESE of Mount Apolotok, in the Salamander Range of the Freyberg Mountains. Named by the Northern Party of NZGSAE 1963–64. It is an Eskimo word meaning "the little red one" (the New Zealanders say it means "the one who hides"), and relates to its position alongside the larger Apolotok. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

The *Tula*. A 150-ton, two-masted, square-sterned schooner of 74 feet 4 inches in length, built in 1819 by Thomas Pope, of Mount Batten, Devon, used as Biscoe's flagship in 1830–32 (*see* **Biscoe Expedition**).

Cabo Tula *see* **Tula Point**

Cape Tula *see* **Tula Point**

Punta Tula *see* **Tula Point**

Tula Mountains. 66°45' S, 51°00' E. A group of numerous peaks extending eastward from Amundsen Bay, between the Scott Mountains and the Napier Mountains, in Enderby Land. They include Mount Riiser-Larsen. Discovered on Jan. 13 or 14, 1930 by BANZARE 1929–31, and named by Mawson as the Tula Range, for the *Tula*. In Feb. 1958, an ANARE party led by Phil Law landed from a launch near Mount Riiser-Larsen. ANCA re-defined the feature in 1958, as Tula Mountains, following the Dec. 1958 ANARE dog-sledging survey of the mountains by Graham Knuckey. US-ACAN accepted the name Tula Mountains in 1962.

Tula Point. 65°31' S, 65°39' W. Forms the NE extremity of Renaud Island, in the Biscoe Islands. The Biscoe Islands were discovered in Feb. 1832, by John Biscoe, and were first roughly surveyed by FrAE 1903–05 and FrAE 1908–10. Renaud Island was again roughly surveyed by BGLE 1934–37. This point was named by UK-APC on March 22, 1954, as Cape Tula, for one of Biscoe's two ships, the *Tula*. US-ACAN accepted this name. It appears as such on a 1957 British chart. Photographed aerially by FIDASE in 1956–57. On July 7, 1959, UK-APC redefined it as Tula Point, US-ACAN accepted that in 1960, and it appears as such on a British chart of 1960. It appears on a Chilean chart of 1962 as Cabo Tula, on one of their 1971 charts as Punta Tula, and the name accepted by the 1974 Chilean gazetteer was Cabo Tula. The Argentines call it Punta Tula.

Tula Range *see* **Tula Mountains**

Tulaczyk Glacier. 78°35' S, 85°53' W. A steep valley glacier flowing W from the W slope of the Vinson Massif, between Cairns Glacier and Zapol Glacier, in the Sentinel Range of the Ellsworth Mountains, and discharging into Nimitz Glacier. Named by US-ACAN in 2006, for Slawek M. Tulaczyk, Earth Sciences, University of California, Santa Cruz, USAP researcher of West Antarctic ice streams from 1998.

Grupo Tule del Sur *see* **Thule Islands**

Cape Tulenij. 66°15' S, 100°45' E. A cape in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Mys Tjulenij. This name was translated by the Australians as Cape Tulenij. Not to be confused with Tyuleniy Point.

The *Tulla* *see* **The *Thulla***

Ostrov Tumannyj *see* **Miles Island**

Tumannyj Island *see* **Miles Island**

Tumba Ice Cap. 64°05' S, 60°55' W. The ice-cap covering the W half of Chavdar Peninsula, it extends 7.7 km in an E-W direction and 4 km in a N-S direction, W of Samodiva Glacier, and drains both northward into Curtiss Bay and southward into Hughes Bay, in Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Sept. 14, 2010, for the peak of Tumba, in Belasitsa Mountain, in southwestern Bulgaria.

Tumble Glacier. 69°57' S, 69°20' W. A glacier, 11 km long and 5 km wide, it flows E from the cliffs of Mount Egbert, Mount Ethelwulf, and Mount Ethelred, into the W side of George VI Sound, immediately S of Mount King, on the NE side of Alexander Island. First roughly surveyed in Oct. and Nov. 1936 by BGLE 1934–37, it appears on Stephenson's 1940 map of that expedition. Re-surveyed in 1948 by Fids from Base E, who so named it because of the extremely broken condition of the lower reaches of the glacier. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Tumbledown Cliffs. 64°05' S, 58°27' W. Conspicuous rock cliffs, rising to 360 m above Prince Gustav Channel, about 5 km N of Cape Obelisk, on the W coast of James Ross Island. Probably discovered in Oct. 1903 by SwedAE 1901–04. The expedition's map of 1905, although it does not name this feature, indicates that they had seen it. Surveyed by Fids from Base D in Dec. 1945. Named by UK-APC on Sept. 4, 1957, for the formation of the scree (talus) slope at the foot of the cliffs. Further surveyed by FIDS in 1960–61. US-ACAN accepted the name in 1963.

Tumbledown Hill. 69°25' S, 76°05' E. In the S part of Stornes Peninsula, sloping down to 2 lakes on its E side, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987. The Chinese call it Niulang Shan.

Tumbledown Mesa. 64°05' S, 58°26' W. A small, but prominent, rubble-covered triangular mesa, with a maximum length of about 2 km,

and rising to about 300 m above sea level, between Kerrick Col and Tumbledown Cliffs, on James Ross Island. Named by UK-APC on Nov. 15, 2006, in association with the cliffs.

Tundzha Glacier. 62°35' S, 60°30' W. A glacier on Livingston Island, in the South Shetlands, extending 14 km in an E-W direction, and 4.5 km in a N-S direction, it is bounded by Snow Peak to the W, Teres Ridge to the E, and to the S by the glacial divide between the Drake Passage and Bransfield Strait, and flows northward into Hero Bay between Avitohol Point and Siddons Point. Named by the Bulgarians on Nov. 4, 2005, for the Tundzha River in Bulgaria.

Tunet *see* **Tunet Valley**

Tunet Valley. 72°02' S, 4°02' E. A semi-circular, ice-filled valley on the N side of Mount Hochlin, between that mountain and Vedkosten Peak and Stålstuten Ridge, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Tunet (i.e., "the country courtyard"). US-ACAN accepted the name Tunet Valley in 1966.

Tunga *see* **Tunga Spur**

Tunga Spur. 73°54' S, 5°20' W. A prominent rock spur, it extends from the SW part of the Kirwan Escarpment, just SW of Gommen Valley, between that valley and the cirque the Norwegians call Svelget (which lies to the SW of the spur), in the N part of the Urfjell Cliffs, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tunga (i.e., "the tongue"). US-ACAN accepted the name Tunga Spur in 1966.

Tuning Nunatak. 84°44' S, 115°58' W. A small rock nunatak, 1.5 km N of Darling Ridge, in the Ohio Range. Surveyed by the Horlick Mountains Traverse Party of 1957-58. Named by US-ACAN in 1962, for Preston O. Tuning, meteorologist at Byrd Station in 1960.

Pico Tuorda *see* **Tuorda Peak**

Tuorda Peak. 65°59' S, 65°10' W. Rising to 870 m, eastward of Ferin Head, on the NW side of the Simler Snowfield, on the Graham Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base J, and in 1958-59 it was mapped by FIDS cartographers from these efforts. Named by UK-APC on July 7, 1959, for Pava Lars Nilsson Tuorda (1847-1911), a Jokkmokk Lapp who, in 1883, with Anders Rossa (*see* **Rossa Point**), accompanied A.E. Nordenskjöld to western Greenland, and first demonstrated the use of skis for polar travel. US-ACAN accepted the name in 1971. It appears, misspelled as Thorda Peak, in the 1974 British gazetteer. The Argentines call it Pico Tuorda.

Îles Tupinier *see* **Tupinier Islands**

Islas Tupinier *see* **Tupinier Islands**

Islotes Tupinier *see* **Tupinier Islands**

Rocas Tupinier *see* **Tupinier Islands**

Tupinier Islands. 63°22' S, 58°16' W. A group of pyramid-shaped islands, reaching an elevation of about 90 m above sea level, off the NW coast of Trinity Peninsula, about 5 km NW of Cape Ducorps. Discovered and charted on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Îles Tupinier, for engineer Baron Jean-Marguerite Tupinier (1779-1850), an official with the French Navy Department who was instrumental in obtaining government support for the expedition. They appear as such on the expedition's 1841 map, and also in Vincendon-Dumoulin's 1847 atlas. They appear as Islas Tupinier on a translated Spanish chart of 1861. The British called them Tupinier Islands on a chart of 1901, and on a Norwegian chart of 1928 they appear as Tupinier Øyane. Re-surveyed by Fids from Base D in 1946, they appear on a British chart of 1949 as Tupinier Islets, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. They appear that way in the British gazetteer of 1955. Photographed aerially by FIDASE in 1956-57. The term "islet" fell out of fashion, and on July 7, 1959, UK-APC renamed the group as Tupinier Islands, and it appears as such on a 1962 British chart. US-ACAN accepted this new name in 1963. They appear on an Argentine chart of 1953 as Islotes Tupinier, and that name was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 (the Chileans rejecting the proposed name Rocas Tupinier).

Tupinier Islets *see* **Tupinier Islands**

Tupinier Øyane *see* **Tupinier Islands**

Tupman Island. 65°29' S, 65°32' W. An island, 3 km long, E of Pickwick Island, in the Pitt Islands, in the Biscoe Islands. Roughly surveyed by ArgAE 1954-55, it appears (unnamed) on their chart of 1957. Photographed aerially by FIDASE in 1956. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Gora Tupoleva. 70°41' S, 67°16' E. A nunatak, E of Murray Dome, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Tur, Juan José. b. 1931, San Juan, Puerto Rico. He earned his medical degree from the University of Puerto Rico School of Medicine, and completed his courses in California. He was a lieutenant in the USNR when he became military leader and medical officer at Hallett Station during the winter-over of 1957. He had a hard time on the ice; some say it was because the Southern boys treated him bad. On Jan. 16, 1958 he was relieved by Lt. Bob Bornmann, and he left on the *Arneb*, for NZ, a different man than when he had come in. He was later a plastic surgeon in Fresno.

Tur Icefall. 72°19' S, 170°10' E. A short icefall of unusual beauty falling from Hallett Peninsula to the SE end of Seabee Hook. It is very prominent from Hallett Station. Named by NZGSAE 1957-58, for Juan Tur. NZ-APC accepted the name.

Tur Peak. 73°06' S, 167°58' E. A distinctive peak, rising to 1470 m, at the SE periphery of the Malta Plateau, on the N wall of the lower part of Mariner Glacier, 7 km SSE of Mount Alberts, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Juan Tur.

Turbidite Hill. 82°01' S, 157°45' E. A low hill, 6 km E of the Laird Plateau, and about 7 km NE of Mount Hayter, on the N side of Olson Névé. Mapped by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, and named by them for the curious sedimentary features in the Beacon Sandstone making up a portion of this feature. NZ-APC accepted the name, and ANCA followed suit on Aug. 10, 1966, with US-ACAN accepting the name later in 1966.

Turbulence Bluffs. 67°09' S, 56°29' E. Three high bluffs with vertical faces on the NW, but merging with the ice sheet on the SE, along the E side of Robert Glacier, 26 km NE of Rayner Peak, in Kemp Land, in Enderby Land. Plotted by Australian cartographers from ANARE air photos. Named by ANCA on July 29, 1965 for the severe turbulence encountered while attempting a helicopter landing in 1965. Ian McLeod and John Arthurson were the first to visit this feature, on Feb. 21, 1965. US-ACAN accepted the name in 1970.

Mount Turcotte. 81°15' S, 85°24' W. A rock peak, about 4 km NW of Mount Tidd, in the Pirrit Hills. Named by US-ACAN in 1964, for F. Thomas "Tom" Turcotte, seismologist here with the Ellsworth-Byrd Traverse Party, when they positioned this peak on Dec. 7, 1958.

Hrebet Turgeneva. 72°05' S, 24°18' E. A ridge on the SE side of Deromfjellet, in the NE part of Mount Walnum, in the central part of the Sør Rondane Mountains. Named by the Russians.

Turk Glacier. 73°21' S, 68°24' E. A small glacier at the S side of McIntyre Bluffs, between those bluffs and Philpott Bluff, it flows W to enter the Lambert Glacier, in the Mawson Escarpment. Mapped by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Andrew Turk, surveyor with the ANARE Prince Charles Mountains Survey Party of 1974. US-ACAN accepted the name on Oct. 20, 2009. The Russians, who plot it in 73°02' S, 68°29' E, call it Lednik Krichaka, for O.G. Krichak (*see* **Krichak Bay**).

Turk Peak. 81°02' S, 158°23' E. A large, hump-shaped, mainly ice-covered peak, rising to 2000 m, being the central of 3 peaks on a ridge about 11 km N of Mount Zinkovich, and just E of Mount Wharton, in the Churchill Mountains. Named by US-ACAN in 1965, for Lt. Col. Wilbert Turk, commander of the 61st Troop Carrier Squadron, which flew the first Hercules aircraft into Antarctica, in Jan. 1960. On Jan. 28, 1960, he flew the C-130 to the Pole

(*see* **South Pole**, that date). ANCA accepted the name on Aug. 27, 1975.

Turks Head. 77°40' S, 166°46' E. A precipitous, black-colored promontory, or headland, rising to over 200 m (the New Zealanders say 158 m), and projecting into McMurdo Sound from Turks Head Ridge, on Ross Island, 8 km ESE of Cape Evans, on the W side of the island, just N of the Erebus Glacier Tongue. Discovered by BNAE 1901-04, and descriptively named by them as Turk's Head (Antarctic place names generally have since become largely free of apostrophes). US-ACAN accepted the name (without the apostrophe) in 1952, and NZ-APC followed suit.

Turks Head Bay. 77°40' S, 166°44' E. A small bay between Tryggve Point and Turks Head, in Erebus Bay, on the W side of Ross Island. The name Turk's Head Bay appears to be first used on a map drawn up by BAE 1910-13, named in association with Turk's Head (*see* **Turks Head** for note on apostrophes in Antarctic place names). US-ACAN accepted the name (without the apostrophe) in 1964, and NZ-APC followed suit.

Turks Head Ridge. 77°38' S, 166°49' E. A mostly ice-covered ridge, extending up the slopes of Mount Erebus to a height of 944 m, from between Turks Head and Three Sisters Cones, at McMurdo Sound, in the SW part of Ross Island. Mapped by BAE 1910-13, and named by them as Turk's Head Ridge, in association with Turk's Head (*see* **Turk's Head** for note on apostrophes in Antarctic place names). US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Turmoil Rock. 62°21' S, 59°47' W. A rock awash, about 1.1 km SE of Table Island, on the W side of English Strait, in the South Shetlands. Charted by an RN Hydrographic Survey unit on the *Protector* in 1967. Named descriptively by UK-APC on Nov. 3, 1971. Since the surface of the rock is only about 0.5 m below the surface of the water, there is always turmoil around it. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Isla Turnabout *see* **Turnabout Island**

Islote Turnabout *see* **Turnabout Island**

Turnabout Glacier. 77°46' S, 160°43' E. A glacier occupying the E half of Turnabout Valley, to the S of Finger Mountain, between that mountain and Pyramid Mountain, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, in association with the valley.

Turnabout Island. 66°06' S, 65°45' W. A snow-capped island, the southeasternmost of the Saffery Islands, 3 km SW of Black Head, off the Graham Coast, on the W coast of Graham Land. Discovered and surveyed in Aug. 1935, by BGLE 1934-37, and named by them for the turning point in a sledge journey S from the Argentine Islands when the survey was done, and when open water was encountered SW of this island. It appears on Rymill's 1938 map of the expedition, and also on a 1948 British chart. However, on another 1948 British chart it appears as Turnabout Islet, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. On a 1943 Chilean chart it appears as Isla Cúmulo (i.e., "pile island"). On an Argentine chart of 1949 it appears as Isla Turnabout, but on one of their charts of 1953 as Islote Regreso (which means the same thing), and on one from 1957 as Isla Regreso. On July 7, 1959, UK-APC, having done away with the term "islet," renamed this feature Turnabout Island, and US-ACAN followed suit in 1963. The Argentine gazetteer of 1970 accepted the name Islote Regreso. On a Chilean chart of 1963 it appears as Islote Turnabout, and that was the name accepted by the 1974 Chilean gazetteer.

Turnabout Ridge. 83°18' S, 162°35' E. A high, rugged ridge, about 16 km long, between Linehan Glacier and Lowery Glacier, in the Queen Elizabeth Range. So named by the Ohio State University Party here to the Queen Alexandra Range in 1966-67 because the ridge was the farthest reached from base camp by the party. US-ACAN accepted the name in 1968.

Turnabout Valley. 77°46' S, 160°32' E. A partially deglaciated valley (Turnabout Glacier occupies the E half of the valley that is glaciated) in the Quartermain Mountains of southern Victoria Land, between Finger Mountain and Pyramid Mountain, to the immediate N of Beacon Valley, and on the S side of Taylor Glacier. Named descriptively by VUWAE 1958-59. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Turnback Dome. 76°05' S, 65°22' E. An ice dome, about 12 km in diameter, with ridges extending radially from the summit, which is about 50 m above the surrounding area. This was the farthest point reached by an ANARE traverse of 1990-91, before they turned back, hence the name given by ANCA on March 12, 1992.

Mount Turnbull. 70°21' S, 64°02' E. Rising to 1980 m, it is the smaller of 2 partly snow-covered mountains in the W extension of the Athos Range, about 20 km (the Australians say about 28 km) SW of Mount Starlight, in the NW part of the Prince Charles Mountains, in Mac. Robertson Land. Recorded on terrestrial photos taken by Rob Lacey in 1955, and on air photos taken by ANARE in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for Walter Lawrence "Laurie" Turnbull, radio supervisor at Mawson Station in 1965. US-ACAN accepted the name in 1970.

Punta Turnbull *see* **Turnbull Point**

Turnbull, David Harrison. b. July 24, 1921. Captain of the BAS ship *Shackleton*, 1960-69. He died in Aug. 1999, in Winchester.

Turnbull, Jeffrey. He joined FIDS in 1952, as a radio operator, and wintered-over at Base G in 1953.

Turnbull Peak. 77°24' S, 161°01' E. Rising to 1600 m at the head of Hernandez Valley, in the Apocalypse Peaks of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Ian Turnbull, geologist with the Institute of Geology and Nuclear Science. In 1988-89 he worked on the geology of the western Asgard Range. In 1992 and 1994, he was a member of the geology mapping parties in the Victoria Valley, the Saint Johns Range, and in the areas of the Mackay Glacier, and in 1997-98 was in the area of the Wilson Piedmont Glacier. US-ACAN accepted the name in 2006.

Turnbull Point. 63°03' S, 56°36' W. An exposed rocky point at the W end of d'Urville Island, it forms the NE entrance point of Burden Passage. This was the old Point Bransfield, named by Ross in 1842 (*see* **Bransfield Island**, for a history of this). Following surveys by Fids from Base D in 1959-61, it was renamed by UK-APC on Feb. 12, 1964, for David Turnbull. US-ACAN accepted the new name later in 1964. Although it appears on a 1958 Argentine chart as Punta Bransfield, that was in the days before FIDS conducted their survey. However, it appears as such in the 1970 Argentine gazetteer as well, and also in the 1974 Chilean gazetteer. Today, however, the Argentines call it Punta Turnbull. The Chileans still call it Punta Bransfield.

Turneaux, Tobias. This is a misprint, sometimes seen (*see* **Furneaux, Tobias**).

Islote Turner *see* **Barrientos Island**

Mount Turner. 68°04' S, 55°29' E. A prominent mountain in the Dismal Mountains, about 10 km SW of Cyclops Peak, in Kemp Land, in Enderby Land. Plotted by Australian cartographers from 1959 ANARE air photos. Named by ANCA on Aug. 27, 1975, for Albert John "Jack" Turner (q.v.), plant inspector who wintered-over at Mawson Station in 1974, and a member of the ANARE tractor train party which established a base camp at Knuckey Peaks that year.

Turner, Albert John "Jack." b. May 27, 1926. Plant inspector at Casey Station in 1970. He led a party to Law Dome. He was back in the same role at Mawson Station in 1974, and this time led a party into Enderby Land. *See also* **Mount Turner**.

Turner, Andrew John "Andy." b. 1948, Sittingbourne, Kent. BAS builder who wintered over 5 times — at Halley Bay Station in 1973, at Signy Island Station in 1974, at Rothera Station in 1976 and 1979, and at Faraday Station in 1983.

Turner, Henry *see* **USEE 1838-42**

Turner, William "Bill." b. Oct. 4, 1923, Ladybank, Fife. He graduated M.A., at St Andrews, in 1947, became a doctor at the same university, in 1952, was house surgeon at Christchurch Hospital and City Hospital, York, and joined FIDS in 1953, as a medical officer, wintering-over at Base D in 1954, as base leader. He was away a lot of the time during the incoming and outgoing summers, on the ships as they toured bases. He spent some time working as doctor for a British whaling company in South Georgia, arriving back in London on Jan. 26, 1955, on the *Highland Brigade*, and returning to Scotland as a doctor. He was also medical officer at the district hospital at Kuala Belait, in Brunei. By 1957 he was living in Ladybank, and later lived at Eyemouth, Berwick, and died near Ullapool, in 1986. He won the MBE.

Turner, William W. *see* **USEE 1838-42**

Turner Glacier. 67°37' S, 68°29' W. On the E side of Mount Liotard, it flows NE into Ryder Bay, on Adelaide Island. Surveyed by Fids from Base E in 1948, photographed aerially by FIDASE in 1956–57, and resurveyed by Fids from Base T in 1961–62. Named by UK-APC on Dec. 8, 1977, for Andy Turner. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Turner Hills. 82°59' S, 156°18' E. A group of hills between Astro Glacier (to the S) and the Worsley Icefalls and the Nimrod Glacier (to the S), in the NW part of the Miller Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Dr. Mortimer D. "Mort" Turner (b. Oct. 24, 1920, Greeley, Colo. d. May 1, 2004, Boulder, Colo.) of the National Science Foundation (1959–84), long-time program manager for Polar Earth Studies. He was in the dry valleys of Victoria Land in 1959–60, and in several subsequent seasons served as USARP representative in Antarctica. He was 27 times on the ice. ANCA accepted the name.

Turner Island. 68°33' S, 77°53' E. About 0.8 km NW of Bluff Island, 4 km W of Breidnes Peninsula, and 4 km NW of Davis Station, in Prydz Bay, in the area of the Vestfold Hills. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Australian cartographers from ANARE air photos taken in 1957 and 1958. Named by ANCA on Aug. 11, 1958, for Peter Bryan Turner (b. Dec. 24, 1927), weather observer and radio officer at Davis Station in 1958. US-ACAN accepted the name in 1965.

Turner Lagoon. 69°24' S, 76°03' E. A small, shallow, round lake, close to the coast on the W side of Stornes Peninsula, and 2.8 km NW of Blundell Peak, in the Larsemann Hills. Named by ANCA on Oct. 25, 1989, for Philip "Pip" Turner, senior helo pilot during the 1987–88 ANARE summer season.

Turner Rock. 68°49' S, 69°20' W. About 4 km NE of Toadstool Rocks, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Named by UK-APC on Dec. 2, 1993, for Capt. Robert Milligan Turner (b. 1947), RN, skipper of the *Endurance*, from which this feature was first reported in March 1993. For this incarnation of the *Endurance*, *see* **The *Polarsirkel***.

Turnpike Bluff. 80°44' S, 30°04' W. A conspicuous rock bluff, rising to about 1150 m, 8 km SW of Mount Homard, it is the most southwesterly feature of the Shackleton Range. First surveyed and mapped in Dec. 1957, by BCTAE, and so named by them because it is the beginning of a badly crevassed area of Recovery Glacier through which the vehicles of the expedition had difficulty passing on their journey from Shackleton Base to the Pole in 1957. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Turnstile Ridge. 79°50' S, 154°36' E. A long, shallow ridge, about 14 km long, and rising to a maximum elevation of 2233 m above sea level, 5 km N of Westhaven Nunatak, at the NW extremity of the Britannia Range, just to the W of the Darwin Mountains, in southern Victoria Land. Discovered in Dec. 1957, by the Darwin Glacier Party of BCTAE, and named by them for the turnstile-like snow passages occurring throughout its length. ANCA accepted the name on Oct. 11, 1960, and US-ACAN followed suit in 1962.

Cabo Turquet *see* **Turquet Point**

Point(e) Turquet *see* **Turquet Point**

Punta Turquet *see* **Turquet Point**

Turquet, Jean. b. May 20, 1867, Pradelette, France. French naturalist who joined the *Français* at Buenos Aires in Dec. 1903, for FrAE 1903–05, as zoologist and botanist. He died on May 16, 1945, in Clugnat, France, where he practiced medicine as a country doctor, and whose mayor he had been elected in 1925.

Turquet Point. 65°03' S, 63°57' W. Marks the NE end of Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Probably discovered by Dallmann, in 1873–74. Charted in 1904, by FrAE 1903–05, and named by Charcot as Pointe Turquet, for Jean Turquet. It appears as such on Charcot's maps of 1906 and 1908. It appears as Point Turquet on a 1943 U.S. Hydrographic Office chart, and as Punta Turquet on a 1949 Argentine chart. We are told by the British gazetteer that it appears on a 1954 Argentine chart as Punta Rozo, which means "chip point," and that the Argentines named it for its shape. This is facile. There is a word "rozo" (not "rózo" as the British say; the word needs no accent), and one could say it means chips, as in wood-chippings perhaps, but that's irrelevant. Just to the W of this feature lies Rozo Point, named for Rozo, Charcot's cook on FrAE 1903–05. It appears misspelled on a 1956 Argentine chart as Punta Tourquet, and on one of their 1957 charts as Cabo Turquet. US-ACAN accepted the name Turquet Point in 1952, and it appears as such in the 1956 U.S. gazetteer. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by a FIDS-RN team in 1957–58. UK-APC accepted that name on July 7, 1959, and it appears as such on a British chart of 1960. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Punta Turquet.

[1]**The Turret**. 60°40' S, 45°09' W. A conspicuous rocky headland, with distinct crenellations on the crown, making the whole appear as a turret. It rises to 460 m at the SE side of the entrance to Gibbon Bay, on the E coast of Coronation Island, in the South Orkneys. Almost certainly first seen by captains George Powell and Nat Palmer in Dec. 1821, this feature was charted and named descriptively by the personnel of the *Discovery II* in 1933. It appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart of 1952 as Promontorio Almena (i.e., "turret promontory"), on one of their 1954 charts as La Torre (i.e., "the tower"), but Promontorio Almena was the name accepted by the 1970 Argentine gazetteer. It was surveyed by Fids from Signy Island Station between 1956 and 1958.

[2]**The Turret**. 77°41' S, 166°29' E. A remarkable, turret-shaped mass, forming a projection at the W end of Big Razorback Island, in the Dellbridge Islands, in McMurdo Sound. It is formed by a plug of one of the vents from which the trachyte lava of this island has come. Named descriptively by Frank Debenham in 1912, during BAE 1910–13. NZ-APC accepted the name.

Punta Turret *see* **Turret Point**

Rocas Turret *see* **Turret Point**

Turret Cone. 77°33' S, 166°26' E. A small summit, rising to about 455 m, locally conspicuous, about 6 km E of Cape Royds, and about 5 km NE of Cape Barne, on Ross Island. Descriptively named by Grif Taylor during BAE 1910–13. US-ACAN accepted the name in 2000, and NZ-APC followed suit in 2001.

Turret Island. 71°22' S, 169°13' E. A small island, about 1.5 km in diameter, and ice-covered except for the NE face, it lies partly within the seaward terminus of Shipley Glacier, 1.5 km NW of Flat Island, on the N coast of Victoria Land. The rocky N end projecting from the glacier suggests a turret. Charted and named descriptively by Campbell's Northern party during BAE 1910–13. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Turret Nunatak. 82°25' S, 158°00' E. A small, elongated nunatak, rising to 1960 m, W of the Cobham Range, in the lower portion of Lucy Glacier. Mapped by the Northern Party of NZGSAE 1961–62, and named by them for its turreted cliffs on the S side. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Turret Peak. 72°16' S, 166°06' E. A prominent rock peak, rising to 2790 m, 11 km NW of Crosscut Peak, in the Millen Range, it is topped by a distinctive nine-meter vertical, spire-like tower, which is an excellent landmark. Named descriptively by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962–63. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Turret Point. 62°05' S, 57°57' W. A point, marked by conspicuous high rock stacks, it forms the E limit of King George Bay, NW of Penguin Island, on the S coast of King George Island, in the South Shetlands. Personnel on the *Discovery II* charted this immediate area in 1937, and applied the name Turret Rocks to the stacks marking the SW extremity of the beach at this point. It appears on their 1937 chart, on a British chart of 1938, and was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. This feature appeared on a 1949 Argentine chart as Rocas Turret, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956. Given that this is a land feature (the term rocks generally — but by no means always — used for rocks in water), and given that it was being confused with offshore rocks lying just off the point (the American gazetteer of 1956 showed the name Turret Rocks in that way), it was renamed Turret Point by

UK-APC on Sept. 23, 1960, and US-ACAN followed suit with the naming later that year. It appears as such on a British chart of 1962. Today, the Argentines call it Punta Turret. Last plotted by the UK, in late 2008.

Turret Ridge. 72°14' S, 166°13' E. A ridge, about 8 km long, extending NE from Turret Peak, in the Millen Range, in Victoria Land. Visited by R.H. Findlay's 1981-82 NZARP field party, and named by them in association with the peak. NZ-APC accepted the name, and US-ACAN followed suit.

Turret Rocks *see* **Turret Point**

Islas Turtle *see* **Turtle Island**

Turtle Back Island *see* **Turtle Rock**

Turtle Island. 66°04' S, 65°51' W. A small island, 5 km SE of the Trump Islands, and 10 km W of Black Head, it is the most northwesterly of the Saffery Islands, in Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Discovered in Aug. 1935, by BGLE 1934-37, and named by them for the *Mock Turtle*, a boat built by the expedition at Winter Island. It appears on Rymill's 1938 map of the expedition. On a 1943 USHO chart of 1943 the Saffery Islands appear as Turtle Islands, as they do on a 1947 Chilean map (as Islas Turtle). On a British chart of 1948 the island named by BGLE appears as Turtle Islet, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 20, 1955. In those days it was plotted in 66°03' S, 65°56' W. On an Argentine chart of 1953 the Saffery Islands appear as Islas Tortuga, but on their 1957 charts they appear as both Islotes Tortuga and Islotes Tortuga, the latter name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. There is a 1976 reference to Turtle Island as Isla Tortuga. On July 7, 1959, UK-APC redefined it as Turtle Island, and US-ACAN accepted that in 1963.

Turtle Islands *see* **Turtle Island**

Turtle Islet *see* **Turtle Island**

Turtle Peak. 75°22' S, 111°18' W. A conspicuous, nearly bare rock summit, rising to 600 m, 3 km S of Hedin Nunatak. The peak is joined at its S side by an ice-covered spur which descends SW from the Mount Murphy massif, on the Walgreen Coast of Marie Byrd Land. Algae and petrels are found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for John P. Turtle, aurora researcher who wintered-over at Byrd Aurora Substation in 1962.

Turtle Rock. 77°45' S, 166°46' E. Also called Turtle Back Island. A low, rounded islet, or rock, rising to an elevation of about 300 m above sea level, in Erebus Bay, close westward of Hut Point Peninsula, Ross Island. Discovered by BNAE 1901-04, and named descriptively by them. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Turton, James Thomas Eric. b. Aug. 3, 1951. BAS electronics engineer who wintered-over at Base F in 1976 and 1977. He later spent two summers there as well.

Tusing Peak. 76°51' S, 126°00' W. A snow-capped peak rising to 2650 m from the central portion of Mount Hartigan, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Allen D. Tusing, meteorologist at Byrd Station in 1959.

The Tusk. 84°52' S, 168°15' W. A small, isolated, sharply pointed peak, composed of coarsely crystalline white marble, and rising to about 460 m, in the E part of Mayer Crags, 2.5 km S of Mount Henson, at the W side of the terminus of Liv Glacier, about 6 km S of that glacier's junction with the Ross Ice Shelf. Named descriptively by the Southern Party of NZGSAE 1963-64. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Tussebreen. 72°23' S, 19°50' E. A glacier, about 42 km long, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("the gnome glacier").

Tussebrekka *see* **Tussebrekka Slope**

Tussebrekka Slope. 72°08' S, 6°24' E. A mainly ice-covered slope (the Norwegians describe it as an ice-fall, but it really is an ice slope), about 10 km long, to the W of the S part (i.e., the head) of Lunde Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Tussebrekka (i.e., "the goblin slope"). US-ACAN accepted the name Tussebrekka Slope in 1966.

Tussehoppet. 72°02' S, 2°35' E. A slope in the area of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named descriptively by the Norwegians on Oct. 12, 2007 (the name means "the tiny trolls' ski jump"). "Tusse" means "tiny trolls," and a "hopp" is a ski jump. The Russians call it Gora Volkonskogo.

Tusseknattane. 72°10' S, 19°30' E. Two nunataks, between Borchgrevikisen and Tussebreen, in the most westerly part of the Sør Rondane Mountains. Named by the Norwegians ("the gnome nunataks").

Tusseladden. 72°02' S, 18°57' E. A nunatak in the westernmost part of the Sør Rondane Mountains. Named by the Norwegians, in association with all the other "gnome" features in the area.

Tussen. 72°04' S, 18°57' E. A nunatak in the westernmost part of the Sør Rondane Mountains. Named by the Norwegians ("the gnome").

Tussenobba *see* **Tussenobba Peak**

Tussenobba Peak. 72°00' S, 6°15' E. Rising to 2665 m, 10 km NE of the Halsknappane Hills, in the E part of the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Tussenobba (i.e., "the gnome knob"). US-ACAN accepted the name Tussenobba Peak in 1966.

Tussungen. 72°04' S, 19°12' E. A nunatak in the westernmost part of the Sør Rondane Mountains. Named by the Norwegians ("the gnome child").

Tustane *see* **Tustane Peaks**

Tustane Peaks. 72°08' S, 25°17' E. A group of peaks at the head of (i.e., at the upper part of) Koms Glacier, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken by OpHJ 1946-47, and named by them as Tustane (i.e., "the clumps"). US-ACAN accepted the name Tustane Peaks in 1966.

Tutrakan Peak. 62°39' S, 60°03' W. Rising to 810 m in Levski Ridge, 2.1 km N of Great Needle Peak, 1.7 km WNW of Helmet Peak, and 680 m E of Plana Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Tutrakan, in northeastern Bulgaria.

Punta Tutton *see* **Tutton Point**

Tutton Point. 66°53' S, 67°36' W. The SW point of Liard Island, in Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. This point is a landing place, the starting point for a route into the interior of the island. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Alfred Edwin Howard Tutton (1864-1938), British mineralogist, crystallographer, and authority on alpine snow and ice. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965. One of the Argentine Antarctic expeditions named it Punta Remedios, for the 19th-century Argentine cutter *Remedios*, and it has been appearing as such since 1978 (*see also* **Punta Aburto**). However, the name generally used by the Argentines is Punta Tutton.

Mount Tuve. 73°47' S, 80°08' W. A mountain, rising to 2745 m above sea level, whose summit rises to 935 m above the surrounding ice surface just S of the base of Wirth Peninsula, toward the interior of the extreme W of the Bryan Coast of Ellsworth Land. Discovered by RARE 1947-48. Named by Finn Ronne as Mount Merle Tuve, for scientist Merle Antony Tuve (1901-1982), director of the Department of Terrestrial Magnetism at the Carnegie Institution, who supplied instruments for the expedition. The name was accepted by US-ACAN, but later shortened. The Chileans call it Monte Tuve.

Cabo Tuxen *see* **Cape Tuxen**

Cap Tuxen *see* **Cape Tuxen**

Cape Tuxen. 65°16' S, 64°08' W. A rocky promontory rising to 2900 feet above sea level, it forms the SW side of the entrance to Waddington Bay, in the Grandidier Channel, on the Graham Coast, on the W coast of Graham Land. Discovered and charted on Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Tuxen. It appears as such on their expedition's maps, and also as Cap Tuxen on the charts produced by FrAE 1908-10. It first appears as Cape Tuxen on Dr. Frederick Cook's 1900

English language version of the maps produced by BelgAE, and, as such it appears on Rymill's 1938 map of BGLE 1934-37, and on a 1948 British chart, and was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team in 1958. The 1970 Argentine gazetteer and the 1974 Chilean gazetteer both accepted the name Cabo Tuxen, although it does appear, as if by solecism, as Cerro Tuxen on a 1953 Argentine chart. There are too many Tuxens from which to make even an educated guess as to which one this feature was named for.

Tvarditsa Rocks. 62°25' S, 59°52' W. Off the N coast of Greenwich Island, 1.3 km SW of Stoker Island, 1.9 km NE of Ongley Island, and 2.6 km W of Sierra Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the town of Tvarditsa, in southeastern Bulgaria.

Tverrbrekka *see* **Tverrbrekka Pass**

Tverrbrekka Pass. 72°14' S, 1°19' E. A pass (the Norwegians describe it as an ice slope), running E-W through the Sverdrup Mountains, between Vendeholten Mountain and Tverrnipa Peak (which surmounts the N end of Tverrveggen Ridge), in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverrbrekka (i.e., "the transverse slope"). US-ACAN accepted the name Tverrbrekka Pass in 1966.

Tverregg Glacier. 73°27' S, 3°36' W. Between Heksegryta Peaks and Tverregga Spur, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverreggbreen (i.e., "the transverse ridge glacier"). US-ACAN accepted the name Tverregg Glacier in 1966.

Tverregga *see* **Tverregga Spur**

Tverregga Spur. 73°23' S, 3°36' W. A small mountain ridge, or spur, on Tverreggtelen Hill, 5 km W of Mount Hallgren, in the most northerly part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverregga (i.e., "the transverse ridge"). US-ACAN accepted the name Tverregga Spur in 1966.

Tverreggbreen *see* **Tverregg Glacier**

Tverreggtelen *see* **Tverreggtelen Hill**

Tverreggtelen Hill. 73°24' S, 3°33' W. A partly snow-covered hill, immediately SE of Tverregga Spur, and W of Mount Hallgren, in the most northerly part of the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverreggtelen, in association with Tverregga Spur. US-ACAN accepted the name Tverreggtelen Hill in 1966.

Tverrholmen *see* **Transverse Island**

Tverrnipa *see* **Tverrnipa Peak**

Tverrnipa Peak. 72°15' S, 1°19' E. A projecting-type mountain, rising to 2195 m, it surmounts the N end of Tverrveggen Ridge, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverrnipa (i.e., "the transverse peak"). US-ACAN accepted the name Tverrnipa Peak in 1966.

Tverrseten *see* **Tverrseten Col**

Tverrseten Col. 72°02' S, 4°46' E. An ice col between Setenuten Peak and Petrellfjellet, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Tverrseten (i.e., "the transverse seat"). US-ACAN accepted the name Tverrseten Col in 1966.

Tverrveggen *see* **Tverrveggen Ridge**

Tverrveggen Ridge. 72°17' S, 1°20' E. A prominent ridge (the Norwegians describe it as a steep mountain wall) extending southward for 6 km from Tverrbrekka Pass, in the W part of Vendehø Heights, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Tverrveggen (i.e., "the transverse wall"). US-ACAN accepted the name Tverrveggen Ridge in 1966.

Tvetaggen *see* **Tvetaggen Peaks**

Tvetaggen Peaks. 71°45' S, 25°17' E. A short line of peaks, 2.5 km N of the N part of the Austkampane Hills, on the W side of Kamp Glacier, in the central part of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers from air photos taken by OpHJ 1946-47, and named by them descriptively as Tvetaggen (i.e., "the double prongs"). US-ACAN accepted the name Tvetaggen Peaks in 1966.

Tvibåsen *see* **Tvibåsen Valley**

Tvibåsen Valley. 71°53' S, 5°15' E. An ice-filled valley whose upper portion divides into 2 heads, it lies between Svarthamaren Mountain and Cumulus Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from 1958-59 air photos taken during the same long expedition, and named by them as Tvibåsen (i.e., "the double stall"). US-ACAN accepted the name Tvibåsen Valley in 1967.

Tvihøgda. 72°14' S, 24°38' E. A mountain with 2 summits, S of Dufek Mountain, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians ("the double height"). The Russians call it Mount Griboedova.

Tvillingane *see* **Patricia Islands**

Tvillingfjell *see* **Holder Peak, Young Peak**

Tvillingstakken *see* **Patricia Islands**

Tvireita *see* **Tvireita Moraine**

Tvireita Moraine. 71°55' S, 14°37' E. A medial moraine, about 8 km long, comprising 2 somewhat parallel segments that appear to unite as they trend NE from Tvireittuene, in the E part of Mendeleyev Glacier, in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them descriptively as Tvireita (i.e., "two furrows"). US-ACAN accepted the name Tvireita Moraine in 1970.

Tvireittuene. 71°57' S, 14°35' E. A group of nunataks in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with nearby Tvireita Moraine.

Tvistein *see* **Tvistein Pillars**

Rocas Tvistein *see* **Tvistein Pillars**

Tvistein Pillars. 68°42' S, 90°40' W. Also seen erroneously as Tvistern, and also (perhaps not so erroneously) as Tvisteinen. Two flat-topped pillars of bare rock, the larger being very prominent, 1.5 km SW of Cape Eva, the N extremity of Peter I Island. Discovered by the *Odd I* in 1927. Named Tvistein by Nils Larsen in the *Norvegia* in 1929. The name means "two-stone" in Norwegian. US-ACAN accepted the name Tvistein Pillars in 1953.

Tvisteinen *see* **Tvistein Pillars**

Tvistern *see* **Tvistein Pillars**

Tvitoppen *see* **Mount Twintop**

Tvitoppen Peak *see* **Mount Twintop**

Tvora. 72°10' S, 0°05' W. A mountain with 2 north-trending spurs, about 5 km E of Straumsvola Mountain, in the Gburek Peaks, at the W end of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them ("two ridges"). US-ACAN accepted the name without modification in 1966.

Tween, Michael Harry "Mike." b. 1927, Croydon, son of Harry George Tween and his wife Florence E. Berge. He joined FIDS in 1959, as a diesel electric mechanic, and wintered-over at Base B in 1960, and at Base E in 1961. In 1967,

in Poole, Dorset, he married Christine R. Hart, and they lived in Poole.

Twelves, Eric Laird. b. 1945, Bury, Lancs, son of Geoffrey Twelves and his wife Dorothy L. Hall. BAS zoologist who wintered-over at Signy Island Station in 1969 and 1970, the latter year also as base commander. In 1971, in Pontefract, Yorks, he married Jane Shillito, and they settled in Nottingham.

Twickler Cone. 77°37' S, 162°22' E. A cone-shaped peak, rising to 1950 m on the ridge separating the upper reaches of Bartley Glacier and Newall Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Mark S. Twickler, a specialist in recovery, analysis, and interpretation of ice core records, with many seasons in Antarctica and Greenland between 1984 and 1995. From 1997, he was executive director of the National Ice Core Laboratory-Science Management Office. As a member of the University of New Hampshire field party in 1988-89, he participated in glaciochemical investigations that collected 2 ice cores, 150 m and 175 m deep, from the upper Newall Glacier, in the vicinity of this peak. NZ-APC accepted the name.

Twig Rock. 68°42' S, 67°32' W. A small rocky mass rising to over 90 m above sea level, off the N end of Alamode Island, between that island and Hayrick Island, in the Terra Firma Islands, off the W coast of Graham Land. The Terra Firma Islands were first visited and surveyed in 1936, by BGLE 1934-37. This particular feature was surveyed by Fids from Base E in 1948, and named by them for the branching nature of the dike system exposed on its N face. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. There is a 1953 British reference to a Terra Firma II Island, apparently meaning this one.

Mount Twigg. 74°17' S, 67°50' E. A large rock outcrop bisected by a north-trending glacier, about 26 km SE of Mount Maguire, and about 20 km E of Wilson Bluff, near the head of (i.e., near the S end of) the Lambert Glacier. Discovered and photographed aerially by ANARE in Nov. 1956, triangulated in 1958 by Graham Knuckey, and mapped by Australian cartographers from these efforts. Named by ANCA on July 22, 1959, for Dudley Raymond "Doug" Twigg (b. Feb. 27, 1928), radio supervisor at Mawson Station in 1958, and officer-in-charge of Casey Station in 1978. He had also wintered-over at Macquarie Island in 1956. He worked for the Antarctic Division until 1992. US-ACAN accepted the name in 1961. The Russians call it Gora Figurnaja.

Twilight Bay. 68°32' S, 69°48' E. A small reentrant of the ice shelf into the plateau on the W side of the Amery Ice Shelf (i.e., it is an indentation of this ice shelf into the plateau behind it). Photographed aerially by ANARE in 1956. The ANARE survey party of Feb. 1968 flew in after sunset, necessitating navigation and photo identification in twilight in order to fix its position, which is probably why John Manning's coordinates of 68°37' S, 69°38' E are so different from the ones accepted by US-ACAN, when that naming body accepted the name in 1971.

Pináculos Twin *see* **Twin Pinnacles**

Twin Crater. 77°50' S, 166°41' E. An extinct volcanic crater with twin nested cones, 0.8 km W of Crater Hill, on Hut Point Peninsula, on Ross Island, rising behind McMurdo Station. Frank Debenham named it Middle Crater during BAE 1910-13, apparently for its location between First Crater and Crater Hill, but that name, despite being in the 1958 NZ provisional gazetteer, seems to have fallen into disuse. The descriptive name Twin Crater was coined about 1971, and was accepted by US-ACAN in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Twin Island. 69°22' S, 76°20' E. An island just N of Lied Peninsula, and marked by 2 peaks separated by a flat, ice-covered valley, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987. The Chinese call it Luansheng Dao.

Twin Nunataks. 75°38' S, 159°36' E. Two small nunataks, E of the Ricker Hills, between those hills and Hollingsworth Glacier, in the Prince Albert Mountains of Victoria Land. Named descriptively by the Southern Party of NZGSAE 1962-63. NZ-APC accepted the name, US-ACAN followed suit in 1966, and ANCA, in turn, followed suit on May 18, 1971.

[1]**Twin Peaks** *see* **Gemel Peaks**

[2]**Twin Peaks**. 63°24' S, 57°07' W. Two sharply defined peaks, standing together, and rising to 750 m and 730 m resp., on the W side of Arena Glacier, 2.5 km N of Mount Taylor, and 3 km W of the head of Hope Bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered in 1902, by SwedAE 1901-04. Surveyed by Fids from Base D in 1945, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Re-surveyed by FIDS in 1955. There is a 1956 Argentine reference to it (by geologist Juan Olsacher) as Cerro Cuerno (i.e., "horn hill").

[3]**Twin Peaks**. 67°08' S, 55°35' E. Two peaks rising to about 1100 m in the Schwartz Range of Kemp Land, about 22 km N of Wilma Glacier, in the SW part of Edward VIII Bay, in Enderby Land. Discovered by Bob Dovers' ANARE sledging party in 1954. Named descriptively by ANCA on Nov. 28, 1955.

Twin Pinnacle Rocks *see* **Twin Pinnacles**

Twin Pinnacles. 62°08' S, 58°07' W. A rock in water with 2 summits, rising to 22 m above sea level, about 180 m NE of Lions Rump, at the W side of the entrance to King George Bay, in the South Shetlands. Charted by the personnel on the *Discovery II* in Jan. 1937, and named descriptively by them as Twin Pinnacle Rocks or Twin Pinnacles (it appears both ways on their 1937 chart). It appears as Twin Pinnacles on a 1938 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. It appears on a 1949 Argentine chart as Pináculos Twin, but on one of their 1953 charts translated all the way as Pináculos Mellizos, that last name being the one accepted by the 1970 Argentine gazetteer. On a 1962 Chilean chart it appears as Islote Mellizos, and that name was accepted by the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Twin Rocks. 78°25' S, 161°41' E. Twin rock bluffs in the Lower Staircase of Skelton Glacier, about 10 km E of Halfway Nunatak, in Victoria Land. They are an important navigational reference point on the route up this glacier. Named descriptively by the NZ party of BCTAE in 1956-58. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Twin Tarns. 68°32' S, 78°20' E. Twin tarns, about 1.3 km NW of Braunsteffer Lake, on Breidnes Peninsula, in the Vestfold Hills. The overland route from Davis Station to Platcha goes beside these tarns. So named by ANCA on Nov. 27, 1973 because the tarns are very similar.

Twins. 62°01' S, 58°08' W. Twin crags in the N part of the Mount Hopeful massif, in the Arctowski Mountains, N of King George Bay, King George Island, in the South Shetlands. Named descriptively by the Poles in 1981, as Bliznieta, it appears on Tokarski's 1981 map. The name has been translated.

The Twins. 60°37' S, 46°04' W. Two rocks (the British describe them as small islands) in the entrance of Sandefjord Bay, 0.8 km S of the S end of Monroe Island, off Coronation Island, in the South Orkneys. Charted and named descriptively by the personnel on the *Discovery II* in 1933. The feature appears on a 1938 British chart. It appears on an Argentine chart of 1945, translated as Los Mellizos, and on one of their 1953 charts as Islotes Los Mellizos, the latter name being the one accepted by the Argentine gazetteer of 1970. US-ACAN accepted the name The Twins in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Mount Twintop. 68°05' S, 62°22' E. Also called Tvitoppen Peak. A twin-peaked mountain, about 10 km SSW of Mount Tritoppen, in the S part of the David Range, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Tvitoppen (i.e., "the twin peak"). ANCA translated the name on Feb. 18, 1958, and US-ACAN followed suit in 1965. The Russians call it Nunatak Promezhutochnyj.

Mount Twiss. 79°23' S, 85°36' W. Rising to 2000 m, at the N end of the Watlack Hills, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for John Russell Twiss, Jr. (b. 1938, NYC. d. July 23, 2009, The Plains, Va., after a long battle with Parkinson's), who was on the support staff at McMurdo, 1961-63. He was USARP representative at McMurdo, 1964-65, and also on the *Eltanin*'s Cruise 34, in 1968. In 1974 he became the first executive director of the Marine Mammal Commission, and retired in 2000.

Twisted Lake. 60°43' S, 45°40' W. About 160 m NE of Cummings Cove, between that cove and Emerald Lake, in the W part of Signy Island, in the South Orkneys. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for its very irregular shoreline. US-ACAN accepted the name in 1975.

Isla Two Hummock *see* **[2]Two Hummock Island**

[1]Two Hummock Island *see* **Two Summit Island**

[2]Two Hummock Island. 64°08' S, 61°40' W. An ice-covered island, 8 km long in a N-S direction, it rises to 670 m above sea level, and has 2 conspicuous rocky summits, 8 km SE of Liège Island, it is between that island and Hughes Bay, on the W side of Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Roughly charted by Hoseason in 1824, and so named in reference to its shape. It appears on Powell's chart of 1828, and on British charts of 1839 and 1937. All the countries with a vested interest in the region translated it according to their language, but all the forms so used are instantly recognizable to the English-speaking eye. Between Jan. 24 and Jan. 26, 1898, it was further charted by BelgAE 1897-99, and a landing was made. It was further charted from the whale catcher *Hanka* in 1913-14. On a Chilean chart of 1947 it appears translated as Isla Dos Colinas. On an Argentine chart of 1953 it appears equally well-translated as Isla Dos Mogotes, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Two Hummock Island in 1952, and UK-APC followed suit on Sept. 22, 1954. It appears in the British gazetteer of 1955, and also on a 1962 British chart. It was photographed aerially by FIDASE in 1956-57. The 1974 Chilean gazetteer accepted the name Isla Two Hummock.

Two-Krøner Lake. A local, informal name given to small lake in Port Foster, Deception Island, in the South Shetlands.

The *2041* *see* beginning of **Ts**

Two Step Cliffs. 71°53' S, 68°16' W. Rising to 665 m above sea level, they form the E face of a flat-topped sedimentary mountain immediately E of Mars Glacier, on the E coast of Alexander Island, and look across George VI Sound to the Batterbee Mountains on the Antarctic Peninsula. Discovered aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936-37 by U.S. cartographer W.L.G. Joerg. Roughly surveyed from the ground in Oct. 1936 by BGLE 1934-37, the feature appears on Stephenson's 1940 map of the expedition. Re-surveyed by USAS 1939-41, when the name Two Step Mountains was applied to an ill-defined feature in 71°50' S, 68°50' W. It appears as such on a 1942 USAAF chart. RARE 1947-48 photographed the same feature aerially in late 1947, and gave it the name Table Mountain. Fids from Base E re-surveyed it, and gave it its current name in 1949. They plotted it in 71°54' S, 68°13' W. That was accepted by UK-APC on March 31, 1955, and by US-ACAN later that year. It appears as such on a 1956 U.S. Hydrographic Office chart. The coordinates were corrected by 1960, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Two Step Moraine. 71°53' S, 68°20' W. A small area (about 0.25 by 0.25 km) of homogeneous fine morainic debris, in the south-facing moraines at the foot of Two Step Cliffs, on the E coast of Alexander Island. The feature contains moist soil and 2 ponds, and is remarkable for its abundance of mosses, algae, and cyanobacteria, unusual in such a southerly location. Named by UK-APC on Dec. 2, 1993, in association with the cliffs. US-ACAN accepted the name in 1994.

Two Step Mountains *see* **Two Step Cliffs**

Two Summit Island. 62°14' S, 58°57' W. A small island marked by 2 prominent summits, at the E entrance to Fildes Strait, on the W side of Maxwell Bay, King George Island, in the South Shetlands. It was known to early sealers. Surveyed by the personnel on the *Discovery II*, in 1935, and named by them as Two Hummock Island. It appears as such on their 1935 chart, and also on a 1948 British chart. On Sept. 20, 1955, UK-APC renamed it in order to avoid confusion with another island of that name, farther south. US-ACAN accepted the new name in 1956. On an Argentine chart of 1943 it appears as Isla Dos Morros, but on one of their 1954 charts as Isla Dos Lomos. The name Isla Dos Morros was the one accepted by both the 1970 Argentine gazetteer (after they had rejected the proposed name Dos Mogotes) and the 1974 Chilean gazetteer (after they had rejected Isla Two Summit). It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Last plotted by the UK, in late 2008.

Twombley Glacier. 80°35' S, 157°45' E. A glacier, 10.5 km long, it flows from the N side of the Kent Plateau into the S side of Byrd Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Chet Twombly [sic].

Twombly, Chester E. "Chet." b. Feb. 5, 1918, Chelsea, Mass., son of furniture man (later trucking company owner) Benjamin M. Twombly and his wife Matilda. He enlisted in the U.S. Army on March 11, 1941, in Boston. A U.S. Weather Bureau man, he was the first civilian at little America V, wintering-over there as IGY representative in the winter of 1956. He had also been in the Arctic. He retired to Groveland, Mass., and died on May 3, 1984, in Amesbury, Mass.

Mount Twomey. 71°30' S, 161°41' E. A somewhat detached peak, rising to over 1200 m, on the NW margin of the Morozumi Range, 4 km NW of Berg Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Arthur A. Twomey, USARP geologist at McMurdo in 1967-68 and 1968-69.

Tyke Nunatak. 80°13' S, 153°35' E. The smallest and most northerly of the Bates Nunataks, at the W end of the Britannia Range. So named by US-ACAN in 2001 for its size, in relation to the 2 southern nunataks in the group.

Tyler, Gordon C. "Tiny." b. Sept. 27, 1934, Quitman, Ark. He joined the U.S. Navy, and shipped out of Norfolk, Va., in Nov. 1955, going through the Panama Canal, to Christchurch, NZ, then on to McMurdo Sound. He helped build AirOpFac McMurdo, and wintered-over there in 1956. Named Tiny because of his enormous size, he was one of the 3rd (and last) group of Seabees to be flown to the Pole, on Nov. 25-26, 1956, one of the boys who built Pole Station, and one of the first party out, on Dec. 24, 1956 (*see* **South Pole Station**). On his way back to the States, he married a NZ girl. In 1975 he moved to Tuolumne County, Calif., and worked with the sheriff's department there for 25 years, before moving back in 2000 to Quitman, where he died on July 25, 2005.

Tyler Glacier. 72°15' S, 168°35' E. A tributary glacier flowing SW along the N side of Mount Francis, between that mountain and Taylor Peak, to enter Tucker Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Paul E. Tyler, medical officer and officer-in-charge at Hallett Station in 1962.

Tyndall Mountains. 67°15' S, 67°10' W. A group of mountains extending N-S, and rising to about 2300 m (in the Gravier Peaks), close S of Avsyuk Glacier, in the central part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Also included within this feature are Pryor Peak and Richardson Peak. Mapped by FIDS cartographers from FIDS ground surveys and FIDASE air photos taken in 1956-57. Named by UK-APC on Sept. 23, 1960, for John Tyndall (1820-1893), Irish physicist, mountain climber, and pioneer glaciologist. US-ACAN accepted the name in 1965.

Tyo-ga-take. 71°33' S, 35°37°E. Rising to 2072 m, it is the NW peak of Mount Eyskens, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979. Name means "butterfly's peak."

Tyo-no-kubo. 71°33' S, 35°37' E. A cirque-like indentation just SW of the peak the Japanese call Tyo-ga-take, in Mount Eyskens, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named ("butterfly's cirque") by the Japanese on Nov. 24, 1981, in association with Tyo-ga-take.

Mount Tyoto *see* **Mount Choto**

Tyoto-zan *see* **Mount Choto**

Mount Tyree. 78°24' S, 85°55' W. A very high and prominent bare rock mountain, rising to 4965 m, 13 km NW of the Vinson Massif, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Discovered during VX-6 reconnaissance flights in Jan. 1958, and mapped the same month by the Marie Byrd Land Traverse Party, led by Charlie Bentley. Named by US-ACAN in 1961, for Adm. David M. Tyree. It was first climbed on Jan. 6, 1957. It was climbed in Nov. 1989 by Terrence "Mugs" Stump.

Tyree, David Merrill. Known as Merrill. b. Jan. 23, 1904, Washington, DC, son of Kentuckian parents George Tyree and his wife Mabel. His father worked for the War Department. He graduated from Annapolis in 1925, and on Dec. 21, 1927, at Woodside, Md., married Eleanor Yates Haddox. He was serving on the aircraft carriers *Lexington* and *Hornet* when they were sunk during World War II. He commanded the battleship *New Jersey* during the Korean War, and was promoted to rear admiral. He took over from Admiral Dufek as the head of OpDF on April 14, 1959, and on Nov. 26, 1962 he was, in turn, succeeded by Admiral James Reedy. He retired in 1963 and died on Aug. 25, 1984, in Portsmouth Naval Hospital, Va.

Tyree Head. 77°39' S, 167°25' E. A headland, rising to over 400 m, and ice-covered except for rock exposed on the lower E side, about 5.5 km NE of Sultans Head Rock, on the S side of Ross Island. Named by US-ACAN in 1999, for Admiral Tyree. NZ-APC had already accepted the name on Nov. 4, 1999.

Tyree Ridge. 78°23' S, 85°40' W. A narrow rock ridge extending NE for 5 km from Mount Tyree, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 2006, in association with the mountain.

Mount Tyrell *see* **Mount Tyrrell**

Tyrol Valley. 77°35' S, 160°38' E. A high, ice-free valley, E of Mount Baldr, in the Asgard Range of Victoria Land. Named by Austrian biologist Heinz Janetschek for his homeland. He was a usarp in this area in 1961-62. US-ACAN accepted the name in 1968.

Mount Tyrrell. 69°38' S, 69°31' W. A mountain with 2 summits, the higher being 1310 m, 5 km inland from the NE coast of Alexander Island, on the E side of, and near the mouth of, Toynbee Glacier. First photographed aerially on Feb. 1, 1937, by BGLE 1934-37. Surveyed by Fids from Base E in 1948, and named by them for George Walter Tyrrell (1883-1961), senior lecturer in geology at Glasgow University, 1919-48. He petrographically described many rocks of King George Island, in the South Shetlands. He was in the Arctic in 1919, and was on 2 Scottish expeditions to Iceland, in 1920 and 1924 (the last one as leader). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears in the 1974 British gazetteer, misspelled as Mount Tyrell.

Tyrrell Ridge. 62°04' S, 58°24' W. A mountain ridge, at an elevation of about 220 m, between Mount Flagstaff and Piasecki Pass, on Keller Peninsula, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for George Tyrrell (*see* **Mount Tyrrell**).

Tysk Pass. 72°43' S, 3°47' W. A mountain pass between Høgskavklen Mountain and Domen Butte, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Tyskepasset (i.e., "the German pass"—it was first photographed aerially by GermAE 1938-39). US-ACAN accepted the name Tysk Pass in 1966.

Tyskepasset *see* **Tysk Pass**

Tyson, Leonard Charles "Len." Known in Antarctica (but only there) as "Lofty." b. Aug. 20, 1923, Doncaster, son of policeman Alfred Tyson and his wife Louisa. He joined the RAF on Aug. 22, 1939, as an aircraft apprentice, and after 2 years became a radio operator/mechanic. He was posted to Egypt in 1946, and in Aug. 1947 was the passenger in a 2-seater Mosquito that crashed on take-off. The pilot was killed, but Tyson managed to get out, and was in hospital in Khartoum for 18 months with major burns. He came out as an acting corporal, was sent to Southern Rhodesia, and demobbed in Sept. 1953, as a sergeant. While he was taking a ship's radio officer course, he saw an ad for FIDS, and was accepted, leaving Southampton on the *John Biscoe* in 1954, bound for the Falkland Islands. He stayed in Stanley for a month before the *John Biscoe* took him down to Signy Island Station, where he wintered-over in 1955 as radio operator/mechanic. While there he was offered a job by Johnny Green, to take charge of the radio station at Port Stanley. After his Antarctic tour, he left Signy for Port Stanley, then on to Montevideo, where he caught the *Alcantara*, arriving in Southampton on May 9, 1956. He interviewed with FIDS in London for his new job, and went back to the Falklands for over 3 years, finally returning to England in March 1960 (Clem Clements took over his job in the Falklands). After 6 months leave he went to work for IAL (International Air-Radio Ltd.), being posted to Libya, and then, among other places, Abu Dhabi, Indonesia, Nigeria, Angola, Tanzania, Kenya, Uganda, the Cayman Islands, Jamaica, and finally back to Libya, where he retired in 1982, to go back to the Caymans to work for a friend. His eyesight forced him to give up the job the following year, and he finally retired to Doncaster.

Ostrova Tyulen'i *see* **Tyulen'i Islands**

Tyulen'i Islands. 66°33' S, 92°57' E. A group of about 3 very small islands, aligned eastward, in the S part of the Haswell Islands, 1.5 km from the mainland, about 2 km W of Mabus Point, and just W of the Stroiteley Islands. Plotted in 1955 by U.S. cartographer Gard Blodgett from air photos taken during OpHJ 1946-47. Re-photographed aerially by SovAE 1956, and named by them as Ostrova Tyuleni'i (i.e., "seal islands"). US-ACAN accepted the name Tyulen'i Islands in 1968.

Tyuleniy Point. 70°44' S, 11°36' E. A rock point, 0.8 km W of Ozhidaniya Cove, on the N side of the Schirmacher Hills of Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by SovAE 1961, and named by them as Mys Tjulenij (i.e., "seal point"). US-ACAN accepted the name Tyuleniy Point in 1970. The Norwegians call it Tjulenijodden (which means the same thing). Not to be confused with Cape Tulenij.

The *UAP Antarctica*. French schooner, with an egg-shaped aluminum hull (so as not to be crushed in the ice), designed by Olivier Petit and Luc Bouvier, and built in 1989 by Michel Franco, for Jean-Louis Étienne, being named for her insurance sponsors (Union des Assurances de Paris). Skippered by Jean Collet, she visited the South Shetlands, the South Orkneys, the Antarctic Peninsula, and Peter I Island, in 1989-90, taking down Will Steger's International Transantarctic Expedition. As the *Antarctica* she sailed to the South Shetlands and the Antarctic Peninsula, again under the command of Mr. Collet, in 1991-92. In 1993-94 Mr. Étienne and Yann Danguy de Déserts took her to Ross Island, where they studied the volcanics of Mount Erebus. In 1999 the vessel was bought by global-warming advocate Sir Peter Blake (*see* **Blake Massif**), who changed her name to *Seamaster*. Sir Peter actually took her several times into Antarctic waters in 2000 and 2001, and after he was murdered by pirates in the Amazon, the schooner was bought in 2004, by Étienne Bourgeois, who renamed her *Tara V*. He and Jean Collet restored her, and in 2004-05 and 2005-06 she was in Antarctic waters again, preparing for a big Arctic expedition in 2006-07.

Uberuaga, Julia Mary "Jules." b. 1954. From 1979 to 1999 she made 20 consecutive Antarctic seasonal deployments, working for contractors in support of USAP. She worked at Pole Station as a general field assistant for the first two seasons, and from 1981 she worked for 15 seasons as heavy equipment operator at Williams Field, with assignments at field camps including Siple Dome, Siple Station, and Byrd Surface Camp. The last few seasons she operated a Caterpillar D7 Pearl on McMurdo Ice Shelf.

Uberuaga Island. 77°53' S, 165°17' E. The easternmost feature in the Dailey Islands, in McMurdo Sound, it is 0.8 km long. Named by NZ-APC on Nov. 4, 1999, for Julia Uberuaga. US-ACAN accepted the name in 2000.

Mount Ubique. 81°30' S, 160°32' E. A prominent peak, rising to 935 m, on the E side of, and about 900 m above, Starshot Glacier, 6.5 km S of Hermitage Peak, in the Surveyors Range of the Queen Maud Mountains. It overlooks, and is a good landmark from, the Ross Ice Shelf, in the area of the Byrd Glacier. Named by the Southern Party of NZGSAE 1960-61 for the Royal Engineers' motto, meaning "everywhere." Capt. P.J. Hunt, leader of the expedition, was an officer in that regiment. NZ-APC accepted the name, and UK-APC followed suit in 1965.

Ubocz. 62°10' S, 58°29' W. A mountain slope, between 100 and 130 m long, between Petrified Forest Creek and Ornithologists Creek, S of Arctowski Station, on Admiralty Bay, King George Island, in the South Shetlands. The name "ubocz," given by the Poles in 1980, is used in the Tatra Mountains of Poland to describe such a slope.

Uchatka Point. 62°13' S, 58°25' W. A cape S of Paradise Cove, on the W shore of Admiralty Bay, in fact at the junction of that bay with Bransfield Strait, on King George Island, in the South Shetlands. Named by the Poles in 1980.

Name means "Kerguélen fur seal." There is a large chinstrap penguin colony here.

Gora Udivetel'naja. 73°35' S, 68°26' E. A hill close to Rimington Bluff, at the S end of Mawson Escarpment, just S of Tingey Glacier, along the E side of the Lambert Glacier. Named by the Russians.

Ueda Glacier. 75°15' S, 64°35' W. A large glacier flowing eastward along the S side of the Scaife Mountains, to enter Hansen Inlet, at the Orville Coast, near the base of the Antarctic Peninsula. Mapped by USGS from ground surveys taken between 1961 and 1965, and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Herbert Tamotsu Ueda (b. 1929, Puyallup, Wash.) who, with Lyle Hansen, was in charge of the CRREL deep core drilling program at Byrd Station in 1966-67 and 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. Interestingly, Mr. Ueda was one of the Japanese-Americans "relocated" during World War II.

Ufs Island. 67°29' S, 61°08' E. A rocky island, 3 km wide (the Australians say 6 km), in the E part of Howard Bay. Mawson discovered the N end of the island, Cape Simpson, in Feb. 1931, during BANZARE, but it was not recognized to be an island until 1946, when Norwegian cartographers were working from aerial photos taken by LCE 1936-37. The Norwegians called it Ufsøy (i.e., "bluff island"), and in 1947 US-ACAN accepted the name Ufs Island.

Ufsebotnen *see* **Ufsebotnen Cirque**

Ufsebotnen Cirque. 71°24' S, 13°09' E. A corrie or cirque in the NW side Mount Schicht, 1.5 km N of the summit, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and photographed aerially by them. It was plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ufsebotnen (i.e., "the bluff cirque"). US-ACAN accepted the name Ufsebotnen Cirque in 1970.

Ufsebrotet *see* **Ufsebrotet Bluff**

Ufsebrotet Bluff. 71°23' S, 13°17' E. A steep bluff, or mountain ridge, 3 km S of Mount Zimmermann, in the middle part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and photographed aerially by them. It was plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ufsebrotet ("ufse" means "the bluff," and the word "brot" signifies "broken"). US-ACAN accepted the name Ufsebrotet Bluff in 1970.

Ufsekammen *see* **Ufsekammen Ridge**

Ufsekammen Ridge. 71°24' S, 13°14' E. A long, narrow, arc-shaped mountain rock ridge, 5 km long, between Mount Schicht and Ufsebrotet Bluff, in the Gruber Mountains of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped from ground surveys conducted during NorAE 1956-60, and from 1958-59 aerial photos taken during the same long expedition, and named by them as Ufsekammen (i.e., "the bluff ridge"). US-ACAN accepted the name Ufsekammen Ridge in 1970.

Ufsöy *see* **Ufs Island**

Ufsöyvågen *see* **Howard Bay**

Ugain Point. 62°38' S, 61°18' W. A rocky hill rising to 102 m on the N coast of Smyadovo Cove, 780 m S of Cape Sheffield, in the NW part of Rugged Island, in the South Shetlands. Mapped by the Spanish in 1992, and by the Bulgarians in 2009, and named by the Bulgarians on Nov. 23, 2009, for the ancient Bulgarian clan known as Ugain.

Ugarchin Point. 62°22' S, 59°28' W. On the NE coast of Robert Island, 4.7 km W of Smirnenski Point, and 4.2 km SE of Newell Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for Ugarchin, the town in northern Bulgaria.

Ugly Sisters Nunataks. 81°39' S, 159°40' E. Two nunataks, S of Cinderella Nunatak, about 75 km SW of Mount Albert Markham, in the Churchill Mountains. Discovered and named by NZGSAE 1960-61. NZ-APC accepted the name, and ANCA followed suit. *See also* **Cinderella Nunatak**.

Skala Ugolëk. 71°49' S, 11°31' E. Rocks in the area of Vestre Høgskeidet, in the S part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians (for the reason why, *see* **Veterok Rock**).

Mount Ugolini *see* **Ugolini Peak**

Ugolini Peak. 78°01' S, 161°31' E. Also called Mount Ugolini. A sharp peak, rising to 2260 m, it stands 10 km S of Knob Head, and surmounts the central part of the large, ice-free massif called Battleship, at the S side of the upper part of Ferrar Glacier, 11 km E of Pivot Peak, in southern Victoria Land. Named by US-ACAN in 1965, for Fiorenzo Cesare Ugolini (b. 1929), Washington State University soil student at McMurdo Sound in 1961-62 and 1962-63.

Ugolini Ridge. 78°02' S, 161°26' E. Close to Ugolini Peak, in southern Victoria Land. Named by US-ACAN in 1994, in association with Ugolini Peak.

Uhlig, Karl. b. 1885, Germany. He went to sea in 1912, as a galleyman, in 1924 becoming an engineer, specializing in refrigeration. He was chief engineer on the *Schwabenland* during GermAE 1938-39.

Uhligberga. 73°52' S, 5°10' W. The NE part of Urfjell Cliffs, running from Uven Spur in the SW to Dråpane Nunataks in the NE, in the SW part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Karl Uhlig. The Germans call it Uhliggipfel.

Uhliggipfel *see* **Uhligberga**

Ui-Te-Rangiora. Cook Islander who, about 650 A.D., sailed with a crew the 2000 miles to Antarctica in his canoe, the *Te-Ivi-o-Atea*, or so legend has it. However, some say he was a chief from Fiji, and that the canoe was called the *Nga-Iwi-o-Aotea*. Others claim he was a Maori from NZ. During his travels he is said to have seen a foggy, dark place not seen by the sun, a place of bitter cold where bare rocks grow out of the solid sea and reach the skies. However, that he got to as far south as 60°S is much doubted.

UK-APC *see* **United Kingdom Antarctic Place-Names Committee**

Ukraine. This (new) country began sending expeditions to Antarctica in 1995-96. Money being tight, and with none of her own ships to make the trip, she had to use the *Akademik Boris Petrov* and the *James Clark Ross*. Akademik Vernadsky Station was established on Feb. 6, 1996, on the site of the old Fids station, Faraday (given to the Ukrainians by the British for that purpose). They were back in 1996-97 and 1997-98, both times on the *Ernst Krenkel*. The *Patriarche* was used for the 1998-99 expedition; the *Gorizont* for the 1999-2000 expedition; the *Grigoriy Mikheev* for the 2000-01 expedition; the *Gorizont* for the 2001-02 expedition; and the *Ushuaia* every season since 2002-03.

Gora Ukrytaja. 72°54' S, 61°19' E. A hill in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains. Named by the Russians.

Uksen *see* **Uksen Island**

Uksen Island. 67°21' S, 60°09' E. A steep-sided, isolated island, with 3 outlying rocks, between Hobbs Island and Scoble Glacier, 6 km NE of Tilley Nunatak, off the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature descriptively as Uksen (i.e., "the ox"). US-ACAN accepted the name Uksen Island in 1965. However, later, ANCA re-named it Solitary Island, because it is one of the few islands off this coast that does not occur in a group. That, in itself, is not sufficient reason to change a perfectly good name, and no one else went along with the change, or, apparently, with the Australians' re-plotting of this feature in 67°21' S, 60°11' E.

Uksöy *see* **Oom Island**

Uksvika *see* **Oom Bay**

Punta Ula *see* **Ula Point**

Ula, Anton Olsen *see* **Olsen, Anton Oluf**

Ula Point. 64°05' S, 57°09' W. A low, ice-covered point, it forms the NE point of James Ross Island, 8 km NW of Cape Gage. Discovered and roughly surveyed in Oct. 1903, by SwedAE 1901-04, and re-surveyed by Fids from Base D in 1945. Surveyed again by FIDS in 1952-54. Named by UK-APC on Sept. 4, 1957, for Anton Olsen Ula. US-ACAN accepted the name in 1963. It appears on a 1959 Argentine map as Cabo 23 de Febrero (i.e., "cape Feb. 23"), but, today, the Argentines tend to call it Punta Ula. Due to an original failure to understand

something Nordenskjöld wrote, "Anton Olsen, Ula" (similar to saying, "John Smith, London"), this man's name has been mis-represented over the years. It was, actually, Anton Oluf Olsen, and Ula was the name of the village he came from.

Ulendet *see* **Ulendet Crevasses**

Ulendet Crevasses. 72°51' S, 0°59' W. A crevasse field 11 km long, in the S and W parts of Jutulstraumen Glacier, 24 km NE of Neumayer Cliffs, in Maudheimvidda, in Queen Maud Land. Mapped in 72°50' S, 1°00' W by Norwegian cartographers from surveys and air photos made by NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-58, and named by them as Ulendet (i.e., "the rough ground"). US-ACAN accepted the name Ulendet Crevasses in 1966. The feature has since been re-plotted.

Ulis, Hans. b. Norway. Carpenter on the *Southern Cross* during BAE 1898-1900.

Seno Ulises. 64°24' S, 61°29' W. A shallow inlet which opens toward the E, in the central part of the S and E shores of Yelcho Passage, on the W coast of the Antarctic Peninsula. Named by the Chileans for Ulises Moreno, marine biologist who took part in ChilAE 1955-56. The Argentines call it Seno Osores, perhaps for Juan Osores, who wintered-over at Órcadas Station in 1977.

Ulitzka-Landspitze. 70°31' S, 161°16' E. A headland in the area of Rennick Glacier, in Victoria Land. Named by the Germans.

Mount Ulla. 77°32' S, 162°24' E. Also called Claymore Peak. A sharp, prominent peak, rising to 1920 m, between Meserve Glacier and Hart Glacier, S of the E end of Wright Valley, in the Asgard Range of Victoria Land. The summit is a knife-edge ridge which drops away on both sides. Named by VUWAE 1958-59, for the Norse god. NZ-APC accepted the name, and US-ACAN followed suit in 1972.

Ullman *see* **Ullmann**

Cordillera Ullmann *see* **Ullmann Spur**

Cordón Ullmann *see* **Ullmann Spur**

Massif Ullmann *see* **Ullmann Spur**

Pointe Ullmann *see* **Ullmann Point**

Punta Ullmann *see* **Ullmann Point**

Ullmann Massif *see* **Ullmann Spur**

Ullmann Point. 62°05' S, 58°21' W. The SW tip of Ullmann Spur, in Martel Inlet, it marks the E entrance point of Visca Anchorage, at Admiralty Bay, on King George Island, in the South Shetlands. Charted, but not named, in Dec. 1909, by FrAE 1908-10, and further charted by the Discovery Investigations in 1927. It appears on their chart of 1929 (still unnamed). Named about 1930 in association with Ullmann Spur. It appears (erroneously) as Ullman Point on a 1943 U.S. Hydrographic Office chart, and on a 1948 British chart, but it was the name Ullmann Point that US-ACAN accepted in 1952, with UK-APC following suit on Sep. 8, 1952. It appears as such in the 1955 British gazetteer, but plotted in 62°03' S, 58°21' W. The coordinates had been corrected by the time of a 1962 British chart, and, with the new coordinates, the feature appears in the 1977 British gazetteer. US-ACAN accepted the new coordinates. It appears as Punta Ullmann on a Chilean chart of 1947, but on a 1949 Argentine chart (erroneously) as Punta Ullman. Punta Ullmann was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on a 1949 French chart as Pointe Ullmann. This feature was last plotted by the UK, in late 2008.

Ullmann Range *see* **Ullmann Spur**

Ullmann Spur. 62°05' S, 58°21' W. A mountainous ridge, rising to 275 m (the British say 290 m and the Chileans say about 400 m), and projecting from King George Island into the central part of the head of Martel Inlet, Admiralty Bay, in the South Shetlands. Charted in Dec. 1909 by FrAE 1908-10, and named by Charcot as Massif Ullmann, probably after a supporter of the expedition. It appears as such on his 1912 maps of the expedition. Further charted by the Discovery Investigations in 1927, it appears on their 1929 map as Ullmann Range. It appears (erroneously) as Ullman Range on a 1948 British chart, but the name Ullmann Range was the one accepted by UK-APC on Sept. 20, 1955, with US-ACAN following suit. However, it was redefined as Ullmann Spur by UK-APC on Sept. 23, 1960, with US-ACAN following suit later that year, and, as such, it appears on a map of 1961 and on a British chart of 1962. It appears as Cordillera Ullmann (i.e., "Ullmann range") on a 1947 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer. It also appears as Cordón Ullmann in a 1955 reference. This spur was last plotted by the UK, in late 2008.

Monte Ulmer *see* **Mount Ulmer**

Mount Ulmer. 77°35' S, 86°09' W. A prominent sharp peak, rising to 2775 m, 3 km N of Mount Washburn, in the N part of the Sentinel Range (in fact, it is the highest peak in that range), in the Ellsworth Mountains, near the S coast of the Bellingshausen Sea. Discovered aerially by Ellsworth on his flight of Nov. 23, 1935, and named by him for his wife Mary Louise Ulmer, first as Mount Mary Louise Ulmer, then as Mount Mary Ulmer, and finally as Mount Ulmer, the name which US-ACAN accepted in 1947. Originally plotted as a mountain in 77°30' S, 86°00' W, it was re-identified using U.S. Navy aerial photographs taken in 1959, alongside Ellsworth's photos.

Ulpts, Jürgen. b. Oct. 18, 1900, Rhauderfern, Lower Saxony, Germany. In 1926 he became a sailor for the North German Lloyd Line, and in 1938 found himself on the *Elbe*, plying the west coast of North America, along with Dr. Joseph Bludau (q.v.), the ship's surgeon, when he became a sailor on the *Schwabenland* for GermAE 1938-39. He stayed in the merchant marine after the war, with Hamburg-American out of Bremen, and well into the 1950s was plying the Atlantic as bosun of the *Lahnstein*, with his friend from Antarctic days, Albert Weber (q.v.).

Ultima Gully. 68°31' S, 78°33' E. A major ice gully, 0.75 km long and 30 meters deep, cut by a meltwater stream in the plateau ice at the edge of the Vestfold Hills. The north-facing side is a cliff displaying the strata of the plateau ice and the floor, while the south-facing sides are mantled by moraine. Named by ANCA for its impressive and desolate location ("ultima" meaning "last").

Ulu Peninsula. 63°56' S, 58°05' W. That portion of James Ross Island NW of the narrow (12 km wide) neck of land between Röhss Bay and Croft Bay, extending from Cape Obelisk to Cape Lachman. Named descriptively by UK-APC on Feb. 15, 1988. In plan view, the feature is shaped like an ulu, the type of knife traditionally used by Eskimo women. US-ACAN accepted the name.

Ulvetanna *see* **Ulvetanna Peak**

Ulvetanna Peak. 71°51' S, 8°20' E. A sharp peak, rising to 2930 m, about 3 km N of Kintanna Peak, in the E part of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 aerial photos taken during the same long expedition, and named by them as Ulvetanna (i.e., "the wolf tooth"). US-ACAN accepted the name Ulvetanna Peak in 1967. The Germans call it Matterhorn.

The *Ulysses*. The first American whaler in Antarctic waters in the modern era (she was really Norwegian — read Anders Jahre — only with an American flag, ostensibly owned by the Western Operating Corporation, of Wilmington, Del. It was a tax scam). Built at Sparrows Point, Md., in 1915, and purchased in 1935 for $850,000. She was converted in Göteberg, Sweden, from an oil tanker into a 12,395-ton, 536 foot 4 inch factory, and much of the equipment on board came from the *Kosmos*. The *Ulysses*' first venture into Antarctic waters was 1937-38, with a (mostly) Norwegian crew under the command of Capt. Hans Mikkelsen, with 10 whale catchers. Lt. (jg) Quentin R. Walsh, of the U.S. Coast Guard, was whaling inspector aboard. Lt. Walsh's account of the expedition makes very interesting reading. **May 26, 1937**: She steamed out of dock, not really ready at all for the job. Lt. Walsh was the only native American aboard. The ship simply couldn't move properly, and had to return to Göteborg for a few weeks. **June 11, 1937**: She finally sailed for Sandefjord. **June 12, 1937**: She left Sandfjord, bound for Southampton. **June 15, 1937**: She arrived at Southampton, where she took on fuel oil. **June 16, 1937**: She left Southampton. **June 17, 1937**: While she was in the Bay of Biscay, there was a fire on board. This was the second fire. **June 20, 1937**: She passed Gibraltar. **June 26, 1937**: She arrived at Port Said, and passed through the Suez Canal. **June 27, 1937**: She arrived at Suez, leaving there the same day. **July 1, 1937**: She refueled from the *Macoma*, while in the Red Sea. **July 3, 1937**: Refueling was completed, and a man died on board. There was another fire. **July 10, 1937**: She crossed the Equator. **July 12, 1937**: She arrived at Diego Garcia, where she picked up more crew and 5 whale catchers. **July 24, 1937**: She

arrived at Shark Bay, Western Australia. That date whaling began in Australian waters. **July 25, 1937**: Another fire. **Aug. 23, 1937**: A man was killed after being hit by a whale fin. **Oct. 5, 1937**: Another fire. **Oct. 9, 1937**: She left Australia, bound for South Africa. **Nov. 1, 1937**: She arrived in Simonstown, South Africa. **Nov. 13, 1937**: She arrived at Walvis Bay, where the new manager, Nicolai B. Herlofsen, a Norwegian, came aboard. **Nov. 27, 1937**: The *Ulysses* left Walvis Bay, bound for Cape Town, with the catchers *Kos 6*, *7*, *11*, *21*, *22*, and *23*. The *H.J. Bull* was another catcher. **Nov. 30, 1937**: She arrived at Cape Town, where she took on fuel. **Dec. 1, 1937**: She left Cape Town, bound for the Weddell Sea. **Dec. 7, 1937**: She met her first icebergs, in 53°20' S, 14°58' E. **Dec. 8, 1937**: She killed her first whale in the Weddell Sea, which is where she would remain for the 1937-38 season. **Dec. 26, 1937**: The crew stopped work for 6 hours to celebrate Christmas Day. This was the only cessation of work aboard during the entire season. **Dec. 29, 1937**: The *Ulysses* was holed in her port side, right at a storage tank. She lost a lot of fuel. **Dec. 30, 1937**: The *Vikingen* came alongside, in 57°06' S, 12°06' E, and gave the *Ulysses* 900 tons of fresh water. **Jan. 2, 1938**: The *Vikingen* left. **Jan. 17, 1938**: The *Ulysses* established contact with the *Florida*, a tanker whose mission was to take whale oil off the *Ulysses* and to give her fresh water. There was an accident, in which the *Florida* hit the *Ulysses*, causing damage to both vessels. **Jan. 20, 1938**: She met up with the *Florida* again. **Jan. 22, 1938**: The *Ulysses* again fueled by the *Vikingen*. **Feb. 3, 1938**: The *Florida* again took off whale oil. **Feb. 19, 1938**: The *Ulysses* met the *Kosmos*, from whom she took on provisions. **Feb. 22, 1938**: The *Kosmos* left. **March 15, 1938**: The *Ulysses* concluded Antarctic operations, in 63°43' S, 26°01' W. **March 16, 1938**: The Antarctic whaling season ended, and the *Ulysses* headed north. 187 men had transferred to the *Kosmos*. She had taken 3665 whales (making 9000 tons of whale oil, i.e., 191,030 barrels, valued at a cool million dollars). One of the blue whales they took in the Weddell Sea was a pregnant female of 98 feet and 192 tons. **April 11, 1938**: She arrived off Sandy Hook, NJ. **June 12, 1937**: The *Ulysses* arrived back in New York. Anders Jahre made $2 million profit. She went back for the 1938-39 season, with 400 men aboard. She was back in 1939-40 and 1940-41.

Umber Island. 69°20' S, 72°10' W. A rocky island, 2.5 km long, 10 km NW of Dint Island, on the E side of Lazarev Bay, off the NW side of Alexander Island. Mapped in 1959-60 by Searle of the FIDS, from aerial photos taken by RARE 1947-48, and plotted by him in 69°13' S, 72°00' W. Surveyed from the ground by FIDS in 1960. UK-APC accepted the name (and Searle's coordinates) on on March 2, 1961, and US-ACAN followed suit that year. On the RARE photos the island appears in deep shadow cast by the Havre Mountains to the NE. It appears on a British chart of 1961. U.S. Landsat imagery of Feb. 1975 corrected the coordinates, and, with these new coordinates, the feature appears in the 1977 British gazetteer.

Mount Umbriel. 71°35' S, 68°46' W. Rising to 1500 m (the British say 1350 m), it overlooks the head of Venus Glacier (which flows to the E of it), in the E part of Alexander Island. First photographed, aerially, by RARE 1947-48, and mapped from these photos by Searle, of the FIDS, in 1960. He plotted it in 71°36' S, 68°53' W. Named by UK-APC on March 2, 1961, in association with Uranus Glacier, Umbriel being a satellite belonging to the planet Uranus. US-ACAN accepted the name (and Searle's cordinates) later in 1961. The feature was later re-plotted from Jan. 1973 U.S. Landsat images, and with the new coordinates, appears in the 1977 British gazetteer.

Umeboshi-iwa *see* **Umeboshi Rock**

Umeboshi Rock. 68°03' S, 43°07' E. Also spelled Umebosi Rock. A small and craggy coastal rock exposure, rising to 100 m above sea level, 6 km ENE of Akebono Rock, and 38 km W of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped from ground surveys and air photos taken by JARE 1962, and named by the Japanese on May 1, 1963, as Umebosi-iwa (i.e., "pickled plum rock," or "rumpled rock"). In 1968, US-ACAN accepted the name Umeboshi Rock. The Norwegians call it Sviskenuten, which is a translation of the Japanese name ("sviske" meaning "prune").

Umebosi-iwa *see* **Umeboshi Rock**

Umebosi Rock *see* **Umeboshi Rock**

Umitaka Bank. A seamount (submarine feature) centering on 67°25' S, 167°00' E. Named for the first *Umitaka Maru*, which took soundings in the area in 1964-65. The name was approved by US-ACAN in 1985, although as late as 1995, others were still calling it Umitaka Seamount.

[1]**The *Umitaka Maru***. A 1387-ton Japanese research and training vessel, built in 1955 for the Tokyo University of Fisheries (later to be called the Tokyo University of Marine Science). Strictly speaking she was the *Umitaka Maru II*, there having been a ship of that name before (although never in Antarctica). She accompanied the *Soya* in 1956-57, as well as conducting a fisheries expedition of her own. Her captain that season was Takeharu Kumagori, and 1st officer was Keijiro Ozawa. In Dec. 1958 she was in at Wellington, NZ. She was in Antarctic waters in 1961-62 (skipper was Keijiro Ozawa) on a Tokyo University of Marine Science Ocean Research expedition, led by Takeharu Kumagori. In 1964-65, under Capt. Ozawa again, she re-mapped Sturge Island, in the Balleny Islands. That season, she was in Antarctic waters between Nov. 2, and Nov. 8, 1964, and again between Feb. 25 and March 1, 1965. Yukiyasu Sasaki was chief scientist on that expedition. This was the third such expedition, but the first that ventured south of 60°S. The 4th such voyage, in 1966-67, again with Ozawa as captain, visited the South Shetlands, between Oct. 23 and Oct. 27, 1966. She was back for the 1967-68 season, between Nov. 13, 1967 and Feb. 11, 1968. In Dec. 1968 she was in the Persian Gulf. The Antarctic expeditions were taken over by the *Hakuho Maru* in 1968-69. The *Umitaka Maru* was replaced in 1973 by another ship of the same name (see below).

[2]**The *Umitaka Maru***. Replaced the earlier ship of the same name (see above) in 1973, the year she was built for the Tokyo University of Fisheries. Technically she was known as *Umitaka Maru III*, being the third ship of that name. 1828 tons, and 79 m long, she could cruise at 14 knots (with a maximum of 15 knots). She had 12 officers, a crew of 20, and could carry 47 scientists. She was in Antarctic waters in 1977-78, skippered by Hideo Houtani, and with Kenji Kanda as chief scientist, conducting marine biology research with a krill thrust. In 1980-81 the new ship was back for the Tokyo University of Fisheries, on two expeditions with the *Kaiyo Maru*, and led by chief scientist Masaaki Murano of the Tokyo University of Fisheries and Yuzou Komaki, chief scientist with the Japanese Fisheries Agency. Skipper of the *Umitaka Maru* was Inoue Kiyoshi. These two expeditions were part of FIBEX (q.v.). In 1983-84 she was back, off Wilkes Land and Enderby Land, again with Murano and Komaki leading the expedition, again in company with the *Kaiyo Maru*, but this time also with the *Hakuho Maru*. Capt. Hideo Houtani was skipper of the *Umitaka Maru* this season. This was as part of SIBEX (q.v.). After a long period of no Antarctic activity, she was back in Jan.-Feb. 1996, under the command of Capt. Isao Kasuga, off the coast of Adélie Land, conducting a biological and oceanographic survey of the Antarctic Convergence. In Sept. 1997 she was in the Japan Sea.

[3]**The *Umitaka Maru***. The fourth vessel with this name (but only the third in Antarctic waters), technically the *Umitaka Maru IV*, and again owned by the Tokyo University of Fisheries. Completed in 2000, she was 93 m long, and could carry 107 persons. She was off the coast of Adélie Land in 2002-03, and in Feb. 2003 was in Australia. She was back off the Adélie Land coast and off Lützow-Holm Bay in 2004-05, and off Lützow-Holm Bay in 2005-06. On Dec. 21, 2007 she left Cape Town, bound for a week's oceanographic study off Lützow-Holm Bay, and then on to Fremantle, Western Australia. She left Fremantle on Jan. 23, 2008, bound for Antarctica, as one of the three international ships taking part in CEAMARK (Collaborative East Antarctic Marine Census). Takashi Ishimaru was voyage leader, and Graham Hosie was the CEAMARK leader). They spent 15 days observation off the coast of Adélie Land and George V Land.

Umitaka Seamount *see* **Umitaka Bank**

Gora Umova. 73°30' S, 61°50' E. A mountain on the large massif between Mount Mather and Mount Bayliss, on the S side of Fisher Glacier, in the Prince Charles Mountains of Mac. Robertson Land. This feature occupies exactly the same coordinates as Mount Menzies.

Una Peaks. 65°01' S, 63°47' W. Very prominent twin ice- and snow-capped peaks, formed of basalt, on Renard Island, rising to 747 m, S

of Cape Renard, at the entrance to Lemaire Channel, on the Danco Coast, on the W coast of Graham Land. This feature is known in the mountain climbing world as Cape Renard Towers, but, more informally among Fids, BAS personnel, and mountain climbers, as Una's Tits (it is on a 1956 chart as such). Irene Una Sedgwick was a Falkland Islander, born on Aug. 16, 1931, daughter of merchant Lawrence Adrian Sedgwick and his wife Irene Isabella Atkins. After boarding school, she was, between Oct. 1949 and Nov. 1950, temporary clerk to FIDS and acting private secretary to Sir Miles Clifford, governor of the Falkland Islands (some say she was a barmaid on South Georgia, but this is absolutely untrue, partly because there never has been a bar on South Georgia, and also because it is unimaginable that the lady in question would ever be a barmaid anywhere). In 1950 she was in her office at Government House, and Bob Spivey walked in fresh from an extended stay in Antarctica. He was wearing canvas trousers held up by a rope, and a faded submariner's pullover. He subsequently asked her if she would like to see his huskies. Even more subsequently, he asked her to marry him. She told him she only accepted applications in triplicate. Spivey went back to England, and in 1952 Una flew on the first ever flight out of the Falklands, on a Sunderland flying boat, up the South American coast to Brazil, and then across to Cape Verde, and up to England. She went to Australia, living and working for 3 years in Northern Territory. Then off to South Africa, where her uncle owned a small supermarket. Back in London in 1959, she ran into Bob again (they had kept in touch), and in Feb. 1960, in Dorset, they were married. They almost immediately took a Dutch ship back to the Solomons, where Bob lived and worked for the Colonial Service. After several attempts by Fids, from the mid-1950s on, and BAS climbers up the north face, the first conquest of Una's Tits was via East Buttress, on Feb. 1-4, 1997, by Canadians Jia Condon and Rich Prohaska. They reached the East Summit, but then descended rather than try the too dangerous saddle connecting that summit with the slightly higher West Summit, which was finally conquered 2 years later by a German team, who climbed straight up the SW face. On May 20, 2008, UK-APC named this feature Una Peaks, and, on Oct. 21, 2008, US-ACAN accepted this new name. Una still lives in the state of Victoria. Her sister Heather married John Tonkin.

Unbestimmter Sporn. 71°37' S, 163°21' E. A spur in the NE part of Molar Massif, in the Bowers Mountains. Named by the Germans. The name means "more indeterminate."

Unconformity Buttress *see* **Breccia Crag**

Cape Underset *see* [1]**North Point**

Underwear. Tourists should wear thermal underwear, or at least something warm, depending on the tolerance level of their more southerly regions.

Mount Underwood. 68°08' S, 49°21' E. An elongated mountain, 2.5 km E of Mount Flett, in the central part of the Nye Mountains of Enderby Land. Plotted by Australian cartographers from aerial photographs taken by ANARE in 1956 and 1957. Named by ANCA for Robert "Bob" Underwood, geophysicist at Wilkes Station in 1959 and 1962. US-ACAN accepted the name in 1965.

Underwood, Joseph Addison. b. July 15, 1809, Jefferson, Maine, son of Joseph Underwood and Sylvia Chapin. He joined the U.S. Navy, and was a lieutenant when he married Sarah J. Stevens, in May 1838, in Boston. He was on the *Vincennes* with Wilkes, during USEE 1838-42, but was killed at Malolo on July 24, 1840.

Underwood Glacier. 66°35' S, 108°00' E. A channel glacier, about 24 km long, it flows between Reist Rocks (13 km to the W of the terminus of this glacier) and Cape Nutt, to feed Vincennes Bay, to the E of the Knox Coast, in Wilkes Land. Snyder Rocks are 5 km to the W of the terminus of this glacier. Mapped in 1955 by U.S. cartographer Gard Blodgett, from aerial photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Lt. Joseph A. Underwood. ANCA accepted the name.

Undietch, John *see* **USEE 1838-42**

The *Undine*. Iron-hulled steam sealing yacht, built in Leith, Scotland, in 1884, as the *Lady Aline*. From 1888 to 1906 she was a Royal Navy vessel, and in 1907 was bought by Carl Anton Larsen's Compañía Argentina de Pesca. Larsen took her to South Georgia in September that year, and in 1908-09 took her on a trip through the islands of South Georgia and the South Sandwich group, to find harbors for whaling. Skipper of the ship that year was Ottar Jørgensen. They left Grytviken in Nov. 1908. Christen Granöe was 1st mate. In 1911-12, again under the overall command of Larsen, she relieved Órcadas Station, bringing in the 1912 wintering-over party. She was also loaned to GermAE 1911-12. The ship relieved Órcadas again in 1916-17, captain unknown. She continued as a sealer until an Argentine fishing company bought her in 1919. She was sold several times more, and sank in 1960.

Ungane *see* **Ungane Islands**

Ungane Islands. 69°16' S, 39°29' E. Three small, islands, 6 km WNW of Hamnenabben Head, in the E part of Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Ungane (i.e., "the children"). US-ACAN accepted the name Ungane Islands in 1968.

Unger Island. 70°41' S, 166°55' E. A small, ice-free island, the westernmost of the Lyall Islands, 6 km SE of Cape Hooker, in the W side of the entrance to Yule Bay, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Pat B. Unger (b. Jan. 1931), USNR, medical officer at Little America in 1957.

Unger Peak. 79°21' S, 86°10' W. A conspicuous, mainly ice-covered peak rising above the plateau at the S end of Founders Escarpment, 3 km NNW of Zavis Peak, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Maurice Henry Unger (b. July 1940), USN, navigator on photographic flights over Ellsworth Land and Marie Byrd Land during OpDF 1965 and OpDF 1966.

Mount Unicorn. 71°16' S, 67°07' W. Rising to about 900 m, it is the most northeasterly of the Batterbee Mountains, about 10 km NW of Mount Ness, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation Monoceros (the Unicorn). US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Union*. Possibly tender to the *Lynx*, in the South Shetlands for the 1820-21 and 1821-22 seasons.

[1]**Cabo Unión**. 63°22' S, 57°56' W. A cape, SW of the Laclavère Plateau and of Cape Legoupil, Trinity Peninsula. Named by the Argentines.

[2]**Cabo Unión** *see* **Cape Ducorps**

Union Glacier. 79°45' S, 82°30' W. Also called Bastien Glacier. A large, heavily crevassed glacier flowing E from the plateau at the Edson Hills (on the W side of the Heritage Range), between Pioneer Heights and the Enterprise Hills, in the middle of the Heritage Range, receiving the flow of several tributary glaciers as it does so. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in keeping with the heritage theme.

The *Unitas*. German whaling factory ship, the largest in Germany, she was owned by Unilever (through their German subsidiary, the Unitas Whaling Company), and flew a German flag. Launched in May 1937, at Bremen, she was in Antarctic waters in 1937-38 and 1938-39. She had 9 catchers, *Unitas 1* through *9*. In 1939 she was laid up in Hamburg for the rest of the war, was seized by the Allies in 1945, and began a new whaling career, as the *Empire Victory*.

United Kingdom seen herein as UK (*see* **Great Britain**)

United Kingdom Antarctic Place-Names Committee. Abbreviated to UK-APC. Established on Nov. 14, 1945, by the UK Polar Committee.

United Nations. The first UN discussion on Antarctica came in 1984 and on Dec. 16, 1985 the UN General Assembly voted 92-0 that all mineral resources in Antarctica should be split between all nations.

The *United States*. Sealing barque from Stonington, Conn. In 1843-44 she was at the Crozet Islands (46°S), on a whaling and sealing expedition under Capt. Barnum, and was back at the same place, on the same mission, in 1849-51, under the same skipper (Barnum). She visited the South Shetlands in 1852-53, under the command of Capt. Adby Wilcox, arriving back in Stonington, on May 10, 1853, with 308 fur seal skins and 2200 barrels of elephant oil. She left

Stonington again on July 28, 1853, again bound for the South Shetlands, for the 1853-54 season, again under Wilcox, and with the *Flying Cloud* as her tender. On Oct. 9, 1853, the *Sarah E. Spear* (which was sailing with the fleet) and the *Flying Cloud* were both lost in a gale off the Falklands. All crews were saved. The *United States* abandoned her intentions of going to the South Shetlands, and arrived back in Stonington on Jan. 12, 1854. Wilcox was back in the South Shetlands, in the *United States*, in the period 1854-56.

United States Advisory Committee on Antarctic Names. Abbreviated to US-ACAN. Part of the U.S. Board of Geographic Names (UBGN), which established ACAN in July 1943. Its first gazetteer, *The Geographical Names of Antarctica*, was published by the UBGN in 1947.

United States Air Force Electronics Test Unit. An expedition of two ski-equipped C-47 aircraft sent out from Bolling Air Force Base in Washington, DC, to Antarctica, for the 1957-58 season, during IGY. Its purpose was to test a Raydist electronic positioning system by surveying and photographing about 100,000 square miles within a 400-mile radius of Ellsworth Station, which was to be the base of operations. **Oct. 1, 1957**: They left Washington, and flew to Ushuaia, Argentina. **Oct. 16, 1957:** They left Ushuaia, and flew to Robert Island, in the South Shetlands, in order to refuel. **Nov. 21, 1957**: They finally left Robert Island, after being grounded by bad weather. The first plane, commanded by the expedition leader, Major Jim Lassiter, then flew to the mainland, but had to land on Dolleman Island to wait for a storm to pass. **Nov. 22, 1957:** Lassiter's plane reached its destination, Ellsworth Station. **Dec. 6, 1957**: The second plane, with Capt. David Roderick (2nd-in-command of the expedition) arrived at Ellsworth. **Mid-Jan. 1958**: The expedition was completed, and they left for home on the *General San Martín*. The planes were later returned to the USAF. Other members of the expedition were: Dalton Webb, an electronics engineer with the Raydist Corporation, who spent a lot of time in the Pensacola Mountains; Capt. Dalton E. Alley; Staff Sgt. Robert E. Bennett, radio operator; Sgt. Ray J. Cavart, flight engineer; Master Sgt. Kit Gray (*see* **Gray Hill**), flight engineer; Willard Nieth (*see* **Neith Nunatak**—sic), photographer; Capt. Samuel J. Lance, navigator; John Wall; and Neil Hinckley. All these men had features named after them, except Ray Cavart.

United States Antarctic Program. Known as USAP since 1971, the successor to USARP (*see* **United States Antarctic Research Program**). Still managed by the National Science Foundation, it remained (until 1997, anyway, when the Navy got out of Antarctica) the overall word for the U.S. involvement in Antarctica. In 1988-89 there were 75 scientific projects on hand in Antarctica.

United States Antarctic Research Program. Known as USARP. A division of the office of the National Science Foundation. It began on Jan. 1, 1959 (effective from March), as a U.S. successor to IGY, and was headquartered in McMurdo Base. To put it succinctly, USARP was the post-IGY U.S. scientific involvement in Antarctica. A member of USARP was called a usarp (and was usually a civilian). This was replaced by USAP in 1971, but a member was not called a usap.

United States Antarctic Service Expedition. 1939-41. Known as USAS. This was Admiral Byrd's third expedition to Antarctica, the first U.S. government-sponsored expedition there since USEE 1838-42, and the largest Antarctic expedition up to that time. Its intentions were to set up two permanent bases in the sector of American interest, and to explore that area systematically; to chart the coastline between 72°W and 148°W, as well as the Weddell Sea coast; to conduct other aerial and detailed scientific investigations: auroral phenomena, bacteriology, botany, cosmic rays, glaciology, magnetism, medicine, meteorology, micro-paleontology, ornithology, petrography and petrology, physiography, physiology, seismology, structural geology, and zoology. Byrd, Finn Ronne, and Dick Black had all been planning separate expeditions when President Roosevelt persuaded them to join forces as USAS, to be led by Byrd, or at least, to be under his overall nominal command. **June 30, 1939**: The U.S. Congress established the United States Antarctic Service, which would be the actual organ to send the expedition to Antarctica. They had two ships, the *North Star*, and the *Bear* (Byrd's old ship, the *Bear of Oakland*, from ByrdAE 1933-35, now renamed). 160 dogs took part in USAS, and 125 men (including 21 scientists), 59 of whom would comprise the shore party for the winter of 1940, at the two bases, East Base and West Base. The rest of the men would stay on the ships. Four planes were used on the expedition: a Barkley-Grow T8P-1 two-engine seaplane (NC18470) was carried on the *Bear* for ice reconnaissance; two Curtiss-Wright Condor twin-engine biplanes, one for East Base and one for West Base; and one single-engine Beechcraft D17A biplane (NC20778), stationed at West Base. Other machines used were two light Army tanks and two light artillery tractors, one of each for each base, as well as the Snowcruiser (q.v.), brought down from the USA by its creator, Dr. Tom Poulter himself, and that would go to West Base. **Sept. 23, 1939**: The *San Jacinto* arrived in New York from Puerto Rico, carrying three future *Bear* crew members—Eddie Bradshaw, Walter Szeeley, and Roger Scott. **Nov. 15, 1939**: The *North Star* commanded by Capt. Isak Lystad, left Boston at 6.14 a.m, bound for Philadelphia, with a Merchant Marine crew: Charlie Salenjus (1st mate); John Wahlborg (2nd mate); Fletcher Ruttle (3rd mate); William Schroeder (4th mate); Kenneth Simundson (bosun); Francis Bearse (radioman); Otto Sanwick (chief engineer); Thomas Holland (1st engineer); Gordon Lien (2nd engineer); C.G. Ralls (3rd engineer); H.O. Hendricks (machinist); Sigfred Sundt (steward); Jimmy Kalerak (2nd cook); John Gambole (baker); Paul Holman and Boston Hunt (waiters); Carl Weissenborn (messboy); Harvey Henderson (galleyman); Leo Belles, W.D. LeRoux, and Bill Lee (oilers); Franklyn Johnson (wiper); John Wahlborg, Jr., Francis Lambson, Jerry O'Brien, Moe Cole, and Albert Duggan (seamen); and James Wiles (deckhand). Alfred B. Geyer was medical officer aboard ship. The 2 ships took separate routes across the Pacific. The expeditioners aboard the *North Star* were: Al Wade, Doc Poulter, Doc Frazier, Finn Ronne, Chuck O'Connor, Larry Warner, Charles Passel, Robert Palmer, Don Hilton, Sig Gutenko, Roger Hawthorne, Fred Dustin, Ike Schlossbach, Earl Lockhart, Milton J. Lobell (ichthyologist; only for the 1st half of the expedition; he would stay aboard ship), Malcolm Davis (biologist on the *North Star* during the first half of the expedition; he would stay on the ship), Eric Clarke (cosmic ray observer; he would stay aboard ship), Ray Butler, Dick Moulton, Zadik Collier, Moe Morency, Arnold Court, Tex Helm (the expedition photographer), Joe Wells, Bob Steele, Dick Black, Jack Richardson, Paul Siple, Adam Asman, Pappy Reece, Art Carroll, Clay Bailey, Harold Gilmour, Ted Petras, Jack Perkins, Malcolm Douglass, Jim McCoy (chief pilot), and 9 Eskimo and Malemute dogs, 7 black and white, and 2 pure white, all the dogs being led by Kotik, the lead dog. **Nov. 17, 1939**: The *North Star* pulled into Philadelphia. The *Bear* left Boston Harbor on a test run. **Nov. 21, 1939**: The Beechcraft airplane was loaded aboard the *North Star*, next to the Snowcruiser. The *North Star* left Philadelphia at 3 P.M., in snow and hail. **Nov. 22, 1939**: The *Bear* left Boston, commanded by Richard Cruzen, the 2nd-in-command of the expedition. The rest of the crew (all U.S. Navy) were: Cdr. Ladislaus Adamkiewicz (medical officer); Lt. George Dufek (navigator); Lt. Bill Crofford (1st officer); Lt. Peter Neimo (2nd officer); William Daly (chief bosun); bosun's mates 1st class Ernest Flaherty, Elmo Jenkins, John Hostinsky, and Lester Lehrke (a sailmaker and communications man, he would go to East Base); William Vrobel (coxswain); Joseph Wallace (yeoman 1st class); Arthur Hill (photographer's mate 3rd class); Swede Nylund (radioman 1st class); Joe Daigle (radioman 3rd class); Frank Messer (chief machinist 1st class); Frank Dawley (chief machinist); Clayton Nelson and Charles Meyer (chief machinist's mate); Charles Allen, George Wyckoff, Thomas Smith, and Wes Jakobczyk (machinist's mates 1st class); Fred Schmohe and James McFarlane (electrician's mates 1st class); Charles Nusbaum (ship's cook 1st class); Emil Swensson (ship's cook 2nd class); Joseph Littleton (ship's cook 3rd class); mess attendants George Gibbs (1st class) and David Taylor (2nd class) (these last three were the first recorded black men to go south in modern times—*see* **Blacks in Antarctica**); and the following seamen 1st class: Robert McLean, Robert Mulhern, Robert Johnson, Sidney Kanefsky, Jack Keck, Anthony Kelczewski (i.e., Tony Wayne), Eddie Bradshaw, Homer Ertenberg, Walter Szeeley, and Roger Scott. Also aboard were expeditioners Pappy Gray, Elmer Lamplugh, Howard

Odom, Ben Johansen, Harry Darlington, Archie Hill, Len Berlin, Glenn Dyer, Lee Curtis, Paul Knowles, Carl Eklund, Holly Richardson, Dutch Dolleman, Lou Colombo, Joe Healy, Jack Bursey, Herb Dorsey, Herwil Bryant, Earle Perce, Ashley Snow, Dr. Lewis Sims, and photographer Charlie Shirley. Byrd's secretary, J.E. MacDonald, would go as far as Panama. **Nov. 30, 1939**: Byrd boarded the *North Star* at Balboa. **Dec. 3, 1939**: The *North Star* crossed the Equator at 6.15 A.M. **Dec. 6, 1939**: The *Bear* left Balboa, bound for Antarctica. **Dec. 13, 1939**: The *North Star* at Pitcairn Island, where they took on board a four-year-old boy, Little Ellis. Ellis's grandfather was Arthur Young, who had lost his wife 3 days before the *North Star* pulled into Pitcairn. Ellis's mother lived in Dunedin, hence the good deed. **Dec. 17, 1939**: The *North Star* at Rapa Island, in French Polynesia. **Dec. 20, 1939**: Doc Frazier operated on Dick Moulton's back, aboard the *North Star*. **Dec. 27, 1939**: The *North Star* pulled into Wellington, NZ. **Dec. 28, 1939**: The *Bear* sighted her first icebergs, in about 58°S. **Dec. 29, 1939**: The *Bear* crossed into Antarctic waters, in 123°43' W. **Dec. 30, 1939**: At noon, the *North Star* left Wellington for Dunedin. On that day, the *Bear* was in 63°S, 124°W. **Dec. 31, 1939**: The *Bear* was in 64°S, 127°W. **Jan. 1, 1940**: The *Bear* in 63°26' S, 130°16' W, on New Year's Day, and reached the pack ice. **Jan. 2, 1940**: The *Bear* headed west along the pack ice, looking for an opening. She reached 63°35' S, 144°13' W. **Jan. 3, 1940**: At 6.05 A.M., with a crowd on the dock to see them off, despite the hour, and Maori singers bringing tears to a lot of eyes, the *North Star* left Dunedin, heading to Antarctica. The *Bear* was in 63°S, 147°W. **Jan. 4, 1940**: The *Bear* in 62°30' S, 149°W. **Jan. 5, 1940**: The *Bear* was in open water again, in 62°34' S, 153°32' W. That day there was a bit of a worry when the monstrous Snowcruiser shifted on deck. **Jan. 6, 1940:** The *Bear* in 63°42' S, 159°W. **Jan. 7, 1940**: The *North Star* was in 61°S. The *Bear* crossed the Antarctic Circle, and by noon was in 66°42' S, 162°26' W. The crew of the *Bear* saw a keg go floating by, heading north. This was an unusual sighting, to say the least. **Jan. 8, 1940**: The *North Star*, which had been running straight down the date line all day, sighted her first iceberg, at 3.30 P.M. The *Bear* was in 69°S, 166°W. **Jan. 9, 1940**: At noon, the *Bear* was in 69°48' S, 172°55' W. The *North Star* had broken through the pack ice into the Ross Sea, and was 255 miles from the Bay of Whales. **Jan. 10, 1940**: The *Bear* entered the pack ice, in 69°30' S, 179°30' E. **Jan. 11, 1940**: Early in the morning, the *North Star* sighted the Ross Ice Barrier. At 8.15 a.m, after cruising east along the barrier, she entered the Bay of Whales. Byrd found that the bay had shrunk since he had last been there in 1935. However, they couldn't moor the ship because of the ice. So, they pressed on east to Kainan Bay, tried the ice, couldn't get in, and pressed on farther east, to Okuma Bay. They couldn't get in there either. That day, at noon, the *Bear* was in 71°33' S, 178°W, having had an easy trip through the pack ice. **Jan. 12, 1940**: The *Bear* was in the Ross Sea, in 74°S, 179°W. The *North Star* finally entered Kainan Bay at 2.30 A.M., and moored there. Siple (leading), Boyd, and Schlossbach got off the ship, to plan a site for West Base. Apparently Black, Ronne, and Moulton were to set out immediately afterwards, as a back-up team, with dogs, tents, provisions, and so on, but, somehow this never happened. By 8 A.M. everyone was worried about the first party, so the second party finally set out. Kainan Bay turned out to be not such a good idea, so everyone got back on board, and by 10 P.M. they were back at the Bay of Whales. Siple, Wade, and Poulter all got out to find a suitable place for landing the Snowcruiser. **Jan. 13, 1940**: At noon, the *Bear* was in 77°14' S, 170°50' W. **Jan. 14, 1940**: The *Bear* entered the Bay of Whales. George Gibbs was the first man down the ladder onto the continent. **Jan. 17, 1940**: Byrd transferred to the *Bear*, and they hoisted the admiral's flag — upside down. **Jan. 18, 1940**: The *Bear* left the Bay of Whales. **Jan. 19, 1940:** The *Bear*, with Byrd aboard, headed for South Cape, for calibration of direction finders. **Jan. 22, 1940**: The first of 4 major flights from the *Bear* over Marie Byrd Land. **Jan. 23, 1940**: The 2nd of the flights from the *Bear*, over the Ford Ranges. Lambson had his accident on the *North Star*. **Jan. 24, 1940**: The *North Star* left West Base at 7 P.M., bound for Valparaíso, Chile, after unloading at Little America III, or West Base as it was called, in 69°29' S, 163°57' W, near the Bay of Whales, and which was under the command of Paul Siple. The *North Star* was going to Chile to pick up 600 tons of supplies for East Base, as well as some South American observers — 1st Lt. Ezequiel Rodríguez Salazar, and Lt. Federico Bonert Holzapfel, both of the Chilean Navy, and Lt. Emilio L. Díaz and Lt. Julio Poch, both of the Argentine Navy. **Jan. 25, 1940**: The 3rd flight from the *Bear*. **Jan. 26, 1940**: The 4th flight from the *Bear*, over the Hobbs Coast. **Jan. 28, 1940**: A piloted balloon went up from West Base, the first of 219 such ascents. The Snowcruiser was set up by Poulter. There were 33 men at West Base, 34 if one includes senior scientist Al Wade, who was in charge of the Snowcruiser, and officially not really based at West Base. 11 scientists were stationed here: Paul Siple (base leader and geographer), Arnold Court (meteorologist), Jack Richardson (meteorological observer), Larry Warner and Charles Passel (geologists), Jack Perkins (biologist), Roy Fitzsimmons (magnetician, seismologist, navigator, and assistant to the auroral observer), Murray Wiener (auroral observer), Len Berlin (cadastral engineer), and Earl Lockhart (physiologist). Other personnel at West Base were: Doc Frazier (medical officer; he was officially listed as part of the scientific crew), Harold Gilmour (administrative assistant, recorder, and historian), Ray Butler (cartographer), Ike Schlossbach (chief engineer), Charles Shirley (chief photographer), Dick Moulton (photographer and chief dog driver), Joe Wells (photographer and observer), Pappy Reece and Clay Bailey (radio operators), Felix Ferranto (radio and tractor operator), Jim McCoy (chief pilot), Ted Petras (pilot), Walt Giles (co-pilot and radio operator on the flights out of West Base), Pappy Gray (aviation machinists's mate and pilot), Vernon Boyd (chief mechanic), Fred Dustin (mechanic; he was transferred here from East Base), Clyde Griffith (machinist and tractor operator), Adam Asman (tractor driver), Louis Colombo (dog driver and biologist), Jack Bursey and Malcolm Douglass (dog drivers), Roger Hawthorne (field representative), Sig Gutenko (cook and steward), and Chuck O'Connor. **Jan. 31, 1940**: The *Bear* arrived back at the Bay of Whales. **Feb. 1, 1940**: The *Bear* left the Bay of Whales, bound for East Base. **Feb. 4, 1940**: The *Bear* passed Franklin Island. **Feb. 5, 1940**: The *Bear* was in 74°29' S, 166°06' E, in Terra Nova Bay. **Feb. 6, 1940**: The *Bear* was at Coulman Island, in the Ross Sea. **Feb. 9, 1940**: Jim McCoy flew from West Base into the interior of Marie Byrd Land. **Feb. 11, 1940**: The *Bear* was in 69°15' S, 179°15' E. **Feb. 12-13, 1940**: Petras flew over the Ross Ice Shelf. **Feb. 16, 1940**: The *Bear* was in 67°S, 130°W. **Feb. 18, 1940:** The *Bear* was in 69°30' S, 121°W. **Feb. 21, 1940**: The *Bear* was in 70°30' S, 109°W, in which general area they stayed for the next 4 days. **Feb. 24, 1940**: The plane was put over the side of the *Bear*, and flew off, with Snow as pilot, Perce as co-pilot, and Byrd as navigator. **Feb. 25, 1940**: The *Bear* was in 71°24' S, 105°36' W. The plane flew again, this time with Dufek as navigator. **Feb. 26, 1940**: The *Bear* was in 70°42' S, 102°18' W, and heading east along the scattered pack ice. **Feb. 27, 1940**: Snow, Perce, and Byrd made another flight from the *Bear*, in 70°12' S, 94°48' W. Thurston Island was discovered. **Feb. 29, 1940**: McCoy flew from West Base over the Ross Ice Shelf. **March 4, 1940**: The *Bear* anchored at Horseshoe Island. **March 5, 1940**: A flight from the *North Star*; the *North Star*, coming back south from Chile, met the *Bear* at Horseshoe Island, Marguerite Bay, and they began a search for the site for East Base. **March 8, 1940**: The site for East Base was selected, on Stonington Island, at 68°12' S, 67°03' W, during a flight by Byrd, Black, Snow, and Perce. **March 11, 1940**: After a delay caused by gales, unloading at East Base began. **March 20, 1940**: The ships completed unloading at East Base. There were 75 dogs here, one of the Condor biplanes, one light Army tank, and one light artillery tractor. There were also 26 men: Dick Black (base leader), Finn Ronne (chief of staff, and 2nd-in-command). 6 of the scientists were stationed here — Herb Dorsey (meteorologist), Paul Knowles (geologist), Herwil Bryant (biologist), Carl Eklund (ornithologist), Glenn Dyer (cadastral engineer), and Don Hilton (surveyor). Other personnel at East Base were: Lt. Lewis Sims, USN (medical officer), Bob Palmer (supply officer and assistant to the meteorologist), Elmer Lamplugh, Howard Odom, and Lytton Musselman (communications men), Lester Lehrke (sail maker and communications man; he replaced Holly Richardson), Little Moe Morency (tractor driver and communications man), Ashley Snow (chief pilot), Earle Perce (co-pilot and radio

operator), Bill Pullen (aviation machinist's mate), Art Carroll (chief aerial photographer on the flights made from East Base), Dutch Dolleman (machinist and tractor driver; he replaced Fred Dustin), Zadik Collier and Harry Darlington (machinists; Darlington replaced Hawthorne), Bob Steele (tank driver), Charlie Sharbonneau (carpenter), Joe Healy (dog driver and operations man), and Archie Hill (cook). Various forays would be made from East Base, including Ronne and Eklund's 84-day sledge journey to the SW end of George VI Sound. **March 21, 1940**: The two ships, the *North Star* and the *Bear*, set sail for home, with Byrd on the *Bear*. Holly Richardson, due to stay at East Base for the winter, was suffering from a stomach ailment, and had to leave on the *Bear*, and was replaced by Lester Lehrke off the *Bear*. Fred Dustin transferred to West Base, being replaced at East Base by Dutch Dolleman, and Roger Hawthorne went back on the *Bear*, replaced by Harry Darlington. **March 27, 1940**: The main building was completed at East Base, after everyone had worked all daylight hours while living out of a tent camp. The machine shop, generator house, and science building were next to be built, in that order. **April 2, 1940**: The *Bear* arrived at Punta Arenas, Chile. **April 7, 1940**: The *Bear* left Punta Arenas, and headed west through the Magellan Straits. **Late April 1940**: All major construction was finished at East Base. **May 20, 1940**: Ashley Snow flew out of East Base, with Earle Perce as co-pilot, and along with Black, Carroll, Ronne, and Dyer, to make a reconnaissance of George VI Sound. They were looking for sledge routes, and a place for a cache to drop supplies, somewhere south of the Wordie Ice Shelf. **May 21, 1940**: The East Base air crew, plus surveyor Hilton, flew to 69°32' S, 66°56' W, where they set up the Wordie Cache, 2000 feet above sea level, so that sledgers would have a chance if things went wrong. **July 21-22, 1940**: Black, Ronne, Healy, and Carroll made a sledge trip up the Northeast Glacier, to a height of 2200 feet, and could see a possible sledge route up to about 4500 feet. **July 26, 1940**: Malcom Douglass walked out of West Base, in a suicide attempt. **July 28, 1940**: Douglass returned, after 44 hours. **Aug. 2-3, 1940**: Black, Ronne, Healy, and Carroll scouted the head of Neny Fjord for possible routes of ascent to the Neny Glacier, but nothing was found. **Aug. 6, 1940**: Black, Ronne, Healy, Dyer and Knowles set out from East Base with 55 dogs in 7 teams, up the Northeast Glacier. The supporting party, to go with them part of the way, consisted of Eklund, Hilton, Carroll, Musselman, and Darlington. **Aug. 9, 1940**: After a hard climb, Black's party camped on the plateau, at an elevation of 5500 feet, at what they called Mile High Camp. A violent easterly hurricane struck that night, and continued for 2 days. That night (Aug. 9) a flight was made from East Base to look for the party, with no luck. **Aug. 13, 1940**: Black's party arrived back at East Base. **Sept. 9, 1940**: Knowles, Hilton, and Darlington, of the Weddell Coast Party, assisted by Healy and Musselman, set out on the first of two scouting and cache-laying journeys across the Antarctic Peninsula. **Sept. 16, 1940**: A flight was made from East Base over the plateau, to try to spot the Weddell Coast Party, whose radio was not working properly. However, due to bad visibility, the flight had to be aborted, and the plane barely made it back to base. **Sept. 18, 1940**: Warner led the party to establish 105-Mile Depot (q.v.). **Sept. 21, 1940**: Black, Snow, Perce, Carroll, Ronne, and Dyer made a flight over the plateau, across the Antarctic Peninsula, and down the Weddell side, to about 69°S, photographing Mobiloil Bay and much else, before bad weather forced their return. Again, they just made it back to base. **Sept. 28, 1940**: Black, Snow, Perce, Carroll, and Ronne, flew to the Wordie Cache area, then on to the Weddell Coast and the Wakefield Highlands, photographing as they went. They spotted the Weddell Coast depot-laying party toiling up the Northeast Glacier. With Hilton's ground surveys and air photos taken on this flight, much new reliable mapping was done. **Oct. 15, 1940**: The Weddell Coast Party arrived back at East Base after their second scouting and cache-laying journeys, having placed 2300 pounds of dog and man food near a glacier descent they had scouted on the Weddell side. Jack Perkins led a major sledge journey east out of West Base. In fact, various research parties went out from West Base — a biological party and a geological survey party, both of which went to the Edsel Ford Mountains; a Pacific Coast survey party which went to Mount Hal Flood; and a geological party that went to the Rockefeller Mountains. **Oct. 26, 1940**: The exposed meteorological outpost in 68°08' S, 66°32' W, planned and built by Dorsey from East Base, was occupied by Palmer and Lehrke. This would be their home for 2 months, and twice a day they sent radio reports back to base. This outpost was invaluable for the airplane flights. **Nov. 4, 1940**: Black, Snow, Perce, Carroll, and Ronne flew from the sea ice between East Base and Neny Island, bound for the northern tip of Alexander Island and a scouting and mapping flight. **Nov. 6, 1940**: The main southern sledging party left East Base, under the command of Ronne. Carl Eklund was 2nd-in-command. The others were Musselman, Dyer, and Healy. The mission was to explore the regions SW and south of Alexander Island, and to delineate the coastline in the Pacific quadrant. The original plan had been to fly the party out to Charcot Island, thus avoiding the need to sledge over the dangerous ice of Marguerite Bay, but the plane could not take off due to bad weather. Knowles and Hilton went along as a support party, and would turn back after 7 days. Planes had set up caches along the trail. 55 dogs were divided into 5 teams, with 2618 pounds of dog food, 900 pounds of man food, and 290 pounds of kerosene. There were 1050 pounds of other equipment, making the total almost 2½ tons, as they set out for Cape Berteaux. **Nov. 11, 1940**: There were 3 sledging parties at McKinley Peak. **Nov. 12, 1940**: At the area of the Wordie Cache (the actual cache had become snowed over, and could not be found), Knowles and Hilton turned back to East Base from the sledging trip. On that day Black, Snow, Perce, and Carroll flew a cache of gasoline and dog and man food to 71°45' S, 67°50' W, i.e., the Batterbee Cache (near the Batterbee Mountains). **Nov. 15, 1940**: Knowles and Hilton returned to East Base. **Nov. 16, 1940**: Black, Snow, Perce, Sims, and Sharbonneau flew a new cache out to the Wordie Cache area. Ronne's sledging party pressed on from the Wordie Cache. **Nov. 18, 1940**: Knowles, Hilton, and Darlington left East Base to pick up their cache on the plateau and then go on their main journey south along the Weddell Coast. **Dec. 2, 1940**: Ronne's sleging party entered the George VI Sound. **Dec. 3, 1940**: Ronne's sledging party arrived at the Batterbee Cache. **Dec. 23, 1940**: In 72°46' S, 75°43' W, Ronne's sledging party headed for home. **Dec. 30, 1940**: Black, Snow, Perce, Carroll, and Dyer made the last exploratory flight. During the expedition, over 1500 miles of new coastline had been discovered aerially, much of it plotted with the help of ground surveys. **Jan. 4, 1941**: Ronne's sledging party back at the Batterbee Cache. **Jan. 7, 1941**: All the sledging parties returned to West Base. **Jan. 15, 1941**: Ronne's sledging party left the Batterbee Cache. **Jan. 17, 1941**: Knowles, Hilton, and Darlington returned to East Base. **Jan. 19, 1941**: Ronne's sledging party began the ascent of the glacier toward the Wordie Cache. **Jan. 20, 1941**: Malcolm Douglass was locked up on the *Bear*, in order to prevent him committing suicide. **Jan. 28, 1941**: Ronne's sledging party arrived back at East Base, after a trip of 1097 miles. **Feb. 1, 1941**: The *North Star* and *Bear* having returned, they evacuated West Base, then sailed for East Base. Dana K. Bailey had replaced Eric Clarke as the ship-based cosmic ray observer. Some of the crew members of both ships did not return for the second half. On the *Bear* these were: Tony Kelczewski, Walter Szeeley, James McFarlane, and Eddie Bradshaw. Replacements were: Earl Bawtinhimer (quartermaster 3rd class), Ralph Moller (quartermaster 1st class), Cyrus Napier (officers' cook 3rd class), Kenneth Stuart (chief machinist's mate), and the three coxswains — Curtis Michael, Joseph L'Esperance, and Gerald Temple. Those of the *North Star* who did not return were: Holland, Hendricks, Kalerak, Gambole, Hunt, Henderson, Leroux, Lee, Johnson, Simundson, Wahlborg, Jr., Lambson, O'Brien, Duggan, Wiles, and Schroeder. Replacements on the *North Star* were John Boss, Ellsworth Bush, John Rose, Earle Snyder, J.A. Neiswender, Everett Arnes, Arthur Corbett, Robert W. Bell, George M. Grasty, Vernon I. Miller, Fremont R. Cody, Wes Carscaden, George N. Weed, Frank N. Thompson, John J. Dolan, Gustav Lund, Paul M. Bratsberg, Gunnar N. Hansen, Walter R. Hansen, Phillip F. Lindner, G.E. Phelps, and a doctor, Henry Storgaard. **Feb. 24, 1941**: The ships reached East Base but could not get in because of the ice. So, the personnel on the *Bear* constructed a landing strip on Mikkelsen Island (now known as Watkins Island), so the members of East Base could

fly out in their Condor — without their dogs and most of their equipment, the equipment being abandoned and the dogs destroyed. **March 22, 1941**: East Base was formally evacuated. **March 26, 1941**: The *Bear* rounded Cape Horn. **April 9, 1940**: The *North Star* pulled into Valparaíso. USAS was terminated due to lack of further financial support brought on by World War II. It succeeded in most of its objectives, however, having charted most of the coast between the Ross Sea and the Antarctic Peninsula. Many of the expedition's results and activities remain unreported.

United States Army Range *see* **LeMay Range**

United States Exploring Expedition 1838-42. Abbreviated to USEE 1838-42, and also known as the Wilkes Exploring Expedition. Led by Charles Wilkes. This was the first American government expedition to include Antarctica. **1836**: The expedition was authorized by Congress, and approved by President Andrew Jackson. Over the two-year span 1836-38 a number of officers turned down the offer to lead the expedition, thus Wilkes achieved greatness by default. Wilkes and Jeremiah N. Reynolds were the main organizers of the expedition. **Aug. 18, 1838**: The expedition left Norfolk, Va., in search of, among other things, the South Magnetic Pole. USEE comprised six vessels; 82 officers; 342 sailors; and 9 naturalists, "scientifics," and artists (only one of this group of 9 — Titian Ramsay Peale — made it to Antarctic waters). These were the officer corps (so to speak) who left the USA (most of them have individual biographies in this book, whereas only a few of the ratings do, partly because there were so many, and also because in many cases these lads signed on with false names). **The flagship, sloop of war *Vincennes***: Charles Wilkes (commanding); Thomas Craven, Overton Carr, James Alden, and William Maury (lieutenants); James North (acting master); Edward Gilchrist (acting surgeon); Richard Waldron (purser); Jared Elliott (chaplain); J.L. Fox and John Whittle (acting surgeons); George Totten, William Reynolds, William May, and Joseph Sanford (passed midshipmen); George W. Clark and Samuel Elliott (midshipmen); William Smith (bosun); Washington Bright and John G. Williamson (gunners); William Laighton (carpenter); Samuel V. Hawkins (sailmaker); Benjamin Vanderford (pilot); R.P. Robinson (purser's steward); Charles Pickering (naturalist); Joseph Drayton (artist); William D. Brackenridge (horticulturalist); John G. Brown (mathematical instrument maker); John W.W. Dyes (assistant taxidermist); and Joseph P. Couthouy (conchologist). **The sloop of war *Peacock***: William L. Hudson (commanding); Samuel P. Lee, William Walker, George F. Emmons, and O.H. Perry (lieutenants); Thomas A. Budd (acting master); J.F. Sickles (surgeon); Silas Holmes (assistant surgeon); Frederick Stewart (captain's clerk); William Speiden (purser); James B. Lewis, Henry Gansevoort, Henry Eld, and George W. Harrison (passed midshipmen); Wilkes Henry and William H. Hudson (midshipmen); Thomas G. Bell (bosun); John D. Anderson (gunner); Jonas Dibble (carpenter); J.D. Freeman (sail maker); William H. Insley (purser's steward); James D. Dana (mineralogist); Titian Ramsay Peale (naturalist); Horatio Hale (philologist); and F.L. Davenport (interpreter). **The storeship *Relief***: Lt. Andrew Long (commander); R.F. Pinkney, A.L. Case, and Joseph A. Underwood (lieutenants); George T. Sinclair (acting master); James Croxall Palmer (acting surgeon); Alonzo B. Davis and Thomas W. Cummings (passed midshipmen); James L. Blair (midshipman); James R. Howison (captain's clerk); J. Black (bosun); Thomas Lewis (gunner); William Rich (botanist); and Alfred S. Agate (artist). **The brig *Porpoise***: Lt. Cadwalader Ringgold (commander); Micajah Claiborne, Henry Hartstene, and John B. Dale (lieutenants); Augustus S. Baldwin (acting master); Charles Guillou (assistant surgeon); Simon F. Blunt and George Colvocoresses (passed midshipmen); Thomas W. Waldron (captain's clerk); John Frost and O. Nelson (bosuns); Amos Chick (carpenter); John Joines (sailmaker); and William H. Morse (master's mate). **The tender *Sea Gull***: Lt. Robert E. Johnson (commanding); James W.E. Reid and Frederick A. Bacon (passed midshipmen); and Isaac Percival (pilot). **The tender *Flying Fish***: Samuel R. Knox (commanding); George Hammersly (midshipman); Richard Ellice (assistant master's mate); H.A. Clemson and Egbert Thompson (midshipmen); A.M. Cesney (master's mate); Edwin De Haven (acting master); and James S. Power (master's steward). Regardless of ship, the other men who left the USA in 1838 were (* means served the cruise, i.e., returned to the USA in 1842. Run means deserted): **Seamen**: Peter Ackerman*, John Anderson*, Silas Atkins, Henry Batchelor*, Henry Blackstone, Robert Boyle, John Brooks*, Joseph Brimblecomb, Richard Brothers, John Brown (i)*, John B. Brown, Joseph Clark*, John Cook, James Cummings, Samuel Dinsman, John Dismond*, John Fenno*, Alexander C. Fowler*, William Frazier, John Gaunt, William Gillan*, John Griem, John P. Griffen*, John Harmon*, Jacob Harrid, Lyranus Hatch, William Hayes*, Santo Hercules, Edward Hill, Edwin Hubbard*, Lawrence Hufford, Henry Hudson*, Thomas Jefferson, William Jewell, William Johnson, Thomas Jones, Francis Joseph*, Samuel Keenan, John Kedd, John King, Godfrey Letourno*, John Lewis, Joseph Limont*, William S. Longley*, Charles Lowe*, Henry Mabee, James McCormick*, William McDonald*, James Marshall*, John More, John Myres*, Horatio Nelson, Charles H. Nicholson, William Noble, William Norton, Daniel Osmand, George Porter, William Robinson*, James G. Rowe*, John Rye*, John Sac, Thomas Sinclair*, George Smith, James Smith (i), John W. Smith, Benjamin Stevens, James Straham, Samuel Sutton*, William Teneycke, Richard Terry, Edwin Thene*, Charles Thomas, John Thompson (i), William Thompson*, James Townsend, George Treble*, Henry Tubor*, John Vancleck*, Peter Welsh, George Wesson*, Edward Widdows, James Wilkinson*, Michael Williams*, Robert Willis. **Ordinary seamen**: Francis Baker*, David Banks, Alexander Barron, Joseph Bass*, Franklin Brown, William Brown (ii), Alfred Cassedy, William Clegg, Garret Cole*, Isaac Cook*, James Crontu, Jerome Davis*, Valentine Dister, William Eastwood*, Charles Erskin*, Henry A. Felson*, Robert Fletcher, William Forsdick, John Francis, Robert Furman, John Gillin*, William Goodman, James Graham*, James H. Grey, Joseph Gundy, James Haggerty, Nathaniel Harris, Asa Hart*, James Hayes*, Robinson Hicks, William H. Hicks, Emanuel Howard*, Henry Hughes, Daniel Jefferson, William Jeffries, Elijah King*, Charles Knowles*, Peter Lines*, Bernard Logan, John Loyd, Washington Lyner, Laurence McGill, Thomas McManus*, David Miller, Michael Miller, William Miller (i), Andrew Nordston*, Benjamin Norton*, Ambrose W. Olivar*, John Orr*, William Orr*, Thomas Penny, James Potter, Benjamin Pulmar, James Quin, Theodore Rameris, Charles Ray*, Matthias Roach, George Reynolds, James Sheaf*, Simon Shepherd*, Allen Simons, David Smith*, Hendrick Smith, James Smith (ii), John Smith (i), John Smith (ii), Charles Truelare*, John Undietch*, Edward Verry*, Henry Waltham*, Benjamin Webb, John White (ii), Kembal Whitney*, Jack Williams*, Philip Williams, John Wilson, Joseph Wilson, Stephen Winks, Horace Wister, William York, Henry Young (ii). **Captains of the foc's'le**: Jacob Bolin*, Samuel Brown, John Harmon*, James Lowell*, John Robinson*, John Thompson (ii)*, Henry Turner*, James White*. **Captains of the hold**: Samuel B. Holt, Amos Howell, Allen W. Kirby. **Captain of the foretop**: Nathaniel Goodhue*. **Captains of the topsail**: Levin Clark*, Charles Clifford, John H. Cole, John Doughty*, John Demock*, James Green*, Griffith Griffith, John C. Head*, William P. Hefferman, James Leavett*, William Lloyd*, Samuel More, Nelson Norton, James Nowland, George Parker, Francis Salsbury*, Robert Spears, William Steward, Matthew Thompson. **Quartermasters**: Henry Buckett, Daniel Clute, Samuel Eastman, John Gorden*, Thomas Green*, Henry Hammond*, James Henderson*, Henry R. Heyer*, George Husted, John Kellum*, William Moody*, William Neill*, Thomas Piner*, Robert Pully*, Joseph Reeves, William Robbin, Thomas Scott*, William J. Smith, Edward Southworth*, George Sudor, William Wilson, Noah Wyeth. **Bosun's mates**: John Black, Robert Brown, W.H. Chummings*, John Green, Henry Greenfield*, William Richmond*, Francis Williams*, George Williams*. **Cockswains**: Alexander Dunn, James H. Gibson*, Francis Linthicum, Daniel Wright. **Coopers**: Fergus Gallagher, Lewis Herron*, John D. Richardson*. **Armorers**: William Brisco*, John Cooper*, Samuel Hobsen, David M. Smith*. **Sailmaker's mates**: Solomon Disney*, Alvin Harris*, David B. Park*, Thomas Wilson*. **Carpenter's mates**: James Brown, Joseph Crozby, Thomas Dickenson*, Lyman Gaylard, William Hyde*, William Schenck*, Benjamin Somerndyke*. **Ordinary sergeant**: Simeon Stearns*. **Landsmen**: Mason Crowell*, Matthew Garrigan,

William Loyd, Alexander McDonald*, Thomas Martin, James Patterson, Morris Russel, Samuel Steward, Henry Thompson, Mark Widden, Henry C. Williams*, James Williams. **Captain's cook**: William Bostwick*. **Officer's cooks**: David Blodget, David Burns, George Butter*, Henry Evans, Henry Gross, Thomas Harden*. **Ship's cooks**: Theodore French, Stephen Knight, John McKeen*, Elias Russel, John Steward*. **Officer's stewards**: David Dalton*, James Dunn*, James Harrison, Francis Montserat*, James Nurse, Frank Stith*. **Quarter-gunners**: Daniel McCarty, William Migley*, John Polnell*, Thomas Sandford*, William W. Turner, James C. Walfe, Daniel Whitehorn*. **Gunner's mates**: James Elliotte, Stephen Fosdick*, Daniel Green*, Samuel Stretch*, Samuel Williams*. **Masters-at-arms**: Charles Berry, Christian Dobleman*, William Jarrett, John Meiney*. **Corporal**: Thomas Dewees*. **Privates**: James Allman*, Joseph Allshouse, Philip Babb*, David Bateman, Thomas Burke*, Robert Campbell*, Joshua Cary, Lawrence Cavenaugh*, John Disbrow*, Addison Dunbar*, John Harman*, Benjamin Holden, Arthur Hughes*, James Hunt*, Lawrence Littleyear, James McKenzie*, John C. March*, John Nebhut*, Samuel Pensyl*, James M. Pottle, Edgar A. Richardson*, John Riley*, Owen Roberts*, George Rodgers*, George Smith*, John Smith*, Ashton Taylor*, Michael Ward*. **Marines**: Sgt. Aaron Walmsley*, Cpl. Joseph Clark*, Cpl. Samuel Dinsman*, Cpl. William H. King*, Cpl. Alexander Ogle. **1st class boys**: Patrick Boyle, Roswell Cann, Isaac Carmey*, James Haskins*, Archibald Jackson, James Moran, William Roberts*, Thomas Wallace*. **Yeomen**: Ezra Green*, William Smith. **Hospital stewards**: Charles J. Colson, Stephen W. Days*, James G. Hanbury*. **Sept. 16, 1838**: Five of the 6 ships arrived at Madeira. Isaac Frietus (ordinary seaman) and Manuel Guido (2nd class boy) joined the expedition. Harrison, the steward, was discharged, and seaman Gaunt was sent home sick. **Sept. 25, 1828**: The 5 ships left Madeira, bound for Cape Verde. **Oct. 7, 1838**: The 5 ships arrived at Cape Verde. The *Relief* was intolerably slow, and was ordered to go direct to Cape Verde, but even then, by the time it arrived there, the rest of the fleet had sailed for Rio. **Nov. 20, 1838**: The *Peacock* was the first to arrive at Rio. **Nov. 26, 1838**: The *Relief* was the last to arrive at Rio. **Nov. 28, 1838**: At Rio, seaman George Smith was discharged: **Nov. 30, 1838**: At Rio, cockswain Dunn was discharged. **Dec. 3, 1838**: At Rio, steward Nurse was discharged. **Mid-Dec. 1838**: The *Relief* was ordered to sail direct for Orange Harbor, in Tierra del Fuego. At Rio, A. Jacquinot, assistant to the scientific corps, joined the expedition. Many men ran here, and many were taken on. Those who ran were: seamen William Jones (i), Thomas Kennedy, and John Lewis; ordinary seamen William Brown (ii), John Francis, William Goodman, William Jeffries, Washington Lyner, James Potter, Matthias Roach, John Smith (i), John White (ii), Joseph Wilson, and Stephen Winks; landsmen Morris Russel and Samuel Steward; Private Joshua Cary; and 1st class boy Patrick Boyle. **Dec. 31, 1838**: At Rio, more men were discharged: seamen John W. Smith, William Norton, and Robert Willis; ordinary seamen David Banks and Joseph Gundy; landsman Thomas Martin; quartermaster Noah Wyeth; steward Scarpa; and quarter-gunner Daniel McCarty. Amos Howell (captain of the hold), and Richard Brothers (seaman) were sent home sick, and Valentine Dister (ordinary seaman) was transferred to a ship called the *Independence*. Those who were taken on (or re-taken on) were: seamen David Bartlett*, James Berry*, Peter Bowen, James Corse, Charles Duegen, Domingo Gonzalez, Ludwig Graves*, John Hellender*, Charles E. Horniston, Robert Johnson, William Jones (i), Thomas Kennedy (seaman), John Lennard, William J. Lester*, Henry Luther, Frank Mackey*, John Mattox*, Thomas Noble, Thomas Parker, George Seabold, Charles C. Sherwood*, John Smith, William Smith, William H. Spencer; ordinary seamen Theodore Beton*, John L. Blake, John Bremot, Peter Brown, John W. Divin, John Fisk*, Thomas Ford*, William Frazier (ii), David Haining, Francis Johnson, Peter Lewis*, William Miller (ii), John Mitchell*, John Rivers, Frederick Seymore, Moses J. Smith, Robert Steward, Nicholas Whiteston; baker John Small; landsmen John Harris, Royal Hope, and William Soule*; captain's cook Justin Mandon*; officer's steward Thomas Scarpa; quarter-gunner James Fritz*; 1st class boys John Brown (ii), Joseph De Silva, John Latty*, William Robb*, Michael Ryan; and 2nd class boys Joseph Rebo* and Vincent Frietus. **Jan. 6, 1839**: The remaining 5 ships left Rio. **Jan. 25, 1839**: The fleet of 5 was in Rio Negro. **Jan. 29, 1839**: The *Relief* arrived at Orange Harbor. **Feb. 3, 1839**: The fleet of 5 left Rio Negro. **Feb. 18, 1839**: The fleet of 5 arrived at its farthest south on the South American coast, Orange Harbor, where it met up with the *Relief*. At Orange Harbor there were changes made. Wilkes was a tyrant, with an impossible temper, and this had a major effect on the expedition. Desertions were rampant from the time they arrived at Rio. At Orange Harbor he split the expedition into 3 parts. The *Porpoise* and the *Sea Gull*. The *Peacock* and the *Flying Fish* (at Tierra del Fuego William Walker replaced Knox as commander) to go SW to try to better Cook's old southing record of 71°10' S. The third party, the *Vincennes* and the *Relief* (Midshipman Reid replaced Long as commander at Tierra del Fuego) to do survey work around Tierra del Fuego. Wilkes himself transferred to the *Porpoise*. Lt. Maury transferred to the *Peacock*. **Feb. 25, 1839**: The fleet left Tierra del Fuego, their intention to push as far south as possible. The *Vincennes* and the *Relief* stayed at Tierra del Fuego. **March 1, 1839**: The fleet (minus, of course, the *Vincennes* and the *Relief*) arrived in the South Shetlands, the *Porpoise* with the *Sea Gull* as its tender, and the *Peacock* with the *Flying Fish*. **March 5, 1839**: Due to bad conditions, Wilkes ordered the *Porpoise* and the *Sea Gull* back to Tierra del Fuego, where they spent the winter of 1839. The *Peacock* and the *Flying Fish* were still in Antarctica, however. They had sailed to the N of Thurston Island. The *Flying Fish* had lost contact for a month, getting as far south as 70°04' S. **March 11, 1839**: William Steward, captain of the topsail, died. **March 25, 1839**: The *Flying Fish* found the *Peacock* again. **March 30, 1839**: The *Peacock* and the *Flying Fish* headed back to their Tierra del Fuego base. The *Relief* was sent back home to the USA for being too slow. **April 17, 1839**: The remaining 5 vessels left Tierra del Fuego, and sailed around the Horn. **April 29, 1839**: On or around this date the *Sea Gull* was lost at sea, off the Chile coast. Those on board included: seamen Robert Johnson and Richard Terry; ordinary seamen William Frazier (ii), David Haining, William Miller (i), John Rivers, James Smith (ii), John Smith (ii), and Nicholas Whiteston; quartermaster Daniel Clute; and 1st class boy Roswell Cann. **May 15, 1839**: When the *Vincennes*, *Porpoise* and *Flying Fish* arrived at Valparaíso, they found the *Peacock* and the *Relief* waiting there. As soon as the *Relief* was repaired, Wilkes ordered her north to Callao, to get rid of the rats that were eating the provisions on board. Several men ran at Valparaíso: seamen Peter Bowen, Charles E. Horniston, Henry Luther, William Noble, Daniel Osmand; Private James M. Pottle; ordinary seamen Theodore Rameris and Allen Simons; and 2nd class boy Vincent Frietus. Several men were taken on: seamen John Baptiste*, Joseph Dolevar*, John Munroe, Peter Shaw*, John Strafford*, John Vanderveer, John A. Weaver*; ordinary seamen Walston Bradley, William Bruce, Thomas Derling, Charles Jorff*, Horace Lamson, William Lawrence, Robert Munroe, George Nichols; quartermasters Robert C. Bernard* and George Mitchell*; armorer James Spear; carpenter's mate George Sharrock*; captain's steward John Joseph*; officer's stewards John Buckley and Paul Camell; 1st class boy George Elliott*; and yeoman William Wells*. **June 6, 1839**: The squadron left Valparaíso. Wilkes, not knowing of the fate of the *Sea Gull*, but fearing the worst, left Lt. Craven at Valparaíso to take command of her should she arrive, and failing her arrival, to make his own way back to the USA. **June 30, 1839**: They arrived at Callao. The officer's steward was discharged as soon as they landed. Seaman James Anderson joined ship here, and Wilkes placed his [i.e., Wilkes's] adversaries (there were several) aboard the *Relief* and sent her home via Honolulu and Sydney, where she would lay supplies for the rest of the expedition. The scientists Agate and Rich were re-positioned on the *Peacock*. Lt. Maury, acting master North, and passed midshipman Totten were all transferred to the *Porpoise*. Joseph De Silva (1st class boy), was transferred to a ship called the *Falmouth*. 8 men ran at Callao: Jacquinot, the scientific assistant; seaman Jacob Harrid; ordinary seamen Walston Bradley, Alfred Cassedy, and William Miller (ii); landsman Henry Thompson; and ship's cook Elias Russel. But many men were taken on: seamen John Anderson, Moses Glachell, William Lee, and Bernard McGee; ordinary seamen

James Anderson*, Charles Chancy, James Cunningham, William Dammon*, John A. Gardner, Robert Goodwin*, Lewis Hanson, Peter McFee*, James Stark, William White*, and Jedediah Wilber*; captains of the topsail Charles Chapman*, Henry Sayres*, and John Glover*; officer's cook Joseph Neale; sail maker's mate Kinnard Foreman; landsmen John Ayres, Davy Beal, and William Finney; ship's cook James De Sauls; officer's stewards Antonio Vines and Antonio Hernandez; and 2nd class boys John Hughes and John H. Myres*. Those on the *Relief* (bound for home) included: seamen Silas Atkins, Joseph Brimblecomb, John B. Brown, John Cook, James Corse, Samuel Dinsman, Charles Duegen, Domingo Gonzalez, Lawrence Hufford, Thomas Jefferson, William Johnson, Thomas Jones, John Lennard, Thomas Noble, Benjamin Stevens, William Teneycke, John Vanderveer, and Peter Welsh; ordinary seamen William Clegg, James Haggerty, William H. Hicks, Daniel Jefferson, Francis Johnson, Horace Lamson, Bernard Logan, David Miller, Philip Williams, and William York; captain of the topsail Matthew Thompson; quartermasters William Robbin, George Sudor, and William Wilson; cockswain Daniel Wright; armorer Samuel Hobsen; cooper Fergus Gallagher; carpenter's mate Joseph Crozby; sailmaker's mate Kinnard Foreman; officer's cook David Burns; officer's steward Antonio Vines; landsmen William Loyd, Mark Widden, James Williams, and James Patterson; gunner's mate James Elliotte; master-at-arms Charles Berry; Private Lawrence Littleyear (private); 1st class boy James Moran; and 2nd class boy Manuel Guido. **July 8, 1839**: Private Benjamin Holden died. **July 13, 1839**: Ordinary seaman John Bremot ran at the last minute, just before the reduced fleet of 4 ships (the *Relief* having been sent back to the USA via the Sandwich Islands and Sydney, and the *Sea Gull* having been lost) left Callao then crossed the Pacific. **Aug. and Sept. 1839**: They charted many Pacific islands, and encountered some hostility from natives who had previously had bad experiences with foreigners. **Aug. 5, 1839**: Theodore French, ship's cook, was discharged. **Aug. 12, 1839**: Marine corporal Alexander Ogle died. **Aug. 13, 1839**: They put in at Minerva Island, in the Low Archipelago. **Aug. 15, 1839**: Ordinary seaman Michael Miller died on Minerva Island. **Aug. 22, 1839**: Ordinary seaman George Reynolds died on Minerva Island. **Sept. 10, 1839**: They moored at Tahiti. Seaman Moses Galchell and ordinary seaman James Cunningham ran. Ordinary seaman John H. Stevens was taken on, as was 1st class boy Thomas Mizir*. **Sept. 29, 1839**: They left Tahiti. **Oct. 11, 1839**: They put in at Tutuila, Samoa. **Oct. 25, 1839**: They arrived at Upolu, Samoa. The attractions of the islands induced a tumescent number of desertions, but most of the lads who ran were captured, brought back, and flogged. Several new men were taken on: seamen Arthur McGill and Thomas L. Williams*; ordinary seamen John Brookins*, Richard Cooper, John Haggerty, Charles Kingsland*, Hugh McBride*, and Humphrey Thomas; and captain of the hold Artimeus W. Beals*. **Nov. 6, 1839**: Officer's cook David Blodget died in the Navigators Islands. **Nov. 10, 1839**: Ordinary seaman Peter Brown ran, just before they left Upolu. Wilkes chose to bypass Fiji, which had been on his schedule, aware as he was of the narrow Antarctic window of opportunity. **Nov. 19, 1839**: The *Relief* left Sydney for the USA. **Nov. 29, 1839**: The 4 ships reached Sydney, finding that the *Relief* had done its job and left for the USA only 10 days before. Mutinous scientist Richard Couthouy, claiming to be sick, left for the USA, much to Wilkes's relief. Landsman Davy Beal, sick, was placed in the charge of the U.S. consul in Sydney. Quartermaster Henry Buckett was discharged. **Dec. 15, 1839**: Ordinary seaman James Stark was discharged. **Dec. 16, 1839**: Ordinary seaman Lewis Hanson was discharged. **Dec. 21, 1839**: 1st class boy John Brown (ii) ran. A lot of men ran in Sydney: Seamen Robert Boyle, John Kedd, William Lee, Henry Mabee, Bernard McGee, John Munroe, Thomas Parker, James Smith (i), John Smith, William H. Spencer, Charles Thomas, John Thompson (i); ordinary seamen William Bruce, Charles Chancy, Richard Cooper, James Crontu, John W. Divin, John Haggerty, Robinson Hicks, Samuel J. Jordon, William Lawrence, John Loyd, Robert Munroe, George Nichols, Benjamin Pulmar, Frederick Seymore, Moses J. Smith, John H. Stevens, and Humphrey Thomas; captains of the topsail Griffith Griffith, James Nowland, and George Parker; quartermaster Joseph Reeves; armorer James Spear; landsmen John Ayres and John Harris; officer's cook Joseph Neale; officer's steward Paul Camell; 1st class boys Michael Ryan and John Thompson (iii). Several new men were taken on: seamen James Dowling (i), Stephen Morant, Andrew Murray, and James Sweeney; ordinary seamen Joseph R. Atkins*, Frederick Beale, William Clark*, James Daniels, John N. Dean*, William Dillon, John Jones*, Samuel J. Jordon, and George Staunton; armorer Humphrey Roberts*; landsman John Roach*; officer's steward Edward Fox; 1st class boys Henry Stephens and John Thompson (iii); and 2nd class boy John Williams*. **Dec. 26, 1839**: Wilkes left Sydney, bound again for Antarctica. **Jan. 10, 1840**: They arrived in Antarctic waters again, and on that day, in 61°08' S, 162°32' E, saw their first icebergs of the season. **Jan. 11, 1840**: The *Vincennes* and the *Porpoise* reached the ice barrier at 64°11' S, 164°30' E, and turned westward. **Jan. 16, 1840**: The *Peacock* joined the *Vincennes* and the *Porpoise*. **Jan. 16, 1840**: Land was sighted. **Jan. 19, 1840**: Land was confirmed. That day a party landed on an offshore island. **Jan. 21, 1840**: They captured an emperor penguin. **Jan. 21, 1840**: The *Flying Fish* joined the other three ships. **Jan. 24, 1840**: The *Peacock* was damaged by icebergs. **Jan. 25, 1840**: The *Peacock* had to leave for Sydney. **Jan. 30, 1840**: The interesting meeting between the *Porpoise* and the two French ships of FrAE 1837-40 (*see* **International cooperation**). The only 3 vessels of Wilkes' fleet now left in Antarctic waters, the *Vincennes*, the *Porpoise*, and the *Flying Fish*, cruised westward on their own, and apart from each other. **Feb. 14, 1840**: The *Porpoise* got to 100°E, and then returned to NZ to meet up with the *Flying Fish* at their rendezvous there. Wilkes, on the *Vincennes*, let some of his men land on an iceberg. **Feb. 21, 1840**: Wilkes discovered the Shackleton Ice Shelf (as it became known later), then the fleet left for Sydney. **March 11, 1840**: The 3 ships arrived at Sydney. **March 1840**: Edward Gilchrist, acting surgeon on the *Vincennes*, was detached. Lewis Meaker, ordinary seaman, was taken on. **March 19, 1840**: The 3 ships left Sydney, William J. Smith, quartermaster, being discharged. The *Peacock* remained in Sydney for repairs. **March 29, 1840**: They arrived in NZ, where 4 men were discharged: seamen Lyranus Hatch and Santo Hercules; ordinary seaman Henry Young (ii); and baker John Small. **March 30, 1840**: The *Peacock* left Sydney. **March 31, 1840**: Ordinary seamen Isaac Frietus and Nathaniel Harris were discharged. 4 men ran in NZ: seaman James Dowling (i); ordinary seamen Frederick Beale and James Daniels; and 1st class boy Henry Stephens. Several men were taken on: seamen Joseph Medley*, James Scott, and Peter Sweeny; ordinary seamen Andrew A. Brown*, James Coburn*, George Parmilla, and Abraham Roberts*; landsmen John E. Day* and George Rocket; quarter-gunner Shelden Benedict*; and 1st class boys John Davis (i) and Josiah Weaver. **April 6, 1840**: They left NZ. **April 14, 1840**: They were at Sunday Island. **April 24, 1840**: They arrived at Tongataboo (i.e., Tonga), where James Grey joined the expedition, as pilot. **April 30, 1840**: The *Peacock* arrived at Tongataboo. **May 1, 1840**: The *Peacock* re-joined the squadron. **May 4, 1840**: The squadron left Tongataboo. **May 16, 1840**: They landed at Malolo, one of the Pacific Islands. **June 30, 1840**: John L. Blake (ordinary seaman) was discharged, and Private David Bateman died. **July 24, 1840**: A battle took place at Malolo, between Wilkes' men and the natives, in which 6 sailors were killed. John Anderson, seaman, was killed by natives on Drummond Island. **Aug. 11, 1840**: They left Malolo. **Sept. 24, 1840**: They arrived at Oahu. Assistant surgeon John Whittle was transferred to the *Peacock*, and passed midshipman Totten to the *Vincennes* again. **Oct. 31, 1840**: A lot of men were discharged: seamen Henry Blackstone, James Cummings, Samuel Keenan, John King, John More, Horatio Nelson, John Sac, James Straham, James Townsend, and Edward Widdows; ordinary seamen Robert Fletcher, Robert Furman, Henry Hughes, and Benjamin Webb; captains of the topsail Robert Spears and William P. Hefferman; captain of the hold Samuel B. Holt; quartermaster Samuel Eastman; pilot James Grey; bosun's mates Robert Brown, John Black, and John Green; cockswain Francis Linthicum; quarter-gunners James C. Walfe and William W. Turner; ship's cook Stephen Knight; master-at-arms William Jarrett; 1st class boy Archibald Jackson; and hospital steward Charles J. Colson. William Forsdick (ordinary seaman) ran. **Nov. 2, 1840**: Again, a lot of men were discharged: seamen Edward Hill and William

Jewell; ordinary seamen Alexander Barron, Hendrick Smith, and James Quin; captains of the topsail Nelson Norton, Charles Clifford, and John H. Cole; captain of the foc's'le Samuel Brown; captain of the hold Allen W. Kirby; and quartermaster George Husted. **Nov. 25, 1840**: Lewis Meaker, ordinary seaman, was discharged. There were more men discharged at Oahu (unknown date): Seamen Joseph Francis, William Lowe, Peter Sweeny, and John Track; ordinary seaman Matthew Francisco; landsman George Rocket; officer's steward Edward Fox; and 1st class boy William Smith (ii). Many men ran at Oahu: Seamen Stephen Morant, Andrew Murray, James Scott, James Sweeny, Ezekiel Cooper, Thomas Derling, William Dillon, John A. Gardner, George Parmilla, Thomas Penny, George Staunton, and Antonio Sylvester; landsmen William Finney and Royal Hope; 1st class boys John W. Boyson, John Davis (i), and Josiah Weaver; and 2nd class boy John Hughes. Many men were taken on (or re-taken on) at Oahu: seamen Stephen F. Angell, John F. Brown*, Tom Coffin, John Davis (ii), James Derley*, Joseph Francis, David Jones*, William Lowe, Calvin Proctor*, Raymond Reed*, Michael Spiney*, and John Track; ordinary seamen Charles Allen*, Joseph C. Allen, Henry Bingham*, Gaylord P. Churchill*, Ezekiel Cooper, Jasper Cropsey*, George Daily*, William Daily*, Harvey Dean, Matthew Francisco, Frederick Friends*, Thomas Gorden*, Thomas Hines*, Henry Johnson*, Theodore Mather*, Edward Mott*, William Pearson*, James Perry*, John Radley*, James Rock, William Slater*, James Stover*, Antonio Sylvester, Edward Townsend*, Abijah Traverse*, Zaccheus Wheeler*, Thomas Wilkins*, and Charles Willis; cooper Charles Adams*; landsman James Dowling (ii)*; officer's steward Warren Johnson; quarter-gunner Earl Millikin*; and 1st class boys William Smith (ii) and Samuel Taber*. **Dec. 3, 1840**: The 3 ships left Oahu, and went exploring the Hawaiian Islands. **Dec. 9, 1841**: They put in at Hilo, where 5 men ran: Seamen Tom Coffin and John Davis (ii); and ordinary seamen Joseph C. Allen, Thomas Simmons, and Charles Willis. Four ordinary seamen were taken on: George Croker, William Hutchinson, Thomas Simmons*, and Henry Young (i)*. **March 19, 1841**: Back in Oahu, where ordinary seamen Stephen F. Angell and George Croker ran. George Case (seaman)*, ordinary seamen John Bartholomew and Ephraim Coffin, and landsman John A. Brown* were all taken on. **March 31, 1841**: Ordinary seaman Horace Wister was discharged. **April 5, 1841**: They left Oahu for the USA. **April 28, 1841**: They arrived at Oregon Territory, where officer's steward Warren Johnson and officer's cook Henry Evans ran at Fort George, on the Columbia River, and cook James De Sauls ran at Astoria. **July 18, 1841**: The *Peacock* was wrecked. **Aug. 14, 1841**: The *Vincennes* arrived at San Francisco. **Oct. 19, 1841**: The rest of the fleet put in at San Francisco, where Lt. Alden transferred from the *Vincennes* to the *Porpoise*; assistant surgeon Fox joined the *Porpoise*; and assistant surgeon Whittle went back to the *Vincennes*. Chaplain Elliot was detached. Lt. Carr took command of the brig *Oregon*. **Oct. 30, 1841**: Joseph Allshouse, a private, was killed by a falling spar. Antonio Hernandez (oficer's steward) and Ephraim Coffin (ordinary seaman) were both discharged in California, and ordinary seamen John Wilson and James Rock ran. **Nov. 1, 1841**: They left San Francisco. **Nov. 16, 1841**: The fleet was back in the islands, at Maui. The following ordinary seamen joined here on that day: Ebenezer Bartholomew*, Derby Batchelor, David Cropsey*, Winslow F. Higgins*, Richard King*, Charles Lear*, David Leavitt*, George Robinson*; as well as 1st class boy Joseph Silvey. **Nov. 17, 1841**: They arrived at Oahu. Taken on were: Alexander Bowman and John Harrison (seamen), and George Cook (2nd class boy). Lt. Robert E. Johnson was detached. **Nov. 19, 1841**: George Cook, 2nd class boy, was discharged. **Nov. 20, 1841**: Arthur McGill (seaman) and Samuel More (captain topsail) were both discharged. **Nov. 25, 1841**: Charles H. Nicholson (seaman) was discharged. **Nov. 26, 1841**: Ordinary seamen John Bartholomew and Derby Batchelor were discharged. **Nov. 27, 1841**: They left Oahu. **Jan. 12, 1842**: They arrived in Manila, in the Philippines, where ordinary seaman Laurence McGill ran. **Jan. 21, 1842**: They left Manila. **Feb. 2, 1842**: They put in at Sulu, in the Philippines. **Feb. 19, 1842**: They arrived at Singapore, where the *Flying Fish* was sold. Two seamen, Alexander Bowman and John Harrison, ran, as did ordinary seaman Harvey Dean. Thomas Nisbet* (an ordinary seaman) joined. **Feb. 26, 1842**: The squadron left Singapore. **March 3, 1842**: George Porter, seaman, died. **April 14, 1842**: They arrived at Cape Town. Six ordinary seamen joined: Jean Antonia*, W.H. Eldridge*, John Hall*, Edward McIntyre*, Edward Nichols*, and John Weller*. **April 17, 1842**: They left Cape Town. **April 19, 1842**: Joseph Silvey, 1st class boy, died. **May 1, 1842**: They arrived at Saint Helena. **May 3, 1842**: They left Saint Helena. **June 30, 1842**: The *Porpoise* and *Oregon* arrived back in New York. The expedition had accomplished a lot. They had cruised the Antarctic coast, surveying 1600 miles of the coastline from the Balleny Islands to the Shackleton Ice Shelf, and declared Antarctica to be a continent. The inaccuracy of his maps, as checked by Ross, led to Wilkes' court martial, but, as it happens, the bulk of his charts were correct, only off in places due to mirages. Wilkes was subject to deserting crews, and on USEE, 62 men were discharged as unsuitable, 42 deserted, and 15 died. The squadron was in Antarctic waters for a total of no more than 69 days. The samples that he brought back from his travels inspired the founding of the Smithsonian Institution. Note: Most of the sailors on this expedition used false names, so it is impossible, at this remove (or any other remove) to find out who they really were, and so, in the body of this book, while a biography on each man would have been fascinating, we can only, with regret, cross-reference them to this entry. Another thing, it may appear gratuitous to detail Wilkes' non-Antarctic stops, but this in the best way to show what happened to the men who were in Antarctic waters.

United States Naval Support Force, Antarctica. Established in 1954 by Admiral Dufek in Washington to develop the base of operations and logistics for U.S. participation in IGY. Split into 2 detachments — one at McMurdo Base, and the other at Christchurch, NZ. After IGY it maintained the same basic function, to provide logistical backup for USARP (later known as USAP). In a sense it was the physical part of the U.S. involvement in Antarctica, whereas the National Science Foundation was (is) strictly for research. U.S. Naval Support Force, Antarctica was led by the commander, USNAVSUPFORANT (*see* **Operation Deep Freeze** and **Task Force 199**). The organization was based out of Port Hueneme, Calif., and that is where it was disestablished, on March 12, 1998, thus ending the Navy's involvement with Operation Deep Freeze.

United States Navy Antarctic Expedition. 1954-55. This was the prelude to OpDF, and was the first U.S. expedition since OpW 1947-48. **Summer 1954**: The *Atka*, commanded by Cdr. Glen Jacobsen, USN, sailed to the Arctic on a test run. **Nov. 25, 1954**: Just before sailing from Boston, half a ton of food was stolen from the expedition ship *Atka*. A sailor and a Rhode Island restaurant owner were apprehended. **Dec. 1, 1954**: Sent by Adm. George Dufek, the *Atka* sailed from Boston to scout for scientific station locations for the U.S. involvement in IGY, as well as other scientific missions, including finding out whether low-lying coastal areas around the U.S. were in danger from polar thawing. There were 22 officers aboard (6 of whom were observers), and 242 enlisted men, as well as 11 scientists and civil technicians, and one mongrel pup. The ship's officers were: Glen Jacobsen (skipper of the ship and leader of the expedition); Lt. Cdr. Francis E. Law, USN (executive officer); Lt. Cdr. Frank A. Woodke, USN (navigation officer; he had been on OpW 1947-48); Lt. Leo H. Grove, USN, of Saugus, Mass. (assistant navigator); Lt. Hilbert C. Hayden, USN; Lt. George W. Huse, USN, of Weymouth, Mass.; Lt. Murray Kahn, USNR (ship's doctor); Lt. Homer W. McCaw, Jr., USNR; Lt. Laird W. Moore, USN; Lt. (jg) Lee A. Blaszczyk, USNR; Lt. (jg) Richard B. Dalbeck, USNR (disbursing officer; promoted from ensign during the voyage); Lt. (jg) Richard E. Dennis, USN; Lt. (jg) Robert H. Loreaux, Jr., USN; Lt. (jg) John P. Moore, USNR; Lt. (jg) Marion T. Tilghman, USNR; Lt. (jg) March Wells, Jr., USNR; chief bosun Joseph Eksterowicz, USN, from Utica, NY; chief machinist Elvie J. Ferris, USN; and chief electrician Richard J. Wasierski, USN. Observers were: Lt. Col. Eugene H. Strayhorn, USMC; Maj. Murray A. Wiener (USAF cold-weather equipment-tester); Capt. Paul D. Nefstead, USA; Master Sgt. Herbert H. Stoltenberg, USA; Norman Bright, of Dayton, O. (human factors specialist, attached to the Air Force); cartographers Charles M. Culkin and Charles M.

Williams, both attached to the Navy; William E. Davies (USGS geologist); Dr. Keith B. Fenton; Paul A. Humphrey, of Memphis, and George R. Toney, Jr. (both of the U.S. Weather Bureau); Father Daniel Linehan (seismologist); Earl H. Moser (civil engineer); Dr. Willis L. Tressler (oceanographer); Bud Waite (electronics engineer; he had also been to Antarctica with Byrd); Walter Sullivan (*New York Times* correspondent aboard for the trip; Sidney Shalett would be another correspondent aboard, but not in Antarctic waters). The rest of the personnel are split up into divisions. **First Division**: Robert L. Ferguson (chief bosun's mate); Theodore J. McCloud and James W. Sofford (bosun's mates 1st class); Roberty L. Delashaw (bosun's mate 2nd class); Stuart Coman, Jr., Robert W. Hess, and Arnold C. Janney (bosun's mates 3rd class); Nicholas J. Coviello, Kenneth J. Dorn, James R. Kruzona, John Kwokaski, Paul D. Morris, Joseph F. Rivezzo, Jr., Charles R. Shultz, Dennis M. Sturgill, Jr., Jordan J. Sukanick, and Dan E. Sutton (seamen); Billy Clark, Larry L. Meinert, and John S. Morefield (seamen apprentices). **Second Division**: Charles H. Cook (senior bosun's mate); Bernard H. Dihrberg, Jr., Jay D. Gardner, and Duane J. Schinn (bosun's mates 3rd class); Charles W. Anderson (senior gunner's mate); David L. Hanna (senior fire control technician); Robert D. Cary, Jr. and Joseph A. Shurilla (fire control technicians 3rd class); Clifford L. Smith and Joseph J. Tavares (gunner's mates 2nd class); Walter T. Matthews and Donald D. Wilson (gunner's mates 3rd class); Andrew Longwizer [gunner's mate (mounts) 1st class]; Bobbie L. Cavender, Phillips S. Clifford, Calvin E. Dennis, James L. Etling, Lowell W. Freeman, Jerry O. Johnson, John J. McEntee, Charles R. Pieper, Clarence A. Stevens, Thomas J. Terreault, and Charles F. Wirth, Jr. (seamen); Carl T. Fow, Gershon P. Meyer, James Miles, William J. Myers, John J. Nebor, Jerry D. Nees, Loren W. Nicholson, Dennis M. O'Rourke, Jerry A. Owens, James R. Pyburn, and Earl W. Springborn, Jr. (seamen apprentices). "**C**" **Division**: Ralph C. Wooton (chief yeoman); Mario R. Impagliazzo (yeoman 2nd class); John W. Holmes (yeoman 3rd class); Bernard R. Gibeault (personnel man 2nd class); William J. Gredin (chief hospital corpsman); John H. Stewart (hospital corpsman 2nd class); Morris E. Layton (dental technician 2nd class); Hassel A. White, of Pensacola, Fla. (chief photographer); George W. Walsh (photographer's mate 1st class); Robert L. Adams and Ronald S. Czjka (photographer's mates 3rd class); Robert W. Dietrich (journalist 1st class); Lester L. Harris, Allen McKinnon, Roger L. Schmiedeknecht, and William D. Townsend (senior radiomen); Harry B. Atkinson and Russell L. Dehetre (radiomen 1st class); Merwyn C. Davis and Thomas F. Ryan (radiomen 2nd class); William K. Folck and Norman A. Peterson (radiomen 3rd class); Frank H. Mazmanian (communications technician 1st class); Robert H. Kranz and Richard R. Cousineau (communications technicians 3rd class); Allen D. Gangloff (senior radar man); Robert D. Condon (radar man 1st class); Robert J. Vanderwall, Frederick Rupsic, and John A. Poland (radar men 3rd class); Edward A. Hudock and John R. Shank (senior sonarmen); Donald E. Smith and Danny J. Groves (sonarmen 3rd class); Robert W. Kooiman (senior electronics technician); Donald L. Talhelm (electronics technician 2nd class); Philip V. Shield (electronics technician 3rd class); Richard L. Branham, Richard A. Foster, William D. Hahn, Henry E. Lee, Philip M. McKenna, and Leroy C. Walden (seamen); Richard L. O'Keefe, Robert A. Osmon, Gary L. Porter, and Donald C. Raymond, Jr. (seaman apprentices). "**E**" **Division**: Melville R. Main (chief electrician's mate); Joseph E. Ress (electrician's mate 1st class); James R. Laska and Alex M. Vafides (electrician's mates 2nd class); Lenord V. Banzer and Donald S. Dutton (electrician's mates 3rd class); Walter G. Yurkus (chief interior communications electrician); Howard A. Hrdlicka (interior communications electrician 3rd class); Arthur W. Brown, Rosario A. Cosentino, Edward J. Kilduff, and William W. Schnippert (electrician's mate firemen); John D. Easton (electrician's mate firemen's apprentice); Carlos A. Watson and David M. Wade (fireman's apprentices); "**M**" **Division**: Harold E. Cilley, Jr., Donald B. Frost, and Lester L. Riber (chief enginemen); Seymour G. Caster, James R. Keaton, Kenneth E. Lane, John C. Peak, and Ronald O. Polston (enginemen 1st class); Richard Almquist, Lester E. Bellows, Emery R. Curry, Russell F. Dell, Richard L. Godfrey, Robert E. Hunter, Donald R. Mertz, and Barrie C. Tosh (enginemen 2nd class); Edward N. Bajorek, Lewis D. Barcellona, Stanley B. Berg, James W. Craig, Jr., Robert C. Gunzinger, Larry F. Hulick, and Ralph L. Hunter (enginemen 3rd class); Martin T. Higgins (diesel engineman 3rd class); Walter D. Huseman and John L. Long, Jr. (enginemen firemen); Albert Maher (pipefitter 2nd class); William E. Dron (pipefitter 3rd class); Albert P. Schooley (pipefitter fireman); James J. Dugas (boilerman 2nd class); Clarence R. Patterson and Felder L. Wells, Jr. (metalsmiths 3rd class); Raymond L. Stuart (driver 1st class); Clarence M. Myers (driver 2nd class); John H. Myers, Jr. (damage controlman 1st class); Joseph G. Burdzy (damage controlman 2nd class); Willard A. Hammond (machinery repairman 3rd class); Thomas L. Allen, Frank Bates, Jimmie D. Boyd, Rodney P. Campbell, Robert J. De Rose, Robert H. Flanagan, Joseph J. Martin, and Richard D. Stout (firemen); Marvin A. Geffken, Clyde C. Human, Kenneth L. Lamalie, Kenneth D. Merritt, Jerry Peaugh, and Robert P. Steffen (fireman's apprentices). "**N**" **Division**: Louis S. Zeller (chief aerographer's mate; from Orlando, Fla.); Robert N. Powell (aerographer's mate and airman); Frank A. Molleen (aerographer's mate 1st class); Raymond E. Betancourt and Irwin J. Rysdam (aerographer's mates 2nd class); Richard K. Brown and Robert H. Hagenbruch (aerographer's mates 3rd class); William P. Harris (chief quartermaster); Roland R. Quinn (senior quartermaster); Kenneth A. Mustain (quartermaster); William Feden (quartermaster 1st class); Kenneth L. Gardner, Joseph B. Hoffmeir, Kay B. Rasmussen, and Gerard J. Regan (quartermasters 3rd class); William J. Cammon, Raymond H. Watson, and Earl R. Moffett (seamen); William J. Meusch (seaman apprentice). "**S**" **Division**: Ralph F. Tackes (disbursing clerk); James F. Hunt (chief storekeeper); Patrick F. Bridges (storekeeper 1st class); Edward L. Carey, Jr., Peter C. Pattison, and John J. Reynolds (storekeepers 2nd class); George B. Keegan, Clarence Miller, and David C. Woods (storekeepers 3rd class); Lawrence D. Roberts (chief commissaryman); Lawrence Friedman and George W. Phillips (senior commissarymen); Paul J. Littleton (commissaryman 1st class); Henry G. Sweatman (commissaryman 2nd class); Carmine P. Barricelli and Richard A. Garyait (commissarymen 3rd class); Stanley W. Heddles, William J. Hunter, and Charles A. Setlech (ship's servicemen 2nd class); Theodore I. Bishop, Arthur D. Dell, David C. Taylor, and James B. Wardle (ship's servicemen 3rd class); George N. Brown, Roland R. DeQuina, and Abraham Hewitt (stewards 1st class); Ignacio T. Malong (steward 2nd class); Alfonso Corpuz and Henry L. Smith (cook; 30 years old; black; from Oklahoma) (stewards 3rd class); Colito A. Calandria, Reynaldo O. Capilitan, William DeFarrow, Freeman O. Dicks, L.B. Porter, Haskell E. Sharpe, Oliver A. Stewart, and Henry Valerio (stewardsmen); William A. Brown (steward recruit); Kirk B. Foyle, Jr., Arliss D. Gardner, Harold U. Hersh, James McWain, Jr., Arthur W. Pogbee, Jr., and Walter M. Williams (seamen). "**V**" **Division**: Samuel J. Bear (aviation structural mechanic and airman); Albert P. Metrolis, of Kittery, Maine (chief aviation machinist's mate and pilot); Stanley Shedaker (chief aviation machinist's mate); Robert C. Hayes (aviation electronics technician); Francis Toothman (aviation machinist's mate 1st class); Leonard J. Marsonoski (aviation machinist's mate 2nd class); Richard L. Rioles and Earl W. Maser, Jr. (aviation machinist's mates 3rd class). Admiral Byrd was technical adviser. The ship carried a jeep and 2 Weasels, in case of landing, and three Bell HTL-5 helicopters under the command of Lt. McCaw. **Dec. 8, 1954**: The *Atka* arrived at Colón. **Dec. 11, 1954**: The *Atka*, after transiting the Panama Canal, left Panama, bound for Wellington, NZ. **Dec. 15, 1954**: They crossed the Equator. **Jan. 1, 1955**: The *Atka* arrived at Wellington, NZ, to take on further supplies. **Jan. 7, 1955**: The *Atka* left Wellington. **Jan. 8, 1955**: As the *Atka* passed Dunedin, 2 of her helos flew to NZ to pay a visit. **Jan. 12, 1955**: They spotted their first iceberg. One of the big questions was, would the Bay of Whales still be there, or had it calved off? **Jan. 14, 1955**: They arrived at the Bay of Whales, and found it very transfigured; "Gone," in their own words. Cdr. Jacobsen flew in a helo to Little America I. Most of it was buried. Little America IV had been cut in two by the calving. **Jan. 16, 1955**: William K. Folck, radioman 3rd class on the *Atka*, received news from Buffalo, NY, that he had become a father. Cdr. Jacobsen closed all of what remained of the Little America

bases. **Jan. 21, 1955**: After cruising east along the coast looking for a suitable landing spot, they arrived at Kainan Bay. **Jan. 22, 1955**: One of the Bell helos was lost at Kainan Bay, killing Lt. John P. Moore. **Jan. 24, 1955**: Her scouting in Kainan Bay done, the *Atka* headed N into the pack ice in an effort to get to Sulzberger Bay, to try there. **Jan. 26, 1955**: In order to let off steam as much as for target practice, the lads took to shooting up icebergs with their cannons. **Feb. 1, 1955**: Six times that night the *Atka* tried to punch her way in to Sulzberger Bay using her 6500-ton fist, drove 63 miles through ever-worsening pack ice, and finally gave up. **Feb. 2, 1955**: The *Atka* began heading toward Thurston Island, looking for a landing site. **Feb. 3, 1955**: The *Atka*, now floundering (philosophically, not physically; what to do now? was the question) in the Amundsen Sea, was given timely orders from Washington to proceed to the Weddell Sea to look for a site. **Feb. 4, 1955**: The *Atka* was off Peter I Island, heading N into the Drake Passage before turning through the South Sandwich Islands and attacking the Weddell Sea. **Feb. 5, 1955**: The Navy called for volunteers for OpDF I next season. 5 men on the *Atka* volunteered. **Feb. 14, 1955**: Seaman Bobby L. Cavender, of Sacramento, spotted the coast of Queen Maud Land, and won an extra round of grog (not to be drunk aboard, though). The *Atka* met the *Southern Main*, a whale catcher belonging to the British factory ship *Southern Venturer*. **Feb. 15, 1955**: They spotted, through binoculars, 7 figures moving on land, land where no humans had been known to set foot before. At first they thought it was the Russians, but it turned out to be a welcoming committee of emperor penguins, who were invited on board, with the intention of putting them up at Washington Zoo. 4 small Adélies came too. **Feb. 16, 1955**: They discovered Atka Bay, and dropped anchor for the first time since leaving NZ on Dec. 7, 1954. The temperature was 7°F. **Feb. 18, 1955**: The crew of the *Atka* found rabbit tracks in the snow on deck. There were no rabbits on board. **Feb. 19, 1955**: After checking out the Weddell Sea, and losing a propeller in the thick ice, the 276 men on the *Atka*, and the emperors, and possibly a rabbit, left Antarctica for home. **Feb. 22, 1955:** The *Atka* crossed the Antarctic Circle. She had spent 41 days in Antarctic waters, and covered 7500 miles in those waters. **Feb. 25, 1955**: 95 miles N of South Georgia, surprisingly far north, they passed one of the largest tabular bergs ever seen. **March 2, 1955**: Radioman Folck got a picture of his baby. He was one of 5 men who became fathers during this trip. **March 7, 1955**: The *Atka* steamed into Buenos Aires. Cdr. Jacobsen's wife and family were there to meet him. **March 14, 1955**: The penguins flew Pan Am out of Buenos Aires, bound for the USA. One of the Adélies died of heat exhaustion upon arrival in the States, and two died not long afterwards. **March 15, 1955**: The *Atka* left Buenos Aires. **March 20, 1955**: The *Atka* arrived at Rio. **March 23, 1955**: The *Atka* left Rio, bound for Boston. **April 12, 1955**: The *Atka* arrived back at Boston. First off was Cdr. Jacobsen. He was greeted by Admiral Byrd. **April 21, 1955**: Two of the emperors arrived at Bronx Zoo. The five who stayed in Washington were all dead of aspergillosis by July.

United States Navy Range *see* **Colbert Mountains**

United States of America. Although the USA (as a country) has never claimed a section of Antarctica, as some other nations have, it has been (one of) the most instrumental in the opening up of the continent. The sealing expeditions of the early 1820s, and captains such as Palmer and Pendleton, did much to discover new areas. In 1828 the U.S. government proposed an expedition, using the *Peacock* and the *Seraph*. Jeremiah N. Reynolds was to be chief organizer, and Thomas ap Catesby Jones was selected as captain of the *Peacock*. Charles Wilkes was the astronomer. However, the new U.S. president, Andrew Jackson, vetoed the expedition for economic reasons, and it never happened. Expeditions were sporadic after that, but in 1838-42, Wilkes led the United States Exploring Expedition (USEE 1838-42). The next major expedition was ByrdAE 1928-30, followed by ByrdAE 1933-35. Then came USAS 1939-41 (the United States Antarctic Service Expedition), OpHJ 1946-47 (Operation Highjump), RARE 1947-48 (Ronne Antarctic Research Expedition), OpW 1947-48 (Operation Windmill), and then OpDF (Operation Deep Freeze), from 1955 onwards. There were also others, private expeditions, over that period of time (Ronne's was essentially private), and afterwards. In 1924 secretary of state Charles Evans Hughes announced, "It is in the opinion of this department that the discovery of lands unknown to civilization, even when coupled with a formal taking of possession, does not support a valid claim of sovereignty, unless the discovery is followed by an actual settlement of the discovered country." This policy has been restated many times since. One of the 12 original signatories to the Antarctic Treaty in 1959, the USA has/had the following scientific stations in Antarctica: McMurdo, Hallett, Siple, Wilkes, Ellsworth, Little America, Palmer, Byrd, Little Rockford, Beardmore, Plateau, Liv, and South Pole. By the 1970s only 4 stations were operating permanently — McMurdo, Pole, Palmer, and Siple. By 1990 Siple had gone. In 1969, 4 American women reached the Pole. In 1982-83 there were more than 285 U.S. scientists working on 84 projects in Antarctica, and in 1986, 150 men and 13 women wintered-over on 4 bases. In 1987, 212 men and women wintered-over at the 3 permanent bases. U.S. involvement in Antarctica was called USARP (United States Antarctic Research Program), and, since 1959, all Antarctic scientific activity has been handled by the National Science Foundation (of which USARP was a division). USARP later became USAP (i.e., the word "research" was dropped). The Committee for Polar Research of the National Academy of Sciences was founded in 1958 and, later renamed the Polar Research Board, advised the NSF. The U.S. Navy, in the form of U.S. Naval Support Force, Antarctica, supplied logistical backup for USAP until 1997, and the stations are now largely managed by a contractor hired by the NSF (*see* **ITT**, as an example). The total budget for the U.S. involvement in Antarctica in 1982 was 66 billion dollars. As a matter of interest, the Antarctican Society was founded in 1959, in Washington, DC.

United Whalers, Ltd. A whaling company incorporated on Oct. 4, 1935 by Rupert Trouton and Erling Naess, as a subsidiary of Hector Whaling, Ltd., and registered in London. They owned the *Terje Viken* and 9 catchers, *Terje 1* through *Terje 9*. The government requisitioned the *Terje Viken* for use in World War II, but she was lost in 1941. After the war, the *Balaena* was built to replace her, and the catchers were modernized. On Aug. 1, 1953, United Whalers was absorbed by its parent company.

Kupol Universitetskij. 69°49' S, 13°02' E. A dome on the W side of the Lazarev Ice Shelf, in Queen Maud Land. Named by the Russians, for their universities.

University Peak. 77°52' S, 160°44' E. At the head of University Valley, 4 km SSW of West Beacon, in Victoria Land. Named by the people who named the valley, and for the same reason (*see* **University Valley**). US-ACAN accepted the name in 1968.

University Valley. 77°52' S, 160°40' E. A valley, 1.5 km long, next NE of Farnell Valley, in the Beacon Valley area of Victoria Land. Named in Jan. 1962 by researchers Heinz Janetschek and Fiorenzo Ugolini, for their universities. US-ACAN accepted the name in 1968.

The *Uniwaleco* *see* **The *Sir James Clark Ross***

Lednik Unkovskogo. 77°10' S, 81°50' W. A glacier immediately NW of Talutis Inlet, on the N side of Carlson Inlet, between Fletcher Ice Rise and Fowler Ice Rise, in the SW part of the Ronne Ice Shelf. Named by the Russians for Admiral Ivan Semyonovich Unkovskiy (1822-1886), explorer and surveyor.

Unneruskollen *see* **Unneruskollen Island**

Unneruskollen Island. 70°30' S, 6°10' W. An ice-covered island, N of Halvfarryggen Ridge, and between the Ekström Ice Shelf and the Jelbart Ice Shelf, on the Princess Martha Coast of Queen Maud Land. Mapped by NBSAE 1949-52, and named by the Norwegians in 1960, as Unnerskollen. US-ACAN accepted the name Unneruskollen Island in 1970.

Unter-See *see* **Lake Unter-See**

Lake Unter-See. 71°20' S, 13°27' E. A meltwater lake between Mount Zimmermann and Mount Mentzel, it occupies the S part of Sjøbotnen Cirque, which indents the N face of the main massif of the Gruber Mountains, 5 km SW of Lake Ober-See, in the Wohlthat Mountains of Fimbulheimen, in the central part of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, plotted from these photos, and named by Ritscher as Unter-See (i.e., "lower lake"). US-ACAN accepted the name Lake Unter-See in 1970. The Norwegians call it Nedresjøen (which means the same thing).

Ensenada Unwin *see* **Unwin Cove**

Mount Unwin. 77°34' S, 163°02' E. Right next to Sanders Nunatak, NW of Scholars Peak, W of Ghent Ridge, and N of Huey Gully, it rises above the ice of the upper part of Commonwealth Glacier, to the S of Noxon Cliff, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Bob Unwin (*see* **Unwin Ledge**). US-ACAN never commented on this mountain. On Aug. 7, 2008 NZ-APC deleted this name, from fear of confusion with Unwin Ledge. So, as of Oct. 2010, this mountain does not have a name.

Punta Unwin *see* **San Eladio Point**

Unwin, Michael John Maximilian "Max." b. July 13, 1926, Thanet, Kent, son of William J. Unwin and his wife Winifred A. Mitchell. He joined the RAF during World War II, later becoming a squadron leader. He joined FIDS in 1951, as a meteorologist, and left the UK later that year, bound for Montevideo, and wintering-over at Base D in 1952. At the end of his tour, he returned to Port Stanley, and there caught the *Fitzroy* heading back to London, where he arrived on Feb. 3, 1953. He later lived in South Africa.

Unwin Cove. 63°19' S, 57°54' W. A smooth, clear, and very deep cove, about 900 m wide at its mouth, it indents Trinity Peninsula for about 700 m, immediately SE of Toro Point, between that point and Sotomayor Island, and S of Cape Legoupil, and separates Toro Point from Punta Ross, at Huon Bay, on the W coast of the Antarctic Peninsula. Its inaccessible cliffs are composed of high ice shelves and glaciers which discharge icebergs into it. Charted by ChilAE 1947-48, and named by them as Ensenada Teniente Unwin, for 1st Lt. Tomás Unwin Lambie (see below). However, it appears shortened on a 1951 Chilean chart, as Ensenada Unwin, and that was the name accepted by the 1974 Chilean gazetteer. It appears translated as Unwin Cove on a U.S. chart of 1963, and that was the name accepted by US-ACAN in 1964, and by UK-APC on Dec. 15, 1982. It appears in the 1986 British gazetteer.

Unwin Lambie, Tomás. 1st lieutenant during the Presidential Antarctic Expedition of 1947-48. Subsequently (as a capitán de fragata) he was commander of the *Lientur* during ChilAE 1949-50 and 1950-51.

Unwin Ledge. 77°35' S, 162°37' E. A flat-topped ridge or tableland, W of Hothem Cliffs, and 1.5 km S of Mount Hall, in the Asgard Range of Victoria Land. The upper surface of the ledge, at 1950 m above sea level, is ice-covered, and rises 400 m above the heads of the adjacent Newall Glacier and Canada Glacier. Named by NZ-APC on Oct. 7, 1998, as Himalaya Ledge. However, apparently, also in 1998, US-ACAN had named the same ledge, but as Unwin Ledge, after Robert Sidney "Bob" Unwin (1918-1996), former superintendent of the NZ DSIR Geophysical Observatory, and a researcher at Scott Base in 1958-59. On Aug. 7, 2008, NZ-APC changed their name from Himalaya Ledge to Unwin Ledge.

Uplaz. 62°09' S, 58°29' W. A gently-tilting rocky ledge to the W of Arctowski Station, on Admiralty Bay, King George Island, South Shetlands. Named by the Poles in 1980. The name "uplaz" is given in the Tatra Mountains of Poland to any such slope.

Islote Upper *see* **Upper Island**

Upper Alph River. 78°18' S, 163°27' E. The upper end of the Alph River, flowing into Pyramid Trough and Pyramid Ponds, on the Scott Coast of Victoria Land. Descriptively named by NZ-APC in Dec. 1993.

Upper Fang *see* **The Fang** (under **F**)

Upper Ferrar Glacier *see* **Taylor Glacier**

Upper Island. 66°00' S, 65°39' W. A low, narrow island, with its rock surface uncovered during the summer months, E of Beer Island, and forming the NE side of Mutton Cove, between Cliff Island and Harp Island, 13 km W of Prospect Point, off Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Roughly charted in 1936, by BGLE 1934-37, and named by them. It appears on their expedition charts. However, it appears on a British chart of 1950 as Upper Islet, and that was the name accepted by UK-APC on Sept. 20, 1955. US-ACAN followed suit with that naming in 1956. It appears on a 1957 Argentine chart as Islote Upper, and that was the name accepted by the Argentine gazetteer of 1970 and by the 1974 Chilean gazetteer. However, on July 7, 1959, it was redefined by UK-APC as Upper Island, and US-ACAN followed suit with the new name in 1963.

Upper Islet *see* **Upper Island**

Upper Jaw Glacier. 78°21' S, 162°57' E. The small, east-flowing northern branch of the glacier on the E side of the ridge that runs N from the peak called Shark Fin, in the Royal Society Range of southern Victoria Land. It runs into Lower Jaw Glacier, and the two coalesced glaciers then run into Renegar Glacier, which, in turn, runs into Koettlitz Glacier. Named by NZ-APC in 1980. US-ACAN accepted the name in 1994. On a map, the combined shapes of Upper Jaw Glacier and Lower Jaw Glacier resemble a gaping mouth, an illusion strengthened by the proximity of Shark Fin.

Upper Meyer Desert. Part of the Meyer Desert, in the Dominion Range of the TransantarcticM ountains.

Upper Staircase. 78°15' S, 161°00' E. The upper eastern portion of Skelton Glacier, just N of The Landing, it merges into Skelton Névé, in Victoria Land. Surveyed by the NZ party of BCTAE in 1957, and so named by them because it seems to be a staircase to the Polar Plateau. US-ACAN accepted the name in 1965.

Upper Victoria Glacier *see* **Victoria Upper Glacier**

Upper Wright Glacier *see* **Wright Upper Glacier**

Upsøy *see* **Easther Island**

Upstream B Camp. 83°29' S, 138°05' W. Also known as Upstream Bravo Camp, and the name is often abbreviated to UpB. American camp, built on the Whillans Ice Stream. Radar depolarization experiments took place here in 1991-92. *See also* **Upstream C Camp** and **Downstream B Camp**.

Upstream Bravo Camp *see* **Upstream B Camp**

Upstream C Camp *see* **Kamb Ice Stream**

Upstream Delta Camp. 81°00' S, 140°00' W. American camp near the Bindschadler Ice Stream, in Marie Byrd Land.

Upton, Benjamin. Captain of the *Nancy*, 1820-22. With John Bertram, he went into the South American trade in a big way in the 1830s and 1840s.

Upton Rock. 62°12' S, 59°07' W. A submerged rock off the N coast of Nelson Island, 5 km NW of Flat Top Peninsula (which is on King George Island), in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, for Capt. Ben Upton. It appears on a British chart of 1962. US-ACAN accepted the name in 1965. This rock was last plotted by the UK, in late 2008.

Ura-nagaone. 72°34' S, 31°31' E. A ridge at the E extremity of the Belgica Mountains. JARE 1976 photographed it aerially, and JARE 1979-80 surveyed it from the ground. Named by the Japanese on Nov. 24, 1981 ("rear long ridge").

Mys Uragannyj *see* **Uragannyy Point**

Uragannyy Point. 69°57' S, 12°50' E. An ice point along the W edge of the Lazarev Ice Shelf, about 5 km N of Leningradskiy Island, Queen Maud Land. Mapped by SovAE 1959, and they named it Mys Uragannyy (i.e., "hurricane point") because, while the *Ob'* was parked there, a big hurricane blew up. US-ACAN accepted the name Uragannyy Point in 1971.

Ostrov Uran *see* **Uran Island**

Uran Island. 66°03' S, 101°17' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Uran. ANCA translated this.

The *Urania II*. A 22-meter, 70-ton Russian steel ketch built in St. Petersburg between 1992 and 1994, and launched in Nov. 1994. With 120 hp, she was capable of 9 knots, and could take a crew of 10. She was in Antarctic waters in 1999-2000, under the command of her principal builder, Aleksandr Struzhilin. She visited the South Shetlands and the Antarctic Peninsula.

Uranium. Tatsuo Tatsumi, of JARE I discovered pitchblende about 50 miles S of Showa Station on Oct. 27, 1957, which contained about 40 to 50 percent oxidized uranium. A similar find was made on Nov. 7, 1957, about 25 S of Showa. The rock was about the size of a large egg, but much heavier than ordinary rock.

Glaciar Urano *see* **Uranus Glacier**

Uranus Glacier. 71°24' S, 68°20' W. A glacier, 30 km long and 10 km wide at its mouth, on the E coast of Alexander Island, it flows E into George VI Sound immediately S of Fossil Bluff, between that bluff and Waitabit Cliffs. Probably first seen by Ellsworth, on his photographic flight directly over this point on Nov. 23, 1935. That portion of the glacier near its mouth was first roughly surveyed in Oct. 1936, by BGLE 1934-37. Fids from Base E re-surveyed

it in its lower portions in some detail in 1948-49. Named by UK-APC on March 31, 1955, for the planet. US-ACAN accepted the name later that year. It appears on a 1955 U.S. Hydrographic Office chart. In 1959-60, Searle of the FIDS mapped the whole glacier from aerial photos taken in Nov. 1947 by RARE 1947-48. The Argentines call it Glaciar Urano, which means the same thing.

Uranus Glacier Automatic Weather Station. 71°25' S, 68° 00' W. An American AWS on Uranus Glacier, 24 km from Fossil Bluff, on Alexander Island, at an elevation of approximately 2400 feet (753 m). It was set up on Feb. 18, 1986, and began operating on March 6, 1986. It was removed on Nov. 5, 1990, and replaced later that season with a new one. The new one was removed on Jan. 19, 2000, and replaced with yet a newer one 5 days later. It was finally removed in Jan. 2005.

Urban Point. 79°48' S, 82°00' W. A sharp rock point, 3 km E of the terminus of Ahrnsbrak Glacier, on the N side of the Enterprise Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Verdis D. Urban (b. Jan. 7, 1933. d. July 20, 2003, San Angelo, Tex.), meteorologist at Ellsworth station in 1958.

Urbanak Peak. 84°38' S, 111°55' W. A peak with exposed rock on its N side, along Mirsky Ledge, in the Ohio Range of the Horlick Mountains. Surveyed in Dec. 1958, by the USARP Horlick Mountains Traverse Party. Named by US-ACAN in 1962, for Richard Lester Urbanak (b. 1936), meteorologist with the National Weather Service, who wintered-over at Byrd Station in 1960, and again in 1971, at Pole Station.

Urbanek Crag. 62°08' S, 58°32' W. A steep buttress of Pilots Mount, between Polar Committee Icefall and Ladies Icefall, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Prof. Adam Urbanek (b. 1928), paleontologist, past president of the Committee on Polar Research, at the Academy of Sciences, Warsaw.

Roca Urchin *see* **Urchin Rock**

Urchin Rock. 65°19' S, 64°16' W. A rock awash (i.e., over which the sea breaks), 3.5 km W of the largest (and most westerly) of the Berthelot Islands, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and first shown (but, apparently, not named) on an Argentine government chart of 1957. Charted by an RN Hydrographic Survey unit in 1957-58. So named by UK-APC on July 7, 1959, because it is a hazard near the NE end of the Grandidier Channel, the word "urchin" here expressed as a "roguish or mischievous boy." US-ACAN accepted the name in 1960, and it appears on a British chart of that year. It appears on a 1962 Chilean chart as Roca Erizo, and that was the name accepted by the Chilean gazetteer of 1974. The British gazetteer says that Roca Erizo is an inapt translation of Urchin Rock, the word "erizo" meaning a sea-urchin. However, it is not inapt at all. When trodden upon, a sea-urchin is much more dangerous than an urchin, the latter, under those circumstances, tending to revert to his natural state of subjugation, while the former rises up and bites back. The Argentines call it Roca Urchin.

Urdoviza Glacier. 62°31' S, 60°44' W. A glacier extending 2.8 km in an E-W direction, and 3 km in a N-S direction, it is bounded by the E slopes of Oryahovo Heights, and flows eastward into Hero Bay between Agüero Point and Sardanski Point, Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, after Cape Urdoviza, on the Black Sea coast of Bulgaria.

The *Urengoy*. Russian ship that took part in SovAE 1981-83, skippered by Yevgeniy Anatol'yevich Bernadskiy.

Urfjell *see* **Urfjell Cliffs**

Urfjell Cliffs. 73°53' S, 5°17' W. A line of rock cliffs and spurs trending SW for 16 km from Urfjelldokka Valley, and forming part of the S portion of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. The feature includes Tunga Spur, Kuven Hill, Kuvungen Hill, Urnosa Spur, Gavlpiggen Peak, Klakknabben, Urfjellglovene, Urfjellklakken, and Urfjellgavlen. The Norwegians call the NE part of these cliffs Uhligberga. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Urfjell (i.e., "mountain with rock-strewn slopes"). US-ACAN accepted the name Urfjell Cliffs in 1966.

Urfjelldokka *see* **Urfjelldokka Valley**

Urfjelldokka Valley. 73°50' S, 4°45' W. A broad, ice-filled valley between the Urfjell Cliffs and Skappelnabben Spur, along the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Urfjelldokka, in association with the cliffs. US-ACAN accepted the name Urfjelldokka Valley in 1966.

Urfjellgavlen. 74°06' S, 5°43' W. A mountain, in the S part of the Urfjell Cliffs, in the SW part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians in association with Urfjell Cliffs.

Urfjellglovene. 73°58' S, 5°16' W. An icefall, S of Tunga Spur, in the Urfjell Cliffs, in the SW part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians, in association with Urfjell Cliffs.

Urfjellklakken. 74°03' S, 5°37' W. A mountain in the S part of the Urfjell Cliffs, in the SW part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians in association with Urfjell Cliffs.

Urguri Nunatak. 63°26' S, 57°34' W. A rocky hill rising to 560 m in the E foothills of the Laclavère Plateau, 2.49 km W by N of Abrit Nunatak, 3.72 km N of Theodolite Hill, and 7.5 km S of Fidase Peak, it overlooks Mott Snowfield to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient and medieval fortress of Urguri, in southeastern Bulgaria.

Bahía Uribe. 64°33' S, 62°51' W. A bay opening to the W from Ryswyck Point (the E extremity of Anvers Island), in the Palmer Archipelago. Named by the Chileans for Lt. Luis Uribe Orrego, one of the (many) heroes on the *Esmeralda*, during the famous naval battle of Iquique, May 21, 1879.

Islas Uribe *see* **Karelin Islands**

Mount Uritorco. 62°56' S, 60°43' W. Surmounts the S part of Telefon Ridge, on Deception Island, in the South Shetlands. The name (presumably Cerro Uritorco) appears on an Argentine chart of 1956, named after Cerro Uritorco, the mountain in Argentina. US-ACAN accepted the name Mount Uritorco in 1965.

Gora Urmaeva. 71°08' S, 67°47' E. A hill, near Gora Okrytaja, in the Prince Charles Mountains. Named by the Russians for Nikolay Andreyevich Urmayev (1895-1958), Soviet geodesist.

Urna. 72°14' S, 16°46' E. A small nunatak, S of Sarkofagen Mountain, in Borchgrevinkisen, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the urn"), in association with Sarkofagen.

Urnosa *see* **Urnosa Spur**

Urnosa Spur. 73°47' S, 5°02' W. A partly snow-capped mountain spur, in the northernmost part of Uhligberga (the NE part of Urfjell Cliffs), at the W side of Urfjelldokka Valley, in the SW part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Surveyed from the ground and photographed from the air by NBSAE 1949-52, and photographed aerially again in 1958-59, during NorAE 1956-60, and mapped from these efforts by Norwegian cartographers, who called this feature Urnosa (i.e., "the rock-strewn nose"). US-ACAN accepted the name Urnosa Spur in 1966.

Acantilado De Urquiza *see under* **D**

Punta Urtubey *see* **Punta Formas**

Uruguay. Uruguay, since the beginning, has been of tremendous importance to Antarctic voyagers. With its capital and port, Montevideo, it has provided not only sterling service to ships and crews of all nationalities, but has provided wonderful memories for thousands of people. Carlos Haymes, a Uruguayan, was chief engineer of the *Scotia* during the 2nd half of ScotNAE 1902-04. Luciano Valette was at that expedition's base on Laurie Island in 1904, and stayed on to winter-over at Órcadas Station that winter. In 1957-58 the famous newspaper *El Día* sent reporter Hugo Rocha and photographer Antonio Caruso to Antarctica, to cover British, Chilean, and Argentine bases during IGY. Their reporting in the "Suplemento Familiar" section of the paper was extensive and enormously well-received. One of the pictures showed the two lads hoisting the Uruguayan flag. Official Uruguayan interest in Antarctica really began in the early 1960s, and in 1962 Professor Julio César Musso

(the leading early propeller of official Uruguayan involvement in Antarctica) edited the first edition of the magazine *Antártica Uruguaya*. In 1964 Ensign Nossei, of the Uruguayan Navy, accompanied a BAS expedition to the South Shetlands, and took notes in his diary that would later be useful for Uruguayan expeditions. In 1968 Professor Musso's book *Antártida Uruguaya* was published, and on Feb. 9 of that year he brought into being the Instituto Antártico Uruguayo (IAU), which, on Aug. 28, 1975, became a division of the Ministry of Defense. The IAU has continued to control all official Uruguayan involvement in Antarctica since then. Official active Uruguayan participation in Antarctica began on Jan. 11, 1980, when Uruguay was ratified as the 22nd signatory to the Antarctic Treaty. That year saw the beginning of an influx of Uruguayan scientists to Antarctica, working with expeditions from several countries. On Jan. 7, 1982, at the invitation of the National Science Foundation (of the USA), two Uruguayan Air Force officers, Col. Aita and Capt. Gadea, hoisted the Uruguayan flag at the South Pole. On Jan. 28, 1984, Uruguayan Air Force lieutenant colonel Jorge Méndez flew a Fairchild FH 227 on a preliminary visit to King George Island, in the South Shetlands. Scientists and logistical personnel were in the plane, and they made plans for the building of the first Uruguayan station. The first official Uruguayan Antarctic Expedition followed in 1984-85, and it established Artigas Station on Dec. 22, 1984. On Oct. 7, 1985, Uruguay became the 17th nation to achieve Consultative status within the Antarctic Treaty system, and on June 29, 1987, became an associate member of SCAR. In 1990 Uruguay's first Antarctic ship, the *Pedro Campbell*, arrived at Artigas Station. In 1997-98 the British gave their old Hope Bay station to the Uruguayans, as their 2nd Antarctic base, and it was renamed Teniente Ruperto Elichiribehety Station. Other ships were used for Antarctic resupply — the *Vanguardia* and the *General Artigas*. In 2006 Artigas Station was modernized.

The *Uruguay*. A small (550-ton) Argentine corvette (she was called a corvette, but was really a warship), 46.36 meters long, built by Laird Brothers of Birkenhead, Cheshire, and launched on March 6, 1874, she spent some years working in hydrography off the South American coasts, and in 1877 was transformed into a naval training ship. She was sent out by the Argentine government in Nov. 1903 to rescue SwedAE 1901-04 on Snow Hill Island. She did just that, on Nov. 7, 1903. The crew were: Teniente de navío Julián Irízar (q.v.) (captain); Teniente de fragata Ricardo Hermelo (2nd-in-command; *see* [1]**Delta Island**); Lt. (strictly speaking ensign) Jorge Yalour (leader of the Navy detachment on board); Felipe Fliess (ensign); Alberto Chandler Baunen (an ensign in the Chilean navy, invited along); Juan López de Bertodano (chief engineer); Gualterio Carminatti (2nd engineer); José Gorrochátegui (surgeon); José Rodríguez (bosun); Fermín Ramírez, Eduardo MacDougall, Federico Argento Prat (*see* **Monte Argento**), Horacio Agnese (*see* **Davey Point**), and Mateo Ramírez (cabos); José Martín Morales, Segundo Furque, Severo Portielo, Segundo Carrizo, and Lorenzo Cáceres (able seamen); Emilio Hoffman (chief helmsman); Manuel Díaz (mechanic); Luis Otaño (chief stoker), Francisco Galain (2nd stoker); Juan Gerardi (stoker); Juan Pérez (stoker, replaced in Ushuaia); Julio Castro (stoker, replaced earlier); Manuel J. Ruiz (carpenter); José Elorza (steward, replaced in Ushuaia); José Lamoza (steward, replaced earlier); and Ramón Bermúdez (cook). One also sees Pastor Paz Argüello as carpenter for 1903 (*see* **Nunatak Argüello**), but he is not on the official list, and neither is mechanic Manuel Díaz (*see* **Cross Valley**). In the 1904-05 season, under the command of Capt. Ismael Galíndez, the *Uruguay* relieved the last of ScotNAE 1902-04 on Laurie Island, on Dec. 31, 1904. Capt. Teodoro Caillet Bois (*see* **Capitán Caillet Bois Refugio**) was aboard that season, and one of the able seamen was Guillermo Acosta. Rivera was the bosun (*see* **Sawyer Island**). In early 1905 Galíndez led her to look for FrAE 1903-05, which was feared lost. The *Uruguay* was in the South Orkneys for many seasons after that, mostly relieving Órcadas Station, which she did in the following seasons (in this list, the seasons that the ship went to Órcadas are in bold. Skippers who didn't go south are listed, simply for completeness): **1906-07**: Skipper was Ricardo Hermelo; skipper between July 7, 1907, and Jan. 1, 1908, was Carlos M. Valladares; **1907-08**: Skipper was Jorge Yalour (from Jan. 1, 1908 to Dec. 2, 1908); **1908-09**: Skipper was Carlos Somosa (from Dec. 12, 1908, to June 15, 1909); **1909-10**: Skipper was Teniente de navío César Maranga (from Dec. 7, 1909, to Oct. 2, 1910); skipper from Oct. 2, 1910, to Dec. 15, 1910, was Víctor Rolandone; **1910-11**: Skipper was Guillermo Llosa (from Dec. 15, 1910, to June 4, 1911), and the ship stayed in Antarctic waters from Feb. 17 to May 2, 1911, charting, before heading back to Buenos Aires; skipper from June 4, 1911, to Dec. 5, 1911, was Teniente de fragata Jorge Reinafé; skipper from Dec. 5, 1911, to Feb. 4, 1912, was Teniente de fragata Juan Cánepa; skipper from Feb. 4, 1912, to June 1, 1913, was Teniente de fragata José Gregores; **1913-14**: Skipper was Teniente de fragata Alberto Sadous (from Jan. 2, 1914, to Oct. 1914); skipper from Oct. 1914 to Dec. 30, 1914, was Teniente de fragata José M. Garibaldi; **1914-15**: Skipper was surveyor Teniente de navío Ignacio Espíndola (from Dec. 30, 1914, to Nov. 24, 1915), and the vessel stayed in Cumberland Bay (South Georgia) from Feb. 28 to March 2, 1915; **1915-16**: Skipper was Teniente de navío Dalmiro Sáenz (from Nov. 24, 1915, to Jan. 1, 1917); skipper from Jan. 1, 1917, to Oct. 8, 1917, was Teniente de navío A. Palizo Mujica; **1917-18**: Skipper was Teniente de navío Eleazar Videla (from Oct. 8, 1917, to Jan. 3, 1919); **1918-19**: skipper was Jorge Games; 1919-20: Skipper was Teniente de navío Daniel Capanegra Davel (from Jan. 2, 1920, to Jan. 4, 1921); **1920-21**: Skipper was Teniente de navío Domingo Casamayor (from Jan. 4, 1921, to May 10, 1921); skipper from May 10, 1921, to Dec. 12, 1921, was Teniente de navío Juan de la Pesa, and from Dec. 12, 1921, to Feb. 1, 1922, was Teniente de navío Rodolfo A. González; **1921-22**: Her last relief voyage, under the command of Teniente de navío Francisco A. Lajous (from Feb. 1, 1922, to Oct. 1, 1922); between Oct. 1, 1922, and Jan. 3, 1924, her skipper was Teniente de navío Torcuato Monti. The ship later became a museum.

Bahía Uruguay *see* **Jessie Bay**, **Uruguay Cove**

Île Uruguay *see* **Uruguay Island**

Isla Uruguay *see* [2]**Uruguay Island**, **Andersson Island**

Lago Uruguay. 62°11' S, 58°54' W. A lake at Collins Harbor, near Artigas Station, King George Island, in the South Shetlands, from which the drinking water supply for the station is drawn. Named by the Uruguayan personnel from the station on Dec. 22, 1984.

Uruguay Bay *see* **Uruguay Cove**

Uruguay Canyon. 72°00' S, 39°00' W. An undersea feature of the Weddell Sea, named by international agreement.

Uruguay Cove. 60°45' S, 44°43' W. In the W part of Jessie Bay, on the N coast of Laurie Island, separated from Scotia Bay by a narrow neck of land, in the South Orkneys. Probably discovered by Weddell in 1823 (but not named by him). Charted in 1903 by ScotNAE 1902-04, and named by Bruce as North Bay. Bruce later renamed it Uruguay Cove, for the *Uruguay*. Recharted by the Argentines in 1930, as Caleta Uruguay, and by the Discovery Investigations in 1933, as Uruguay Cove, it appears on the latter's map of 1934. US-ACAN accepted the name Uruguay Cove in 1952, and UK-APC followed suit on Sept. 9, 1953. It appears as such in the 1955 British gazetteer. Although it appears on a 1947 Argentine chart as Bahía Corbeta Uruguay (i.e., "Corvette Uruguay bay"), the Argentine gazetteer of 1970 accepted the name Caleta Uruguay. However, it seems that today the Argentines call it Bahía Uruguay. It was also seen in a 1950 reference as Uruguay Bay.

[1]**Uruguay Island** *see* **Andersson Island**

[2]**Uruguay Island**. 65°14' S, 64°14' W. An island, 0.8 km long, with a cove indenting its W side, between Irízar Island to the N and Corner Island to the S, in the NE sector of the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered in 1904, by FrAE 1903-05, and named by Charcot as Île Uruguay, for the *Uruguay*. The island was re-charted in 1935 by BGLE 1934-37, and referred to by them as Uruguay Island. It appears as such on a British chart of 1947, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. Photographed aerially by FIDASE in 1956-57, and surveyed by an RN Hydrographic Survey unit in 1958. The name Isla Uruguay was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Baliza Uruguaya. 62°11' S, 58°54' W. A lighted beacon tower near Artigas Station, on King George Island, in the South Shetlands. Named by the Uruguayans on April 1, 1988.

Uruguayan Antarctic Expeditions. These are the expeditions (UruAE). **UruAE 1984-85**. This was the first expedition to Antarctica by Uruguay, and is often referred to as Antarkos I. Lt. Col. Omar Porciúncula, of the Uruguayan Air Force, led it, and they came down on the Chilean vessel *Piloto Pardo*. Artigas Station was established as a summer station on Dec. 22, 1984. **UruAE 1985-86**. Antarkos II. Came south with the Uruguayan Air Force to Teniente Rodolfo Marsh Station. Omar Porciúncula led it until Jan. 1986, when Eduardo Techera took over. Supplies were brought in by ships from the UK, Chile, Argentina, and the USSR. Artigas was converted into an all-year station. **UruAE 1986-87**. Antarkos III. Led by Heber Cappi. Again, the personnel were flown into Teniente Rodolfo Marsh Station by the Uruguayan Air Force. **UruAE 1987-88**. Antarkos IV. Led by Emilio Alvárez. Once again, the Uruguayan Air Force flew the relief personnel into Teniente Rodolfo Marsh Station, and flew the winterers from the previous year out of the same station. The leader of the following Antarkos expeditions was also leader of Artigas Station that winter (*see* **Artigas Station**). **UruAE 1988-89**. Antarkos V. **UruAE 1989-90**. Antarkos VI. **UruAE 1990-91**. Antarkos VII. **UruAE 1991-92**. Antarkos VIII. **UruAE 1992-93**. Antarkos IX. **UruAE 1993-94**. Antarkos X. **UruAE 1994-95**. Antarkos XI. The ship was the *Vanguardia*. **UruAE 1995-96**. Antarkos XII. The ship was the *Vanguardia*. **UruAE 1996-97**. Antarkos XIII. The ship was the *Vanguardia*. **UruAE 1997-98**. Antarkos XIV. The ship was the *Vanguardia*. **UruAE 1998-99**. Antarkos XV. The ship was the *Vanguardia*. **UruAE 1999-2000**. Antarkos XVI. The ship was the *Vanguardia*. **UruAE 2000-01**. Antarkos XVII. The ship was the *Vanguardia*. **UruAE 2001-02**. Antarkos XVIII. The ship was the *Vanguardia*. **UruAE 2002-03**. Antarkos XIX. The ship was the *Vanguardia*. **UruAE 2003-04**. Antarkos XX. The ship was the *Vanguardia*. **UruAE 2004-05**. Antarkos XXI. The ship was the *Vanguardia*. **UruAE 2005-06**. Antarkos XXII. The ship was the *Vanguardia*. **UruAE 2006-07**. Antaros XXIII. **UruAE 2007-08**. Antarkos XXIV. **UruAE 2008-09**. Antarkos XXV. **UruAE 2009-10**. Antarkos XXVI.

Skala Urvanceva *see* **Urvantsev Rocks**

Urvantsev Rocks. 72°06' S, 5°37' E. A group of rocks, 8 km SE of Skorvetangen Spur, in the Mühlig-Hofmann Mountains of Queen Maud Land. This feature was surveyed from the ground by NorAE 1956-60, and photographed aerially in 1958-59, during the same long expedition. The Norsk Polarinstitutt mapped it from these efforts, but did not name it. It was mapped again in 1961, by the Russians, who did name it, as Skala Urvanceva, for geologist and geographer Professor Nikolay Nikolayevich Urvantsev (1893-1985). US-ACAN accepted the name Urvantsev Rocks in 1970.

Urvich Wall. 62°39' S, 60°58' W. A narrow, ice-free, crescent-shaped ridge, 6.9 km long and up to 400 m wide, separating Byers Peninsula to the W from Rotch Dome to the E, it is bounded by Nedelya Point to the N and Rish Point to the SE, on Livingston Island, in the South Shetlands. Surveyed and mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for the medieval fortress of Urvich, on Plana Mountain, in Bulgaria.

Us to Know How. 12407. An R4D Dakota airplane, built in 1943 by Douglas, and used by the Marines during World War II. It was assigned to VX-6 on Oct. 20, 1963, and crashed on Lillie Glacier on Oct. 22, 1964.

US-ACAN *see* **United States Advisory Committee on Antarctic Names**

USA *see* **United States of America**

USAAF. Short for United States Army Air Force.

USAF. Short for United States Air Force.

USAP *see* **United States Antarctic Program**

USARP *see* **United States Antarctic Research Program**

Usarp Mountains. 71°10' S, 160°00' E. The name Usarp is also seen completely capitalized (i.e., USARP Mountains). A long chain of mountain ranges, trending N-S for about 200 km, bordering the W side of Rennick Glacier, and bounded to the N by Pryor Glacier and the Wilson Hills, in Oates Land, The major features within it are: the Daniels Range, the Morozumi Range, the Helliwell Hills, the Pomerantz Tableland, the Emlen Peaks, Mount Burnham, Mount Gorton, MacPherson Peak, Frontier Mountain, Roberts Butte, and Big Brother Bluff, none of them over 10,000 feet. Parts of the feature were discovered and photographed aerially during OpHJ 1946-47, and the feature was completely mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for USARP. ANCA and NZ-APC both accepted the name.

USAS 1939-41 *see* **United States Antarctic Service Expedition**

Usas Escarpment. 76°00' S, 129°00' W. The name Usas is also seen completely capitalized (i.e., USAS Escarpment). An expansive, but discontinuous north-facing escarpment, about 300 km long, N of the Executive Committee Range, and extending roughly W to E along the 76th parallel, from where the elevation of the snow surface descends toward the Ruppert Coast and the Hobbs Coast, in Marie Byrd Land. The position of the escarpment coincides with the N slopes of the Flood Range, the Ames Range, the McCuddin Mountains, and the E peaks of Mount Galla, Mount Aldaz, and Benes Peak. First named the 76th Parallel Escarpment by USAS 1939-41, who discovered it. The name was later changed to honor the expedition itself. US-ACAN accepted the new name in 1962.

USCG. Short for United States Coast Guard.

USEE *see* **United States Exploring Expedition**

Isla Useful *see* **Useful Island**

Islote Useful *see* **Useful Island**

Useful Island. 64°43' S, 62°52' W. A low, circular island, ice-free in summer, measuring about 900 m by 525 m, and with regular geological relief, 3 km (the Chileans say about 5 km) W of Rongé Island, with a string of rocks between, in Gerlache Strait, off Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99. Re-surveyed by the Discovery Investigations in 1927, it appears (as Useful Island) on their 1929 chart, the descriptive name probably having been in use for some years by whalers in the area. It appears on a 1947 Chilean chart as Isla Útil, and on a 1949 Argentine chart as Isla Useful. It appears as Useful Islet on British charts of 1948 and 1950, and that was the name accepted by UK-APC on Sept. 20, 1955. US-ACAN accepted that name in 1956. On a 1953 Argentine chart, the N part of the island is shown as Punta Útil. It was photographed aerially by FIDASE in 1956-57, and renamed Useful Island by UK-APC on July 7, 1959. It appears as such on a British chart of 1959, and US-ACAN accepted the new name in 1963. On a 1959 USAF chart, it appears in error as Lemaire Island. It appears on a 1962 Chilean chart as Islote Useful, and that was the name accepted by the 1974 Chilean gazetteer. The Argentine gazetteer of 1970 accepted the name Isla Útil.

Useful Islet *see* **Useful Island**

Useless Bay *see* **Shingle Cove**

USGS. Short for United States Geological Survey.

Ushakov Nunataks. 67°30' S, 51°22' E. A group of nunataks about 24 km NE of the Perov Nunataks, in Enderby Land. Photographed aerially by ANARE in 1956 and 1957, and again by SovAE 1962, who named this feature Gory Ushakova, for Georgiy Alekseyevich Ushakov (1901-1963), Soviet polar explorer. The Australians translated the name.

Gory Ushakova *see* **Ushakov Nunataks**

Mount Usher. 84°57' S, 172°04' E. A distinctive, almost entirely ice-covered mountain rising to 2895 m, 6 km SW of the mouth of Brandau Glacier, just to the NE of Keltie Glacier, and overlooking the S side of that glacier near its confluence with the Beardmore Glacier, in the Queen Maud Mountains. Discovered by BAE 1907-09, and named by Shackleton for London doctor John Edward Usher (b. 1854, Victoria, Australia. d. Dec. 27, 1918, London), a fellow of the Royal Geographical Society, former surgeon superintendent and medical officer of health to the Queensland government, author of *Alcoholism and its Treatment*, and consulting physician to Shackleton's expedition. US-ACAN accepted the name in 1952, and NZ-APC followed suit. Identification of this mountain varied on maps over the years; this one follows the H.E. Saunders map of 1961, and is the one generally accepted.

Usher, Joseph. He had sailed to St. Petersburg in the summer months, and to the South American and West Indies ports in the winter. He was commander of the Liverpool sealer *Caraquette*, in the South Shetlands in the 1821-22 season.

Usher Glacier. 62°02' S, 58°34' W. A glacier, 6 km long, flowing NW into the Drake Passage

between Stigant Point and Davey Point, on the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960 for Captain Joseph Usher. US-ACAN accepted the name later in 1960. This feature was originally plotted in 62°02' S, 58°37' W, but in late 2008 the UK re-plotted it.

[1]**The *Ushuaia***. Argentine transport ship which took part in the 1948 Argentine Naval maneuvers led by Admiral Cappus.

[2]**The *Ushuaia***. Argentine tourist vessel, operated by Antarpply, out of Ushuaia, Chile, and registered in Panama. She was in Antarctic waters in 2002-03, 2003-04, 2004-05, 2005-06, 2006-07, 2007-08, 2008-09, and 2009-10, each season taking down the Ukrainian Antarctic expeditions. She could carry 75 passengers. Incidentally, one of the passengers on the 2007-08 trip was Fred Roots. In early Dec. 2008, she ran aground in Marguerite Bay, and started drifting. She had 89 passengers and 33 crew.

Nunatak Ushuaia. 82°10' S, 40°00' W. Next to Nunatak Iberá, in the Panzarini Hills, in the Pensacola Mountains. Named by the Argentines.

USN *see* **United States Navy**

USNAE *see* **United States Navy Antarctic Expedition**

Usnea Plug. 62°38' S, 61°06' W. A volcanic plug, 110 m from base to summit, less than 0.8 km SW of Chester Cone, on Byers Peninsula, in the W end of Livingston Island, in the South Shetlands. Named by Kaye Everett (*see* **Everett Spur**), of the Institute of Polar Studies, Ohio State University, who was here in Feb. 1969, with a USAP geological field party. Usnea is a type of lichen he found here. US-ACAN accepted the name in 1970, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer. This feature was last plotted by the UK, in late 2008.

Usnea Ridge. 60°42' S, 45°38' W. Running NNW at an elevation of between 100 m and 160 m, from Jane Peak to Spindrift Col, in the central part of Signy Island, in the South Orkneys. The ridge was an ecological study site for BAS biologists. Named by UK-APC on May 13, 1991, for the genus of lichens named Usnea, which form a main element of the plant life on the ridge. US-ACAN accepted the name.

USNR. Short for United States Naval Reserve.

Skaly Usova. 73°24' S, 65°30' E. A group of isolated rocks, in the S part of the Prince Charles Mountains. Named by the Russians.

Glaciar Uspallata *see* **Uspallata Glacier**

Uspallata Glacier. 68°11' S, 66°52' W. A glacier flowing NW from the col between Walton Peak (to the SW) and Mount Rhamnus (to the NE), along the SW side of Mount Rhamnus and the SE side of Mount Nemesis, to enter Northeast Glacier, at Neny Bay, on the Fallières Coast of Graham Land. Named by the Argentines as Glaciar Uspallata, after a town in the Andean province of Mendoza, in Argentina. UK-APC accepted the name Uspallata Glacier on May 10, 2006, and US-ACAN followed suit that year.

Baie U.S. S. Glacier. 70°20' S, 24°01' E. A small bay, part of Breid Bay, on the Princess Ragnhild Coast of Queen Maud Land. Reconnoitered by BelgAE 1957-58, and named by them for the U.S. icebreaker *Glacier*, which got the trapped *Polarhav* out of the ice in Jan. 1959.

USSR. Known as Russia until 1917, and from 1990 once again known as Russia. In between, it suffered the aberration of Bolshevism, and was known as the Union of Soviet Socialist Republics. That is a simplistic history, of course, but one that can be grasped in a nutshell. The first Russian on the Antarctic scene was von Bellingshausen in 1819-21. He circumnavigated the continent at high latitudes and discovered several bits of land in his ships, the *Vostok* and the *Mirnyy*. A 1932-33 expedition was planned, but never came off. That was in the days when the USSR was desperate to keep its secrets, and they felt that exposing themselves to the world would be dangerous. The next group south were Bolsheviks, in 1946 — whalers, and since then they have done much whaling here. On June 7, 1950, the Soviet Union made a statement about not recognizing other countries' claims to pieces of Antarctica. The USSR made no such claims on Antarctica for itself, and neither does modern-day Russia. A big participant in IGY, the first Soviet Antarctic Expedition (SovAE) arrived in early Jan. 1956, led by Mikhail Somov in the *Ob'* and the *Lena*. The Air Fleet was commanded by Ivan Cherevishniy. Six scientific stations were set up, including Mirnyy, Oazis (later to be transferred to Poland and renamed Dobrowolski), Pionerskaya, Vostok, and Sovietskaya. One of the 12 original signatories to the Antarctic Treaty in 1959, the USSR sent an expedition every year from 1956 onwards, until its collapse as an empire. The 26th (1981-82) SovAE involved 1400 men and women, with 8 ships used to supply the 7 permanent stations (*see* below). About 300 scientists and technicians wintered-over in 1981. The 27th SovAE (1982-83) involved 800 men and women. Soviet support personnel were not military, as they were in the USA, for example. Each Soviet station had its own political leader (not freely elected until the 1990s), i.e., the local communist party secretary. Other Soviet stations in Antarctica have included: Druzhnaya, Druzhnaya III, Russkaya, Soyuz, Leningradskaya, Novolazarevskaya, Bellingshausen, and Lazarev. A Soviet air route was established between Maputo in Mozambique and Molodezhnaya Station, the main Soviet base in Antarctica. For Russian involvement in Antarctica, post collapse, *see* **Russia**.

Ustina Point. 63°36' S, 59°50' W. Forms the S extremity of Tower Island, 2.7 km WSW of Condyle Point, 5.58 km SSE of Kranevo Point, and 300 m N of the adjacent Zigzag Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlemt of Ustina, in southern Bulgaria.

Ustra Peak. 62°38' S, 60°36' W. A rocky peak rising to 195 m, on the coast of Walker Bay, next SE of Verila Glacier, 2 km W of Krakra Bluff, and 1.8 km NNE of Hannah Point, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Nov. 2005, after the medieval Bulgarian fortress of Ustra, in the eastern Rhodope Mountains.

Ustvedthorten. 74°31' S, 11°28' W. A nunatak in the most northwesterly part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Dr. Hans Jacob Neumann Ustvedt (1903-1982), Resistance leader during World War II. He was director general of the Norwegian Broadcasting Corporation from 1962 to 1972. Name means "Ustvedt crags."

Gora Utës. 72°36' S, 68°09' E. A nunatak, SW of Lines Ridge, at the N end of the Mawson Escarpment. Named by the Russians.

Mys Utës *see* **Utes Point**

Utes Point. 67°44' S, 45°43' E. Projects from Enderby Land into Alasheyev Bight, about 6 km W of Molodezhnaya Station. Named by the Russians as Mys Utës. US-ACAN accepted the translated name.

Utgard Peak. 77°38' S, 161°09' E. A prominent peak, rising to 2050 m, 1.3 km NNE of Wolak Peak, on the E side of Njord Valley, in the Asgard Range of Victoria Land. The name was proposed by Graeme Claridge (q.v.), to accord with the practice of naming several other features in the Asgard Range and in Jotunheim Valley after Norse mythological places and persons. NZ-APC accepted the name in 1982, and US-ACAN followed suit. Utgard was a fortress in Jotunheim, the home of the giants. Utgard Peak resembles such a fortress.

Utholmen *see* **Utholmen Island**

Utholmen Island. 68°56' S, 39°31' E. The most northwesterly of the Flatvaer Islands, in Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Utholmen (i.e., "the outer island"). US-ACAN accepted the name Utholmen Island in 1968.

Uti-hanare-iwa. 71°39' S, 35°52' E. A small rock exposure, at an altitude of 2214.3 m above sea level, just E of the vast moraine field the Japanese call Ogi-ga-hara, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named by the Japanese on March 22, 1979 ("inner remote rock").

Isla Útil *see* **Useful Island**

Punta Útil *see* **Useful Island**

Utkikken *see* **Utkikken Hill**

Utkikken Hill. 71°32' S, 1°01' W. The most northeasterly rock summit on Ahlmann Ridge, in Maudheimvidda, it stands 6 km NE of Trollkjelpiggen Peak, where it overlooks the mouth of Jutulstraumen Glacier and the coastal ice shelf fringing Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Utkikken (i.e., "the look-out"). US-ACAN accepted the name Utkikken Hill in 1966.

Utnibba. 71°48' S, 23°52' E. A nunatak at the E side of Utsteinflya, between Vesthaugen Nunatak and Dotten Nunatak, in the central part of the Sør Rondane Mountains. Name means "the outer nunatak" in Norwegian.

Utopia Glacier. 71°51' S, 68°16' W. It flows SE from Natal Ridge, between Two Step Cliffs and Ares Cliff, on Alexander Island, at George VI Sound. Indeed, it is encircled by Mariner Hill, Syrtis Hill, Natal Ridge, and Ares Cliff. Named by the Mars Oasis Party, who were searching for life on the glacier, much as *Viking 2* was searching for life when it landed at Utopia Planitia, on the planet Mars on Sept. 3, 1976. UK-APC accepted the name on April 23, 1998, and US-ACAN followed suit in 1999.

Utöy *see* **Achernar Island**

Utpostane. 73°55' S, 15°40' W. Bare rock crags on the S side of the ice ridge, in the southernmost part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians (name means "the outposts").

Utråkket *see* **Utråkket Valley**

Utråkket Valley. 73°40' S, 4°25' W. An ice-filled valley between Skappelnabben Spur and Enden Point, in the central part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Utråkket (i.e., "untrampled"). US-ACAN accepted the name Utråkket Valley in 1966.

Gora Utrennjaja *see* **Mount Utrennyy**

Mount Utrennyy. 68°06' S, 49°54' E. A peak about 11.1 km E of the Ward Nunataks, in the Nye Mountains of Enderby Land. Photographed aerially by ANARE in 1957, and by SovAE 1962. The Russian expedition namd it as Gora Utrennjaja (i.e., "mount morning"). ANCA translated it.

Utrinden *see* **Utrinden Point**

Utrinden Point. 73°50' S, 5°18' W. A low and rocky point at the NW side of Kuven Hill, W of Kuvsletta Flat, near the SW end of the Kirwan Escarpment, in Queen Maud Land. Mapped by the Norwegians from surveys and air photos taken by NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Utrinden (i.e., "the outer ridge"; it was, at first, thought to be a ridge). The Americans re-defined it, and US-ACAN accepted the name Utrinden Point in 1966.

Utrista *see* **Utrista Rock**

Utrista Rock. 71°35' S, 10°32' E. A small, isolated nunatak, 16 km NNE of Mount Dallmann, at the NE extremity of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition, and named by them as Utrista (i.e., "the outer ridge"). US-ACAN accepted the name Utrista Rock in 1970.

Utsikta. 73°34' S, 14°34' W. A trigonometric station, in the SE part of the large ice hill the Norwegians call Høgisen, in the Kraul Mountains of Maudheimvidda, in Queen Maud Land. Name means "the outer view" in Norwegian.

Utskjera *see* **Rigel Skerries**

Utsteinen *see* **Utsteinen Nunatak**

Utsteinen Nunatak. 71°58' S, 23°34' E. A nunatak, 6 km N of Viking Heights and the main group of the Sør Rondane Mountains, in Queen Maud Land. Mapped by Norwegian cartographers in 1957 from air photos taken by the Americans during OpHJ 1946-47, and named by them as Utsteinen (i.e., "the outer stone"), for its position. US-ACAN accepted the name Utsteinen Nunatak in 1966. Princess Elisabeth Station is here.

Utsteinflya. 71°51' S, 23°27' E. A glaciated plain between the Perlebandet Nunataks, Fokknuten Nunatak, Utnibba, Dotten Nunatak, Vesthaugen Nunatak, and Teltet Nunatak, in the W part of the Sør Rondane Mountains. Named by the Norwegians, in association with nearby Utsteinen Nunatak. The word "flya" signifies a glaciated plain.

Utstikkar Bay. 67°33' S, 61°28' E. About 6.5 km wide, immediately E of Utstikkar Glacier, where it indents the coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Utstikkarbukta, in association with the nearby glacier. US-ACAN accepted the translated name Utstikkar Bay in 1947. On Feb. 18, 1958, ANCA renamed it (for themselves only) as Stibbs Glacier, for R. Keith Stibbs, aviation meteorologist with the Australian Bureau of Meteorology from 1948, who was offficer-in-charge of the Macquarie Island station (not actually in Antarctica) in 1951. He was back (with only one week's notice) at Macquarie in 1954, but not as leader.

Utstikkar Glacier. 67°33' S, 61°20' E. Also called Jelbart Glacier. A broad glacier flowing N from the vicinity of Moyes Peak, it terminates in Utstikkar Glacier Tongue just W of Utstikkar Bay. Photographed aerially in Jan.-Feb. 1937, by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it descriptively as Utstikkarbreen (i.e., "the projecting glacier"). US-ACAN accepted the name Utstikkar Glacier in 1953.

Utstikkar Glacier Tongue. 67°30' S, 61°22' E. Forms the seaward extension of Utstikkar Glacier, just W of Utstikkar Bay. Photographed aerially in Jan.-Feb. 1937, by by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Although the Norwegians named Utstikkar Glacier (albeit as as Utstikkarbreen), it was US-ACAN who named the tongue, in 1953 (*see also* **Utstikkar Glacier**).

Utstikkarbreen *see* **Utstikkar Glacier**

Utstikkarbukta *see* **Utstikkar Bay**

Utus Peak. 63°45' S, 58°29' W. A rocky peak rising to 1217 m, in Trakiya Heights, 980 m SSE of Mount Daimler, 5.62 km W of Rayko Nunatak, 2.05 km NW of Papiya Nunatak, and 2.57 km ENE of Bozveli Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Roman town of Utus, in northern Bulgaria.

Utvikgalten *see* **Martin Island**

Utz Spur. 78°21' S, 162°19' E. An ice-covered spur, just E of Potter Glacier, between the upper part of that glacier and the upper part of Comberiate Glacier, just W of Mount Duvall, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for Loreen G. Utz (b. April 29, 1959), USGS cartographer, a research assistant with the satellite surveying team that wintered-over at Pole Station in 1983, and one of the early women at the Pole.

Uven *see* **Uven Spur**

Uven Spur. 73°56' S, 5°20' W. A small rock spur, or crag, just SW of Tunga Spur, in Uhligberga, in the N part of the Urfjell Cliffs, it extends from the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Uven. US-ACAN accepted the name Uven Spur in 1966.

Uversnatten *see* **Uversnatten Rock**

Uversnatten Rock. 72°58' S, 3°54' W. A small rock eminence, 1.5 km W of Huldreslottet Mountain, at the S end of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Uversnatten (i.e., "bad weather night"). US-ACAN accepted the name Uversnatten Rock in 1966.

Gora Uzkaja. 67°42' S, 63°01' E. A nunatak occupying the same coordinates as Hanging Lake and Vestkollen, in the Framnes Mountains of Mac. Robertson Land. Named by the Russians.

Morena Uzkaja. 72°59' S, 66°12' E. A moraine, NW of Mount Stinear, in the S part of the Prince Charles Mountains. Named by the Russians.

Hrebet Uzkij. 73°06' S, 60°35' E. Mountains, SW of Mitchell Ridge, in the S part of the Prince Charles Mountains. Named by the Russians.

Proliv Uzkij *see* **Launch Channel**

V. Cliffs *see* **Vee Cliffs**

V. Drygalski Bay *see* **Drygalski Glacier**

Cap V. Ryswyck *see* **Ryswyck Point**

Vaca Nunatak. 82°17' S, 41°42' W. Rising to 715 m, it is the most southerly nunatak in the Panzarini Hills, in the Argentina Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1967. Named by US-ACAN in 1968, for Capt. José M.T. Vaca, officer-in-charge of General Belgrano Station in 1961. UK-APC accepted the name on Nov. 3, 1971. There is a 1978 Argentine reference to it as Nunatak Sara, so named by one of the Argentine Antarctic expeditions for the wife of one of the expeditioners.

Cerro Vaccaro. 63°27' S, 57°55' W. A hill, 5

km NE of Cerro Guerrero, and some 14 km S of Cape Legoupil, in the central part of Trinity Peninsula, on the Antarctic Peninsula. Named by the Chileans for Humberto Vaccaro Cuevas, the Instituto Antártico Chileno coordinator for ChilAE 1970-71. The Argentines call it Cerro Referencia.

Vacchi Ice Piedmont *see* **Vacchi Piedmont Glacier**

Vacchi Piedmont Glacier. 74°34' S, 164°38' E. A piedmont glacier shaped in general like a trapezoid, it is formed from glaciers flowing S from the 200 meter-high S slopes of Mount Melbourne, to the sea at Silverfish Bay, between Shields Nunatak and Oscar Point, and N of Terra Nova Bay (this piedmont glacier being the N boundary of the bay), on the Scott Coast of Victoria Land. Named by NZ-APC on May 15, 2006, as Vacchi Ice Piedmont (which is how the New Zealanders define it), for Marino Vacchi, principal investigator on Ecofish Programme 2005, members of which first identified the abundance of silverfish eggs in Terra Nova Bay. Dr. Vacchi, whose specialty is Antarctic fish, has been part of the Italian Antarctic Research program since 1987, and since 1990 has been an Italian delegate at the working meetings of CCAMLR. US-ACAN accepted the name Vacchi Piedmont Glacier, on July 17, 2007.

Vaclav Vojtech Base *see* **Eco Nelson**

Vadel Islands *see* **Vedel Islands**

Cerro Vago. 62°35' S, 59°53' W. A hill, one of several on Half Moon Island, in the entrance to Moon Bay, on the E side of Livingston Island, in the South Shetlands. Named by the Argentines.

Vagrant Island. 66°28' S, 66°28' W. The N of two small islands just W of Rambler Island, in the Bragg Islands, in Crystal Sound, about 12 km N of Cape Rey, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers from ground surveys conducted by Fids from Base W in Sept. 1958, and named by UK-APC on Sept. 23, 1960, in association with Rambler Island. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965.

Vågsbreen. 69°52' S, 39°05' E. A glacier, between the Rundvågs Hills and Rundvågs Head, in the W part of the Prince Olav Coast of Queen Maud Land. Named by the Norwegians ("the bay glacier"), in association with nearby Rundvåg. *See* **Rundvåg Bay** for more on this glacier.

The *Vague-à-Bond*. French yacht, skippered by Claude Veniard, in Antarctic waters in 1996-97.

Bahía Vahsel *see* **Vahsel Bay**

Cape Vahsel. 76°37' S, 30°25' W. A cape on the Weddell Sea coast, originally named Kap Vahsel by Filchner's GermAE 1911-12, for Richard Vahsel, and plotted astronomically by them in 76°48' S, 30°25' W. From a ground survey, they later fixed it in 76°41' S, 30°25' W. The Russians plot it in 76°37' S, 30°25' W. Also called Cape Vahsel, it has since been replotted in 76°48' S, 30°43' W.

Vahsel, Richard. b. Feb. 9, 1868, Hohnhorst, near Hanover. 2nd officer on the *Gauss*, during GermAE 1901-03, he led the first sledging expedition from the icebound ship, March 18-26, 1902, and discovered Gaussberg. He was back in Antarctica in 1911-12, as captain of the *Deutschland* on Filchner's GermAE of that year. He died on board the *Deutschland*, on Aug. 8, 1912, of an old illness.

Vahsel Bay. 77°49' S, 35°10' W. A Weddell Sea indentation, about 11 km wide (but actually of variable extent), in the W part of the Luitpold Coast, at the point where Coats Land meets the Filchner Ice Shelf, or, to put it another way, between the Filchner Ice Front and the SW end of the Luitpold Coast. It is fed by Schweitzer Glacier and Lerchenfeld Glacier. Discovered and roughly charted in Jan.-Feb. 1912, by GermAE 1911-12, and named by Filchner as Vahsel-Bucht (or Vahselbucht), for Richard Vahsel. Shortly thereafter, large portions of the ice surrounding the bay broke away, forming a larger bay. Filchner re-named this larger bay Herzog Ernst Bucht, after Herzog Ernst Ludwig von Essen Darmstadt (1868-1937). So now there were two features, the smaller bay, called Vahsel, and the larger one, called Herzog Ernst. Both must be described here, rather than as separate entries, but, for clarity, the history of Vahsel will be taken first, and Herzog Ernst second. The smaller bay appears as Vahsel Bay on Shackleton's 1919 map, and again on a 1930 British map, and a 1942 USAAF chart (as simply Vahsel), and it was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1956. In those days it was plotted in 77°48' S, 34°39' W. It was shown on a 1946 Argentine chart as Bahía Vahsel, and that was the name accepted by the Argentine gazetteer of 1970. It was surveyed by BCTAE in Oct. 1956. In the 1960s it was replotted in 77°49' S, 35°07' W, and it appears that way in the 1977 British gazetteer. It was further delineated from U.S. Landsat images taken in Jan. 1973, and the coordinates were brought up to date by the time of the 1986 British gazetteer. The larger bay, shown on Filchner's charts of 1913 as Herzog Ernst Bucht, is shown translated into English variously as Duke Ernst Bay, Duke Ernest Bay, and Herzog Ernst Bay, on the 1929 American Geographical Society map, the 1932 *National Geographic* map, and a 1943 U.S. Hydrographic Office chart. The name Duke Ernst Bay appears on a 1947 USAF chart, and on the 1956 American Geographical Society's map. It is shown on a 1952 Argentine chart as Bahía Duque Ernesto, and there is a 1956 reference to it as Bahía del Duque Ernesto. However, the name Bahía Duque Ernesto was the one accepted by the 1970 Argentine gazetteer.

Vahselbucht *see* **Vahsel Bay**

Vakarel Saddle. 62°59' S, 62°31' W. A crescent-shaped saddle, 1800 m above sea level, in the Imeon Range, on Smith Island, in the South Shetlands. It is bounded to the ENE by Antim Peak, and to the SW by the lower N height of the double Mount Foster, the midpoint of the saddle lying 850 m SW of Antim Peak, 6.2 km S of Gregory Point, 1.7 km NNE of the S height of Mount Foster, and 4.9 km N of Ivan Asen Point. Named by the Bulgarians on Dec. 15, 2006, after Vakarel, the settlement in western Bulgaria.

Monte Valain *see* **Mount Vélain**

Cabo Valavielle *see* **Cape Valavielle**

Cap Valavielle *see* **Cape Valavielle**

Cape Valavielle. 60°41' S, 44°32' W. Marks the N end of Watson Peninsula, on the N coast of Laurie Island, in the South Orkneys. Roughly charted in Feb. 1838, by FrAE 1837-40, and named by them as Cap Valavielle. It appears as such in Vincendon-Dumoulin's atlas of 1847. Re-surveyed in 1903, by ScotNAE 1902-04, and renamed by Bruce as Cape Buchanan, for J.Y. Buchanan. It appears as such on their chart of 1905, and also on a British chart of 1941. *See* **Buchanan Point**. Sørlle's chart of 1912 gives it as Cape Puckman, and Sørlle and Borge's chart of 1913 gives it as Cape Puikman. However, Sørlle's 1930 chart gives it as Kapp Buchanan. On an Argentine chart of 1933 it appears as Punta Buchanan. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Cape Valavielle, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and which appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Punta Valavielle, but on a 1947 Argentine chart as Cabo Valavielle. The name Punta Valavielle was the one accepted by the 1970 Argentine gazetteer. There is also a 1948 reference to it as Cabo Puckman. A name like Valavielle is bound to get mangled sooner or later, and the British gazetteer has it as Cape Valavieille, and the 1974 British gazetteer has it as Cape Valevielle. Having said that, one is assuming Dumont d'Urville and Vincendon-Dumoulin spelled it correctly. Maybe they didn't. If so, it may indeed be Valavieille, which is a much more common name, or even Valevielle, or none of the above. As for Sørlle's names for it, Puckman and Puikman, one can't help wondering if they are mistakes for Buchanan. Puckman and Puikman themselves seem to mean nothing.

Punta Valavielle *see* **Cape Valavielle**

Valchedram Island. 62°27' S, 60°49' W. An island, 280 m long in a SE-NW direction, it is the island off the N coast of Livingston Island, 1.35 km NW of Shirreff Point and 2.2 km NNE of San Telmo Island. Mapped by the Bulgarians in 2008, it was named by them on Aug. 12, 2008, for the town of Valchedram, in northwestern Bulgaria.

Islote Valdebenito *see* **Valdebenito Rock**

Valdebenito Rock. 62°30' S, 59°42' W. A large rock N of Canales Island, off Ferrar Point, to the SE of Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1947, and named by them as Islote Valdebenito, for Marine sergeant Valdebenito, who was on the *Iquique* during that expedition. As such it appears on a Chilean chart of 1951. UK-APC accepted the name Valdebenito Rock, on May 11, 2005.

Valderhaug, Olaf. b. March 28, 1894, Åle-

sund, Norway, son of fishing boat skipper Johan Valderhaug and his wife Elise. He went to sea during the early part of World War I, on Norwegian merchant ships, and, on Aug. 1, 1935, he signed on at Ålesund, as bosun of the *Wyatt Earp*, for Lincoln Ellsworth's Antarctic expedition.

Valdés, Jorge Di Giorgio *see under* **De Giorgio**

The *Valdivia*. A 2600-ton German steam ship of the Hamburg-Amerika line. 320 feet long, 43 feet wide, with 1250 hp, she could move at 10 to 11 knots. The line loaned the ship to the German Navy Oceanographic Expedition, along with its skipper, Adalbert Krech, and crew. In addition, they agreed to feed the expedition (wine at cost price), and re-fit the ship for scientific work. They had no ulterior motive for this 340,000-mark gift, other than to help advance science.

Glaciar Valdivia *see* **Gould Glacier**

Isla Valdivia *see* **Valdivia Point**

Punta Valdivia *see* **Valdivia Point**

Valdivia Abyssal Plain. 62°30' S, 70°00' E. A submarine feature, off the coast of East Antarctica. Named by international agreement for the 1899 expedition ship.

Valdivia Basin *see* **Atlantic-Indian Basin**

Valdivia Insel *see* **Valdivia Point**

Valdivia Island *see* **Valdivia Point**

Valdivia Point. 64°21' S, 61°22' W. Forms the extreme NW side of the entrance to Salvesen Cove, Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Valdivia Insel (i.e., "Valdivia island"), for the *Valdivia*. It appears as such on Gunnar Andersson's map of 1905. The Argentines and Chileans both called it Isla Valdivia, but the Chileans did so for an interestingly (and typically Chilean) different reason. The non-commissioned officer radio telegraphist on ChilAE was named Juan Valdivia T., and it was he for whom (at least from 1947) Chile named this feature. Aerial photos taken by FIDASE 1955-57, and ground surveys by Base O Fids from the Portal Point refuge hut, showed this feature to be joined to the mainland, and it was re-defined. UK-APC accepted the name Valdivia Point on Sept. 23, 1960, and it appears as such on a British chart of 1961. It appears on a Chilean chart of 1962, as Punta Valdivia. US-ACAN accepted the name Valdivia Point in 1965. The Argentines also call it Punta Valdivia (but, obviously, after the ship).

Cabo Valentín *see* **Cape Valentine**

Cabo Valentine *see* **Cape Valentine**

Cape Valentine. 61°06' S, 54°39' W. A rock massif rising almost vertically from the sea, to a height of 244 m, it forms the NE extremity of Elephant Island, in the South Shetlands. Named by Bransfield on Feb. 14, 1820 (St. Valentine's Day). It appears, roughly, on his chart of that year, and also on a British chart of 1822. During USEE 1838-42, Wilkes named it Cape Belsham, in error, and it appears as such on his expedition map of 1845. This is the place where Shackleton and his 27 men landed on April 14, 1916, during the ill-fated BITE 1914-17. It appears on a 1927 British chart, and on a 1949 British chart it is plotted in 61°04' S, 54°43' W. It appears on a 1939 Argentine map as Cabo Valentín (which means the same thing), but on a 1949 Argentine chart as Cabo Valentine. It appears on a Chilean chart of 1947 as Cabo Valentine. US-ACAN accepted the name Cape Valentine in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, plotted in 61°03' S, 54°47' W. On a British chart of 1962, it is plotted in 61°03' S, 54°36' W. On a British chart of 1972 the co-ordinates had been corrected, and it appears as such in the 1977 British gazetteer. The Chilean gazetteer of 1974 calls it Cabo Valentine, and the Argentines today tend to call it Cabo Valentín. The island was surveyed by the British Joint Services Expedition of 1970-71.

Valentiner, Hugo. b. July 30, 1877, Copenhagen, Denmark, son of Gustav Valentiner and his wife Elisabeth Marie Claudine Bruun. He studied as a draftsman, and, on Feb. 7, 1903, he left Hamburg on the Hamburg-South America Steamship Line ship *Cap Roca*, bound for Buenos Aires, becoming a citizen of Argentina. He wintered-over at Órcadas Station in 1917, and then led the wintering-over parties there of 1919, 1921, and 1923.

Cabo Valenzuela *see* **Cabo Ambas Piedras**

[1]**Caleta Valenzuela**. 63°37' S, 56°58' W. A cove, 3 km wide at the mouth, which indents for 2.6 km the central part of the S coast of Tabarin Peninsula, at the extreme end of Trinity Peninsula, on the Antarctic Peninsula. Named by the Chileans for the *Almirante Valenzuela*. The Argentines call it Caleta Saborido, for Lorenzo Saborido, Argentine naval lieutenant, captain of the *Austral*, 1905-06. *See also* **Eagle Cove**.

[2]**Caleta Valenzuela**. 64°54' S, 62°52' W. A cove, 520 m wide at the mouth, which indents the W coast of Graham Land for 350 m, between Skontorp Cove to the N and Oscar Cove to the S, at Paradise Harbor, 3 km SE of Bryde Island. Named by the Chileans for Capitán de corbeta Germán Valenzuela Labra, skipper of the *Leucotón* during ChilAE 1954-55. The Argentines call it Caleta Hernán.

Isla Valette *see* **Valette Island**

Valette, Luciano Honorio. b. Aug. 20, 1880, Montevideo. He moved to Buenos Aires, at 17 became an assistant in the zoology department at the Museo de Ciencias Naturales de la Plata, and in 1899 went to work for the zoology office within the Department of Agriculture, becoming involved in the artificial breeding of fish. He would become an Argentine citizen. He was meteorologist at the Laurie Island base in 1904, who stayed on at Órcadas Station after ScotNAE left. In 1906 he wrote *Viaje a las islas Órcadas Australes*. He was later chief of the Bureau of Fisheries, of the Department of Agriculture, in Argentina, and proved it was possible to raise freshwater mackerel in the inland lakes. He retired from the department in 1930. He married Lola Bosch, lived in Monte Grande, and died in 1957.

Valette Island. 60°46' S, 44°36' W. An island, 330 m long, forming the W entrance point to Mill Cove, on the S side of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce as Valette Isle, for Luciano Valette. It was re-charted in 1933 by the Discovery Investigations, and renamed Valette Island. It appears on a 1933 Argentine chart as Isla Valette, but on one of theirs from 1947 (erroneously) as Islas Valette. US-ACAN accepted the name Valette Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. The Argentines have settled on Isla Valette (it appears as such in their 1970 gazetteer).

Valette Isle *see* **Valette Island**

The *Valhalla*. A 20-meter, 35-ton, LOA steel schooner, built in 1991 by Pascal Boimard. She was in at the South Shetlands and the Antarctic Peninsula in 1996-97, skippered by Monsieur Boimard, and carrying tourists. She was back in 1997-98 and 1999-2000, again under M. Boimard, but only at the Antarctic Peninsula, and not carrying tourists.

Mount Valhalla. 77°35' S, 161°56' E. At the W flank of Valhalla Glacier from where it overlooks the S side of Wright Valley, in the Asgard Range of Victoria Land. In keeping with the practice of naming several features in this area after things Norse, this one was named by both US-ACAN and NZ-APC in 1976, after the reward of the gods.

Valhalla Glacier. 77°34' S, 161°58' E. A small glacier, flowing partway down the N wall of the Asgard Range, between Mount Valhalla and Conrow Glacier, toward Wright Valley, in Victoria Land. Named jointly by US-ACAN and NZ-APC in 1976, in association with the nearby mountain.

Valichanovtoppen *see* **Mount Valikhanov**

Valiente Peak. 65°27' S, 63°43' W. Rising to 2165 m, close N of the mouth of Lever Glacier, where that glacier enters the NE side of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Sommet Saens Valiente (sic), for hydrographer Captain (later Admiral) Juan Pablo Sáenz Valiente (b. 1861, Buenos Aires. d. June 7, 1925, Buenos Aires), who, at the time, was Minister of Marine for the district of Victorino de la Plaza, and who, from 1910, would be Minister of the Argentine Navy. From 1900 to 1905 he had been associated with the publication of the *Boletín del Instituto Geográfico Argentino*. Re-mapped by BGLE 1934-37 during surveys of Beascochea Bay in Aug. 1935 and a journey to Trooz Glacier in Jan. 1936. It appears on a 1943 U.S. Hydrographic Office chart as Mount Saens Valiente. US-ACAN accepted the name Saenz Valiente Peak in 1951, and UK-APC followed suit on Sept. 22, 1954. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and appears (still with the long name) on a British chart of 1957. UK-APC shortened the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such on a British chart of

1960. The Argentine gazetteer of 1970 accepted the name Pico Saenz Valiente.

Gora Valihanova *see* **Mount Valikhanov**

Mount Valikhanov. 71°49' S, 12°15' E. A nunatak-type mountain, rising to 2800 m, 1.5 km NW of Mount Mirotvortsev, in the middle of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and originally plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Mapped yet again by SovAE 1960-61, and named by the USSR in 1966, as Gora Valihanova, for geographer Chokan Valikhanov (1935-1965). US-ACAN accepted the name Mount Valikhanov in 1970. The Norwegians call it Valichanovtoppen.

Mount Valinski. 84°32' S, 177°30' E. A prominent peak, rising to 1640 m, with prominent rock exposures in the high land along the W side of the depression carrying Ramsey Glacier (it is 6 km W of that glacier, and just S of Millington Glacier), in the Queen Maud Mountains. Discovered and photographed aerially on the flights of Feb. 16, 1947, during OpHJ 1946-47. Named by US-ACAN in 1962, for Joseph Valinsky [sic and q.v.], who was on one of those flights (Flight 8). NZ-APC accepted the name.

Valinsky, Joseph Edward. b. June 14, 1927, Nanty Glo, Pa., son of coal miner Joseph Valinsky and his wife Elizabeth, both of Lithuanian ancestry. He entered the U.S. Navy on Nov. 9, 1943, during World War II, serving on aircraft carriers. He re-enlisted on May 21, 1945, and was radio operator on OpHJ 1946-47. He was on Flight A during Byrd's trip to the Pole on Feb. 16, 1947. He retired on April 27, 1961, and died on Sept. 23, 1997, in Tampa, Fla.

Valken *see* **Valken Hill**

Valken Hill. 71°29' S, 1°59' W. A nunatak-type hill, 10 km SW of Marsteinen Nunatak, in the northernmost part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Valken (i.e., "the roll"). US-ACAN accepted the name Valken Hill in 1966.

Mount Valkyrie. 77°33' S, 162°19' E. A dolerite-capped peak on the S wall of the Wright Valley, it separates Bartley Glacier from Meserve Glacier, in the Asgard Range of Victoria Land. Named by VUWAE 1958-59, for the Valkyries of Norse mythology. NZ-APC accepted the name, and US-ACAN followed suit in 1972.

Valkyrie Dome. 77°30' S, 37°30' E. An ice dome, 300 m long, and rising to about 3700 m, in the E part of Queen Maud Land. In 1963-64, a Russian oversnow traverse crossed the N part of this dome at an elevation of 3600 m. The feature was delinated by SPRI-NSF-TUD airborne radio echo-sounding programs between 1967 and 1979, and named by UK-APC for the Valkyries of Norse mythology. The Norwegians call it Valkyrjedomen.

Valkyrjedomen *see* **Valkyrie Dome**

Nunatak Valladares. 66°05' S, 61°00' W. One of a group of nunataks on the N coast of Jason Peninsula, on the Oscar II Coast of Graham Land. Named by the Argentines.

Cape Vallavielle *see* **Buchanan Point**

Punta Valle *see* **Punta Valles**

Islote Vallenar *see* **Chanticleer Island**

Punta Valles. 62°10' S, 58°47' W. A point projecting toward the SW from the NE coast of Collins Bay, at the head of Fildes Bay, King George Island, in the South Shetlands. Named by the Chileans for Capt. Antonio Valles Venegas, Chilean Army pilot on the *Piloto Pardo* during ChilAE 1970-71.

Valley glaciers. Glaciers that flow down valleys, as opposed to mountain glaciers.

Vallin, Sten Axel. Name also seen as Wallin. b. Jan. 16, 1891, Karlskrona, Sweden, son of professor Karl Vallin and his wife Ellen Nilsson. Doctor, scientist, and naturalist, from the University of Lund, who, representing the government of Sweden, went to Antarctica aboard the whaler *Sir James Clark Ross*, in 1923-24. He died in 1977.

Glaciar Vallot *see* **Vallot Glacier**

Vallot Glacier. 67°21' S, 67°25' W. Flows NW into Laubeuf Fjord close S of Lewis Peaks, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Surveyed near its mouth by Fids from Base E in 1948, photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Joseph Vallot (1854-1925), French astronomer, naturalist, and glaciologist who, in 1890, built the observatory on Mont Blanc, in the Alps, that bears his name. He was the first to measure the surface velocity of a glacier over an extended period of time (1891-99), in Switzerland. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Vallot.

Punta Valparaíso. 64°50' S, 62°59' W. A point, the extreme SW tip of Lemaire Island, on the N coast of the Lientur Channel, 5 km E of the extreme S of Lautaro Island, it protects Paradise Harbor from the N, off the W coast of the Antarctic Peninsula. Named by one of the Chilean Antarctic expeditons for the great port of Valparaíso. The Argentines call it Punta Vieytes.

Vals Col. 67°33' S, 68°11' W. A col, facing NNE, N of Ryder Buttress and Reptile Ridge, on Adelaide Island. Named by UK-APC on Sept. 29, 2004, probably for Val d'Isère, a nod to the French ski resort. This area on Adelaide is used for the same purpose, by members of Rothera Station.

Valter Butte. 71°54' S, 3°14' W. An ice-free butte on the E side of Schytt Glacier, 8 km WNW of Mount Schumacher, on Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from air photos taken during the same expedition, and named by them as Valterkulten, for Stig Valter Schytt. US-ACAN accepted the translated name Valter Butte in 1966.

Valterkulten *see* **Valter Butte**

Nunatak Valun. 70°33' S, 65°36' E. Due E of Cutcliffe Peak, in the Porthos Range, in the Prince Charles Mountains. Named by the Russians.

Punta Vampiro. 64°05' S, 62°32' W. A point on the coast of Guyou Bay, on Pasteur Peninsula, Brabant Island, in the Palmer Archipelago. Named by the Argentines.

Rocas Van *see* **Van Rocks**

Van Acken, Henrik. b. Belgium. He was living in Punta Arenas, Chile, when he was taken on as 2nd steward (garçon de cabine) on the *Pourquoi Pas?* during FrAE 1908-10.

Van Allen Range. 78°09' S, 159°30' E. A range, 22 km long, at the S margin of Skelton Névé, between the Boomerang Range and the Worcester Range, in southern Victoria Land. The range includes Escalade Peak (2035 m), Tate Peak, and Mount Marvel. Named by US-ACAN in 2000, for the famous space physicist James Alfred Van Allen (b. Sept. 7, 1914, Mount Pleasant, Ia. d. Aug. 9, 2006, Iowa City, Ia.), who helped ByrdAE 1933-35 prepare seismic and magnetic experimental equipment, and who conducted shipboard aurora investigations in the Ross Sea during IGY (1957). He also discovered the Van Allen radiation belts. NZ-APC had already accepted the name on Nov. 4, 1999. *See* **International Geophysical Year**, for Van Allen's involvement in IGY.

Van Autenboerfjellet. 72°21' S, 20°15' E. A nunatak, E of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians for Belgian geologist Tony Van Autenboer, who took part in BelgAE 1957-59, BelgAE 1958-60, and BelgAE 1959-61, and who was leader of two joint Belgian and Netherlands Antarctic expeditions into Queen Maud Land, in the mid 1960s. *See also* **Tonyknausane** and **Tonynuten**.

Cabo Van Beneden *see* **Beneden Head**

Cap Van Beneden *see* **Beneden Head**

Cape Van Beneden *see* **Beneden Head**

Mount Van Buren. 71°18' S, 63°30' W. The prominent mountain, rising to 2865 m, 5 km NNW of Mount Jackson, at the E side of the Dyer Plateau, in the central part of Palmer Land. Mapped in 1974 by USGS, from USN air photos taken betwen 1966 and 1969. In association with Mount Jackson, it was named by US-ACAN in 1976, for Martin Van Buren (1782-1862), who was President Jackson's vice president during the second term (1833-37), and his successor, as 8th president of the USA, 1837-41. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Van de Canhamaren. 72°16' S, 23°16' E. A nunatak at the S side of Widerøefjellet, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians.

Van der Does, Willem Jan Pieter. b. April 20, 1889, Rotterdam. Dutch artist who went to Indonesia in 1918, as a civil servant, to survey the

country. He talked his way onto the Norwegian whaler *Sir James Clark Ross*, as a laborer, for that vessel's 1923–24 expedition to Antarctica. He worked in Indonesia until his return to the Netherlands in 1946. His book, *Storms, Ice, and Whales; The Antarctic Adventures of a Dutch Artist on a Norwegian Whaler*, was published in Indonesia in 1934, and later in the Netherlands. He died on Feb. 3, 1966, in Zeist.

Mont Van der Essen *see* **Mount Van der Essen**

Mount Van der Essen. 72°35' S, 31°23' E. Rising to 2525 m, just S of Mount Gillet, in the Belgica Mountains. Discovered by BelgAE 1957–58, and named by Gaston de Gerlache as Mont Van der Essen, for Alfred Van der Essen, director at the Belgian Ministry of Foreign Affairs, and a patron of the expedition. US-ACAN accepted the name Mount Van der Essen in 1966.

Mount Van der Hoeven. 71°54' S, 161°25' E. Rising to 1940 m, at the N side of the head of Boggs Valley, in the central SE part of the Helliwell Hills, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Frans G. Van der Hoeven, seismologist and leader of the Victoria Land Traverse, 1959–60 (q.v.). He had also been at Scott Base for the 1959 winter. NZ-APC accepted the name.

Van der Veen Ice Stream. 83°50' S, 130°00' W. A large SE tributary to the Whillans Ice Stream, in Marie Byrd Land. Formerly known as Ice Stream B1. Named by US-ACAN in 2003, for Cornelis J. "Kees" Van der Veen (b. 1956), of the Byrd Polar Research Center, and of the departments of geological sciences and geography, at Ohio State University. *See* **Macayeal Ice Stream** for further details.

Mount Van der Veer. 76°41' S, 145°54' W. A mountain, 13 km S of Mount Ronne, in the Haines Mountains of Marie Byrd Land. Mapped by USAS 1939–41. Named by US-ACAN in 1966, for Willard Van der Veer.

Van der Veer, Willard. Known as Van. b. Aug. 23, 1894, Brooklyn, NY, son of Thomas C. Van der Veer. At the age of 8 he became a child actor, and entered the movies in 1912, as a technician. During World War I he was a Sergeant 1st class in the Signal Corps. He married Edna in 1920, and they had a family in Yonkers. He was the photographer assigned by Paramount News to ByrdAE 1928–30. He had already been with Byrd on that explorer's North Pole expedition, and was the first person to photograph both poles. He worked in movies and TV, as a cameraman, producer and director of shorts, and was Warner Pathé News's Southern California bureau chief. He died on June 16, 1963, in Encino, California.

Van Hulssen Island. 67°33' S, 62°43' E. A small, low island, one of a group of 10 small islands, 5 km NW of the Flat Islands, in Holme Bay, and 9 km NW of Mawson Station. Photographed by LCE 1936–37. It is possibly part of the scattered group of islands the Norwegian cartographers called Ytterskjera (q.v.), when they mapped this area from the LCE photos in 1946. The island was included in a triangulation carried out by Bob Dovers, of ANARE, in 1954, and, in 1955, an ANARE party established an automatic weather station here. Named by ANCA for Frits Adriaan Van Hulssen (b. Oct. 28, 1924, Surabaya), Dutch radio officer in planes for the Netherlands Navy and the British during World War II, he left the Dutch Navy in 1953, and was radio station supervisor at Mawson in 1955, and technical officer (ionosphere) at the same station in 1959. US-ACAN accepted the name in 1961.

Van Hulssen Islands. 67°33' S, 62°43' E. Ten small islands, 2.5 km N of Pila Island, in Holme Bay, and about 9 km NW of Mawson Station. Photographed aerially by LCE 1936–37, and mapped from those photos in 1946, by the Norwegians, and included by them as part of the now extinct Ytterskjera (q.v.). Re-mapped by ANARE between 1954 and 1962, and named by ANCA for the largest island in the group (*see* **Van Hulssen Island**). US-ACAN accepted the name in 1970.

Van Hulssen Nunatak. 67°59' S, 62°45' E. An isolated nunatak, rising to about 1330 m above sea level, at the S end of Trilling Peaks, in the Framnes Mountains, and about 11 km S of the South Masson Range, in Mac. Robertson Land. Photographed by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Named by ANCA for Frits Van Hulssen (*see* **Van Hulssen Island**). US-ACAN accepted the name in 1965.

Van Loon Glacier. 71°01' S, 163°24' E. A tributary glacier, 11 km long, flowing from the E slopes of the Bowers Mountains between Rastorguev Glacier and Montigny Glacier, merging into the larger Graveson Glacier at the E margin of the mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1975, for Harry Van Loon (*see* **South Africa**).

Mont Van Mieghem *see* **Mount Van Mieghem**

Mount Van Mieghem. 72°36' S, 31°14' E. Rising to 2450 m, 1.5 km S of Mount Perov, in the Belgica Mountains. Discovered by BelgAE 1957–58, led by Gaston de Gerlache, and named by him as Mont Van Mieghem, for Prof. Jacques Van Mieghem (1905–1980), president of the scientific committee of the expedition. US-ACAN accepted the name Mount Van Mieghem in 1965.

Van Mirlo, Jean "Jan." b. July 12, 1877, Antwerp. Belgian sailor on BelgAE 1897–99. He was still sailing, as 3rd engineer, into the 1920s, on Belgian ships. He died in April 1964, the last survivor, and for years was a folk hero in Antwerp. *See* **Mount Pierre** for interesting possiblities concerning his name.

Mont Van Pelt *see* **Mount Van Pelt**

Mount Van Pelt. 71°15' S, 35°43' E. A steep, bare rock mountain, rising to 2000 m, next E of Mount DeBreuck, in the N part of the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the Belgian Antarctic Expedition under Guido Derom, and named by him as Mont Van Pelt, for Guy Van Pelt, radio operator on Belgian aircraft during reconnaissance flights here in 1960. US-ACAN accepted the name Mount Van Pelt in 1966.

Van Reen, Rudolph Adrianus. b. April 30, 1895, Holland, older brother of Thomas Van Reen. He went to sea at 14, and, as a young seaman, aged 18, he found himself in the Marshall Islands, and signed on for a voyage to San Francisco on the *Neptune*. He then plied the West Coast of the United States in the *Philadelphia*, and returned to Holland. He then signed on at Rotterdam on the *Olivebank* in 1915, sailed via Callao to Oregon, where there was trouble with money, and half the sailors deserted. Van Reen stayed on only after he was paid. He then picked up the *Honoipu*, sailing to Sydney, and returned to Oregon on the same ship in 1917. On Jan. 8, 1931, in Buffalo, NY, he was naturalized as an American citizen, and lived in Delhi, NY. He arrived back in the USA from Rotterdam on the *Black Falcon* on March 8, 1933, just in time to become a seaman on the *Bear of Oakland*, 1933–34, and 3rd officer, 1934–35, the two seasons of ByrdAE 1933–35. After World War II he was 3rd mate on the *Mahanoy City Victory*, plying the Atlantic. He married a Dutch girl named Wilma, and they lived in Wesleyville, Pa. He died in July 1980, in Rotterdam.

Van Reen, Thomas. b. Feb. 17, 1900, Holland, younger brother of Rudolph Van Reen. He married a Wisconsin girl named Dora, and they lived in Buffalo, NY. He was 2nd officer on the *Jacob Ruppert*, 1934–35, during ByrdAE 1933–35. He died in Sept. 1973, in Detroit.

Van Reeth Glacier. 86°25' S, 148°00' W. A tributary glacier, about 30 km long, it flows W between Mount Blackburn and Mount Bowlin, into Scott Glacier, in the Queen Maud Mountains. Discovered by Quin Blackburn's Dec. 1934 party, during ByrdAE 1933–35, and named by US-ACAN in 1967, for Cdr. (later Capt.) Eugene William "Gene" Van Reeth (b. April 14, 1927, Chicago), VX-6 pilot during OpDF 1966 (i.e., 1965–66), OpDF 1967 (i.e., 1966–67), and OpDF 1968 (i.e., 1967–68), and commanding officer of that organization from 1968 and on into 1969 when it became VXE-6.

Cap Van Rijswijck *see* **Cape Ryswyck**

Van Rocks. 63°05' S, 62°43' W. Very conspicuous pinnacle rocks, close W of Cape James, Smith Island, in the South Shetlands. In 1828–31, during the *Chanticleer* Expedition, Foster described these rocks as a small island, and on the chart resulting from that expedition, they are shown as such. FIDASE photographed them aerially in 1955–57, and, in 1959, from these photos, FIDS cartographers were able to delineate the feature more accurately. Named by UK-APC on Aug. 31, 1962, for the fact that they mark the westernmost land in the South Shetlands. US-ACAN accepted the name in 1965. The Argentines call the feature Rocas Van. Originally plotted in 63°06' S, 62°50' W, the feature was last re-plotted by the UK in late 2008.

Van Rysselberghe, Max. b. Dec. 19, 1878, Ix-

elles, Belgium, as Max Van Rijsselberghe. Flemish 2nd engineer on the *Belgica* during BelgAE 1897-99. After the expedition he settled in Chile, as an engineer on the railroads.

Punta Van Ryswyck *see* **Ryswyck Point**

Van Ryswycke Point *see* **Ryswick Point**

Mount Van Valkenburg. 77°19' S, 142°06' W. Rising to 1165 m, 1.5 km S of Mount Burnham, in the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially by West Base personnel during USAS 1939-41, and named for Prof. Samuel Van Valkenburg (1891-1976), Dutch director of the School of Geography at Clark University. US-ACAN accepted the name in 1947.

Mount Van Veen. 71°35' S, 161°54' E. A precipitous, mainly ice-free mountain, rising to 1510 m, at the S side of Jupiter Amphitheatre, in the Morozumi Range of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Richard C. Van Veen (b. 1944), USARP geologist at McMurdo, in 1967-68.

Van Wyck Island *see* **Wyck Island**

The *Vance*. A 1200-ton, 306-foot-long destroyer escort, built by Brown Shipbuilding in Houston in 1943. She was in Greenland for many seasons, on the DEW Line. As U.S. ocean station ship DER-387, she took part in OpDF, in support of aircraft flights between NZ and McMurdo between 1960 and 1962. Lt. Cdr. Harmon C. Penny was commander from April 16, 1960, to Dec. 18, 1961, when H.J. Beyer took over. She was decommissioned in 1969, struck from the list on June 1, 1975, and sunk in 1985.

Mount Vance. 75°28' S, 139°34' W. Rising to 840 m, between Mount LeMasurier and Mount McCrory, in the Ickes Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Dale Lines Vance (b. 1938), ionosphere physicist at Byrd Station in 1963. He would also be a U.S. exchange scientist to Vostok Station in 1971.

Vance Bluff. 81°49' S, 156°55' E. A small, ice-covered eminence, rising to about 2360 m above sea level, 16 km N of the Laird Plateau, and about 33 km SE of the Wilhoite Nunataks. Its flat summit merges with the ice sheet to the N and W, but there is a steep cliff along the S side. Mapped from USN air photos. Named by US-ACAN in 1965, for the *Vance*. ANCA accepted the name on Aug. 27, 1975.

Vancleck, John *see* **USEE 1838-42**

Vancouver, George. b. June 22, 1757, Kings Lynn, Norfolk, son of collector of customs John Jasper Vancouver and his wife Bridget Berners. He descended from a Dutch family named Van Coeverden. He was only 15 when he sailed with Cook on the *Resolution* on the famous 2nd voyage, and was again with Cook's 3rd voyage, this time on the *Discovery*. He was promoted to lieutenant in 1780, and in the 1790s became famous for his surveys of the Pacific Coast of North America. The city of Vancouver is named for him. He died on May 12, 1798, in Richmond, Surrey.

Lake Vanda. 77°32' S, 161°32' E. A highly saline lake, 5 km long, just E of The Dais, in the middle of Wright Valley, near McMurdo Sound, it is the largest volume closed lake in the dry valleys of Victoria Land. It is permanently covered with ice and the only river that feeds it is the Onyx River. Named by VUWAE 1958-59 for a dog owned by Colin Bull, leader of the expedition, when he had been on the British North Greenland Expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Vanda Lake *see* **Lake Vanda**

Vanda Station. 77°31' S, 161°40' E. A New Zealand scientific camp at the E end of Lake Vanda, in the area of Wright Valley, southern Victoria Land. **1967-68**: Opened as a field camp, by members of Scott Base. **1968-69**: Re-built, as an all-year station. **1969 winter**: William R. Lucy (leader). **1970 winter**: Harold Phillip Lowe (leader). After the 1970 winter it became a summer station. **1974 winter**: Anthony Atkinson (leader). **1984-85 summer**: The station was enlarged. **1994-95**: With lake levels rising and threatening to flood the site, the station was removed. In 1994, NZ established huts here, opposite the station, known as the Lake Vanda Huts.

Vandament Glacier. 85°19' S, 167°10' E. A glacier, 10 km long, flowing E from the E central portion of the Dominion Range ice cap, parallel to its immediate northern neighbor, Koski Glacier, and terminating 3 km NW of Safety Spur. Named by US-ACAN in 1966, for Charles Hugh Vandament (b. 1935), ionosphere physicist at Pole Station in 1962.

Vanderford, Benjamin. Baptized Dec. 21, 1788, Salem, Mass., son of Benjamin Vanderford and his wife Sarah Kehou. He married Elizabeth Donaldson on April 2, 1812, in Salem. Working his way up through the merchant marine ranks, he finally skippered the *Vivid* in 1813, and was captured by the British. He commanded several ships out of Salem, and was chosen as pilot of the *Vincennes* during USEE 1838-42, also acting as interpreter, and died on March 22, 1842, en route to Cape Town. His widow died in 1869.

Vanderford Glacier. 66°35' S, 110°26' E. About 8.5 km wide, it flows NW into the SE side of Vincennes Bay, close S of the Windmill Islands, on the Budd Coast. It moves seaward at a rate of about 7 feet per day. First delineated in 1955, by U.S. cartographer Gard Blodgett, from air photos taken during OpHJ 1946-47. Photographed by ANARE in 1956. Named by US-ACAN in 1955, for Benjamin Vanderford. ANCA accepted the name.

Vanderford Strath *see* **Vanderford Valley**

Vanderford Submarine Valley *see* **Vanderford Valley**

Vanderford Valley. 66°25' S, 110°10' E. A submarine feature off the Budd Coast of Wilkes Land, immediately N of Vanderford Glacier. Also called Vanderford Submarine Valley, and Vanderford Strath. Named by US-ACAN in 1970, in association with the glacier.

Mont Vanderheyden *see* **Mount Vanderheyden**

Mount Vanderheyden. 72°30' S, 31°20' E. Rising to 2120 m, 2.5 km NE of Mount Bastin, on the N side of the Belgica Mountains. Discovered during BelgAE 1957-58, and named by that expedition's leader Gaston de Gerlache as Mont Vanderheyden, for Henri Vanderheyden, aircraft mechanic with the group. US-ACAN accepted the name Mount Vanderheyden in 1962.

Vane Glacier. 75°15' S, 110°19' W. A broad glacier that flows from the NE slopes of Mount Murphy, in Marie Byrd Land, to enter the Crosson Ice Shelf between Eisberg Head and Boyd Head. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Gregg Alan Vane (b. 1947), U.S. exchange scientist at Novolazarevskaya Station in 1972.

Vane Hill *see* **Windvane Hill**

Monte Vang *see* **Mount Vang**

Mount Vang. 73°26' S, 67°09' W. An isolated mountain, rising to about 1600 m (the Chileans say about 2440 m, but, as they purportedly plot it in 75°50' S, 69°15' W, they are probably purportedly wrong), 130 km ESE of the Eklund Islands, southward of George VI Sound, SE of the English Coast, between that coast and the Lassiter Coast, in southern Palmer Land. Discovered in Dec. 1940, by Ronne and Eklund of USAS 1939-41, during their sledging journey through George VI Sound. On Dec. 3, 1947, it was sighted again on a flight during RARE 1947-48. Named later by Ronne for Norwegian portrait photographer and well-known freemason Knut Vang (b. 1900), of Brooklyn, who contributed photographic materials to RARE 1947-48. US-ACAN accepted the name in 1955, and UK-APC followed suit on Dec. 20, 1974. Mr. Vang, a U.S. citizen since 1936, had financed other expeditions of various types, but none to Antarctica.

Lednik Vangengejma *see* **Vangengeym Glacier**

Vangengejymbreen *see* **Vangengeym Glacier**

Vangengeym Glacier. 71°17' S, 13°48' E. About 10 km (the Norwegians say about 24 km) long, it flows N from the area E of Mount Mentzel, toward Mount Seekopf, in the E part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but, apparently, not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61. Named by the Russians in 1966 as Lednik Vangengejma, for one of their meteorologists, Georgiy Vangengeym (1886-1961). US-ACAN accepted the name Vangengeym Glacier in 1970. The Norwegians call it Vangengejmbreen.

Vanguard Nunatak. 82°33' S, 47°38' W. A conspicuous, cone-shaped nunatak, rising to 715

m, at the N extremity of the Forrestal Range, in the Pensacola Mountains. It is probably the feature sighted by Grupo Aeronaval UT78 on the first Argentine flight to the South Pole, in Jan. 1962, mapped by them in 82°35' S, 46°02' W, and named by them as Nunatak CTA-15, from the registration number of one of the 2 aircraft on the flight (the other being CTA-12; *see* **Butler Rocks**). It appears as such in a 1964 Argentine text, and was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project, and mapped by USGS from these efforts. US-ACAN named it Vanguard Nunatak in 1968, for its northern vanguard position in the Forrestals. UK-APC accepted that name on Nov. 3, 1971, and it appears as such in the 1974 British gazetteer.

The *Vanguardia*. The Uruguayan ship that replaced the *Comandante Pedro Campbell* as the vessel that supplied Artigas Station. 72 m long, she was built in 1976, and was purchased by the Uruguayan Navy on Dec. 18, 1991. She was in at Artigas in 1993-94 (Capt. Federico Lebel), 1994-95 (Capt. Gerardo Calimaris), 1995-96 (Capt. Alejandro Laborde), 1996-97 (Capt. Laborde), 1997-98 (Capt. Pablo Alvárez), 1998-99 (Capt. Héctor Cabanas), 1999-2000 (Capt. Cabanas), 2001-02, 2001-02 (Capt. Carlos Coccaro), 2002-03 (Capt. Coccaro), 2003-04, 2004-05, 2005-06, 2006-07, 2007-08.

Caleta del Vanguardia. 63°33' S, 58°58' W. A little cove between Punta Salas and Cape Roquemaurel, on the NW coast of Trinity Peninsula. Named by the Uruguayans on Jan. 2, 1996, for their expedition ship, the *Vanguardia*.

Vanhöffen, Ernst. b. Nov. 15, 1858, in Wehlau, East Prussia. Zoology professor of Kiel University, who was in Greenland in 1892-93, went on the *Valdivia* for the German Navy Oceanographic Expedition, 1898-99, and was also a member of GermAE 1901-03. He died in 1918.

Vanishing Creek. 62°10' S, 58°29' W. Immediately S of Czech Creek, close to Arctowski Station, Admiralty Bay, King George Island, in the South Shetlands. Its highest point is 185 m above sea level, and its lowest point is 80 m above sea level. Named by the Poles. Originally it was part of Ornithologists Creek (q.v.).

The *Vankarem*. Soviet ship which took part in the 1974-76 expedition to Antarctica. Her skipper was Mikhail Andreyevich Petrov.

Mys Van'kova. 70°30' S, 164°04' E. A cape. Named by the Russians. These coordinates, if accurate (they are in the SCAR gazetteer, and this cape is given as a separate feature in that gazetteer), would place it just W of Cape Williams, at the E end of the Bowers Hills, in Oates Land, in Victoria Land. It is either a small, insignificant cape (otherwise someone else would have named it long before), or, and this is more likely, it is the Russian name for Cape Williams.

Vann Peak. 84°50' S, 116°43' W. A small but prominent bare rock peak rising to 2140 m, the central and dominant feature of 3 aligned peaks at the W end of the Ohio Range. Surveyed by the Horlick Mountains Traverse Party in Dec. 1958. Named by US-ACAN in 1962, for Charlie E. Vann (b. 1921), chief of the photogrammetry unit responsible for Antarctic maps in the USGS Branch of Special Maps.

Vanni Peak. 67°05' S, 67°06' W. Rising to about 1700 m, 5 km N of Mount Lagally, in the Dorsey Mountains, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from FIDASE air photos taken in 1956-57, and from ground surveys conducted by FIDS between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Manfredo Vanni (1898-1976), Italian hydrologist and glaciologist. US-ACAN accepted the name in 1965.

Vansay Point *see* **Vanssay Point**

Pointe de Vanssay (de Blavous) *see* **Vanssay Point**

Punta Vanssay *see* **Vanssay Point**

Vanssay Point. 65°04' S, 64°01' W. The extremity of a small peninsula which extends N into the SW portion of Port Charcot, on Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Pointe de Vanssay de Blavous, for Pierre-Marie-Joseph-Félix-Antoine de Vanssay de Blavous (1869-1947), French hydrographic engineer and longtime director of the *Révue Hydrographique*. Charcot shortened the name to Pointe de Vanssay, during FrAE 1908-10. It appears on a British chart of 1930, misspelled as Vansay Point; on a U.S. Hydrographic Office chart of 1943, as Point de Vansay; and on an Argentine chart of 1953, as Punta Vanssay. US-ACAN accepted the name Vanssay Point in 1952, and UK-APC followed suit on Sept. 8, 1953.

Vantage Hill. 80°17' S, 155°22' E. A flat-topped hill, rising to 2200 m above sea level, and 300 m above the surrounding plateau, 16 km SW of Mount Henderson, in the W part of the Britannia Range, giving a splendid view (hence the name) of the Byrd Glacier and the mountains to the S of it. Named by the Darwin Glacier party of BCTAE 1957-58. This was their southernmost point on the expedition. ANCA accepted the name on Nov. 21, 1961, and US-ACAN followed suit in 1965.

Vantage Hills. 73°33' S, 162°27' E. Small, escarpment-like hills, 8 km W of the S end of Gair Mesa, overlooking the saddle that links Campbell Glacier with Rennick Glacier to the S, in Victoria Land. Named descriptively by the Northern Party of NZGSAE 1962-63, for their position. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Vapour Col. 62°59' S, 60°44' W. A col, at an elevation of about 150 m, S of Stonethrow Ridge, on the SW side of Deception Island, in the South Shetlands. Surveyed by Fids from Base B in 1953-54. Named by UK-APC on July 7, 1959, for the volcanic vapor. US-ACAN accepted the name in 1965.

Vapour Point. 62°59' S, 60°45' W. A rocky headland NNW of Vapour Col, on the outer coast of Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961, it was named by the Poles on Sept. 1, 1999, in association with the col.

Vaptsarov Peak. 62°37' S, 59°54' W. A peak with steep and ice-free W slopes, rising to about 410 m on Delchev Ridge, 670 m NW by N of Paisiy Peak, 930 m NE of Rodopi Peak, and 5.25 km W by S of Renier Point, it surmounts Sopot Ice Piedmont to the E, N, and W, in the Tangra Mountains of eastern Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for their famous poet Nikola Vaptsarov (1909-1942).

Cerro Varadero. 62°37' S, 61°05' W. A hill, rising to 116 m above sea level, overlooking Punta Varadero, on Byers Peninsula, Livingston island, in the South Shetlands. Named by the Spanish, in association with the punta.

Punta Varadero. 62°36' S, 61°05' W. A point on Byers Peninsula, Livingston Island, in the South Shetlands. Named by the Spanish. The word "varadero" means a dockyard, where repairs are undertaken. This is in allusion to this feature, where icebergs get beached ("varado" is an adjective meaning "unemployed, without means").

Bahía Varas *see* **D'Abnour Bay**

Punta Varas. 62°13' S, 59°48' W. The bluff at the base of, and 720 m SE of, Spit Point (the S limit of the entrance to Yankee Harbor), on the SW coast of Greenwich Island, in the South Shetlands. Named by ChilAE 1951-52, for 1st Lt. Armando Varas Espejo (b. 1925), who, after graduating as a doctor from the University of Chile in 1950, became surgeon on the *Angamos* during that expedition. He later became a well known internist and endocrinologist.

Varcoe Headland. 77°31' S, 166°12' E. A low headland, rising to 34 m above sea level, that marks the N entrance point to Horseshoe Bay, immediately SW of Rocky Point, in the W part of Ross Island. Named by NZ-APC for Technical Services Officer Garth Edwin Varcoe (b. 1943, NZ), who worked with NZARP for 15 years until his accidental death in a helo crash near this headland in Oct. 1992 (*see* **Deaths in Antarctica**). US-ACAN accepted the name in 1999. *See also* **Mount Belgrave**.

Vardeflaket. 73°42' S, 14°24' W. A small mountain in the Kraul Mountains, in New Schwabenland. Named by the Norwegians (name means "cairn névé").

Vardeklettane. 75°00' S, 12°52' W. A group of nunataks in the W part of the Tottan Hills, in the Heimefront Range of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "cairn of stones").

Vardim Rocks. 62°40' S, 61°11' W. A group of rocks, extending for 1.3 km in an E-W direction, on the S side of Hell Gates, facing Devils Point, in the SW extremity of Byers Peninsula, on Livingston Island, in the South Shetlands. The two principal islands in the group measure 420 m by 400 m, and 270 m by 150 m, respectively. Mapped by the Spanish in 1992. Remapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of

Vardim, as well as for the island of the same name, in the Danube, in northern Bulgaria.

Morro Varela *see* **Crimson Hill**

Cabo Variable. 74°30' S, 24°00' W. An isolated cape on the N part of the Brunt Ice Shelf, off the Caird Coast. Named by the Argentines.

Ostrov Varjag *see* **Varyag Island**

Varlamov Glacier. 71°40' S, 73°25' W. On Beethoven Peninsula, it flows NW into the head of Brahms Inlet, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Varlamova, for Aleksandr Varlamov (1801-1848), Russian composer. US-ACAN accepted the translated name Varlamov Glacier in 2006.

Lednik Varlamova *see* **Varlamov Glacier**

Poluostrov Varna *see* **Varna Peninsula**

Varna Peninsula. 62°32' S, 62°08' W. A roughly rectangular, ice-covered peninsula, 9 km wide, and about 12 km long in a SW-NE direction, forming the NE extremity of Livingston Island, in the South Shetlands. It is bounded by Hero Bay to the NW, Moon Bay to the SE, and McFarlane Strait to the NE. Its NE coast is indented by Lister Cove and Dragon Cove; Inott Point forms the peninsula's E extremity, and Williams Point forms its N extremity. Bezmer Point is on the NW coast. Williams Point was discovered in 1819, by William Smith on the *Williams*, thus marking the discovery of the South Shetlands. Mapped by the British in 1968. re-mapped by the Bulgarians in 2005, and named by them as Poluostrov Varna, for their famous town of Varna. UK-APC accepted the name Varna Peninsula, on April 23, 1998. The Bulgarians mapped it yet again in 2009.

Varney Nunatak. 75°56' S, 162°31' E. An ice-free nunatak at the S side of the mouth of Harbord Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for Kenneth L. Varney, USN, equipment operator at McMurdo in 1965-66 and 1966-67.

Punta Varoli *see* **Catharina Point**

Gora Varsanof'evoj. 70°54' S, 67°46' E. A nunatak just SW of Battye Glacier, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Varshets Saddle. 62°58' S, 62°31' W. Running at an elevation of 1430 m, bounded by Antim Peak to the SSW and Slatina Peak to the E, and overlooking Chuprene Glacier to the NW and Krivodol Glacier to the S and SE, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Varshets, in northwestern Bulgaria.

Mount Vartdal. 66°51' S, 64°23' W. A snow-capped mountain, rising to 1505 m (the British say about 1600 m), surmounting and forming part of the plateau escarpment along the Foyn Coast, along the E coast of Graham Land, it is located 6 km NE of Karpf Point, on the N side of Mill Inlet. In late 1947 it was photographed aerially by RARE 1947-48, and surveyed from the ground by Fids from Base D, who charted it, and named it for Hroar Kåre Vartdal (1903-1953), Norwegian polar bibliographer. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1953. It appears on a British chart of 1954, and in the British gazetteer of 1955. Further surveyed by Fids from Base E in 1963-64.

Lake Varuna. 70°46' S, 11°44' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Varvara Cove. 62°20' S, 59°08' W. A cove, 3.3 km wide, indenting the SW coast of Nelson Island for 1.9 km, in the South Shetlands, and entered between The Toe and Ross Point. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Varvara, in southeastern Bulgaria.

Varyag Island. 68°51' S, 77°46' E. About 16 km long, about 2 km SE of Hop Island, in the Rauer Islands, off the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers in 1946, as part of Hop Island. Re-photographed aerially by OpHJ 1946-47, SovAE 1956, and by ANARE in 1957 and 1958. The Russians determined it to be a separate island, and named it Ostrov Varjag, for the Russian cruiser at the turn of the 20th century. ANCA accepted the name Varyag Island.

Lake Vashka. 77°21' S, 161°11' E. A dry valley lake near the center of Barwick Valley, 6 km E of Webb Glacier, in southern Victoria Land. Named by VUWAE 1958-59 for Vashka, a dog on BAE 1910-13. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Vashka Crag. 77°19' S, 161°03' E. An abrupt rock crag at the E end of The Fortress, on the N side of Barwick Valley, in Victoria Land. Named by VUWAE 1959-60, in association with nearby Lake Vashka. NZ-APC accepted the name, and US-ACAN followed suit in 1976.

Vasilev Bay. 62°33' S, 60°20' W. An embayment, 9.6 km wide, indenting the N coast of Livingston Island for 3.8 km between Siddons Point and Bezmer Point, in the South Shetlands. Named by the Bulgarians on Nov. 23, 2009, for Nikola Vasilev (b. 1949), the medical officer at St. Kliment Ohridski Station in 1993-94.

Pik Vasil'eva. 71°52' S, 8°21' E. A peak, hard by Ulvetanna Peak, in the E part of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Pik Vasilija Struve. 71°53' S, 7°29' E. A peak, NW of Kampekalven Mountain, at the E end of the Filchner Mountains, in Queen Maud Land. Named by the Russians, for Vasiliy Struve (1793-1864), the Russian astronomer.

The *Vasiliy Fedoseyev*. Russian diesel-electric ship, sister ship of the *Kapitan Markov*, that took part in SovAE 1973-75 (Capt. Vladimir Petrovich Petrenko), SovAE 1975-77 (Capt. S.A. Lobanovskiy), SovAE 1981-83 (Capt. Grigoriy Solomonovich Matusevich), and SovAE 1986-88 (Sergei Tikhonovich Sitnik).

The *Vasiliy Golovnin*. Built in the Ukraine in 1988, and operated by the Far Eastern Shipping Company, out of Vladivostok. Sister ship of the *Xue Long*. The first time she went to Antarctica was when she was hired by the Australians to supply their stations in 2003-04. She was back, doing the same thing, in 2005-06.

Astronomicheskij Punkt Vasjuki. 66°09' S, 88°26' E. An astro point, rather than an actual geographical feature. It is N by NW of Philippi Glacier, in Wilhelm II Land. Named by the Russians.

Islote Vásquez *see* **Vásquez Rock**

Vásquez Rock. 62°30' S, 59°41' W. A large rock, NNE of Canales Island, and NW of Sotos Point, off Ferrar Point, on the E coast of Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1947-48, and named by them as Islote Vásquez, for aviation sub lieutenant Rafael Vásquez, part of the Air Force contingent during that expedition. It appears on a Chilean chart of 1951. UK-APC accepted the name Vásquez Rock on May 11, 2005.

Vassdalen. 72°02' S, 2°39' E. A valley in the area of Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007 (the name means "the water valley").

Vassfjellet *see* **Schirmacher Hills**

Vassholisen. 70°43' S, 11°32' E. The ice shelf N of the W part of the Schirmacher Hills, with small depressions filled by melted water, on the border of Fimbulheimen and the Princess Astrid Coast, in Queen Maud Land. Named by the Norwegians (name means "the water hole ice"). The Norwegians include Vassholisen as part of a larger feature they call Schirmacheroasen (i.e., "the Schirmacher Oasis").

Vasskaret. 72°03' S, 2°39' E. A pass In the area of Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. The name means "water gap."

Vasskilsåta. 71°12' S, 13°33' E. A nunatak in the N part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "watershed haystack").

Mount Vaughan. 85°57' S, 155°50' W. Also seen spelled (erroneously) as Mount Vaughn. Rising to 3140 m (the New Zealanders say about 2500 m), 6 km SSW of Mount Griffith, on the ridge at the head of Vaughan Glacier, between Mount Goodale and Mount Crockett, at the E side of the Amundsen Glacier, in the Hays Mountains, in the Queen Maud Mountains. Discovered by the Geological Party of ByrdAE 1928-30, and named by them for Norman Vaughan. The name originally applied to the S portion of Mount Goodale, but in 1952 US-ACAN re-applied the name to this peak, 24 km to the southeastward. NZ-APC accepted this situation.

Vaughan, H. b. 1881, Lyttelton, NZ. On April 7, 1909, at Lyttelton, he signed onto the *Nimrod* as a fireman, at the tail end of BAE 1907-09, and thus never got to see Antarctica. On the ship's manifest, when the *Nimrod* pulled into Sydney from Christchurch on April 20, 1909, he is listed as H. Vaughan, fireman, aged 28, born Lyttelton. He was discharged at Poplar

(in London) on Aug. 31, 1909. He was still sailing as a fireman in 1918.

Vaughan, Norman Dane. b. Dec. 19, 1905, Salem, Mass., son of wealthy leather tanner George Cutts Vaughan (who invented a white shoe polish) and his second wife Bessie Dane. Between college stints at Harvard he worked in Greenland, and as dog driver for the "missionary to the Eskimos," Dr Wilfred Grenfell. He also tutored in Guatemala. He was chief dog driver on ByrdAE 1928-30, and was one of the 6-man Southern Geological Party led by Larry Gould during that expedition. He was the first American to drive dogs in Antarctica. For decades he was a champion dog driver and sledger, even being in the 1932 Olympics. During World War II he was in the Army Air Corps, training men to use sledge dogs in the Arctic, rose to the rank of colonel, and later served in the Korean War, remaining as a civilian employee of the Pentagon until 1956. He turned down the offer to lead Byrd Station for the winter of 1957. In 1968 he began life again in Alaska (he had lived for years in Providence, RI), with no money and a broken marriage (to Rosamond). Just days before his 89th birthday he and his new wife (Carolyn Muegge, whom he married in 1987) climbed Mount Vaughan, the peak named after him in Antarctica. At 96 he carried the Olympic torch in Juneau, and died, aged 100, on Dec. 23, 2005, in Anchorage, Alaska. In 1998 his autobiography, *With Byrd at the Bottom of the World*, was published.

Vaughan Bank. 67°37' S, 163°30' E. A seamount in the area of the Balleny Islands. Named for V.J. Vaughan (*see* **Vaughan Promontory**), skipper of the *Glacier* when that ship took part in the US/NZ Balleny Islands expedition of 1965. The name was accepted by international approval in April 1980.

Vaughan Glacier. 85°55' S, 153°12' W. A tributary glacier, 16 km long, it flows eastward from Mount Vaughan to enter Scott Glacier just S of Taylor Ridge, in the Hays Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, in association with the mountain.

Vaughan Inlet. 65°02' S, 61°36' W. An inlet, 14 km wide, indenting the Oscar II Coast for about 17 km, between Shiver Point and Whiteside Hill, on the coast of the Antarctic Peninsula. It was formed by the retreat of the lower parts of Hektoria Glacier, Green Glacier, and Evans Glacier, which, in turn, followed the calving off of the Larsen Ice Shelf along the Oscar II Coast, in March 2002. This inlet coincides with Hektoria Fiords, the ice-covered feature photographed from the air by Wilkins on Dec. 20, 1928, and named by him for the *Hektoria*. Named by UK-APC on May 20, 2008, for David G. Vaughan, honorary professor of geography at Swansea, BAS glaciologist, 1986-99; BAS principal investigator, 1999-2008; and a member of the intergovernmental panel on climate change which won the Nobel Prize in Sept. 2007. He has been at the forefront in the investigations of the breakup of the Larsen Ice Shelf. US-ACAN accepted the name on Oct. 21, 2008.

Vaughan Promontory. 83°08' S, 167°35' E. A high, rugged ice-covered promontory which extends eastward from the Holland Range between Ekblad Glacier and Morton Glacier, and which terminates in Cape Maude, overlooking the Ross Ice Shelf. Named by US-ACAN in 1966, for Cdr. Vie John Vaughan (b. June 9, 1917, Arkansas. d. Jan. 1977, Norfolk, Va.), USN, commanding officer of the *Glacier* during OpDF 64 (i.e., 1963-64) and OpDF (i.e., 1964-65).

Mount Vaughn *see* **Mount Vaughan**

Cabo Vauréal *see* **Vauréal Peak**

Cape Vauréal *see* **Vauréal Peak**

Pico Vauréal *see* **Vauréal Peak**

Vauréal Peak. 62°11' S, 58°17' W. A rocky peak, rising to about 200 m, NE of Chabrier Rock, at the E side of the entrance to Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909 by FrAE 1908-10, at which time the E side of the rock was charted as a cape, being named by Charcot as Cap Vauréal. It appears as Cape Vaureal (no accent mark) on British charts of 1929 and 1948. It appears as Cabo Vauréal on a Chilean chart of 1947, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. It appears as Cape Vauréal (with the accent mark) on a British chart of 1954, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. Following aerial photography by FIDASE in 1956-57, UK-APC redefined the feature as Vauréal Peak (the peak being the utterly dominant feature of the cape) on July 7, 1959, and US-ACAN accepted that new name in 1960. It appears to have been charted as such in 1961, and definitely appears on a British chart of 1962. If the Chileans still call it Cabo Vauréal, the Argentines have moved with the times, and now call it Pico Vauréal. Last plotted by the UK, in late 2008.

The *Vavilov*. Her full name was the *Akademik Sergey Vavilov*, named after a Soviet nuclear physicist. 117.04 meters (384 feet) long, a Russian research and tourist vessel, completed in Rauma, Finland on Feb. 12, 1988, for the Russian Academy of Sciences. Her original purpose was to conduct hydro-acoustic research in tandem with her sister ship, the *Akademik Ioffe*, and she began operations on March 20, 1989. A beautiful white ship, she had an ice-strengthened hull, and could cruise at 14.5 knots, had a staff and crew of 53, and could take 110 passengers. She was in Antarctic waters, in the Ross Sea, in 1992-93 (under the command of Capt. Valeriy Beluga), and again in 1993-94 and 1994-95, at the South Shetlands, the South Orkneys, and the area of the Antarctic Peninsula, both times under the command of Capt. Kalishnikov. She was back in the same waters in 1995-96, under Capt. Beluga, and again in 1996-97, 1997-98, 1998-99, 1999-2000, and 2000-01 (all times under Capt. Kalishnikov again; that last season, she was in the Ross Sea). Chartered by the Adventure Fleet, she was in Antarctica again in 2004-05, when she got trapped in the ice in Dec. 2004, and had to be towed out by the *Polar Star*. She was back in 2005-06, and again in 2007-08, under the command of Capt. Viktor Lysak. She would also sail under the name *Marine Voyager*.

Vavilov Hill. 72°02' S, 13°11' E. Rising to 2640 m, 5 km W of Shatskiy Hill, in the E part of Snøskalkhausen, in the SW part of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. First roughly plotted from aerial photos taken during GermAE 1938-39. Mapped (but apparently not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966, as Gora Nikolaja Vavilova, for botanist and geneticist Nikolay Ivanovich Vavilov (1887-1943). US-ACAN accepted the name Vavilov Hill in 1970. The Norwegians call it Vavilovskuten (which means the same thing).

Vavilovskuten *see* **Vavilov Hill**

Roca Vay. 62°16' S, 62°36' W. An isolated rock in water, SW of Roca Norte, about 35 km N of Smith Island, in the South Shetlands. Named by the Argentines.

Vazov Point. 62°43' S, 60°07' W. On the coast of Bransfield Strait, it forms the NE side of the entrance to Brunow Bay, 2.4 km NE of Samuel Point, and 3.3 km W by S of Aytos Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for writer Ivan Minchov Vazov (1850-1921).

Vazov Rock. 62°43' S, 60°07' W. A rocky peak rising to over 200 m at the S extremity of the crescent-shaped Preshev Ridge (it is 1.25 km SSE of the summit of the ridge), and trending for about 300 m in a NW-SE direction, being linked by a saddle to the rest of the ridge. It is 2.5 km NE of Samuel Point, and 3.5 km W by S of Aytos Point, and overlooks Boyana Glacier to the E and NE, Vazov Point to the S, and Brunow Bay to the SW, in the Tangra Mountains, in eastern Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, in association with Vazov Point.

Cabo Vázquez *see* **Cabo Serrat**

Isla Vázquez *see* **Vázquez Island**

Vázquez Island. 64°55' S, 63°25' W. An island between Fridtjof Island and Bob Island, off Pursuit Point, on the SE side of Wiencke Island, in the Palmer Archipelago. It was not sighted in Feb. 1898 when BelgAE 1897-99 charted this area, but it was charted by FrAE 1903-05. During a survey of the area by Operation Tabarin personnel from Port Lockroy Station, this feature was not sighted, yet it does appear on a British chart of 1948. It was left to one of the Argentine Antarcic expeditions of the late 1940s to name it, as Isla Vázquez, probably after one of the crew members of the *Uruguay* in 1904-05. It appears as such on their charts of 1950 and 1953. Surveyed by Fids on the *Norsel* in April 1955. Named by UK-APC on Aug. 31, 1958, as Truant Islet, for the way in which it has appeared and disappeared on charts and maps over the years.

It appears as such on a British chart of that year. On July 7, 1959, UK-APC redefined it as Truant Island, and it appears as such on a British chart of that year. It appears as Isla Rojas Parker on a Chilean chart of 1962, and that was the name accepted by the Chilean gazetteer of 1974, named after Capitán de fragata Gabriel Rojas Parker, skipper of the *Angamos* during ChilAE 1947. In 1965, US-ACAN accepted the name Vázquez Island.

The *Vdumchivyy 34*. Soviet whale scouting vessel loaned to the International Whaling Commission (q.v.) for their Antarctic expeditions of 1980–81 (Capt. Gennadiy Garmanov), 1981–82 (Capt. Garmanov), 1982–83, 1983–84, 1984–85 (Capt. V. Kiyak), 1985–86, and 1986–87. Not to be confused with the later Soviet vessel (later the *Aleksandr Nevsky*, and sold to the Chinese in 2001).

Bukhta Vechernjaja. 67°39' S, 46°05' E. A bay just W of Vechernyy Hill, at the E end of the Thala Hills of Enderby Land. Named by the Russians,in association with the hill (which used to be called Mount Vechernyaya).

Gora Vechernyaya *see* **Vechernyy Hill**

Mount Vechernyaya *see* **Vechernyy Hill**

Vechernyy Hill. 67°39' S, 46°09' E. At the E end of the Thala Hills, near Molodezhnaya Station, in Enderby Land. Photographed aerially by ANARE in 1956 and by SovAE 1962. Named by the USSR as Gora Vechernyaya (i.e., "mount evening"); the name was translated by the Australians as Mount Vechernyaya, but, more recently, they changed the name to Vechernyy Hill. The landing strip for Molodezhnaya is here.

Veddels *see* **Weddell Islands**

Île(s) Vedel *see* **Vedel Islands**

Islas Vedel *see* **Vedel Islands**

Islotes Vedel *see* **Vedel Islands**

Vedel Island *see* **Vedel Islands**

Vedel Islands. 65°07' S, 64°15' W. A group of small islands, 3 km W of Hovgaard Island, and S of the Dannebrog Islands, between Petermann Island and the Myriad Islands, in the Wilhelm Archipelago. The largest of these islands was discovered by Dallmann, in 1874, and named by him as Friedburg-Insel (i.e., "Friedburg Island"). This island was roughly charted by BelgAE 1897–99, and re-named by de Gerlache as Île Vedel, for French writer Émile-Henri-Auguste Vedel (1858–1937), a naval lieutenant, a member of the French Geographical Society, and a supporter of de Gerlache's expedition. Charcot charted the other islands in the group in 1904, during FrAE 1903–05. In 1909, during his 2nd expedition, FrAE 1908–10, he charted them again, and named the whole group as Îles Le Myre de Vilers, for Charles Le Myre de Vilers (1833–1918), French colonial administrator and politician. However, as even the French could not remember this name, let alone spell it, the name Îles Wedel is also seen on some of the expedition's maps. The name Vedel Islets was seen on British charts of 1916 and 1948, and was accepted by US-ACAN in 1951 (after they had rejected the name Îles Vedel) and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. However, the name Weddell Islets appears on a 1930 British chart, and Wedel Islands on a map prepared by BGLE 1934–37. The name Vedel Islands appears on a 1943 U.S. Hydrographic Office chart, and, on July 7, 1959, UK-APC redefined the nature of the group, and likewise called them the Vedel Islands. US-ACAN accepted this. The group appears on a 1946 Argentine chart, as Islas Vedel, and on a Chilean chart of 1947 as Islas Wedel. It appears as Islotes Vedel on a 1953 Argentine chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The islands were photographed aerially by FIDASE in 1956–57. The group appears (erroneously) as Vadel Islands, on a 1974 British chart. The name Vedel Island, for the largest of the group, was discontinued.

Vedel Islets *see* **Vedel Islands**

Vedena Cove. 62°53' S, 62°23' W. A cove, 1.73 km wide, indenting the NW coast of Smith Island for 560 m, W of Delyan Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the River Vedena, in western Bulgaria.

Vedkosten *see* **Vedkosten Peak**

Vedkosten Peak. 72°01' S, 3°58' E. A bare peak, rising to 2285 m, 1.5 km SE of Hoggestabben Butte, and N of Mount Hochlin, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Vedkosten (i.e., "the wooden broom"). US-ACAN accepted the name Vedkosten Peak in 1966.

Vedskålen *see* **Vedskålen Ridge**

Vedskålen Ridge. 72°03' S, 3°56' E. The most northwesterly ridge on Mount Hochlin, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Vedskålen (i.e., "the shed for firewood"). US-ACAN accepted the name Vedskålen Ridge in 1966.

Vee Cliffs. 77°38' S, 167°45' E. Also called V. Cliffs. Steep, mainly ice-covered cliffs, 6 km long, between Sultans Head Rock and Terror Point, or between Aurora Glacier and Terror Glacier, on the S side of Ross Island, overlooking Windless Bight. Wilson and Hodgson visited here in Nov. 1903, during BNAE 1901–04, and Wilson so named it because 2 prominent V-shaped wedges protrude from the cliff wall. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

Isla Vega *see* **Vega Island**

Vega Island. 63°50' S, 57°25' W. An island, 27.5 km long and 10 km wide, in the W part of Erebus and Terror Gulf, off the NE tip of the Antarctic Peninsula, it is separated from James Ross Island by Herbert Sound, and from Trinity Peninsula by Prince Gustav Channel (it actually lies on the side of the entrance to that channel), and is the northernmost of the James Ross Island group. On Jan. 6, 1843, Ross, during RossAE 1839–43, charted it as part of James Ross Island. In Oct. 1903 its insularity was established by SwedAE 1901–04, and it was named by Nordenskjöld, as Vega Ön, for his uncle's Arctic ship, the *Vega* (which made the first voyage through the Northeast Passage, 1878–79). It appears translated as Vega Island on British charts of 1921 and 1949. It was re-surveyed by Fids from Base D in Nov.–Dec. 1945. ChilAE 1947–48 charted it as Isla Alonso de Ercilla, after the author (*see* **Heroína Island**), but that name did not catch on. US-ACAN accepted the name Vega Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It was further surveyed by Fids in 1960–61. The Argentines had been calling it Isla Vega from as early as 1908, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974.

Vega Ön *see* **Vega Island**

Vega Refugio *see* **Cabo Lorenzo Vega Refugio**

Vegetation Island. 74°47' S, 163°37' E. Also called Lichen Island. A narrow island, about 1.5 km long, 3 km (the New Zealanders say 5 km) N of Inexpressible Island, behind Terra Nova Bay, and just W of the Northern Foothills and Mount Abbott, along the coast of Victoria Land. Discovered by Campbell's Northern Party during BAE 1910–13, explored by Priestley and Dickason of this party on Feb. 5, 1912, and so named by Priestley because the rocks were covered with all sorts of lichens. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

The *Vegewind*. A 20-meter 2-masted German schooner, in at the South Shetlands and the Antarctic Peninsula in 1998–99, under the command of Volker Reineke.

Vegvisaren *see* **Sirube-zima**

Veidemannen. 71°50' S, 2°50' E. A small nunatak, N of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "the hunter").

Isla Veier *see* **Veier Head**

Península Veier. 66°10' S, 61°20' W. A small peninsula projecting from the S end of Jason Peninsula for about 24 km, roughly along the central meridian of Jason Peninsula, it reaches elevations of about 350 m, and has an average width of 8 km, terminating to the S in Veier Head. It is notable for being almost completely ice-free. Named by the Chileans on a chart of 1962, and that name was accepted by the 1974 Chilean gazetteer.

Punta Veier *see* **Veier Head**

Veier Head. 66°29' S, 61°42' W. A high, snow-covered headland, the southernmost point of Península Veier, and therefore also of Jason Peninsula, it marks the SW entrance point of Stratton Inlet, on the Oscar II Coast, on the E coast of Graham Land. On Dec. 9, 1893, Søren Andersen saw this feature, and his captain, Carl Anton Larsen, charted it as a small island, in

66°40' S, 60°45' W, naming it Veier Ø, or Veier Øen (i.e., "the Veier island") after Andersen's home, Veierland, in Norway. It appears both ways on Larsen's expedition charts. In English this became Veier Island, and it appears as such in many sources — e.g. Wilkins in 1929, and U.S. cartographer W.L.G. Joerg in 1936. However, it was also incorrectly translated as Weather Island, and appears that way on Bartholomew's 1898 map, and on a British chart of 1901. The Germans translated this as Wetterinsel, it appears on BelgAE 1897-99 chart as Île Wetter, and as Wetter Island on British charts of 1901, 1916, and 1942. On Irízar's 1903 (Argentine) maps it appears variously as Isla Veiro and Isla Wotter, which are both about as wrong as you can get. A 1908 Argentine map has it as Isla Weather. In Capt. Hans E. Hansen's 1936 atlas it figures as Veier Ö (in Norwegian the character ö is generally used in writing, whereas in print it is generally rendered as ø). Ellsworth's map of 1937 shows it as Vier Island. There have been countless variants of this name seen over the years, most of them erroneous, and too many to list here, except for the major ones. In 1946, an Argentine chart showed it as Isla Wetter, but two Chilean charts of 1947 have Isla Veier and Isla Veir. US-ACAN accepted the name Veier Island, plotting it in 66°26' S, 61°30' W, and as such it appears on a 1948 British chart. However, a survey by Fids from Base D in Dec. 1947, showed there to be land between 65°58' S and 66°28' S, in about 61°45' W, but, because of poor visibility, they failed to establish the correct nature of the feature. ChilAE 1947-48 named it Isla Diego Portales, after Chilean statesman Diego Portales (1793-1837). After a survey in Sept. 1955, by Fids from Base D, it was found to be not an island at all, but a small peninsula forming the S end of Jason Peninsula. The fear of naming a peninsula off another peninsula led to this small peninsula remaining unnamed until the Chileans had the nerve to name it on a 1962 chart, as Península Veier (which was a name accepted by the 1974 Chilean gazetteer). On Aug. 31, 1958, UK-APC named the S tip of this small peninsula as Veier Head, and it appears as such on a British chart of 1961. US-ACAN accepted Veier Head in 1964. Today the Argentines call it Punta Veier.

Veier Island *see* **Veier Head**

Veier Ø *see* **Veier Head**

Punta 21 de Mayo *see* **Cape Freeman**

Cabo 23 de Febrero *see* **Ula Point**

Cabo 24 de Septiembre *see* **Khamsin Pass**

The *Veinticinco de Mayo*. Cruiser that took part in the Feb. 1948 Argentine naval maneuvers under Admiral Cappus (q.v. for details). Juan C. Scarímbolo was captain of the ship.

Isla 25 de Mayo *see* **King George Island**

Veitch, Robert Samuel. b. Oct. 19, 1908, Hitchin, Herts, son of Robert Veitch. Sounding machine technician on the *Discovery II* during the Discovery Investigations of 1933. He died in Jan. 1994, in Northampton.

Veitch Point. 60°36' S, 46°03' W. A point situated centrally on the NE end of Monroe Island, in the South Orkneys. Charted and named in 1933 by personnel on the *Discovery II*, for R.S. Veitch. US-ACAN acceepted the name in 1952.

Roca Vela *see* **Sail Rock**

Vela Bluff. 71°10' S, 66°56' W. A large, isolated nunatak rising to about 600 m on the S side (i.e., the lower part) of Ryder Glacier, 8 km W of Canopus Crags, and 17.5 km from the W coast of Palmer Land, at George VI Sound, it signals the only known route across this part of Ryder Glacier. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation Vela. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Roca Vela Mayor *see* **Mainsail Rock**

Îlot du Vêlage *see under* **D**

Mont Vélain *see* **Mount Vélain**

Monte Vélain *see* **Mount Vélain**

Mount Vélain. 66°42' S, 67°44' W. Rising to 750 m (the British say 920 m and the Chileans say 701 m), SSW of Cape Mascart, in the extreme NE part of Adelaide Island, on the W side of Buchanan Passage. Across its snow cap rises the black triangular summit. It is possible that Biscoe discovered it in Feb. 1832, but he certainly did not name it. Roughly charted on Jan. 14, 1905, by FrAE 1903-05, and named by Charcot as Sommet Vélain, for Charles Vélain (1845-1925), professor of physical geography at the Sorbonne, and a member of the commission appointed to publish the scientific results of Charcot's expedition. Further charted in Jan. 1909, by FrAE 1908-10. It appears on a 1937 French chart as Mont Vélain, on a British chart of 1940 as Mount Velain (i.e., sans accent), and on a 1949 Argentine chart as Monte Vélain. It also appeared occasionally as Vélain Peak. As a result of 1947 aerial photography by RARE 1947-48, this mountain was misidentified, i.e., the name Mount Vélain was accepted by the world's Antarctic naming bodies (US-ACAN in 1951, and UK-APC on Sept. 8, 1953), but the name was applied to what would later be called Mount Machatschek (q.v. for more details). It appears as such in the 1955 British gazetteer, and (as Monte Vélain) on a 1957 Argentine chart. To make it worse, US-ACAN accepted the name again in 1956, but applied it to what would later be called Blümcke Knoll. However, after ground surveys by Fids from Base W in 1958-59, UK-APC corrected the situation on Sept. 23, 1960, and US-ACAN followed suit in 1969. It appears (erroneously) as Monte Valain on a Chilean chart of 1966, but both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Monte Vélain, and with the correct coordinates.

Sommet Vélain *see* **Mount Vélain**

Vélain Peak *see* **Mount Vélain**

Velasco Glacier. 74°16' S, 101°11' W. About 8 km long, it flows W from the Walgreen Coast, toward the Backer Islands, in Marie Byrd Land. Named by US-ACAN in 2003, for Miguel G. Velasco, computer specialist with USGS at Flagstaff, Ariz., part of the USGS team that compiled the Advanced Very High Resolution Radiometer 1:5,000,000 scale maps of Antarctica in the 1990s.

Punta Velásquez *see* **Blue Point**

Roca Velásquez. 64°49' S, 62°51' W. A rock off the extreme NE of Waterboat Point, on the Danco Coast, on the W coast of the Antarctic Peninsula. Named by ChilAE 1950-51 for Chaplain Ramón Velásquez, who was on that expedition.

Velchev Rock. 62°39' S, 60°21' W. A small nunatak rising to 208 m, and projecting slightly above the ice sheet, with about 0.3 hectares of rocky ground exposed on its N slope during the summer, 1 km E of Atlantic Club Peak, 1.22 km SE of Sinemorets Hill, 2.74 km W by N of Castillo Nunatak, and 950 m N by E of the highest point of Charrúa Ridge, on the SW edge of the Balkan Snowfield, just N of Contell Glacier, in the E part of Livingston Island, in the South Shetlands. Due to its location as the most important landmark visible from the Bulgarian base, it is an important landmark in the course of field work. Surveyed by the Bulgarians in 1996, and named by them on April 19, 1996, as Krum Rock, for Krum A. Velchev (b. 1954), meteorologist at St. Kliment Ohridski Station in 1993-94, 1994-95, and 1995-96. UK-APC accepted the name Velchev Rock on June 2, 1997, and US-ACAN followed suit that year.

Veleka Ridge. 62°44' S, 60°19' W. A ridge extending 2.5 km in a N-S direction on Friesland Ridge, in the Tangra Mountains of Livingston Island, in the South Shetlands. The summit, rising to 538 m, is 4.4 km SW of St. Methodius Peak, 2.25 km NE of Barnard Point, and 2.3 km N of Botev Point. Mapped by the British in 1968. Named by the Bulgarians on March 15, 2002, for the Veleka River, in Bulgaria.

Isla Velez Sarsfield *see* **Jagged Island**

Veli Peak. 77°39' S, 161°28' E. Just E of Idun Peak, and 1.5 km S of Brunhilde Peak, in the Asgard Range of Victoria Land. Named by NZ for unknown reasons. US-ACAN accepted the name in 1976.

Velichkov Knoll. 63°54' S, 59°45' W. A peak rising to 970 m E of Sabine Glacier and W of Andrew Glacier, 6.55 km ESE of Bankya Peak, 5.25 km NE of Sredorek Peak, and 6.3 km SW of Nikyup Point, on the Davis Coast, on the W coast of Graham Land. Mapped by the British and Germans in 1996. Named by the Bulgarians on June 3, 2010, for Bulgarian aviation pioneer Stoyan Velichkov (1871-1966), who built the first air-dropped bomb, used in the First Balkan War, 1912.

Velie Nunatak. 74°23' S, 99°10' W. About 14 km N of Mount Moses, in the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Edward C. Velie (b. 1938), meteorologist at Byrd Station in 1967.

Velingrad Peninsula. 66°02' S, 65°00' W. An ice-covered peninsula projecting for 22.5 km from the Graham Coast, on the W coast of Graham Land. It is bounded by Barilari Bay to the NE and by Holtedahl Bay to the SW, and sepa-

rated from the Biscoe Islands to the NW by the Grandidier Channel. Its base is surmounted by Chiren Heights. Base **J** was at the W end of this peninsula. Mapped by the British in 1971 and 1976. Named by the Bulgarians on Sept. 14, 2010, for the city of Velingrad, in southern Bulgaria.

Vella Flat. 78°11' S, 166°14' E. A coastal flat to the S of Lake Cole, in the NE part of Black Island, in the Ross Archipelago. Named by US-ACAN in 1999, for Prof. Paul Vella of the department of geology, at Victoria University of Wellington (NZ), who made a reconnaissance survey of Brown Peninsula and Black Island stratigraphy while a member of VUWAE 1964-65. NZ-APC accepted the name on Nov. 4, 1999.

The *Vema*. A 585-ton luxury yacht, designed by Cox & Stevens, and built in 1923 by Burmeister & Wain, in Copenhagen, as the *Hussar*, for famous stockbroker and magnate E.F. Hutton and his wife Marjorie Merriweather Post (the parents of actress Dina Merrill). In 1934 Hutton sold the *Hussar* to shipping tycoon Georg Vetlesen, who renamed her the *Vema*. She served with the Coast Guard during World War II, and in 1953 was acquired by Columbia University, as her 3-masted research schooner. She was in the South Shetlands in 1961-62, under the command of Capt. Henry Conrad Kohler (b. 1920, Lunenburg, Nova Scotia. d. April 14, 1997, Lunenburg), under the auspices of the Lamont Geological Observatory (of Columbia), on a joint Chilean and American hydrographic survey led by chief scientist William Maurice Ewing (known as Maurice, or "Doc"; b. May 12, 1906, Lockney, Texas. d. May 4, 1974; he founded the Lamont in 1949), and accompanied by the *Yelcho*. Capt. Kohler, who had gone to sea at the age of 15, had been her skipper for 24 years when he retired. The *Vema* was sold in 1982, and again became a cruising yacht, the *Mandalay*.

Venable Ice Shelf. 73°03' S, 87°20' W. About 60 km long and 24 km wide, between Fletcher Peninsula and Allison Peninsula, in Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Cdr. Jack Donald Venable (b. June 12, 1926, Las Vegas, NM. d. July 19, 2008, Annapolis, Md.), who enlisted in the Naval Reserve in 1944, and graduated from the Naval Academy in 1949, with a degree in meteorology. He was ships operations officer, U.S. Naval Support Force, Antarctica, during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). He retired from the Navy in 1970, and then helped build the second span of the Bay Bridge, at Annapolis.

Vendehø *see* **Vendehø Heights**

Vendehø Heights. 72°19' S, 1°28' E. A broad, ice-covered elevation surmounted by several rock crags and peaks, close SE of Tverrveggen Ridge, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vendehø (i.e., "turn heights"). US-ACAN accepted the name Vendehø Heights in 1966.

Vendeholten *see* **Vendeholten Mountain**

Vendeholten Mountain. 72°12' S, 1°20' E. A partly snow-capped mountain, rising to 2230 m, N of Tverrbrekka Pass, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vendeholten (i.e., "the turn grove"). US-ACAN accepted the name Vendeholten Mountain in 1966.

Skala Venera-3 *see* **Ormesporden Hill**

Nunatak Venera-9. 72°55' S, 62°07' E. Just NW of Nunatak Venera-10, in the Prince Charles Mountains. Named by the Russians.

Nunatak Venera-10. 73°02' S, 62°12' E. Just SE of Nunatak Venera-9, in the Prince Charles Mountains. Named by the Russians.

Venesta cases. Strong, light packing cases made of Venesta wood, which was a composite material made of 3 layers of hard wood, compressed with intermediate layers of waterproof cement. They were used by Scott, Amundsen, and Shackleton on their expeditions.

Venetz Peak. 80°23' S, 25°30' W. Rising to about 1500 m, it surmounts the SE rim of Bonney Bowl, in the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Ignaz Venetz-Sitten (known as Ignaz Venetz) (1788-1859), Swiss engineer and glacial geologist who, in 1821, first expressed in detail the idea that Alpine glaciers were formerly much more extensive. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Venezuela. The 44th member country to ratify the Antarctic Treaty, on May 24, 1999. On Jan. 26, 2006 the Venezuelan flag was planted at the South Pole by Marcus Tobía, Carlos Calderas, Martín Echeverría, and Marco Cayuso, all members of Proyecto Cumbre (i.e., "Project Summit"). A fifth member, Carlos Castillo, could not make it to the end, due to frostbite. There have been two Venezuelan Antarctic expeditions as of 2008 (VenAE). VenAE 1 was 2007-08. VenAE 2 was 2008-09. The second one left Montevideo on the Uruguayan ship *General Artigas*, on Jan. 2, 2009, bound for Esperanza Station, where it conducted investigations into various scientific disciplines. Summer only.

Vengen *see* **Vengen Spur**

Vengen Spur. 72°04' S, 23°40' E. A rocky spur, 14 km long, projecting N from the E part of Mount Widerøe toward the Viking Heights, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Vengen (i.e., "the wing"). US-ACAN accepted the name Vengen Spur in 1966.

Mount Vennum. 71°33' S, 61°53' W. Rising to 1320 m and surmounting the NE part of the Rowley Massif (it is, indeed, the highest point on the massif), on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Walter Robert Vennum (b. May 10, 1941, Seattle), USGS geologist here in 1972-73, with the USGS Lassiter Coast party. He was later long time professor of geology at Sonoma State, Calif. UK-APC accepted the name on July 21, 1976.

Vent Point. 62°11' S, 58°53' W. A rocky promontory with a well-exposed volcanic vent structure (hence the name given by the Poles in 1984), W of Nebles Point, at Maxwell Bay, King George Island, in the South Shetlands.

Venta Plateau. 80°03' S, 155°40' E. A small plateau rising to between 1800 and 2000 m, between the heads of Isca Valley and Lemanis Valley, 6 km E of Haven Mountain, in the Britannia Range. In association with the Roman name Britannia, it was named by Mike Selby's University of Waikato (NZ) 1978-79 geological party, after a Roman name for Winchester. NZ-APC accepted the name, and US-ACAN followed suit.

Isla Ventana *see* **Window Island**

Punta Ventana. 62°25' S, 60°47' W. A point directly SE of Punta Aguayo, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because the point presents a great orifice which resembles a natural window ("ventana" means "window").

Roca de la Ventana *see* **Hole Rock**

(Caleta) Ventana de Neptuno *see* **Neptunes Window**

Roca Ventana del Chileno *see* **Hole Rock**

Pik Ventcelja *see* **Sandnesstaven Peak**

Ventifact Knobs. 77°42' S, 162°35' E. Minor knobs just E of Lake Bonney, in Taylor Valley, Victoria Land, they stand from 3 to 6 meters high, composed of lake clay covered by glacial drift. This glacial drift has cobbles that are well polished by the wind and cut into ventifacts which cover the knobs. Although the knobs were noted by British geologists in earlier expeditions, they were first studied (in Dec. 1957) and described in scientific papers by Troy L. Péwé (*see* **Lake Péwé**), who named them. US-ACAN accepted the name in 1960, and NZ-APC followed suit.

Península Ventimiglia *see* **Península Péfaur**

Bahía Ventisquero *see* **Whale Bay**

Fondeadero Ventisquero *see* **Orwell Bight**

Valle Ventoso *see* **Windy Valley**

Venture Dome. 68°36' S, 62°13' E. A large, heavily-crevassed ice dome, about 57 km S of Mount Twintop, in Mac. Robertson Land. Since 1957, the dome had been seen by several ANARE parties traveling S from Mawson Station, but from a distance only, and for good reason. In 1967 John Manning picked a route through the crevasses and established a beacon tellurometer

station on it. So named by ANCA on Oct. 22, 1968, because of the risk taken to cross it. US-ACAN accepted the name in 1971.

Bahía Venturini *see* **Bertodano Bay**

[1]**The *Venus***. A 131-ton, 2-masted New York sealing schooner, 68 feet long, built in 1811 at Woodbridge, NJ, and registered on Oct. 7, 1820. Commanded by Capt. William Napier, she was part of the New York Sealing Expedition which went to the South Shetlands in 1820-21. She ran into a reef at Esther Harbor on March 7, 1821, and sank. Her crew were picked up by the *Emerald* and the *Esther*.

[2]**The *Venus***. A 288-ton Liverpool whaling and sealing barque, owned by Capt. James Kelly of Hobart Town (in Van Diemens Land). On June 1, 1830, in Liverpool, Samuel Harvey took command of her, and that day sailed her out of that port, carrying cargo and passengers, bound for London, leaving there on June 17, for Cape Town, and leaving there on Oct. 19, bound for Hobart, arriving on Nov. 13, 1830. She left Hobart on Nov. 20, for Sydney, arriving on Nov. 30, 1830, leaving that port on Jan. 8, 1831, on a sealing and whaling voyage to Macquarie Island (not in Antarctica), and then sailed south, getting through the pack-ice to the Ross Sea in March 1831, as far south as 72°S, the farthest south attained in the Ross Sea to that date. She was back in Sydney on Dec. 31, 1831, and in Hobart by 1832, leaving there on May 3, again under Capt. Harvey, and again on a whaling trip (not in Antarctic waters this time), arriving in Sydney on May 1, 1833, with 60 tons of sperm aboard. She left Sydney on Sept. 4, 1833, for another voyage, returning in 1834, again under Harvey (but again, not in Antarctic waters). Under Harvey she left Sydney on Sept. 5, 1834, for a similar trip, returning on Jan. 5, 1835. On Feb. 1, 1835, she left Sydney again, returning on May 28, leaving again on June 3, 1835, bound for London. She arrived off the Downs on Sept. 23, 1835. She was finally sold and broken up in 1841.

Bahía Venus *see* **Venus Bay**

Glaciar Venus *see* **Venus Glacier**

Venus Bay. 61°56' S, 57°51' W. A bay, 10 km wide, between False Round Point and Brimstone Peak, along the N side of King George Island, in the South Shetlands. It was roughly charted by early 19th-century sealers, and on an 1893 U.S. Hydrographic Office chart it appears, erroneously, as Esther Hr. (i.e., Esther Harbor). David Ferguson called it Esther Bay in 1913-14, and it appears as such on his 1921 chart. It was re-surveyed in Jan. 1937, by the Discovery Investigations, and Esther Harbour appears on their 1938 chart incorrectly as a harbor in the E side of the bay. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958. Renamed by UK-APC on Sept. 23, 1960, for the NY schooner *Venus*. US-ACAN accepted that name later in 1960. It appears as such on a 1962 British chart. It appears on a 1957 Argentine chart as Puerto Esther, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, the Argntines began calling it Bahía Venus as early as 1977. Last plotted by the UK, in late 2008.

Venus Glacier. 71°36' S, 68°27' W. A glacier, 16 km long, and 10 km wide at its mouth, flowing E into George VI Sound, between Keystone Cliffs on the one hand and (on the other) Triton Point and Bandstone Block, on the E coast of Alexander Island. The coast in this area was photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. This particular feature was roughly surveyed from the ground in 1936 by BGLE 1934-37, photographed aerially in 1947, by RARE 1947-48, and surveyed near its mouth by Fids from Base E in 1949. In 1959-60, Searle of the FIDS, using RARE photos, mapped it along its entire length, plotting it in 71°38' S, 68°15' W. In keeping with the naming of various features in this area after planets, this one was named by UK-APC on March 31, 1955, for Venus. US-ACAN accepted the name later in 1955. It has since been replotted. The Argentines call it Glaciar Venus.

Venzke, Norman Charles. b. Dec. 8, 1927, Baltimore, son of railroad brakeman Charles Venzke and his wife Florence. He entered the U.S. Coast Guard Academy in 1946, was commissioned an ensign in June 1950, was a lieutenant on the *West Wind* during OpDF III (i.e., 1957-58), and then to the Arctic. In the mid-1960s he was ships operations officer for OpDF. He served in Vietnam, and was commander of the *North Wind* in 1972 and 1973. He was several other times in Antarctica, on different ships, including the *Edisto* and the *Polar Star*, and retired as a rear admiral in July 1985. He later went many times to Antarctica on French tourist ships, as beachmaster.

Venzke Glacier. 75°00' S, 134°24' W. A broad glacier flowing northward between Bowyer Butte and the Perry Range into the Getz Ice Shelf, on the coast of Marie Byrd Land. Discovered and photographed aerially in Dec. 1940, by USAS 1939-41. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Norman Venzke.

Ver-sur-Mer. 78°40' S, 164°10' W. A small inlet in the E portion of the Bay of Whales, indenting the Ross Ice Shelf on the coast of Marie Byrd Land, a few miles from Little America I and Little America II, which lay at the head of this inlet. Named by Byrd on Jan. 1, 1929, for the French village near to which he landed after his 1927 transatlantic flight. This feature (the Antarctic one) is no longer there (*see* **Bay of Whales**, under **W**). The feature appears in the 1958 NZ provisional gazetteer, as Ver-sur-Mer Inlet.

Islote Vera. 63°18' S, 57°55' W. A small island NW of Punta Lermanda, on Kopaitic Island, in Covadonga Harbor, just S of Cape Legoupil, Trinity Peninsula. Named by ChilAE 1947-48 for navigator 1st Lt. Edgardo Vera Fisher (b. Jan. 10, 1912), a member of the expedition.

Kupol Verbljud *see* **Verblyud Island**

Verblyud Island. 70°00' S, 15°55' E. An ice-covered island whose summit rises to 200 m above the surrounding Lazarev Ice Shelf, of which it is at the E margin, along the coast of Queen Maud Land. First mapped by SovAE 1961, and named descriptively by them as Kupol Verbljud (i.e., "camel dome"). US-ACAN accepted the name Verblyud Island in 1970.

Islote Verde *see* **Green Island**

Laguna Verde *see* **Kroner Lake**

Pico Verde *see* **Copper Peak**

Verdi Ice Front. 71°39' S, 74°40' W. The seaward face of the Verdi Ice Shelf, in the SW part of Alexander Island. Named by UK-APC in Jan. 1973, it appears in the British gazetteer of 1980.

Verdi Ice Shelf. 71°36' S, 74°30°W. The ice shelf in Verdi Inlet, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977, it appears in the 1980 British gazetteer with the coordinates 71°39' S, 74°31' W. US-ACAN accepted the name (but with slightly different coordinates) in 2006.

Verdi Inlet. 71°38' S, 74°33' W. An ice-filled inlet, 40 km long, and 10 km wide, it indents the N side of Beethoven Peninsula between Pesce Peninsula and Harris Peninsula, 16 km SW of Brahms Inlet, in the SW part of Alexander Island. Discovered and photographed aerially in 1947 by RARE 1947-48, and first roughly mapped by them. Re-mapped from the RARE photos in 1959-60 by Searle of the FIDS, who plotted it in 71°30' S, 75°00' W. Named by UK-APC on March 2, 1961, for the Italian composer, Giuseppe Fortunino Francesco Verdi (1813-1901). US-ACAN accepted the name later in 1961. It appears on a 1962 U.S. Hydrographic Office chart. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer. Note: US-ACAN has plotted it in 71°36' S, 74°30' W.

Nunatak Verdier. 66°02' S, 60°53' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Verdikal Gap. 63°41' S, 58°30' W. A flat, ice-covered saddle, extending for 5.3 km at an elevation of over 750 m above sea level between the Louis Philippe Plateau to the N and Mount Canicula and Trakiya Heights to the S, it is part of the ice divide between Bransfield Strait and Prince Gustav Channel, and overlooks Russell West Glacier to the W and Russell East Glacier to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians for the settlement of Verdikal, in western Bulgaria.

Vere Ice Rise. 70°27' S, 72°44' W. A small ice rise in the Wilkins Ice Shelf, off the NW coast of Alexander Island. It was roughly mapped from the air by BAS during a radio echo-sounding flight on Feb. 1, 1967. Later accurately plotted from U.S. Landsat images taken in Feb. 1979. Named by UK-APC on Dec. 9, 1981, for Flight Lt. Robert Paul Vere (b. June 12, 1937, Sheffield. d. Dec. 2004, Leominster, Herefordshire), RAF, BAS pilot #2 of the Twin Otter aircraft used on the flight. US-ACAN accepted the name.

Lake Vereteno. 68°31' S, 78°25' E. A narrow lake, 2.5 km long, in the NE part of Breidnes Peninsula, in the E part of the Vestfold Hills, about 2.5 km S of Luncke Ridge, and about 19 km ENE of Davis Station. Photographed aerially by OpHJ 1946-47, by ANARE in 1954, 1957, and 1958, and by SovAE 1956. Named Ozero Vereteno (i.e., "spindle lake") by the USSR in 1959, for its shape. ANCA accepted the translated name on June 28, 1962, and US-ACAN followed suit in 1970.

Ozero Vereteno *see* **Lake Vereteno**

Vereyken Glacier. 78°25' S, 163°57' E. A glacier, whose upper part is close NE of Morning Glacier, at Mount Morning, in Victoria Land. Named by US-ACAN in 1994, for Jill Vereyken, of Antarctic Support Associates, at the Berg Field Center, at McMurdo.

Rocas Verge *see* **Verge Rocks**

Verge Rocks. 65°34' S, 64°34' W. Two offshore rocks, 3 km due N of the extreme NW point of Chavez Ialand, off Leroux Bay, on the the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from the chart compiled by a joint FIDS-RN team which surveyed it in 1957-58. So named by UK-APC on July 7, 1959, because they lie on the edge (verge) of Grandidier Channel. The feature appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Chilean gazetteer of 1974 accepted the name Rocas Verge.

Skaly Vergilov *see* **Vergilov Rocks**

Vergilov Rocks. 62°38' S, 60°22' W. Two adjacent rocks, submerged at high water, 510 m NE by N of Hespérides Point, and 310 m W by S of Greenpeace Rock (which rises out of Bulgarian Beach, on Livingston Island), in the South Shetlands. Named by the Bulgarians on Oct. 29, 1996, as Skaly Vergilov, for mineralogist and crystallographer Zlatil Vergilov (b. 1952), a member of the 1988 Bulgarian party on Livingston Island, which built the first facilities at the St. Kliment Ohridski Station in April of that year. He was also base leader at that station for the summer season of 1996-97. UK-APC accepted the translated name on on April 29, 1997, and US-ACAN followed suit that year.

Mont Verhaegen *see* **Mount Verhaegen**

Mount Verhaegen. 72°34' S, 31°08' E. An ice-free mountain rising to 2300 m immediately W of Mount Perov, in the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, and named by him as Mont Verhaegen, for Baron Pierre Verhaegen, collaborator of the expedition. US-ACAN accepted the name Mount Verhaegen in 1965.

Mount Verhage. 71°23' S, 163°42' E. A prominent mountain, rising to 2450 m, directly at the head of Smithson Glacier, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Lt. (later Lt. Cdr.) Ronald Glenn Verhage (b. 1939), USN, supply officer at McMurdo in 1967.

Verheyefjellet. 72°09' S, 23°45' E. A peak in the southwesternmost part of Mount Walnum, in the central part of the Sør Rondane Mountains. Named by the Norwegians. It means "the Verheye mountain," and probably refers to Belgian marine biologist Hans M. Verheye (b. Oct. 29, 1956).

Ozero Verhnee *see* **Lake Verkhneye**

Holmy Verhnie. 66°33' S, 99°58' E. One of the Obruchev Hills, in Queen Mary Land. Named by the Russians.

Verila Glacier. 62°36' S, 60°41' W. A roughly crescent-shaped glacier, extending for 13 km in an E-W direction, and 4 km in a N-S direction, and bounded by Rotch Dome to the W, by Snow Peak to the N, and by Ustra Peak to the SE, it flows southward into Walker Bay between John Beach and Hannah Point. Named by the Bulgarians on Nov. 4, 2005, for Varila Mountain, in western Bulgaria.

Lake Verkhneye. 68°36' S, 78°31' E. About 3 km NE of Krok Lake, in the Vestfold Hills. Photographed aerially during OpHJ 1946-47, again by SovAE 1956, and also by ANARE in 1957 and 1958. Named by the Russians as Ozero Verhnee. ANCA translated the name.

Mount Verlautz. 86°46' S, 153°00' W. Rising to 2490 m, just N of the mouth of Poulter Glacier, in the SE end of the Rawson Mountains, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Major (later Lt. Col.) Sidney James Verlautz (b. Feb. 18, 1930. d. May 29, 1989), U.S. Army Transportation Corps, in Antarctica as logistics research officer on the staff of the commander, U.S. Naval Support Force, Antarctica.

Verleger, William Frederick "Bill." b. May 21, 1878, Mass, but grew up in Albany, NY, son of German cigar maker William Verleger and his wife Sarah. He apprenticed under sail in 1895, and in 1898 fought at Cuba on the *Iowa*. In the same war, as a gunner on the *Vicksburg* in the Philippines, he was part of the joint Army-Navy mission into the interior that captured the rebel chief Emilio Aguinaldo. He worked his way up through boatswain and ensign, serving during the Cuban Pacification of 1909, the Nicaragua Campaign the same year, and the Vera Cruz Campaign of 1914. In the meantime, in 1908, he married a Nebraska girl, Rose Frances Wilkins. As a temporary lieutenant he served on troopships and minesweepers during World War I. In 1922 he was reverted to enlisted rank, and retired in 1924 as chief quartermaster. He was a lieutenant in the USNR when he was picked to be commander of the *Jacob Ruppert* on the first trip to the Bay of Whales during ByrdAE 1933-35. He contracted pneumonia while down there, but recovered. Byrd sent him home to New Canaan, Conn., and he immediately became the democratic candidate for state representative. On Feb. 11, 1942 he enlisted for World War II. He was 63. As a lieutenant he trained reserve officers, and finished the war as captain of the *Black Rock*, a merchant ship on rescue duty in Europe. He died on Nov. 3, 1955, at St. Albans Naval Hospital, in Queens, NY, and was buried in Arlington National Cemetery.

Verleger Point. 74°42' S, 136°15' W. Marks the W side of the entrance to Siniff Bay, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Bill Verleger.

Vermili, Hansen. b. 1882, Norway. Skipper of the *Thor I*, in Antarctic waters in 1921-22. He continued as skipper of the *Thor I* for several more years.

Podlëdnye Gory Vernadskogo. 79°00' S, 50°00' E. An isolated valley inland from Mac. Robertson Land, almost at the Polar Plateau. Named by the Russians.

Poluostrov Vernadskogo. 66°35' S, 51°00' E. A peninsula, just NW of the Kozlov Nunataks, in the Tula Mountains of Enderby Land. Named by the Russians.

Vernadsky Station *see* **Akademik Vernadsky Station**

Monte Verne *see* **Mount Verne**

Mount Verne. 67°45' S, 67°26' W. A mountain rising to 1645 m, 10 km ESE of Bongrain Point, and dominating the S part of Pourquoi Pas Island (it is the highest point on the island), off the Fallières Coast, on the W coast of Graham Land. Discovered and roughly surveyed and mapped in 1909 by FrAE 1908-10. Re-surveyed in July-Aug. 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. Re-surveyed in 1948 by Fids from Base E, and named by them for Jules Verne (1828-1905), the famous French author. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. In those days the coordinates given were 67°45' S, 67°29' W. It appears as such in the 1956 British gazetteer, and on a 1957 British chart. The coordinates were corrected from U.S. Landsat images taken in the mid-1970s, and, with those new coordinates, the feature appears on a British chart of 1982, and in the 1986 British gazetteer. It appears on a 1962 Chilean chart as Monte Verne, and on one of their 1966 charts as Monte Berne (in Spanish the letters "b" and "v" are somewhat interchangeable), but it was the name Monte Verne that was accepted by the 1974 Chilean gazetteer. Note: US-ACAN gives the coordinates as 67°45' S, 67°34' W.

Verner Island. 67°35' S, 62°53' E. In the Jocelyn Islands, just W of Petersen Island, in Holme Bay, off the Mawson Coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named later by ANCA for Verner Pedersen, chief officer of the *Thala Dan* in 1961. US-ACAN accepted the name in 1965.

Vernier Valley. 77°58' S, 161°09' E. An ice-free valley on the E side of Mount Blackwelder, in the NE part of the Wilkniss Mountains of Victoria Land. Named by NZ-APC in 1992, in keeping with the surveying motif running through the names of several features in this area (a vernier being a graduated scale used on measuring instruments to allow the reading of finer subdivisions). US-ACAN accepted the name in 1993.

Mount Vernon Harcourt. 72°32' S, 169°55'

E. Also called Mount Harcourt. A remarkable conical mountain, rising to 1570 m, northward of Mount Northampton, in the south-central part of Hallett Peninsula, in the Admiralty Range, in northern Victoria Land. Discovered on Jan. 19, 1841 by Ross, who named it for scientist Rev. William Vernon Harcourt (known as Vernon Harcourt) (1789-1871), son of the Archbishop of York, and one of the founders of the British Association for the Advancement of Science. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Vernum, Anthony John "Tony." b. 1932, Huntingdon, son of John William H. Vernum and his wife Winifred Ena Foster. He was working at the Met Office in 1950 with Graham Rumsey when the two of them answered an ad for the FIDS. While Rumsey went into the RAF for 2 years before going south, Vernum wintered-over as meteorologist at Signy Island Station in 1951, and Base G in 1952. At the end of his tour he returned to Port Stanley, and there caught the *Fitzroy* back to London, arriving there on Feb. 3, 1953. He caught pneumonia, and died in 1958, in Peterborough, where his parents were living.

Verry, Edward *see* **USEE 1838-42**

Îlot du Verseau *see* **Le Verseau** (under **L**)

Le Verseau *see under* **L**

Île Verte *see* **Verte Island**

Verte Island. 66°44' S, 141°11' E. A small rocky island, 1.5 km N of the Double Islands, and 2.5 km NE of the tip of Zélée Glacier Tongue, between the Port-Martin peninsula and Cape Jules, in the Géologie Archipelago. Photographed aerially by OpHJ 1946-47. Charted by the French in 1949-51, and named by them as Île Verte, for its green appearance caused by bird droppings. US-ACAN accepted the name Verte Island in 1955.

Vertigo Bluff. 83°35' S, 167°00' E. A prominent rock bluff rising to 1950 m, 6 km S of Asquith Bluff, on the W side of Lennox-King Glacier. Named for the precipitous nature of the bluff face by John Gunner who, with Henry Brecher, collected rock samples here in 1969-70, during the Ohio State University Geological Expedition. US-ACAN accepted the name in 1972.

Vertigo Cliffs. 63°47' S, 57°26' W. Spectacular, near-vertical cliffs on the S side of Flask Glacier, running W from Cape Well-Met for between 11 and 13 km along the N coast of Vega Island, at a height of about 200 m above sea level, being finally broken by a cirque near the W end. Named by UK-APC on Feb. 15, 1988. US-ACAN accepted the name.

Poluostrov Vertolëtnyj *see* **Vertoletnyj Peninsula**

Vertoletnyj Peninsula. 66°12' S, 100°42' E. A peninsula, measuring 4.5 by 2.2 km, 7 km NE of Edgeworth David Station, at the SW corner of the Edisto Glacier Tongue, in the Bunger Hills. High hills are a feature of its NE and SW extremities, and it contains many other knolls and lakes. Charted by SovAE 1956, who named it Poluostrov Vertolëtnyj. ANCA accepted the translated name on March 12, 1992.

The *Veryan Bay*. British frigate, formerly to be known as the *Loch Swannay*, launched on Nov. 11, 1944. Named after the bay in Cornwall (*see also* **The *St Austell Bay***). In 1950, under the command of Capt. James Francis Reginald Crewe, she was in South Georgia. She achieved minor notoriety on July 5, 1951 when, entering Portland Harbor (in England) she was struck by a dummy torpedo. In early 1952, under Capt. Richard Horncastle, she was in South Georgia again, and in mid-1953 (under Capt. Richard George Windham Hare) was at the Falklands. **Aug. 3, 1954**: She left Plymouth, bound for Bermuda and the West Indies, under the command of Capt. L.R.P. Lawford (he had replaced Capt. Hare on March 3, 1954). **Aug. 7, 1954**: She had to turn back to Cobh, in Cork, to land a Marine suffering from appendicitis. **Aug. 17, 1954**: She arrived in Bermuda. **Sept. 4, 1954**: She left Bermuda, bound for Port Stanley, in the Falkland Islands, for guardship duties. **Sept. 8, 1954**: She called in at Antigua. **Sept. 15, 1954**: She re-fueled at Trinidad. **Sept. 18, 1954**: She called in at Georgetown, British Guiana. **Sept. 27, 1954**: She visited a Brazilian naval base at Belem, Brazil. **Oct. 5, 1954**: She was at Salvador, Brazil. **Sept. 11, 1954**: She was at Rio. **Sept. 16, 1954**: She left Rio. **Oct. 23, 1954**: She docked at Port Stanley. **Nov. 21, 1954**: She left Port Stanley, to visit FIDS stations in the South Shetlands with the governor of the Falklands aboard. She was also taking mail, men, and food to Base D, on Deception Island. **Nov. 25, 1954**: She arrived at Potters Cove, in the South Shetlands, then left for Signy Island. **Nov. 27, 1954**: She arrived at Signy Island. **Nov. 30, 1954**: She left Signy Island, bound for Grytviken, South Georgia. **Dec. 1, 1954**: She arrived at Grytviken. **Dec. 8, 1954**: She left South Georgia, bound for Port Stanley. **Dec. 10, 1954**: She arrived back at Port Stanley. **Jan. 3, 1955**: She left Port Stanley for Deception Island. **Jan. 7, 1955**: She arrived at Deception Island, where she delivered a protest to the "invading" Argentines. **Jan. 13, 1955**: She left Deception Island, and cruised South Shetlands waters for two days. **Jan. 17, 1955**: She left Antarctica, bound for Port Stanley. **Jan. 21, 1955**: She arrived at Port Stanley. **Feb. 3, 1955**: She left Port Stanley for South Georgia. **Feb. 8, 1955**: She arrived at Grytviken. **Feb. 16, 1955**: She left South Georgia. **Feb. 20, 1955**: She arrived back at Port Stanley. **March 2, 1955**: She left the Falklands, heading for Bermuda. **March 4, 1955**: She arrived at Punta Arenas, Chile. **March 8, 1955**: She arrived at Puerto Montt, Chile. **March 14, 1955**: She arrived at Antofagasta, Chile. **March 25, 1955**: She arrived at Mollendo, Peru. **March 31, 1955**: She arrived at Libertad, Ecuador. **April 1955**: She passed through the Panama Canal to Bermuda. **Aug. 2, 1955**: She arrived back in Devonport, for a refit. She had steamed 32,000 miles that season. On Oct. 15, 1955 Cdr. Jack Bitmead replaced Lawford as skipper. She was back in the Falklands between May and October of 1956, and in July was sent to patrol the South Shetlands. She was laid up in Plymouth from 1957 to 1959, then sold to BISCO, and broken up in 1959.

Mount Vesalius. 64°04' S, 61°59' W. Rising to 765 m in the Brugmann Mountains, NW of Macleod Point, in the S part of Liège Island, in the Palmer Archipelago. Surveyed by ArgAE 1949-50, and named descriptively by them as Monte Sur (i.e., "south mountain"). It appears as such on their 1950 chart, and also on an Argentine chart of 1954. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for the Flemish anatomist, Andreas Vesalius (1514-1564). It appears as such on a British chart of 1961. US-ACAN accepted the name in 1965. This mountain, and Pavlov Peak, appear collectively on a 1962 Chilean chart as Montes Brugmann.

Vesalkletten. 72°29' S, 20°5' E. A nunatak in the SW part of the Blåklettane Hills, in the SW part of the Sør Rondane Mountains. Named by the Norwegians ("the little mountain").

Vesalvika *see* **Ko-minato**

Vesconte Point. 68°31' S, 65°12' W. A steep rock point on the S side of Bermel Peninsula, on the NW side of Mobiloil Inlet, and separating that inlet from Solberg Inlet, it marks the extremity of a spur running SE from the easternmost of the Bowditch Crests, on the Bowman Coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Photographed aerially again in Sept. 1940, by USAS 1939-41. On Aug. 14, 1947, Fids from Base E roughly sketched it both from the air and from the ground. It was re-surveyed from the ground by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Petrus Vesconte of Genoa, medieval pioneer chartmaker. US-ACAN accepted the name later in 1962. The Chileans used to use the name Punta Carrera Pinto for the feature known as Rock Pile Point (which they now call Punta Rock Pile), but they re-applied that name to this one, i.e., to Vesconte Point, and it appears as such in the 1974 Chilean gazetteer. Capt. Ignacio Carrera Pinto (b. 1848), of the Chilean Army, was a hero (and victim) of the battle of La Concepción, in July 1882.

Gora Vesëlaja *see* **Vesëlaya Mountain**

Veselajatind *see* **Vesëlaya Mountain**

Vesëlaya Mountain. 71°38' S, 12°32' E. A mountain with a sharp summit rising to 2385 m, it forms the N end (and the highest peak) of the Svarttindane Peaks, in the Südliche Petermann Range of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966, as Gora Vesëlaja (i.e., "cheerful mountain"). US-ACAN accepted the translated name in 1970. The Norwegians call it Veselajatind.

Nunataki Veshki. 68°04' S, 63°41' E. A group of nunataks, SE of the group the Russians call

Nunataki Kroshki, in Mac. Robertson Land. Named by the Russians.

Veslebusen. 71°37' S, 15°09' E. A small nunatak N of the mountain the Norwegians call Storebusen ("the big ogre"), in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the little ogre").

Veslehø. 66°29' S, 53°03' E. A height due N of the nunatak the Norwegians call Kampen, in Enderby Land. The SCAR Composite Gazetteer says that the Russians named it, but it is a Norwegian name ("the little height").

Veslekletten *see* **Veslekletten Peak**

Veslekletten Peak. 72°05' S, 3°26' W. A small mountain, about 1.5 km S of Storkletten Peak, and S of Flårjuven Bluff, on the SW part of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Veslekletten (i.e., "the little mountain"). US-ACAN accepted the name Veslekletten Peak in 1966.

Vesleknausen *see* **Vesleknausen Rock**

Vesleknausen Rock. 69°56' S, 38°53' E. A rock (the Norwegians describe it as small crag) rising to 110 m, 5 km SW of Rundvågs Head, on the E side of the inner part of Havsbotn, on the SE shore of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Vesleknausen (i.e., "the tiny crag"). US-ACAN accepted the name Vesleknausen Rock in 1968.

Veslekulten *see* **Hayes Peak**

Veslenupen *see* **Veslenupen Peak**

Veslenupen Peak. 72°07' S, 2°13' E. Near the N end of Nupskammen Ridge, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Veslenupen (i.e., "the little peak"), in association with Nupskammen Peak. US-ACAN accepted the name Veslenupen Peak in 1966.

Veslenutane *see* **Fitzgerald Nunataks**

Veslenuten *see* **Ko-iwa Rock**

Vesles *see* **Sanae IV Station**

Vesleskarvet *see* **Vesleskarvet Cliff**

Vesleskarvet Cliff. 71°40' S, 2°51' W. A rock cliff 8 km N of Lorentzen Peak, on the W side of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vesleskarvet (i.e., "the little barren mountain"). US-ACAN accepted the name Vesleskarvet Cliff in 1966.

Veslestabben *see* **Veslestabben Nunatak**

Veslestabben Nunatak. 69°42' S, 37°35' E. A small, isolated nunatak in the central part of Botnneset Peninsula, on the S side of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Veslestabben (i.e., "the little stump"). US-ACAN accepted the name Veslestabben Nunatak in 1968.

Vesletind *see* **Vesletind Peak**

Vesletind Peak. 72°10' S, 3°02' W. A small peak, 5 km ESE of Aurhø Peak, in the S part of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Vesletind (i.e., "the little peak"). US-ACAN accepted the name Vesletind Peak in 1966.

Vespucci, Amerigo. b. March 9, 1454, Florence. Italian merchant and explorer who knew Columbus. He gave his name to what is now South America and, ultimately, to the whole of America. His 2nd voyage to the New World left Lisbon on May 13, 1501, and, via Cape Verde, reached Brazil. He sailed as far south as Río de la Plata, which he discovered, and then probably sailed even farther south, 54°S being his official southing record. However, he claimed that on April 7, 1502, he experienced a day with 15 hours of night in it. This could only have been in 72°S, which would have put him in the Weddell Sea or the Bellingshausen Sea. The trouble is, he claimed to be still along the coast of South America. For Vespucci to have gone as far south as Antarctic waters flies in the face of all we suppose about his travels, so it is highly unlikely that he was ever anywhere near this far south. Almost certainly, he either knowingly exaggerated, or was in error. However, he was the first to prove that the Americas are not part of Asia, as Columbus had supposed, but an entirely new continent. He died on Feb. 22, 1512, in Seville.

Vesta Nunataks. 71°18' S, 68°42' W. A group of nunataks rising to about 1200 m between Grikurov Ridge (in the LeMay Range) and Aeolus Ridge (in Planet Heights), at the S end of the Milky Way, NNE of Atoll Nunataks, in the E part of Alexander Island. Named by UK-APC on Feb. 15, 1988, for Vesta, the asteroid that lies between the orbits of Mars and Jupiter. US-ACAN accepted the name.

Vestal Ridge. 77°53' S, 160°38' E. A steep rock ridge, rising to about 2240 m, in the SE part of Beacon Valley, it forms the divide between Mullins Valley and Farnell Valley, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1993, for James Robie Vestal (b. Oct. 16, 1942, Fla. d. Aug. 4, 1992; known as Robie Vestal), microbiologist at the University of Cincinnati, 1983-92; chairman of the advisory committee to the NSF's Division of Polar Programs, 1990-91. He was in Antarctica in 1984, studying the effect of extreme cold on lichens.

Vestbanen *see* **Vestbanen Moraine**

Vestbanen Moraine. 71°35' S, 11°59' E. A medial moraine in the Humboldt Graben, originating at Bremotet Moraine, on the NW side of Zwiesel Mountain, and trending N in string-like fashion for about 22 km along the W flank of the Petermann Ranges, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by NorAE 1956-60, and named by them as Vestbanen (i.e., "the west path"). US-ACAN accepted the name Vestbanen Moraine in 1970. *See also* **Austbanen**, which parallels it 11 km to the eastward.

Vestbukta. 70°45' S, 4°30' W. A bay indenting the Jelbart Ice Shelf, on the Princess Martha Coast. Named by the Norwegians ("the west bay").

Vestby, Anton Ingvaldsen. b. May 23, 1898, Andebu, Norway, son of Ingvald A. Vestby and his wife Klara Olava. He joined the Norwegian merchant navy as a 2nd cook, and then became a photographer, living for a time in the north of England. He photographed reptiles in Honduras, and immigrated to the USA, lived in Brooklyn, and went to Antarctica as a photographer on the *Jacob Ruppert* during ByrdAE 1933-35. He became a U.S. citizen in 1936, moved to Augusta, Ga., then to Baltimore just after World War II, then on to New Jersey, and died on Dec. 1, 1987, in Savannah, Tenn.

The *Vesterlide*. Built as an 836-ton, 3-masted barque in Nova Scotia in 1872, she was bought by Chris Chistensen's Ørnen Company in 1904, and converted into an 897-ton whale coal store, auxiliary ship, and cooking ship, having 3 cookery boilers installed (she was the second ship ever to be converted into a whaler). She supported the *Admiralen* in the Arctic in 1905, and performed the same service in the South Shetlands in 1906-07. In 1908 she was sold to Søren L. Christensen's Nor Company, and used as a whale cookery ship off the Patagonian coast of Chile, and also in the Falklands. She supported the *Admiralen* in the South Shetlands for the 1908-09 season, her manager being fleet manager August F. Christensen and skipper being Capt. Carl Englund. Her two catchers that season were the *Svip* and the *Ravn*. All three vessels lay at anchor at Deception Island from Nov. 11, 1908 to Feb. 18, 1909, and again from Feb. 23, 1909 to March 3, 1909. After the season was ended, the three vessels went back to Port Stanley, and then up the Chilean coast, investigating new whaling grounds from May to Oct. 1909. In 1910 the *Vesterlide* was sold to the Pacific Company (Lars Christensen, manager), and in 1911 sold to Chile.

Vestfjella *see* **Kraul Mountains**

Vestfold *see* **Vestfold Hills**

The *Vestfold*. A 21,800-ton Norwegian whaling factory ship, built in 1931 (specially with a stern slip, and two side-by-side funnels) by the Furness Shipbuilding Co., of Middlesbrough, for the Vestfold Whaling Company. She was in West Antarctica waters in the 1932-33 season (under the command of Capt. Sverre Skedsmo), in a joint venture between the Vestfold Company and the Viking Whaling Company, of London and Sandefjord (see ***Vikingen***, for details of the Viking Whaling Co.). The same thing happened in 1933-34 season, except that *Vikingen* did not

go south that season. The *Vestfold* began operations that season on Oct. 25, 1933, and ended on March 25, 1934. When the Viking Company took over the Vestfold Company, the vessel went along with the deal. She had two catchers in attendance. The vessel was back in Antarctic waters in 1934-35, leaving Norway on Oct. 2, 1934. *Vikingen* went along as well, as a fuel supply ship and whale-oil carrier. The season was from Dec. 1, 1934 to March 31, 1935, and produced less oil, but prices were higher. The ship was back in 1935-36, 1936-37, and 1937-38. In the last season, she operated from Dec. 8, 1937 to March 15, 1938, with 9 whale catchers. In 1938-39 she operated with 8 catchers. She was in Antarctica again in 1939-40. Legendary whale gunner Alf Skontorp was manager that season, and Emil Haga was captain. There were 305 crew all told, and these were the salient ones that season: Rudolf Ranberg (1st officer), Laurits Nilsen (2nd officer), Erik Nielsen (3rd officer), Tormod Olsen (4th officer), Sverre Samuelsen, Leiv Moe, Kare K. Garman-Vik, Tarjei Levaas, and Sigmund Hansen (mates), Alf Skorpen and Ingvald Antonsen (bosuns), Anders Mathiesen and Henry Tonnesen (carpenters), Christian Dovle (secretary), Hans Somme (doctor), Thorleif Johansen and Helge Berntsen (radio operators), Sverre Enge, Mathias Arnesen, Frithjof Pral Pedersen, Georg Davidsen, Otto Olsen, Ole A. Hansen, Rolf Johannessen, and Karl Thue Nilsen (stewards), Kristian Samuelsen (1st cook), Reidar Johannessen (2nd cook), Harald Pindsle (baker), Reidar Pattersen (butcher), Halfdan Jensen (chief engineer), Osvald Olsen (2nd engineer), Hjalmar Olsen (3rd engineer), Even Evensen (4th engineer), Gustav Wettermark (5th engineer), Dagfinn Berg, Ole Gjestrum, Sofus Sorensen, Hans Hansen, Rolf Jacobsen, Ditlef Bruun, Anders Jacobsen, Leif Kopstad, Kristoffer Kopstad, Anton Johansen, Sverre Andreassen, Alf Andersen Skjeggerød, Ole Abrahamsen, Bjarne Evensen, Cornelius Nilsen, Anker Andersen, Arthur Wangensten-Hansen, and Reidar Hansen (engineers), Gustav Lindstrøm (electrician), Lorentz Abrahamsen (blacksmith), Magnus Andersen (2nd blacksmith), Einar Hansen, Jens Christoffersen, Iver Iversen, Sverre Andreassen, Lars Nilsen, and Magnus Ellefsen (gunners), Adolf Mathisen (whale catcher captain). Many of the above worked both the factory and the catchers. The British requisitioned her as a convoy ship during World War II, and she was torpedoed on Jan. 17, 1943, in the North Atlantic.

Vestfold Hills. 68°33' S, 78°15' E. Also called the Vestfold Mountains. An ice-free oasis, about 510 sq km in area, comprising bedrock, glacial debris, lakes, metabasalt dykes, ponds, rounded rock coastal hills, and offshore islands, overlooking the E side of Prydz Bay, at the N side of Sørsdal Glacier, on the Ingrid Christensen Coast. The hills are essentially subdivided into 3 major west-trending peninsulas bounded by narrow fjords, and most of the hills range between 30 and 100 m above sea level, the highest being 159 m. Discovered on Feb. 20, 1935, by Klarius Mikkelsen, when a brief landing was made in the N portion of the hills, from the *Thorshavn*, during LCE 1934-35. Named by him for the Norwegian county of Vestfold, in which the whaling capital of Sandefjord is situated. The hill area and its offlying islands were photographed aerially by LCE 1936-37. Further brief landings were made by Ellsworth in 1939, and the area was re-photographed aerially by OpHJ 1946-47. Landings were made in 1954 and 1955, by ANARE parties led by Phil Law, who explored the area. In Jan. 1957, the Australians established Davis Station here. US-ACAN accepted the name in 1947, and ANCA followed suit. Originally plotted in 68°40' S, 78°30' E, they have since been replotted.

Vestfold Mountains *see* **Vestfold Hills**

Vestfold Whaling Company. Formed in 1920, as Hvalfanger-Aktieselskapet Vestfold (A/S Vestfold). It was dismantled in the early 1930s, and its assets taken over by a new Vestfold Whaling Company, which was incorporated in London on March 7, 1934. The assets included the whaling factory *Vestfold*.

Vesthaugen *see* **Vesthaugen Nunatak**

Vesthaugen Nunatak. 71°42' S, 23°40' E. Rising to about 1400 m, 24 km NW of Brattnipane Peaks, in the NW part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Re-mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Vesthaugen (i.e., "the west hill"). US-ACAN accepted the name Vesthaugen Nunatak in 1965.

Vesthjelmen *see* **Vesthjelmen Peak**

Vesthjelmen Peak. 71°42' S, 26°18' E. Rising to 1810 m, 13 km W of Austhamaren Peak, E of the lower part of Byrdbreen, in the north-central part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Re-mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Vesthjelmen (i.e., "the west helmet"). US-ACAN accepted the name Vesthjelmen Peak in 1965.

Vesthøgdnutane. 66°24' S, 53°20' E. A group of peaks including Armstrong Peak, in Enderby Land. The Americans have not found sufficient cohesion in the feature to name it, but the Norwegians have (it means "the west high peaks").

Vesthovde *see* **Vesthovde Headland**

Vesthovde Headland. 69°45' S, 37°23' E. A mostly ice-capped headland, marked by several rock exposures, forming the W elevated portion of Botnneset Peninsula, on the E side of Fletta Bay, on the S side of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Vesthovde (i.e., "west knoll"). US-ACAN accepted the name Vesthovde Headland in 1968.

Vesthovde-higasi-iwa. 69°43' S, 37°21' E. Eastern rock exposures on Vesthovde Headland, on the Prince Harald Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1969-84, and named by them on March 26, 1985 (name means "Vesthovde east rocks").

Vesthovde-kita-iwa. 69°42' S, 37°18' E. Northern rock exposures on Vesthovde Headland, on the Prince Harald Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1969-84, and named by them on March 26, 1985 (name means "Vesthovde north rocks").

Vesthovde-naka-iwa. 69°44' S, 37°18' E. Rock exposures in the center of Vesthovde Headland, on the Prince Harald Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1969-84, and named by them on March 26, 1985 (name means "Vesthovde mid rocks").

Vesthovde-nisi-iwa. 69°44' S, 37°15' E. Western rock exposures on Vesthovde Headland, on the Prince Harald Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1969-84, and named by them on March 26, 1985 (name means "Vesthovde west rocks").

Vestkapp *see* **Cape Vestkapp**

Cape Vestkapp. 72°40' S, 19°00' W. About 100 km W of the Kraul Mountains, on the Princess Martha Coast of Queen Maud Land, it is a prominent western projection of the ice front of the Riiser-Larsen Ice Shelf, located midway along the ice front. Mapped by Norwegian cartographers from 1951-52 air photos taken during NBSAE 1949-52, and named by them as Vestkapp (i.e., "west cape"). US-ACAN accepted the name Cape Vestkapp in 1970.

Vestknatten *see* **Vestknatten Nunatak**

Vestknatten Nunatak. 69°48' S, 75°03' E. An elongated nunatak in the center of Polarforschung Glacier, about 24 km ESE of Mount Caroline Mikkelsen, on the Ingrid Christensen Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Vestknatten (i.e., "the west crag"). Visited by ANARE geologist Ian McLeod in Jan. 1969, during the Prince Charles Mountains Survey. US-ACAN accepted the name Vestknatten Nunatak in 1973, and ANCA also accepted the name.

Vestkollen. 67°42' S, 63°01' E. A knoll on the side of Hanging Lake, in the Framnes Mountains. Named by the Norwegians ("the west knoll").

Vestre Høgskeidet. 71°52' S, 11°25' E. The way this feature seems to be described in Norwegian gazetteers is as a glacier between the 2 southern mountain ridges in the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. And that may be correct, despite the name meaning ("western high mountain) (cf **Austre Høgskeidet**). The Germans call it Westliches Hochfeld (which means the same thing).

Vestre Petermannkjeda *see* **Westliche Petermann Range**

Vestre Skorvebreen *see* **Vestreskorve Glacier**

Vestre Svarthornbreen. 71°30' S, 12°19' E. A glacier, 30 km long, between the Westliche Pe-

termann Range and the Mittlere Petermann Range, in the Wohlthat Mountains, in the NE part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians, in association with the nearby Svarthorna Peaks.

Vestreskorve Glacier. 71°57' S, 5°05' E. A broad glacier, to the S of Breplogen Mountain, flowing from a position opposite the head of Austreskorve Glacier northwestward along the W side of Svarthamaren Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vestre Skorvebreen. US-ACAN accepted the name Vestreskorve Glacier in 1967.

Vestreskorvebreen *see* **Vestreskorve Glacier**

Vestryggen. 68°52' S, 90°38' W. A mountain ridge, about 4 km long, SW of Lars Christensen Peak, in the NE part of Peter I Island. Named by the Norwegians ("the west ridge").

Vestskjaera *see* **Child Rocks**

Vestskjera *see* **Child Rocks**

Vestskotet *see* **Vestskotet Bluff**, **West Stack**

Vestskotet Bluff. 73°13' S, 2°09' W. Just S of Armålsryggen, at the W end of Neumayer Cliffs, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vestskotet (i.e., "the west bulkhead"). US-ACAN accepted the name Vestskotet Bluff in 1966.

Veststraumen *see* **Veststraumen Glacier**

Veststraumen Glacier. 74°15' S, 15°00' W. About 68 km long, it flows W along the S end of the Kraul Mountains, into the Riiser-Larsen Ice Shelf. Discovered and photographed aerially during an LC-130 flight over the coast on Nov. 5, 1967, and plotted by USGS from these photos. Named by US-ACAN in 1970, as Endurance Glacier, for Shackleton's old ship which went down near here. However, the British Joint Services Expedition to Elephant Island, in the South Shetlands, in 1970-71, named a glacier on that island as Flog Glacier, a name UK-APC changed on Nov. 3, 1971 to Endurance Glacier, for the more modern *Endurance*. It is not clear why US-ACAN let them get away with that, but they did, and, accordingly, changed their Endurance Glacier to Veststraumen Glacier. The name means "the west stream" in Norwegian, and US-ACAN seems to have adopted this name because it appears on a 1972 Norsk Polarinstitutt map of 1972, as Veststraumen.

Veststupet. 68°48' S, 90°40' W. A precipice at the N side of the mountain the Norwegians call Salen, in the NW part of Peter I Island. Named by the Norwegians ("the western precipice").

Vestsundent *see* **Nishino-seto Strait**

Vestvatnet *see* **Zapadnoye Lake**

Vestveggen. 68°51' S, 90°39' W. A steep rock face or wall, about 4 km long, and mainly snow-covered, E of Tofte Glacier and Sprekkehallet, on the W side of Peter I Island. Named by the Norwegians ("the western wall").

Vestvika *see* **Vestvika Bay**

Vestvika Bay. 69°10' S, 33°00' E. A large bay on the W side of the Riiser-Larsen Peninsula, dividing the Princess Ragnhild Coast and the Prince Olav Coast, in Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Vestvika (i.e., "the west bay"). US-ACAN accepted the name Vestvika Bay in 1970.

Vestvollen *see* **Vestvollen Bluff**

Vestvollen Bluff. 72°06' S, 3°38' E. A rock and ice bluff forming the W side of Festninga Mountain, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vestvollen (i.e., "the west wall"). US-ACAN accepted the name Vestvollen Bluff in 1966.

Vestvorren *see* **Vestvorren Ridge**

Vestvorren Ridge. 73°06' S, 1°53' W. The western of 2 rock ridges which trend northward from Neumayer Cliffs, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vestvorren (i.e., "the west jetty"). US-ACAN accepted the name Vestvorren Ridge in 1966.

Veteheia. 70°47' S, 11°37' E. A bare mountain in the S portion of the Schirmacher Hills, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the cairn hill").

[1]**Veten**. 70°46' S, 11°35' E. A small crag in the ice, on the NW side of the mountain the Norwegians call Veteheia, in the S portion of the Schirmacher Hills, in the E part of Fimbulheimen, in Queen Maud Land. Nameed by the Norwegians ("the cairn").

[2]**Veten** *see* **Veten Mountain**

Veten Mountain. 72°37' S, 3°50' W. About 3 km NW of Høgskavlen Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Veten (i.e., "the beacon"). US-ACAN accepted the name Veten Mountain in 1966.

Skala Veterok *see* **Veterok Rock**

Veterok Rock. 71°54' S, 14°43' E. A prominent rock (the Norwegians call it a crag) just N of Spraglegga Ridge, in the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by them as Skala Veterok, for the dog Veterok (name means "breeze" in Russian), who, with Ugolyëk (name means "ember") was launched into space aboard *Cosmos 110* on Feb. 22, 1966, and spent 22 days in orbit before landing on March 16. US-ACAN accepted the translated name in 1970. The Norwegians call it Veterokhamaren (which means the same thing). *See also* **Skala Ugolyëk**.

Veterokhamaren *see* **Veterok Rock**

Vetlehø.71°56' S, 25°21' E. A mountain, S of Nipe Glacier, and E of the mountain the Norwegians call Storehø, in the central part of the Sør Rondane Mountains. Named by the Norwegians ("the little height").

Veto Gap. 73°24' S, 162°54' E. Between Tobin Mesa and Gair Mesa, it connects the upper Rennick Glacier with Aeronaut Glacier, in the Mesa Range of Victoria Land. So named by the Northern Party of NZGSAE 1962-63 because it was decided that Pinnacle Gap to the N offered the better route from Rennick Glacier to Aviator Glacier, and so this gap was vetoed. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Vetrino Glacier. 62°56' S, 62°30' W. A glacier on Smith Island, in the South Shetlands, flowing for 3.2 km from the NW slopes of Imeon Ridge, N of Drinov Peak, into the Drake Passage. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Vetrino, in northeastern Bulgaria.

Sopka Vetrov *see* **Vetrov Hill**

Vetrov Hill. 66°34' S, 92°58' E. Rising to 21 m above sea level, at the E side of the entrance to McDonald Bay, about 3 km SW of the buildings at Mirnyy Station. Mapped from air photos taken during OpHJ 1946-47, and first visited (and re-mapped) by SovAE 1956, who named it Sopka Vetrov (i.e., "windy hill"). It was also named to honor Aleksandr Ivanovich Vetrov, captain of the *Lena* that year. ANCA translated the name on Oct. 11, 1960, and US-ACAN accepted the Australian naming in 1961.

Vetterstein. 71°34' S, 160°14' E. A rock due N of Mount Toogood, at the S side of the head of Edwards Glacier, in the Daniels Range, in the Usarp Mountains. Named by the Germans.

Bukhta Vetvistaja *see* **Vetvistaja Bay**

Vetvistaja Bay. 66°05' S, 92°58' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Bukhta Vetvistaja. ANCA translated the name on Jan. 19, 1989.

Ozero Vetvistoe. 66°05' S, 100°36' E. A lake in the SE part of Belyj Peninsula, in the Bunger Hills. Named by the Russians.

Lednik Vetvistyj *see* **Rofe Glacier**

Mount Veynberg. 67°27' S, 67°34' W. Rising to about 900 m, in the S part of Haslam Heights, just W of Nye Glacier, and N of Whistling Bay, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Roughly surveyed by Fids from Base E in 1948, photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960,

for Boris Petrovich Veynberg (1871-1942), Soviet physicist specializing in ice flow. US-ACAN accepted the name in 1965.

Ostrov Vhodnoj *see* **Vkhodnoy Island**

Vicars Island. 65°51' S, 54°24' E. A small, ice-covered island, about 3.5 km off the coast of Enderby Land. Discovered on Jan. 12, 1930 by BANZARE, and named by Mawson for Vicars Woollen Mill, in Marrickville, NSW, which provided cloth for the expedition's uniforms. US-ACAN accepted the name in 1947, and ANCA followed suit on Dec. 7, 1976.

Base Vicecomodoro Marambio *see* **Vicecomodoro Marambio Station**

Isla Vicecomodoro Marambio *see* **Seymour Island**

Vicecomodoro Marambio Station. 64°17' S, 56°45' W. Known officially as Base Aérea Vicecomodoro Gustavo A. Marambio (Vice Commodore Gustavo A. Marambio Air Force Base), but more commonly referred to as Base Marambio, or just Marambio. Year-round Argentine scientific base, 196 m above sea level on Seymour Island (or Isla Vicecomodoro Marambio, as the Argentines call it), 100 km from Esperanza Station, off the coast of the NE tip of the Antarctic Peninsula. It was later moved to 64°13' S, 56°39' W. **Oct. 29, 1969**: The station opened. **1970 winter**: Jorge Ángel Berreta (leader). **1971 winter**: Edmundo Luque (leader). **1972 winter**: Jacinto Storino (leader). **1973 winter**: Carlos Miguel Vázquez (leader). **1974 winter**: Hugo Fedderson (leader). **1975 winter**: Félilx Vidaechea (leader). **1976 winter**: Edgardo Raúl Bergamaschi (leader). **1977 winter**: Anselmo Ramón Aguilera (leader). **1978 winter**: Ricardo Abel D'Onofrio (leader). **1979 winter**: Juan Carlos Fernández (leader). **1980 winter**: Carlos Alberto Gut (leader). **1981 winter**: Leónidas Aldo Loza (leader). **1982 winter**: Óscar Emilio Quinteros (leader). **1983 winter**: Pedro Agustín Maya (leader). **1984 winter**: Luis María Ocampo (leader). **1985 winter**: Rubén P. Abalos Aliaga (leader). **1986 winter**: Luis M. Schweizer (leader). **1987 winter**: Rodolfo E. Drigatti (leader). **1988 winter**: Leónidas Aldo Loza (leader). **1989 winter**: Robert Colodro (leader). **1990 winter**: Major Mario A. Compagnucci (leader). **1991 winter**: Luis María Ocampo (leader). **1992 winter**: Roberto Colodro (leader). **1993 winter**: Juan José Bordet (leader). **1994 winter**: Carlos Monti (leader). **1995 winter**: Roberto Colodro (leader). **1996 winter**: José Óscar García (leader). **1997 winter**: Ricardo Vicente Valencia (leader). **1998 winter**: Juan Luis Micheloud (leader). **1999 winter**: Óscar Antonio Céliz (leader). **2000 winter**: Fernando Klix (leader). **2001 winter**: Guillermo Lozada Acuña (leader). **2002 winter**: Rubén Omar Muñoz (leader). **2003 winter**: Osvaldo Enrique Marchesini (leader). **2004 winter**: Héctor Ricardo Ludueña (leader). **2005 winter**: Rubén Esteban Lianza (leader). **2006 winter**: Juan Pedro Brückner (leader). **2007 winter**: Abel Christian Colman (leader), Noemi Troche (meteorologist). **2008 winter**: Ricardo Ángel Valladares (leader). **2009 winter**: Enrique Óscar Videla (leader).

Vicente Station *see* **Pedro Vicente Maldonado Station**

Vickers Nunatak. 85°20' S, 176°40' W. A prominent and massive nunatak in the upper part of Shackleton Glacier, about 20 km SE of Mount Black. Named by the Southern Party of NZGSAE 1961-62, for Eric Vickers, radio operator at Scott Base that year (and for the winter of 1962), who was in almost daily contact with the Southern Party for the 3 months they were in the field. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Baie Victor *see* **Victor Bay**

Mont Victor *see* **Mount Victor**

Mount Victor. 72°36' S, 31°16' E. Rising to 2590 m, between Mount Van Mieghem and Mount Boë, in the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont Victor, for Paul-Émile Victor. US-ACAN accepted the name Mount Victor in 1962.

Victor, Paul-Émile. b. June 28, 1907, Geneva, of French parents. Polar explorer, scientist, adventurer, formerly in the U.S. Army and highly decorated. He was with Charcot in Greenland in the *Pourquoi Pas?* in 1934, and from the late 1940s was the prime mover in French Antarctic exploration. He was director of Expéditions Polaires Françaises, and from 1952 to 1958 was special polar consultant to the U.S. Armed Forces. He and Bertrand Imbert led the 1955-56 French Antarctic Expedition (the two of them did not winter-over). He led the French Antarctic Expedition of 1959-61, on the *Norsel*, and the expeditions of 1961-62, 1963-64, 1964-65, 1965-66, 1966-67, 1967-68, and 1968-69, each time on the *Magga Dan*. He wrote several books, retired to Bora Bora in 1977, and died on March 7, 1995.

Victor Bay. 66°20' S, 136°30' E. A bay about 26 km wide, indenting the W coast of Adélie Land for about 11 km between Pourquoi Pas Point and Mathieu Rock. The bay, the largest in Adélie Land, is marked by an extensive chain of icebergs breaking away from the high tongue of the Commandant Charcot Glacier. Delineated from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1955, for Paul-Émile Victor. The French called it Baie Paul-Émile Victor, but in 1995 accepted the shortened name Baie Victor.

Victor Cliff. 85°20' S, 119°12' W. An abrupt rock cliff, 2.5 km long, it forms the SW shoulder of the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Lawrence J. Victor (b. 1936), aurora scientist at Byrd Station in 1961.

Île Victor Hugo *see* **Hugo Island**

Isla Victor Hugo *see* **Hugo Island**

Victor Hugo Island *see* **Hugo Island**

Victor Rock *see* **Vietor Rock**

Glaciar Victoria *see* **Victory Glacier**

Monte Victoria *see* **Victoria Peak**

Mount Victoria *see* **Victoria Peak**

Punta Victoria. 64°48' S, 63°31' W. A point between Dorian Bay and Punta Gloria, on the NW coast of Wiencke Island, in the Palmer Archipelago. The name first appears on a Chilean chart of 1947, and has been in use ever since.

Victoria Glacier *see* **Victoria Lower Glacier**, **Victoria Upper Glacier**

Victoria Land. 74°15' S, 163°00' E. That part of Antarctica that fronts on the W side of the Ross Sea, it extends from about 70°30' S to 78°S, and from the Ross Sea to the edge of the Polar Plateau. Sometimes split into two sections (but not officially)—northern Victoria Land and southern Victoria Land. Discovered by Ross in Jan. 1841, and named by him for Queen Victoria. In fact, Ross intended the name for the entire continent. It was first landed on—at Cape Adare—by a Norwegian party from the *Antarctic*, on Jan. 24, 1895. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Victoria Land Basin. The westernmost of the three N-S trending sedimetary basins underlying the Ross Sea.

Victoria Land Traverse 1958-59. Also known as the Little America—Victoria Land Traverse. Bert Crary led the traverse, accompanied by chief glaciologist Charles Wilson, glaciologist Stephen den Hartog, and seismologist Hugh Bennett.

Victoria Land Traverse 1959-60. A seismic and topographic traverse in Tucker Sno-Cats, led by seismologist Frans van der Hoeven, and including Al Stuart (glaciologist and deputy leader), Claude Lorius (French glaciological observer), T.T. Baldwin (transport officer), Arnold Heine (NZ surveyor), Warren Jackman (USN photographer), Louis Roberts (surveyor and cartographer), William Smith (psychologist), and John Weihuapt (seismologist). It began at Hut Point Peninsula, on Ross Island, leaving Scott Base on Oct. 16, 1959, and then ascended to the plateau of Victoria Land via the Skelton Glacier. From there they followed a NW course on the interior plateau to 71°09' S, 139°12' E. They returned eastward, keeping S of the 72nd parallel, to 72°37' S, 161°32' E (on the E side of the Outback Nunataks), from which point the party was taken off by VX-6 aircraft. They had covered 1530 miles. Note: Most, if not all, of these men had features named after them.

Victoria Lower Glacier. 77°18' S, 162°40' E. Also called Lower Victoria Glacier. It occupies the lower (eastern) end of Victoria Valley, where it appears to merge with Wilson Piedmont Glacier, in Victoria Land. Named by VUWAE 1958-59, for their alma mater (Victoria University of Wellington, New Zealand), which sponsored the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Victoria Peak. 64°29' S, 62°34' W. A cone-shaped, snow-covered peak rising to 485 m, on the W side of Chiriguano Bay, 3 km ESE of Mount Bulcke, in the S part of Brabant Island, in the Palmer Archipelago. Discovered and photographed in Jan. 1898, by BelgAE 1897-99. It first seems to appear as Mount Victoria on a British chart of 1921, that name perhaps reflecting whaling usage in the decade prior to that. It was surveyed by Fids on the *Norsel* in April 1955,

and the name Mount Victoria was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It was photographed aerially by FIDASE in 1956-57, and appears on a British chart of 1959. However, on July 7, 1959, UK-APC redefined it as Victoria Peak, and US-ACAN accepted that name in 1960. It appears as such on a British chart of 1961. It appears on a 1947 Chilean chart as Monte Victoria, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Victoria University of Wellington Antarctic Expeditions. Abbreviated (as from 1960) to VUWAE (q.v.).

Victoria Upper Glacier. 77°17' S, 161°33' E. Also called Upper Victoria Glacier. Occupies the upper (NW) end of Victoria Valley, in Victoria Land. Named by VUWAE 1958-59 (*see* **Victoria Lower Glacier**). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Victoria Upper Lake. 77°19' S, 161°35' E. A meltwater lake at the terminus of Victoria Upper Glacier, in Victoria Land. Named descriptively, and for the glacier, by Parker Calkin (*see* **Calkin Glacier**) in 1964. US-ACAN accepted the name in 1970.

Victoria Upper Névé. 77°16' S, 162°05' E. A névé with an area of about 25 sq km, at the head of Victoria Upper Glacier, between the Clare Range and the Cruzen Range, eastward of the Fortress, in Victoria Land. Named by US-ACAN in 2005. NZ-APC accepted the name on Sept. 12, 2005.

Victoria Valley. 77°23' S, 162°00' E. An extensive and spectacular dry valley, formerly occupied by Victoria Glacier, near McMurdo Sound, it extends from Victoria Upper Glacier to Victoria Lower Glacier. Named by VUWAE 1958-59 (*see* **Victoria Lower Glacier**), for their university. US-ACAN accepted the name in 1962.

Victory Glacier. 63°49' S, 58°25' W. A gently sloping glacier, 13 km long, flowing ESE from the N end of the Detroit Plateau, on Trinity Peninsula, into Prince Gustav Channel immediately N of Pitt Point. Discovered by Fids from Base D in Aug. 1945, a week after VJ Day. Surveyed by them in Dec. 1946, and named by them appropriately. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1959-60. It appears on a British chart of 1962. There is a 1978 Argentine reference to it as Glaciar Victoria. The Chileans call it Glaciar Vivar, for Carlos Vivar Tapia, taxidermist with the Instituto Antártico Chileno, who was a member of ChilAE 1970-71.

Victory Mountains. 72°40' S, 168°00' E. A major group of mountains inland from the Borchgrevink Coast of Victoria Land. They measure about 160 km long and 80 km wide, and are bounded primarily by the Polar Plateau, Tucker Glacier, Mariner Glacier, Whitehall Glacier, and the Ross Sea. Like the Admiralty Mountains, the group probably includes 2 main ranges, and several lesser ones. The highest peaks are: Mount Riddolls, Mount Hancox (both over 10,000 feet), Gless Peak, Mount Brewster, and Hawkes Heights. The division between the Victory Mountains and the Concord Mountains is less precise but apparently lies in the vicinity of Thomson Peak. The expeditions of Ross, Borchgrevink, Scott, and Shackleton all saw these mountains from the area of the Ross Sea. Mapping of the interior mountains was done by USGS largely from USN air photos and ground surveys conducted by NZ and U.S. parties in the 1950s. Named by NZGSAE 1957-58, in association with the Admiralty Mountains, and with the intention that its individual features would be named after naval victories. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Victory Nunatak. 68°45' S, 64°22' W. A conspicuous island-like nunatak in the Larsen Ice Shelf, with 3 rocky summits, the southernmost and highest being 360 m, it rises above the ice in the SE part of Mobiloil Inlet, W of Crabeater Point, and 13 km SE of Kay Nunatak, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 23, 1935, and first mapped roughly from these photos by U.S. cartographer W.L.G. Joerg, in 1936. Re-photographed aerially in Sept. 1940, by USAS 1939-41, on Aug. 14, 1947, by Fids from Base E, and again in Dec. 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in Dec. 1958, and so named by them because, when viewed aerially it looks like 3 dots and a dash, Morse Code for V for Victory. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Lake Vida. 77°23' S, 161°57' E. North of Mount Cerberus, in Victoria Valley, Victoria Land. Named by VUWAE 1958-59 for Vida (*see also* **Lake Vanda** and **Lake Vashka**), a dog on BAE 1910-13. NZ-APC accepted the name, and US-ACAN followed suit in 1962. In 1989-90 the Americans built a refuge hut and cache here, in 77°20' S, 162°00' E, 600 feet from the SW shore of the lake.

Cabo Vidal *see* **Forbes Point**

Islote Vidal *see* **Vidal Rock**

Vidal, Joseph-Antoine. b. Feb. 10, 1810, Toulon. Carpenter on the *Zélée* during FrAE 1837-40.

Vidal Rock. 62°30' S, 59°43' W. A rock, rising to 1 m above sea level, 1.3 km W of Ferrer Point, between that point and Basso Island, in the S part of Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, who first named it Islote Silvia, for the daughter of President Gabriel González Videla (*see* **Silvia Rock**). However, it appears on their 1947 chart as Islote Vidal, named for Marinero 1st class Osvaldo Vidal, navigator in charge of echo-sounding on the *Iquique* during that expedition. It appears on a 1961 Chilean chart as Islote Navegante Vidal, but the name accepted by the 1974 Chilean gazetteer was Islote Vidal. Further charted by an RN Hydrographic Survey unit on the *Protector*, in 1964. It appears on a British chart of 1968 as Vidal Rock, and that was the name accepted by UK-APC on Nov. 3, 1971. US-ACAN accepted that name in 1972. It appears as such in the 1974 British gazetteer.

The *Vidal Gormaz*. Chilean ship used on ChilAE 1995-96 (Captain Juan Olguín Peña).

Glaciar Vidaurrazaga *see* **Vidaurrazaga Glacier**

Paso Vidaurrazaga. 63°37' S, 57°26' W. A small marine passage, about 350 m wide, between Eagle Island to the SW and Beak Island to the NE, off Trinity Peninsula. Named by the Chileans for Alberto Vidaurrazaga (*see* **Vidaurrazaga Glacier**). The Argentines call it Pasaje Lidia.

Vidaurrazaga Glacier. 64°49' S, 62°50' W. Flows northwestward into Aguirre Passage, NE of Waterboat Point, on the Danco Coast, on the W coast of Graham Land. The British Imperial Antarctic Expedition of 1920-22 named this feature in 1921, as Mount Lunch-Ho! Glacier, in association with the nearby mountain they had called Mount Lunch-Ho!, or Mount Luncho (*see* **Mount Frödin**). Both the glacier and the mountain appear as such on their chart of 1921. The glacier and the mountain were both surveyed by ChilAE 1950-51, and named by them as Glaciar Vidaurrazaga and Monte Bertil Frödin respectively, the former for Chilean Air Force architect Alberto Vidaurrazaga, who took part in the construction that season of Presidente Gabriel González Videla Station. It appears as such on their 1951 chart, and was the name accepted by the Chilean gazetteer of 1974. UK-APC accepted the translated name on March 31, 2004.

Punta Vidaurre. 62°21' S, 59°05' W. A separate and distinct point, named by the Chileans, and in exactly the same coordinates as Ross Point (what the Chileans call Punta Ross), on the SW side of Nelson Island, in the South Shetlands.

Roca Vidaurre *see* **Vidaurre Rock**

Vidaurre Rock. 63°18' S, 57°56' W. A rock, breaking the surface at low water, about 80 m ENE of Acuña Rocks, in the Duroch Islands, about 700 m from the extreme NW of Islote Vera, NW of Covadonga Harbor, off Trinity Peninsula. Named by ChilAE 1949-50 as Roca Vidaurre. US-ACAN accepted the translated name in 1964.

Vidbol Glacier. 64°40' S, 62°30' W. A glacier, 5.5 km long and 1.5 km wide, flowing northwestward from the N slopes of Pulfrich Peak, W of Henryk Peak and E of Mount Dedo, on Arctowski Peninsula, to enter Gerlache Strait at Orne Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Bulgarians on Nov. 23, 2009, for the Vidbol River, in northwestern Bulgaria.

Viddalen *see* **Viddalen Valley**

Viddalen Valley. 72°20' S, 2°45' W. A wide, open, ice-filled valley draining eastward between Borg Massif on the one hand, Jutulstraumen Glacier on another, and the S end of Ahlmann Ridge on the third, in Maudeheimvidda, in Queen Maud Land. Surveyed from the ground and photographed aerially by NBSAE 1949-52, and mapped from these efforts, and also from air

photos taken in 1958-59 during the long NorAE 1956-60, by Norwegian cartographers, who named it Viddalen (i.e., "the wide valley"). US-ACAN accepted the name Viddalen Valley in 1966.

Viddalskollen *see* **Viddalskollen Hill**

Viddalskollen Hill. 72°25' S, 2°19' W. A hill, 10 km SW of Nashornet Mountain, and W of Jutulstraumen Glacier, on the S side of Viddalen Valley, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Viddalskollen (i.e., "the wide valley's knoll"), in association with Viddalen Valley. US-ACAN accepted the name Viddalskollen Hill in 1966.

Isla Videla *see* **Bates Island**

Videla, Eleazar. Teniente de navío in the Argentine Navy, he was captain of the *Uruguay* between Oct. 8, 1917 and Jan. 3, 1919.

Vidin Heights. 62°32' S, 60°10' W. Ice-covered heights, 8 km long and trending WSW-ENE toward Inott Point, occupying the central area of Varna Peninsula, on Livingston Island, in the South Shetlands. Their highest point, rising to over 600 m, is located 4.35 km NNE of Leslie Hill, 9.45 km N by E of the summit of Mount Bowles, and 1.8 km WNW of Mount Samuel. Sharp Peak is at their ENE extremity. Named by the Bulgarians on Aug. 19, 1997, for the town of Vidin, in northwestern Bulgaria. UK-APC accepted the name on April 23, 1998.

Vidulich, Victor. b. 1912, Simonstown, South Africa, son of Croatian immigrant Victor Valentine Vidulich, a German reservist arrested by the British in 1919 and paroled to Cape Town, where he became a fisherman. Young Victor went to sea for the first time as an ordinary seaman on the *Discovery II*, 1934-35, and a fireman on the same vessel, 1935-38. During World War II he sailed on merchant ships, becoming an engine room storeman. On May 5, 1944, in Glasgow, he signed on to the British tanker *British Merit*, which left Malta on Nov. 14, 1944, bound for New York, arriving there on Dec. 10, 1944. On March 16, 1945, he was in New York, and signed on to the *Queen Mary*, which left port the following day. In the dying days of the war he was in Glasgow, where he signed on to the *Ancylus*, bound for New York. He developed an infection of the jaw, and had to be hospitalized in New York on his arrival on May 3. However, on July 21, 1945, he signed on to the *Laurelwood*, due to sail for Texas the next day, but the ship did not leave port on time, so Vidulich signed on to the *Adolph S. Ochs*, and on July 29, 1945, sailed with her for Bari, Italy. In 1946, he left Southampton, bound for Durban.

Viehoff Seamount *see* **Orca Seamount**

Vieira, Juan. Veteran Portuguese skipper of the Chilean sealer *Pichincha*, in the South Shetlands in 1902.

The *Viens-tu?* French yacht, skippered by Claude Plée, which visited the South Shetlands and the Antarctic Peninsula in 1998-99.

Viereck, Hans-Werner. 3rd officer on the *Schwabenland* during GermAE 1938-39.

La Vierge *see under* **L**

Îlot de la Vierge *see under* **L**

Isla Viernes *see* **Wednesday Island**

Roca Vietor *see* **Vietor Rock**

Vietor Rock. 62°41' S, 61°06' W. A rock off South Beaches, Byers Peninsula, in the South Shetlands, it is connected to the S coast of Livingston Island by a spit. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Alexander Orr Vietor (b. Nov. 13, 1913, NY. d. March 9, 1981, NYC), curator of maps at the Yale University Library, who discovered the original log books of the *Hersilia*, 1819-20, and the *Huron*, 1820-21. US-ACAN accepted the name in 1960. It appears on a Chilean map of 1970 as Roca Vietor. It appears (misspelled) as Victor Rock in the 1974 British gazetteer.

Mount Viets. 78°14' S, 86°14' W. A sharp pyramidal mountain rising to over 3600 m, 3 km N of Mount Giovinetto, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, under Charles Bentley, who named it for Ronald Lamont Viets (b. Nov. 14, 1918, Groton, Conn.), geophysicist at Little America in 1957. US-ACAN accepted the name in 1960.

Isla Vieugué *see* **Vieugué Island**

Vieugué Island. 65°40' S, 65°13' W. An island, 5 km long, and consisting basically of a rock massif rising to about 300 m above sea level, at the W side of Grandidier Channel, 1.5 km NW of Duchaylard Island, 17.5 km E of Renaud Island, and 20 km WNW of Cape García, off the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1903-05, and named by Charcot as Île Vieugué, for Paul-Antoine-Charles Vieugué, French chargé d'affaires at Buenos Aires, who assisted the expedition when it arrived there in Dec. 1903. Monsieur Vieugué was married to the sister of the 1st Viscount Ullswater, and would later be posted to St. Petersburg, Madrid, and Brussels during the course of his diplomatic career. It appears as such on Charcot's map of 1906, and also on a 1916 British chart. It appears on a British chart of 1908 as Vieugué Island. On Bongrain's chart of 1914, this island and the Pitt Islands appear collectively as Îles Martin. On a British chart of 1930, and on Rymill's 1938 expedition map of BGLE 1934-37, this island appears as Vieugue Island (i.e., sans accent). On an Argentine map of 1946 it appears as Isla Vieugué, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Vieugué Island in 1950, and UK-APC followed suit on Sept. 8, 1953. As such it appears in the 1955 British gazetteer, and on a British chart of 1961. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58. On a 1957 Argentine chart it appears in error as Isla Duchaylard.

Viéville Glacier. 62°08' S, 58°20' W. An extensive glacier, immediately S of Krak Glacier, occupying a stretch of the E coast of Admiralty Bay for 6 km, at the head of Lussich Cove, between Manczarski Point (near Vauréal Peak) and Point Hennequin, at Martel Inlet, King George Island, in the South Shetlands. Charted by FrAE 1908-10, and named by Charcot. The Chileans call it Vieville Glacier and the Argentines spell it Glaciar Viéville. Since the mid-1950s it has been receding to a point where it no longer exists.

Punta View *see* **[1]View Point**

[1]View Point. 63°33' S, 57°21' W. The E tip of a promontory, rising to 150 m above sea level, forming the NW entrance point of Duse Bay, on the S coast of Trinity Peninsula. Discovered by J. Gunnar Andersson during SwedAE 1901-04. Surveyed by Fids from Base D in Nov. 1945, and so named by them because from this promontory good panoramic surveying photographs were obtained. It appears on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1951 as Punta Vista (which means the same thing), and that name was accepted by the 1974 Chilean gazetteer. It appears on a 1953 Argentine chart as Punta View. Base V was established here in 1953. The London *Times* of June 7, 1955, carried a report from their correspondent in Buenos Aires, filed the day before, titled "New Argentine Base in Antarctic," in which the new Argentine refugio of Cristo Redentor is discussed, as being located on Punta Villegas. As there seem to be no other non-derivative references to this name Punta Villegas, the mention in the *Times* must be treated with extreme caution (*see* **Caleta Villegas**). It appears on a 1957 Argentine chart as Punta Visión, and that name was accepted by the 1970 Argentine gazetteer.

[2]View Point. 77°02' S, 163°05' E. On the SE side of Granite Harbor, E of Harbour Ice Tongue, in Victoria Land. Named descriptively by Grif Taylor's Granite Harbour Geological Party, during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

View Point Station *see* **Base V**

Punta Vieytes *see* **Punta Valparaíso**

Vigen Cliffs. 83°23' S, 50°07' W. Rising to about 1750 m, to the E of Gabbro Crest, on the SE side of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Oscar C. Vigen, budget and planning officer with the NSF's Division of Polar Programs, 1968-85. UK-APC accepted the name on May 21, 1979.

Cabo Vigía *see* **Cape Lookout**

Isla Vigía *see* **The Watchkeeper**

Islote Vigía *see* **The Watchkeeper**

Rioca Vigía *see* **The Watchkeeper**

Vigil, Lauro. Argentine aviation lieutenant, the medical officer and 2nd-in-command at Órcadas Station in 1950.

Vigil Spur. 71°06' S, 165°30' E. A spur forming the SW extremity of Mount Bolt, it borders (and overlooks) Ebbe Glacier, in the Anare Mountains. So named by the Northern Party of NZGSAE 1963-64, because the party spent a long time here due to a blizzard and whiteout. NZ-APC accepted the name, and US-ACAN followed suit in 1954.

Cabo Vigilante *see* **Cape Lookout**

Vigridisen. 70°15' S, 8°30' E. The ice shelf S of the point the Norwegians call Breiodden, on the Princess Astrid Coast. Named by the Norwegians ("Vigrid ice"), after Vigrid, the dike from where they used to ride off to battle in old Norse mythology.

Vihren Peak. 62°40' S, 60°02' W. A sharp peak rising to about 1150 m, in Levski Ridge, next E of Vitosha Saddle, 560 m SSW of Helmet Peak, 1.55 km NE by E of Great Needle Peak, and 2.3 km N by W of Radichkov Peak, overlooking Huron Glacier to the NNW and Magura Glacier to the SE, in the Tangra Mountains of eastern Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the summit of Pirin Mountain, in Bulgaria.

Lake Vijaya. 70°46' S, 11°41' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Cabo Vik *see* **Cape Vik**

Cape Vik. 60°40' S, 45°40' W. Marks the W side of the entrance to Marshall Bay, on the S side of Coronation Island, in the South Orkneys. It appears to be first shown and named on a chart drawn up by Petter Sørlle in 1912-13. However, Capt. Moe also surveyed it at that time, and it appears on his Jan. 1913 chart as Cape Evensen. It appears on a 1933 Argentine chart as Cabo Vik, and that name was accepted by the Argentine gazetteer of 1970. It was re-charted by the Discovery Investigations in 1933, and appears as Cape Vik on their 1934 chart. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was surveyed from the ground by Fids from Signy Island Station between 1956 and 1958.

Vikenegga. 74°19' S, 9°42' W. A mountain in the N part of Helsetskarvet, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for teacher and sportsman Kåre Viken (b. 1905), Resistance leader during World War II. This may be the same feature as the one the Germans call Wallnerspitze.

The *Viking.* Norwegian floating factory whaler out of Sandefjord, she was in in the Weddell Sea in 1927-28, the first modern whaler (with a stern slipway built in, so whales could be hauled up easily on board) into Antarctic waters.

Viking Heights. 72°04' S, 23°24' E. A prominent, flat-topped mountain, rising to 2960 m, between Tanngarden Peaks and Mount Widerøe, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Vikinghøgda (i.e., "the Viking height"). US-ACAN accepted the name Viking Heights in 1966.

Viking Hills. 76°42' S, 161°48' E. A range of low hills characterized by outcroppings of reddish granite in chocolate-brown dolerite, between Flagship Mountain and Mount Davidson, in the Convoy Range of Victoria Land. Visited by VUWAE 1976-77, led by Christopher J. Burgess, who named the feature in association with Mars Hill, and also from their coloration, reminiscent of the color images of Mars obtained by *Viking I* and *Viking II*, the NASA planetary probes that landed on Mars in July and September of 1976. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Viking Valley. 71°49' S, 68°20' W. A valley on the E side of Mars Glacier, containing a braided stream which feeds into Secret Lake, on Alexander Island. This area was the prime research site of the 1992-93 Mars Glacier field party led by David Wynn-Williams. Named by UK-APC on Dec. 2, 1993, in association with Mars Glacier. The name Viking comes from NASA's Viking Lander project which first searched for life on Mars in 1976. US-ACAN accepted the name in 1993.

The *Vikingen*. The name is Norwegian for "the Viking," and so the ship is also known as the *Viking*. To call the vessel "The *Vikingen*" is like saying "The the *Viking*," but convention must be adhered to when indexing in English. A 12,639-ton whaling factory ship built by Swan Hunter and Wigham Richardson, of Wallsend-on-Tyne, for the Viking Whaling Company, of London and Sandefjord. She could also do service as an oil tank ship, if necessary. The Viking Company incorporated on May 3, 1928, as the Bouvet Whaling Company (the name changed to Viking on Sept. 24, 1928), had as directors Sir William Lamond Allardyce (chairman; b. 1861. d. June 9, 1930; governor of the Falkland Islands), Lord Churston, Erling Dekke Naess, Olaf Hansen, Torger Moe, and Johan Rasmussen. She conducted successful trials on Aug. 31, 1929, and her first season in Antarctic waters was 1929-30, in West Antarctica, with seaplanes aboard. Sverre Skedsmo was whaling manager aboard, and Capt. Johansen was skipper. Johan Hjort was aboard that season, as observer. The vessel, one of the smallest of the newly-built factory ships that season, was actually built as a tanker, with whale-processing machinery below decks. She had 5 whale catchers — *Vikingen I*, *Vikingen II*, etc, through *Vikingen V*. From Oct. 23 to Dec. 7, 1929, 24,100 barrels of whale oil were produced from their catch (there were 40 boilers installed). On March 2, 1930, with 81,500 barrels of whale oil, she left the whaling grounds, with her five catchers in tow, headed for South Georgia, where the catchers were laid up. On April 7, 1930, *Vikingen* arrived back in Sandefjord, where she put ashore the factory and whaling crews. Then she headed to Amsterdam and Fredrikstad, to discharge her cargo. The net amount realized from the whale oil was £338,943 5s 8d, and the total cost of the season's operations was £178,005 13s 8d, leaving a gross profit for the company of £160,937 12s. On Aug. 7, 1930, *Vikingen* left Sandefjord for Curaçao, to pick up fuel, and on Sept. 23 began operations in Antarctic waters, for the 1930-31 season. By Nov. 30 she had made 36,500 barrels of whale oil. Operations ended in March 1931, and on April 24, 1931, she arrived back in Sandefjord, where her crew was paid off and the catchers laid up. Then *Vikingen* sailed to Holland to discharge her cargo. Due to over-fishing, the Norwegian companies decided not to go to Antarctica in the 1931-32 season, and the Viking Company complied with this. The next season, operations began in Antarctic waters on Oct. 23, 1932, and ended on March 27, 1933. Capt. Skesdmo was still manager. 163,747 barrels of whale oil were produced, at £13 a ton, and delivered on the continent of Europe. The average blue whale produced 117.8 barrels of whale oil. In 1933 the vessel was overhauled by its original builders, which brought some employment to depression-torn Newcastle. As *Vikingen* could not make it south for the 1933-34 season, an arrangement was made with the Vestfold Whaling Company, to send down the *Vestfold*, and split the profits with them. 20,000 tons were pre-sold to Procter & Gamble, in the USA, at £12 a ton, and 8000 tons for delivery in Denmark. *Vikingen* went south again in 1934-35, but merely to support the *Vestfold*. For the 1935-36 season, a new catcher, *Vikingen VI*, was built by Smith's Dock & Engineering Co., of Middlesbrough. The company also hired a seventh whale catcher for the season, the season beginning on Dec. 1, 1935. This was the first season since 1930-31 that *Vikingen* had gone south as a factory ship. Yet another catcher, *Vikingen VII*, was delivered by Smith's in time to join the *Vikingen* for the 1936-37 season, but despite this the operation was done with only 6 catchers (adhering to international law of a maximum of 6 catchers per factory ship), beginning on Dec. 8, 1936. The 1937-38 season was different. Given the international uncertainty (i.e., Hitler), a number of whaling companies, including Viking, banded together and sent 12 expeditions south, with *Vikingen* acting as a transport ship rather than a whaler. In March 1938 *Vikingen* and catchers I through V were sold to German buyers, the *Vikingen* becoming the *Wikingen*. This was really an exchange for a new 14,500-ton motor tanker, to be built and ready by May 1939. The Viking Company wound up as war was declared. It was not the end of the *Vikingen*, however, not by a long way. Her next incarnation was as the *Empire Venture*.

Vikinghögda *see* **Viking Heights**

Hrebet Vil'gel'ma *see* **Pieck Range**

Pika Vil'gel'ma *see* **Pieck Range**

Gora Vil'kickogo. 70°30' S, 65°48' E. A peak, about 5 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians. *See* **Webster Peaks**.

Villa Las Estrellas. The village of the stars. The permanent Chilean village at Frei Station, the first of its kind anywhere in Antarctica (built

in 1984; there is one other), designed to strengthen Chile's claim on this portion of Antarctica. It is actually located in the "comune" of Antártica, in the "provincia" of Antártica (it is the capital of the province), in the "región" of Magallanes y Antártica Chilena, and is (according to them) an integral part of Chile. The 2002 census showed 34 inhabitants (19 men and 15 women), mostly scientists, explorers, and Chilean Army officers and their families. There are now 14 houses, all 90 sq m in size. About 88 people (including women and children) live here year round, and the village can grow to as many as 135 in the summer. There is a constant phone and internet link with Santiago, and there is TV. The village has many visitors from other stations, national and international. The post office is a red wooden hut on stilts, with a blue roof and blue door; the school has two teachers, and the kindergarten has one; the hospital has a doctor and nurse, and there is a dental clinic. The bank is a branch of the Banco de Crédito y Inversiones, and the Catholic chapel is called Santa María Reina de Paz. The village also has an airstrip, a supermarket, library, a hotel for 20 guests, a gift shop, and a civil registration office. The women play bingo, and there is even a winter Olympics in the gym.

Nunatak Villacian. 66°14' S, 61°32' W. Immediately W of Punta Anchorena, in the extreme S of Jason Peninsula. One of the numerous nunataks on the peninsula named by the Argentines.

Cabo Villagra. 62°57' S, 62°34' W. A cape, 2.35 km SSW of Jirecek Point, on the NW coast of Smith Island, in the South Shetlands. Named by the Argentines.

Villalón, Antonio *see* **Órcadas Station**, 1942

Villalón, Gregorio *see* **Órcadas Station**, 1944,1947

Villalón, Luis Pardo *see under* **Pardo**

Villalón Passage. 62°25' S, 59°46' W. A narrow passage between Barrientos Island on the one hand and Dee Island and Sierra Island on the other. It appears on a Chilean chart of 1998, presumably as Paso Villalón, named after Luis Pardo Villalón (*see under* Pardo). UK-APC accepted the translated name Villalón Passage, on May 11, 2005.

Nunatak Villanueva. 66°12' S, 61°44' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Punta Villard *see* **Villard Point**

Villard Point. 62°37' S, 61°03' W. A point just to the W of Lair Point, on Robbery Beaches, at Barclay Bay, on Livingston Island, in the South Shetlands. Named by ChilAE 1970-71, as Punta Villard (no one knows why), after geological field work carried out here by them, and it appears as such on their 1971 map. BAS also did geological work here in 1975-76. UK-APC accepted the translated name on Feb. 7, 1978, and it appears in the 1980 British gazetteer. Last plotted by the UK, in late 2006.

Monte Villarrica *see* **Mount Bain**

Mount Villarrica *see* **Mount Bain**

Caleta Villegas. 63°12' S, 55°12' W. A cove opening to the N, immediately E of Cape Fitzroy, in the extreme NE of Joinville Island, in the Weddell Sea. Named by the Chileans for 1st Lt. Aureliano Villegas, on the *Rancagua* during ChilAE 1947-48. The Argentines call it Caleta Cáceres, for Lorenzo Cáceres, able seaman on the *Uruguay* in 1903.

Punta Villegas *see* [1]**View Point**

Villiers, Alan John. b. Sept. 23, 1903, Melbourne, son of poet and union leader Leon Joseph Villiers. He went to sea in sail in 1919, and was a whaling laborer on the *Sir James Clark Ross* expedition of 1923-24, on which he wrote articles for a Hobart newspaper, and then went on to write a book, *Whaling in the Frozen South*, and others (*see* the Bibliography). In 1934-35, with a band of intrepids, he sailed around the word in his own full-masted frigate, the *Joseph Conrad*. In fact, he went around the world several times. He fought in World War II, becoming a naval commander, and won the DSC during the assault on France. Then he became master of the training ship *Warspite*, at Aberdovey, sailed with the Portuguese cod-fishing fleet, and in 1957 sailed a replica of the *Mayflower* across the Atlantic. He later lived in Oxford, where he died on March 3, 1982.

Vilmain, Haldéric-Victor. b. May 18, 1822, Briançon, France. Cabin boy on the *Astrolabe* during FrAE 1837-40.

Islote Viña del Mar. 63°54' S, 60°49' W. A little island immediately N of Skottsberg Point (the S point of Trinity Island), in the Palmer Archipelago. Discovered (but not named) by SwedAE 1901-04, it was named by the Chileans for the whaling town of Viña del Mar, near Valparaíso.

Vince, George Thomas. b. Sept. 25, 1879, Blandford Forum, Dorset, son of fishmonger George Vince and his wife Elizabeth Jane Chammen. When George was a little lad his father went insane, and his mother had to take in laundry, until she died, worn out, in 1893. George joined the Royal Navy, and was not long out of his posting at Lerwick, in the Shetlands, when he joined the *Beagle*, as an able seaman. He was with her in Cape Town when he transferred to the *Discovery* as part of BNAE 1901-04. A popular, happy-go-lucky fellow, he became the first man to lose his life in McMurdo Sound when, on March 2, 1902, wearing fur-soled boots, he fell over Danger Slope into the sea during a blizzard. That year Vince's Cross was erected to his memory at Hut Point, 90 yards SW of the Discovery Hut.

Vince Nunatak. 77°30' S, 163°22' E. Just NW of Mount Coleman, at the head of New Harbor, in Victoria Land. Named by US-ACAN in 1998, for George Vince. NZ-APC accepted the name on Oct. 7, 1998.

Vincendon-Dumoulin, Clément-Adrien. b. March 17, 1811, Chatte, France. Hydrographer 3rd class and cartographer, who embarked on the *Astrolabe* on Dec. 13, 1839, at Hobart, during FrAE 1837-40. In 1842, after Dumont d'Urville died, he took over the publication of the expedition. He died in 1858.

The *Vincennes*. A 780-ton American cutter-rigged coasting sloop-of-war, built in Brooklyn in 1826, the USS *Vincennes* was the flagship of USEE 1838-42, under Charles Wilkes. 127 feet long, 34 feet 9 inches in the beam, 16½ feet depth in hold, 10 guns, 10½ knots speed, crew of 190. After the expedition, Franklin Buchanan commanded her for a year or so, and after various vicissitudes, including various trips to Japan and serving in the Civil War, she was sold in Boston, in 1867.

Vincennes Bay. 66°30' S, 109°30' E. A large, V-shaped bay between the Knox Coast and the Budd Coast, 104 km wide at its entrance between Cape Nutt and Cape Folger, and marked by several large, steep glaciers near its head. Named by Wilkes for his flagship, the *Vincennes*. Photographed aerially during OpHJ 1946-47. It was entered in its N part in Jan. 1948 by the *Burton Island* and the *Edisto*, during OpW 1947-48. US-ACAN accepted the name in 1956 (instead of the proposed Kreitzer Bay), and ANCA followed suit.

Vincennes Subglacial Basin. 73°30' S, 122°00' E. To the N of Dome C in Wilkes Land, it runs ENE-WSW and joins Aurora Subglacial Basin with Adventure Subglacial Trench. Delineated by the SPRI-NSF-TUD airborne radio echo-sounding program, 1967-79, and named after Wilkes's flagship, the *Vincennes*. ANCA accepted the name on July 26, 1983, and US-ACAN also accepted the name.

Vincent, John William "Jack." b. 1878, Stratford Road, Shipston-on-Stour, Worcestershire (since 1931 part of Warwickshire), son of rural postman William Vincent and his wife Mary Ann Gillman. The family moved to Telegraph Street, in Shipston, where Jack finished school at 12 and became a grocer's porter. Looking much older than 12, he quit that job, and ran away to join the Merchant Navy, becoming an able seaman on the tall ships. He then joined the Royal Marine Light Infantry, and by the age of 21 was serving on the *Cambridge*. He was bosun on the *Terra Nova* during her 1911-12 attempted relief voyage, and again on the 1912-13 voyage, both during BAE 1910-13. He was back in Antarctica, as bosun on the *Endurance* during BITE 1914-17. A former wrestler and boxer, he was the strongest man on the expedition, but had a fearful temper, was naturally contentious, and was a bully; he insisted on being served first at mealtimes. He had a violent disagreement with Orde-Lees, and Shackleton demoted him to able seaman (however, everyone, including Shackleton, continued to call him "Bosun"). He was one of the 5 men to go with Shackleton from Elephant Island to South Georgia on the *James Caird* in 1916. Shackleton picked him for several reasons. One, he was a good seaman, two, he was so strong, and three, Shackleton could keep an eye on him. On that trip Vincent was almost washed over the side of the boat, and lost his upper lip when it became attached to a frozen drinking cup. Hardly surprising, he was in a physically bad way when they reached South Georgia. Only four men were denied the Polar

Medal by Shackleton — Stephenson, Holness, McNish, and Vincent. In 1918, while serving in the Mediterranean on a trawler chartered by the British government, he was torpedoed, but after the war went back to trawler fishing out of the northeast ports (Hull, etc). For a time he worked in Finland as a pilot and fishing instructor for the Finnish government. They offered him a permanent job, but his wife refused to live in Scandinavia, so they settled in Grimsby and raised a family. "Sailor Jack" Vincent was in the Royal Naval Reserve during World War II, skippering the armed RN trawler *Alfredian*, on which he developed pneumonia while in the North Sea, and died on Jan. 19, 1941, at the Naval Hospital in Grimsby, aged 61.

Vincent Creek. 77°43' S, 162°26' E. A meltwater stream, 1 km long, flowing N from the N end of Hughes Glacier, to the S edge of Lake Bonney, in Taylor Valley, Victoria Land. Named by US-ACAN in 1996, for Warwick F. Vincent, of the Université Laval, in Canada, NZ limnologist who conducted experimental ecological research in the McMurdo Dry Valleys from 1978.

Mount Vincent Astor *see* **Mount Astor**

Vincent Gutenko Mountains *see* **Gutenko Mountains**

Vinci Bank *see* **Da Vinci Bank**

Vindberget. 80°31' S, 191°12' W. A hill in the Shackleton Range. Named by the Norwegians ("wind hill"). It may be the hill the Russians call Gora Il'jushina.

Vindegga *see* **Vindegga Ridge**, **Vindegga Spur**

Vindegga Ridge. 72°57' S, 3°46' W. A small, partly snow-capped ridge of low peaks extending N from Huldreslottet Mountain, in the southernmost part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Vindegga (i.e., "the wind ridge"). US-ACAN accepted the name Vindegga Ridge in 1966.

Vindegga Spur. 71°51' S, 11°19' E. A prominent mountain ridge just S of Vindegghallet Glacier, in the SW part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vindegga (i.e., "the wind ridge"). US-ACAN accepted the name Vindegga Spur in 1970.

Vindegghallet *see* **Vindegghallet Glacier**

Vindegghallet Glacier. 71°49' S, 11°15' E. A glacier (the Norwegians call it an ice slope) flowing W for 6 km along the S side of Mount Flånuten, N of Vindegga Spur, in the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vindegghallet (i.e., "the wind ridge slope"), in association with nearby Vindegga Spur. US-ACAN accepted the name Vindegghallet Glacier in 1970.

Vindknattane. 73°30' S, 14°28' W. Small crags on the E side of Høgisen, in the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the wind crags").

Vine-Lott, George Trevor. Known as Trevor. b. March 22, 1930, Medway, Kent, son of Frederick G. Vine-Lott and his wife Vera L. Mockford. He joined FIDS in 1954, as a geographer, and served as meteorologist at Base Y for the winters of 1955 and 1956. He lived for years in London (he married Anna A. Smith there in 1960), but in 1967 ran into a bit of trouble when he went on an "expedition" to the Bahamas, and was arrested there and brought back to face bankruptcy charges. He then moved to Cambridge, where he died in March 2000.

Vineh Peak. 62°38' S, 61°12' W. A rocky peak, rising to 170 m, 600 m E of the highest point on Bakshev Ridge, 900 m S of Herring Point, 1 km N of Radev Point, and 550 m W of Vund Point, in the E extremity of Rugged Island, off the W coast of Byers Peninsula (which is on Livingston Island), in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for Khan Vineh of Bulgaria, 756-60.

Ensenada Vinett. 62°30' S, 59°43' W. A small cove W of Labbé Point, in Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946-47, and named by them as Ensenada Contramaestre Vinett, for the bosun on either the *Iquique* or the *Angamos*. In 1951, in order to avoid compound names, Chile abbreviated the name to Ensenada Vinett.

Vinje Glacier. 71°55' S, 8°00' E. A broad glacier, about 30 km (the Norwegians say 50 km) long, flowing NW in the Orvin Mountains, between the Filchner Mountains and Fenriskjeften Mountain, in the central part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vinjebreen, for Torgny E. Vinje (b. 1928), meteorologist who wintered-over for 3 successive years at Norway Station during NorAE 1956-60. The last winter (1959) he was chief meteorologist. US-ACAN accepted the translated name Vinje Glacier in 1966.

Vinjebreen *see* **Vinje Glacier**

Vinogradi Peak. 63°50' S, 58°37' W. Rising to 1043 m on Kondofrey Heights, 1 km S of Gurgulyat Peak, 3.65 km WSW of Mount Reece, and 5.2 km N of Mount Bradley, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Vinogradi, in southwestern Bulgaria.

Vinogradov Fracture Zone. 60°56' S, 29°12' W. A submarine feature named for Russian geochemist Aleksandr Pavlovich Vinogradov (1895-1975), first director of the Vernadsky Institute of Geochemistry. The name was proposed by Galina Agapova, of the Russian Academy of Sciences, and the name was accepted by international agreement in June 1997.

Mount Vinson. 78°32' S, 85°37' W. The highest peak in Antarctica, at 4892 m, it marks the highest point on Vinson Massif, being in the N part of that massif's summit plateau, 2 km N of Hollister Peak, in the Sentinel Range of the Ellsworth Mountains. First climbed at 11.30 A.M., on Dec. 18, 1966, by the U.S. Mountaineering Expedition, led by Nicholas Bayard "Nick" Clinch. The other climbers were: Pete Schoening (*see* **Schoening Peak**), John Evans, Bill Long (q.v.), Barry Corbet, Dick Wahlstrom, Charles Hollister, Sam Silverstein, Brian Marts, and Eichii Fukushima. Mountain Travel and other tour operators have, for years, organized climbing expeditions, as Vinson is one of the 7 mountains to be conquered in the world (the highest in each continent). On Nov. 23, 1987, Chris Bonnington reached the top (the rest of his party did so 7 days later). On Nov. 1, 2006, US-ACAN ended the confusion between Mount Vinson and Vinson Massif by declaring the two to be separate entities, which they are (*see* **Vinson Massif**). By 2004-05 about 970 persons had climbed the peak. In 1985 Martyn Williams and Pat Morrow skied down it. In 1999 Stephen Koch (an American) snowboarded down it. The multi-national Vinson Camp was here, in 78°32' S, 86°01' W. In Dec. 2006, 4 members of the original party — Evans, Fukushima, Marts, and Silverstein — attempted Vinson again, but failed to reach the summit.

Vinson Camp *see* **Mount Vinson**

Vinson Massif. 78°35' S, 85°25' W. A large mountain massif, about 22 km long and 13 km wide, it contains Mount Vinson, the highest elevation in Antarctica, standing at 4892 m (16,065 feet — the latest of several measurements, bound to be changed yet again) in the S portion of the main ridge of the Sentinel Range, in the Ellsworth Mountains, overlooking the Ronne Ice Shelf. Discovered in Jan. 1958 by U.S. Navy aircraft flying recon from Byrd Station. Named by US-ACAN in 1961, for Carl G. Vinson (1883-1981), Georgia congressman, a major force in 20th-century American defense (especially the Navy) and Antarctic exploration, and the longest-ever serving congressman from anywhere (1914-65). There was never an official distinction between Mount Vinson and Vinson Massif until 2006.

Vinson Plateau. 78°32' S, 85°35' W. The summit plateau of the Vinson Massif, in the Ellsworth Mountains, it extends for 9 km between Goodge Col and Hammer Col, which link the plateau to the north-central part of the Sentinel Range to the NNW and to the Craddock Massif to the SSE, respectively. Rising to elevations of between 4000 and 4600 m above sea level, the plateau is 4.5 km wide between Branscomb Peak and Silverstein Peak (to the W) and Schoening Peak and Marts Peak (to the E).

Rising from the plateau is not ony Mount Vinson (Antarctica's highest point) but also Clinch Peak, Corbet Peak, Silverstein Peak, Schoening Peak, and Hollister Peak. Mapped by the Americans in 1988. Named by the Bulgarians on Sept. 14, 2009, in association with the massif.

Vinten-Johansen Ridge. 71°49' S, 8°58' E. A huge, bare rock ridge in the north-central part of the Kurze Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vinten-Johansenegga, for Anders Vinten-Johansen, who wintered-over as medical officer at Norway Station in 1958, during NorAE 1956-60. US-ACAN accepted the translated name in 1967.

Vinten-Johansenegga *see* **Vinton-Johansen Ridge**

Islote Vío *see* **Moreno Rock**

Isla Viola. 64°17' S, 62°00' W. A completely snow-covered island, reaching an elevation of 94 m above sea level, about 1 km SW of Guesalaga Island, and near the E coast of Lecointe Island, to the E of Brabant Island, in the Palmer Archipelago. The name appears for the first time on a Chilean chart of 1963, and has been used ever since. However, as early as ChilAE 1946-47, this island and Guesalaga Island were grouped together as Islotes Sigrid (q.v.), even though Guesalaga was named at that time as an individual feature as well.

Ensenada Violante *see* **Violante Inlet**

Violante Inlet. 72°35' S, 61°05' W. An ice-filled inlet, between 20 and 24 km wide, indenting the Black Coast for 26 km in an E-W direction between Cape Fanning and Cape Herdman, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940 by USAS 1939-41, and roughly mapped from these photos in 73°00' S, 59°10' W. Named for Maj. (later Col.) André Leonard Violante (1894-1968), U.S. Army, who designed the prefabricated buildings used on USAS. Particularly because of a false floor, these buildings proved to be the most satisfactory ever used in Antarctica to that date. It appears as such on a USAAF chart of 1942, and on a U.S. Hydrographic Office photograph of 1943. US-ACAN accepted the name in 1947. It was surveyed in Nov. 1947, by a combined sledging team of Fids from Base E and personnel from RARE 1947-48, and was found to lie about 65 km NW of its previously reported position. So, on Dougie Mason's 1950 FIDS map, the coordinates had been corrected. As such, UK-APC accepted the name on Jan. 28, 1953. It appears on a British chart of 1954, and in the 1955 British gazetteer. On a 1947 Argentine chart it appears as Ensenada Violante, but on one of their 1952 charts it appears as Seno Violante. On a 1947 Chilean chart it appears as Estero Violante. The name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was Ensenada Violante (the Chileans having rejected the proposed Estrecho Violante, which is just as well, as an estrecho is not an ensenada). It was re-mapped by USGS in 1974, from USN air photos taken between 1966 and 1969, and appears as Violante Inlet on the 1979 USGS sketch map of the N part of Palmer Land. The British plot it in 72°32' S, 61°00' W.

Cerro Virchow *see* **Virchow Hill**

Virchow Hill. 64°07' S, 62°17' W. Rising to about 750 m, on the SW side of Bouquet Bay, between Lister Glacier and Paré Glacier, in the NE part of Brabant Island, in the Palmer Archipelago. Shown (unnamed) on an Argentine chart of 1953. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos in 1959. Named by UK-APC on Sept. 23, 1960, for Rudolph Virchow (1821-1902), German pioneer of pathological research. US-ACAN accepted the name later in 1960. The Argentines call it Cerro Virchow.

Mount Virdin. 73°29' S, 61°54' W. A mountain rising to 1080 m, 6 km SW of Mount Hemmingsen, in the Werner Mountains, W of New Bedford Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Roughly surveyed in Dec. 1947, by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E. Mapped by USGS from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Floyd Virdin, construction mechanic who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Cerro Virgen de las Nievas *see* **Virgin Hill**

Virgen de las Nieves Refugio. 79°10' S, 38°53' W. Argentine summer-only refuge hut built at an elevation of 85 m above sea level, on Dec. 2, 1958 by Lt. Col. Jorge de Marzi and Major Pedro Pascual Arcondo, of the Argentine Army, during ArgAE 1958-59, 150 km south of General Belgrano Station.

Virgen de Loreto Refugio. 65°33' S, 61°30' W. Argentine refuge hut built by the Army in Sept. 1963, and opened on Oct. 20, 1963, 60 m above sea level, near Teniente Matienzo Station, on the Larsen Ice Shelf, in the area of Cape Disappointment. It has been dismantled.

Isla Virgen del Carmen *see* **Vortex Island**

Virgin Hill. 63°56' S, 58°09' W. Rising to 665 m (the Chileans say 721 m), W of Carro Pass, and 5 km E of Cape Lagrelius, between Whisky Bay and Holluschickie Bay, on the NW coast of James Ross Island. It was named (probably by ArgAE 1977-78), as Cerro Virgen de la Nieves (*see* **Virgen de las Nieves Refugio**, above). On Feb. 15, 1988, UK-APC accepted the name Virgin Hill, and US-ACAN followed suit. The Chileans call it Cerro Di Castri, for Francisco Di Castri (sic; the name is Italian, and demands a capital "D"), director of the Instituto de Higiene y Fomento de la Producción de Animal, at the University of Chile, here with ChilAE 1967-68, sudying mesofauna.

The *Virginia*. The Fokker Super Universal monoplane — NC4453 — taken to Antarctica by Byrd for ByrdAE 1928-30. She was 49 feet 10 inches long, and 733 sq feet in area. She had a 74-foot span overall, and a Pratt & Whitney Wasp engine giving 425 hp. She was lost in a storm in the Rockefeller Mountains in March 1929.

Mount Virginia. 79°15' S, 84°02' W. A bare rock mountain at the N extremity of a ridge in the Pioneer Heights of the Heritage Range, where Splettstoesser Glacier joins Schmidt Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for geographer Virginia S. Taylor, a staff assistant to US-ACAN, 1961-65.

Virginia Valley. 77°29' S, 160°56' E. An upland valley, opening N to McKelvey Valley, E of Wall Valley, between the N part of Mount Electra on the W and Mount Circe and Mount Dido on the E, in the Olympus Range of Victoria Land. Named by US-ACAN on July 14, 2004, for ecosystem ecologist Ross A. Virginia, of the environmental studies program at Dartmouth, USAP soils biologist in the McMurdo Dry Valleys for 13 field seasons between 1989 and 2002. NZ-APC accepted the name on Nov. 30, 2004.

Virik, Haldor. b. July 3, 1880, Sandar, Norway. In 1910 he founded the Eskimo Company, with 6 whale catchers, including the *Fortuna* and the *Hertha*. In 1912 he and Ole Wegger formed the Odd Company, with the *Odd* and the *Sobraon*, and later added the *Normanna* and the *Guvernøren*. Virik sold the Odd Company in 1920 to Thor Dahl, and went into tankers. He died on Aug. 17, 1958.

Punta Virto *see* **Sepúlveda Point**

Virus. A Japanese movie, partly shot in the waters of the South Shetlands in 1979-80, aided by the *Lindblad Explorer* and by the Chilean sub *Simpson*.

Anse Visca *see* **Visca Anchorage**

Caleta Visca *see* **Visca Anchorage**

Visca Anchorage. 62°05' S, 58°22' W. Basically a cove, it is the NW arm of Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Anse Visca, for Dr. Pedro Francisco Visca (1840-1912), a friend in Montevideo, a former pupil of Charcot's father's, founder of the Medical Clinic in Uruguay, and who assisted the expedition. It appears as such on Charcot's 1912 map. Re-surveyed by the Discovery Investigations in 1927, it appears on their 1929 chart as "Visca or North Anchorage." On their 1930 chart it appears as Visca Cove. On a 1947 Chilean chart it appears as Caleta Visca, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a British chart of 1948 as Visca Anchorage, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1949 Argentine chart as Fondeadero Visca, and that was the name accepted by the 1970 Argentine gazetteer. It was re-surveyed and charted by an RN Hydrographic Survey unit on the *John Biscoe* in 1951-52. Last plotted by the UK, in late 2008.

Visca Cove *see* **Visca Anchorage**

Vishegrad Knoll. 63°17' S, 57°04' W. A hill rising to 550 m at the NE tip of Trinity Peninsula, 2.21 km SSW of Cape Dubouzet, 1.87 km SE of Obzor Hill, and 1.83 km E of Mount Bransfield. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Vishegrad, in southern Bulgaria.

Hrebet Vishnevskogo *see* **Klakegga**

Vishniac Peak. 77°14' S, 160°31' E. Rising to 2280 m, just N of the head of Webb Glacier, 5 km SW of Skew Peak, in southern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1947 and 1962. Named by US-ACAN in 1975, for Wolf Vladimir Vishniac (1922-1973), professor of biology at the University of Rochester. He was in Antarctica in 1971-72, and again in 1973 (*see* **Deaths**, 1973).

Cabo Visible *see* **Cape Well-Met**

Mount Vision. 78°13' S, 166°15' E. A peak in the volcanic complex 1.5 km NW of Mount Aurora, on Black Island, in the Ross Archipelago. So named by NZGSAE 1958-59 because of the magnificent view obtained from here of the peaks in the vicinity and of the Ross Archipelago and Minna Bluff area. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Punta Visión *see* **[1]View Point**

Viskyar Ridge. 62°32' S, 59°39' W. A rocky ridge extending for 2.5 km in a N-S direction in Breznik Heights, with its S extremity forming Sartorius Point, on Greenwich Island, in the South Shetlands. It is bounded to the W by Zheravna Glacier, and to the E by Targovishte Glacier. The summit of the ridge, rising to 600 m at its N extremity, is situated 1.47 km SE of Momchil Peak, 2.9 km E of Razgrad Peak, and 1 km W of Vratsa Peak. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for Viskyar Mountain, in western Bulgaria.

Cerro Visser *see* **Visser Hill**

Visser Hill. 66°45' S, 67°44' W. A hill rising to about 160 m, 4 km S of Mount Vélain, and SSW of Cape Mascart, in northern Adelaide Island. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for Philipp Christian Visser (1882-1955), Dutch mountain climber and diplomat. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Cerro Visser.

Punta Vista *see* **[1]View Point**

The *Vistamar*. Tourist ship registered in Spain, that could carry 280 passengers. Raimund Krüger was her skipper. She was in Antarctic waters in 1991-92, 1994-95, and 1997-98, visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula.

Cabo Vitie *see* **Cape Hartree**

Mys Vitjaz.' 67°33' S, 48°22' E. A cape, NE of Forefinger Point, on the coast of Enderby Land. Named by the Russians.

Mys Vitkovskogo. 68°57' S, 155°38' E. A cape SE of Cape Andreyev, on the coast of Oates Land, in Victoria Land. Named by the Russians.

Skala Vitkovskogo *see* **Glopenesranen Nunatak**

Vitnesteinen *see* **Vitnesteinen Rock**

Vitnesteinen Rock. 71°25' S, 12°36' E. A large rock outcrop (almost a small mountain) on the mountain the Norwegians call Lyrittaren, along the W side of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Vitnesteinen (i.e., "the witness stone"). US-ACAN accepted the name Vitnesteinen Rock in 1970.

Mount Vito. 85°44' S, 131°30' W. A bare mountain, rising to 1810 m, 3 km NE of Mount Frontz, along the E side of Reedy Glacier, in the W part of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John Vito, electronics technician who wintered-over at Byrd Station in 1961.

Vito Automatic Weather Station. 78°30' S, 177°45' E. American AWS, deployed by John Cassano on the Ross Ice Shelf, in Feb. 2004, and named by him for his father.

Vitosha Saddle. 62°40' S, 60°03' W. An ice-covered saddle in Levski Ridge, extending 400 m in a SW-NE direction at an elevation of about 1050 m, between Great Needle Peak and Vihren Peak, it is part of the divide between the glacial catchments of Huron Glacier to the N and Magura Glacier to the S, in the Tangra Mountains of eastern Livingston Island, in the South Shetlands. The midpoint of the saddle is 1 km NE by E of Great Needle Peak. Named by the Bulgarians on Feb. 17, 2004, for Vitosha Mountain, in Bulgaria.

Vittoria Buttress. 69°29' S, 71°42' W. A conspicuous rock cliff, rising to 750 m, overlooking the SE side of Lazarev Bay, and forming the NW extremity of the Lassus Mountains, S of Palestrina Glacier, in the NW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 during RARE 1947-48. He plotted it in 69°23' S, 71°47' W. Named by UK-APC on March 2, 1961, for Tomás Luis de Vittoria (1548-1611), the most famous composer in Spain in the 16th century. However, they misspelled it as Vittorio Buttress, and it appears that way on a British chart of 1961. US-ACAN accepted that spelling later in 1961. However, some time in 1962 the name was corrected. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Vittorio Buttress *see* **Vittoria Buttress**

The *Vitus Bering*. Russian ship that took part in SovAE 1987-89, conducting a geophysical survey of the Weddell Sea in 1987-88. Skipper that year was Sergey N. Sakhnov. She was back, as part of SovAE 1988-90, again under Capt. Sakhnov.

Vivaldi Gap *see* **Vivaldi Glacier**

Vivaldi Glacier. 70°47' S, 69°50' W. A glacier flowing SW from the Purcell Snowfield into the head of Schubert Inlet, it separates the Colbert Mountains from the Lully Foothills, on the W coast of Alexander Island. It seems to appear on aerial photos taken in 1940, during USAS 1939-41. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. He plotted it in 70°40' S, 70°20' W. At that stage of the game they thought it was an open, snow-covered glacial trough connecting the Purcell Snowfield with Schubert Inlet, and, accordingly, UK-APC named it on March 2, 1961, as Vivaldi Gap, for Antonio Vivaldi (1675-1741), the Venetian composer. US-ACAN followed suit with the naming in 1962. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appeared in the 1977 British gazetteer. However, upon close study of U.S. Landsat images taken in Feb. 1979, it was seen by British cartographers that there were flow lines in the feature, and that it was therefore a glacier, and not a gap after all. The name Vivaldi Glacier appears in the 1986 British gazetteer, and US-ACAN accepted the new name.

Vivaldi Quintet. 61°54' S, 58°01' W. A group of 5 offshore stacks close to False Round Point, at Corsair Bight, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Vivaldi, the composer (*see* **Vivaldi Glacier**).

Ventisquero Vivallos *see* **Vivallos Glacier**

Vivallos Glacier. 64°52' S, 62°49' W. A short, steep glacier flowing N into Leith Cove, Paradise Harbor, NE of Conesa Point, on the Danco Coast, on the W coast of Graham Land. Surveyed by ChilAE 1950-51, and named by them as Ventisquero Vivallos, for Cabo José L. Vivallos, a member of that expedition. It appears as such on their 1951 chart, and was the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the translated name on Feb. 7, 1978 and US-ACAN followed suit. It appears as such in the 1980 British gazetteer.

Glaciar Vivar *see* **Victory Glacier**

Vivian Nunatak. 77°32' S, 143°34' W. Marks the SW extremity of the Mackay Mountains, in Marie Byrd Land. Mapped (but not named) by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. John F. Vivian, pilot of Hercules LC-130F aircraft during OpDF 68 (i.e., 1967-68).

Isla Vizcaina *see* **Isla Blass**

Gora Vize. 70°26' S, 65°30' E. A peak, about 5 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians, for V.I. Vize (*see* **Vize Islands**). *See* **Webster Peaks**.

Islotes Vize *see* **Vize Islands**

Mys Vize. 65°02' S, 95°45' E. A cape, at the SW end of the Shackleton Ice Shelf. Named by the Russians, for V.I. Vize (*see* **Vize Islands**).

Ostrova Vize *see* **Vize Islands**

Vize Islands. 65°40' S, 65°37' W. A group of small islands forming the NE entrance point of Zubov Bay, 4 km S of the Karelin Islands, off the E side of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57. First accurately show (but not named) on a 1957 Argentine chart. Named by UK-APC on July 7, 1959, for Vladimir Iul'evich Vize (1886-1954), German-Russian geographer and meteorologist during Sedov's Russian North Pole expedition of 1912-14. Many times on Russian ships in the Arctic, he became a leading Soviet ice forecaster. They appear on a British chart of 1960. US-ACAN accepted the name in 1971. The main isand in the group appears on a 1962 Chilean chart as Isla Orella, apparently named by ChilAE 1961-62 (the reason remains unknown), and that name seems to have been accepted by the Chilean gazetteer of 1974. However, today, the Chileans use the name Islas Orella for the group. The Argentines call them Islotes Vize, and the Russians call them Ostrova Vize.

Gora Vjatskaja *see* **Vyatskaya Peak**

Vjatskajatoppen *see* **Vyatskaya Peak**

Dolina V'juzhnaja. 73°11' S, 63°00' E. A valley, due E of Mount Scherger, in the southern Prince Charles Mountains. Named by the Russians.

Ostrov Vkhodnoj *see* **Vkhodnoy Island**

Vkhodnoy Island. 66°32' S, 92°58' E. A small island, 0.8 km SW of Tokarev Island, in the Haswell Islands, and almost 2.5 km NW of Mabus Point. The ships get to Mirnyy Station by here. First plotted (but not named) by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Photographed aerially again by SovAE 1956, and shown on their maps descriptively as Ostrov Vhodnoj (i.e., "entrance island"). US-ACAN accepted the translated name in 1968.

Vladaya Saddle. 62°43' S, 60°14' W. A saddle, at an elevation of about 1000 m, in Friesland Ridge, it is bounded by St. Cyril Peak to the NE and St. Methodius Peak to the SW, and overlooks Ruen Icefall to the NW and Prespa Glacier to the SE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, for the settlement of Vladaya, in western Bulgaria.

The *Vladimir Arsen'yev*. Russian ship that took part in SovAE 1989-91. Her skipper was Sergey Tikhonovich Sitnik.

The *Vladimir Ignatjuk*. An icebreaker built in 1982, in British Columbia, as the *Arctic Kalvik*. Sold in 2003 to the Murmansk Shipping Company, and renamed. She took IndAE 2009-10 to Antarctica.

Pik Vladimira Belova. 83°37' S, 56°46' W. A peak, NE of Kinsella Peak, in the Neptune Range of the Pensacola Mountains. Named by the Russians.

Lednik Vladimira Chelomeja. 74°10' S, 9°00' W. A glacier in the Heimefront Range of Queen Maud Land. Named by the Russians.

The *Vladivostok*. Soviet icebreaker from the Northern Sea Route Fleet, sent to Antarctica in 1985 to rescue the *Mikhail Somov*, which was trapped in the frozen Bellingshausen Sea. On July 26, 1985, she took the *Somov* in tow, and by Aug. 3 had pried her loose from the pack-ice.

Gora Vmërzshij Kamen. 70°48' S, 66°09' E. A nunatak, immediately SW of Mount Afflick, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Gora Vnutrennjaja. 70°43' S, 67°45' E. A nunatak on the Manning Massif, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Vpadina Vodosbornaja. 73°14' S, 67°37' E. A trench in the SE part of the Lambert Glacier. Named by the Russians.

Voegeli, Henry L. b. 1885, Switzerland. He was cook on the *Diomed*, on the Glasgow to Sydney run in 1912, and on the *Aurora*, 1917, during the relief of the Ross Sea party of BITE 1914-17. Immediately after the expedition, he joined the *Gilgai*, as chief steward on that vessel's London to Melbourne to Sydney run. He was still a chief steward in 1938, plying back and forth between Dundee and the Antipodes, for the Caledonian Shipping Company.

Gora Voejkova. 80°22' S, 25°10' W. A nunatak in the central part of the Shackleton Range. Named by the Russians.

Gory Voejkova *see* **Sørhortane**

Shel'fovyj Lednik Voejkova *see* **Voyeykov Ice Shelf**

Glaciar Vogel *see* **Vogel Glacier**

Vogel Glacier. 65°00' S, 63°10' W. Flows W into Flandres Bay, 5 km SE of Cape Willems, on the Danco Coast, on the W coast of Graham Land. It appears (apparently unnamed) on an Argentine chart of 1952. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Hermann Wilhelm Vogel (1834-1898), German photographic pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. Today, the Argentines call it Glaciar Vogel.

Vogler Peak. 77°38' S, 162°12' E. A rock peak rising to 2050 m, 1.2 km SW of Mount Irvine, on Roa Ridge, in the Asgard Range of Victoria Land. Named by US-ACAN on Dec. 23, 1999, for Jane Dionne Vogler, National Science Foundation program manager, their representative at McMurdo and Pole Station. She established the management plan for McMurdo's Albert P. Crary Science and Engineering Center (1985-86), and established the NSF's Antarctic Environmental Research Program, in 1994. NZ-APC had already accepted the name on Nov. 4, 1999.

Vogt Peak. 82°22' S, 156°42' E. Rising to 2180 m, it surmounts the E part of the McKay Cliffs, in the Geologists Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Peter Richard Vogt (b. June 8, 1939, Hamburg), USARP geologist at McMurdo, 1962-63. ANCA accepted the name.

Voight, Frederick Carl "Fred." b. July 11, 1886, Kalamazoo, Mich. He joined the U.S. Navy, and in 1910 was a coxswain on the *Des Moines*. He was living in Warwick Neck, RI, and was married to Sally, when he became postmaster for Little America, coming to Antarctica on the *Jacob Ruppert*, 1934-35, i.e., for the 2nd half of ByrdAE 1933-35, as ship's bosun. After the expedition, he joined the crew of the steamer *Pipestone County*. By 1949 he was a retired chief petty officer, USN. He was then of Richmond.

Voight Nunatak. 74°22' S, 72°27' W. Rising to about 1500 m, 5 km NNW of Tollefson Nunatak, in the Yee Nunataks, on the English Coast of Ellsworth Land. Named by US-ACAN in 1987, for William M. Voight, USGS cartographer who worked in the field in support of the Ross Ice Shelf Project, at Byrd Station and Siple Station, and also at Dome C, in 1974-75. UK-APC accepted the name on Feb. 15, 1988.

Voigt Ledge. 76°48' S, 160°48' E. A flat-topped ridge, rising to an elevation of about 2000 m, between Merrell Valley and the head of Greenville Valley, in the Convoy Range of Victoria Land. The relatively level upper surface of the ledge is 5 km long and 2.5 km wide, tapers in the N, and stands about 500 m above the adjoining valleys. Named by US-ACAN on Oct. 21, 2008, for Donald E. Voigt of the department of geosciences and Penn State Ice and Climate Exploration Center, at Pennsylvania State University, who carried out research in glaciology, geophysics, and seismology in different parts of Antarctica, including the Transantarctic Mountains, in 12 field seasons between 1995 and 2008.

Rocher Voile *see* **Sail Rock**

Voisin, Pierre. b. 1797, Saint-Lô. On Dec. 30, 1839, at Hobart, he embarked as a junior seaman on the *Zélée* during FrAE 1837-40. On April 13, 1840, after the Antarctic trip, he transferred to the *Pauline* at Otago, NZ.

Pico Voit *see* **Voit Peak**

Voit Peak. 66°40' S, 65°35' W. Between Drummond Glacier and Hopkins Glacier, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 FIDASE photographed it aerially and Fids from Base W surveyed it from the ground. From these efforts, it was mapped by FIDS cartographers. Named by UK-APC on Sept. 23, 1960, for Carl von Voit (1831-1908), German physiologist specializing in calories. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Pico Voit.

Vojtech, Vaclav "Vacloo." b. Nov. 28, 1901, Novy Bydzov, in Eastern Bohemia, son of a groundskeeper. He worked for the Czech Provincial Archives, who, in 1922, sent him to Paris, where he happened to see a documentary movie about the tragic Scott expedition to the South Pole. This fired his imagination. In 1927 he became a doctor of history, did his national service, and then went to work for a news agency in Prague. Hearing that Byrd was looking for men for his 1928-30 expediton, he sent the American

a letter. In early Sept. 1928 he received a reply from Byrd, inviting him to a meeting in Wellington, NZ. A few days later he received another letter, canceling the meeting. However, by now Vojtech had raised financial backing from, among others Jan Masaryk and Tomas Bata, the industrialist, and he left Prague on Sept. 25, 1928. He took the *Mataroa* through the Panama Canal to Wellington, arriving there just before the Byrd ships. The NZ press pressured Byrd to take him on, which he did, as assistant stoker on the *Eleanor Bolling*, and on Dec. 2, 1928, he left Dunedin for Antarctica. On Feb. 2, 1929, with Vojtech aboard, the *Eleanor Bolling* left Antarctica for the return trip to NZ. He trained as a dog driver in the New Zealand Alps, and then went back to Antarctica for the 2nd half of ByrdAE 1928-30, this time as a seaman on the *City of New York*, and also as veterinarian to the huskies. At the end of the expedition he accompanied the penguins back from Antarctica to the USA, on the *C.A. Larsen*. He had some problems when he landed in NY, but these were soon overcome. He was in the USA for a couple of months, until Byrd's expedition returned, and then he himself returned to Prague, and wrote *As Seaman, Stoker, and Dog Runner on the South Polar Ice*. He learned to fly, and, while planning an Alaskan polar expedition with Ales Hrdlicka, for which he had applied for a Czech government airplane, he was rowing in the Elbe in Germany on Aug. 6, 1932, when his kayak overturned, he got hit on the head, and was drowned. He was the first recorded Czech in Antarctica.

Vokil Point. 62°48' S, 61°31' W. A point projecting for 300 m into Boyd Strait, 2 km S of Esteverena Point, and and 2 km N of Monroe Point, on the SW coast of Snow Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the 8th-century Bulgarian ruling dynasty of Vokil.

The Volcano *see* **Vulcan Nunatak**

Volcanoes. The two main active volcanoes in Antarctica are Mount Erebus and Deception Island. Another large volcano is Mount Siple, and other extinct volcanoes include Mount Discovery and Mount Melbourne. There are also Mount Harcourt, Mount Bird, and Coulman Island. In Marie Byrd Land there are Mounts Berlin, Kauffman, Takahe, Bursey, Andrus, Waesche, Obiglio, Hampton, Sidley, and Murphy, as well as Toney Mountain and Shepard Island (*see also* **McMurdo Volcanics**). **1820-21**: Apparently, Bridgeman Island was erupting when Powell went by. **1837**: Mount Melbourne probably exploded (the last time on record for this volcano). **1839**: Balleny reported Buckle Island in eruption. **Jan. 26, 1841**: Erebus erupted, when James Clark Ross was there. Mount Terror, Erebus's neighbor on Ross Island, was also active. **Feb. 1842**: A passing U.S. sealer (the *Ohio*, under Capt. Smyley) noted Deception Island blowing, but this might be considered a doubtful account. **1899**: Buckle Island reported blowing. **1912**: Deception Island erupted. It is a caldera, or a volcano that has a collapsed summit along ring faults which form a large, interior basin. **1917**: Deception Island erupted. **1967**: Minor shocks occurred at Deception Island, increasing in frequency in November of that year. **Dec. 4, 1967**: Grade 4 and 5 tremors occurred at Deception Island, and an underwater eruption took place in Telefon Bay. The personnel at the Chilean base of Presidente Pedro Aguirre Cerda Station evacuated to the British Base B nearby, and the island was then evacuated entirely. Base B and the Argentine bases on the island were more or less undamaged, but the Chilean base was wiped out. **Early 1969**: A second bout of activity at Deception Island destroyed Base B. **Aug. 12 and 13, 1970**: Deception Island erupted (*see* **Deception Island**). **Sept. 4, 1974**: Erebus erupted, for 6 hours. **Sept 13-19, 1974**: Erebus erupted. **1979**: Erebus erupted. **1981**: Three seismic stations were established on Erebus by New Zealand, American, and Japanese scientists to study the internal activity of the mountain. These stations were placed in the volcano itself.

Gora Volkonskogo *see* **Tussehoppet**

Gora Volkova. 70°45' S, 66°51' E. A nunatak, immediately S of McLean Ridge, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Vollmer Island. 76°44' S, 150°30' W. An ice-covered island, 17.5 km long, 11 km NW of Cronenwett Island, it is one of the grounded islands along the edge of the Sulzberger Ice Shelf. Discovered and photographed aerially by ByrdAE 1928-30, and roughly mapped from these photos. Named by US-ACAN in 1966, for Lt. T.H. Vollmer, USN, engineering officer on the *Glacier*, along this coast in 1961-62.

Ustup Volnistyj. 70°29' S, 63°36' E. A ridge, SW of Vrana Peak, in the W extension of the Athos Range, in the Prince Charles Mountains. Named by the Russians.

Ostrova Vol'nye *see* **Vol'nyje Islands**

Vol'nyje Islands. 66°03' S, 101°04' E. A group of islands in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrova Vol'nye. ANCA translated the name on Jan. 19, 1989.

Volov Peak. 63°59' S, 59°56' W. A rocky peak rising to 1148 m, at the SW extremity of Korten Ridge, 1.84 km SSW of Chubra Peak, 5.5 km W of Mount Bris, and 16.6 km SE of Havilland Point, it surmounts Temple Glacier to the SW, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Panayot Volov (1850-1876), a leader of the April 1876 uprising for Bulgarian independence.

Voluyak Rocks. 62°26' S, 59°58' W. A chain of rocks extending for 1.9 km in a SE-NW direction, off the N coast of Greenwich Island, 400 m N of Pavlikeni Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Voluyak, in western Bulgaria.

Skaly Volynova. 79°21' S, 159°35' E. A group of rocks, E of Mount Wills, in the S part of the Conway Range, on the W edge of the Ross Ice Shelf. Named by the Russians.

Proliv Volzhskij. 68°52' S, 77°49' E. A strait, running in a SW-NE direction between Varyag Island on the NW and Torckler Island on the SE, in the S part of the Rauer Islands, off the Ingrid Christensen Coast. Named by the Russians.

Von Bellingshausen, Fabian Gottlieb. Also known as Thaddeus von Bellingshausen, his name in Russian was Faddey Faddeyevich Bellingsgauzen. The Bellingshausen version is German, and the "von" part was designed to give him more status. All this confusion accounts for the various spellings given his name over the years. b. Sept. 20, 1778, Hoheneichen, on the island of Ösel, Estonia, son of Fabian Ernst von Bellingshausen and his wife Anna Katharine von Fölckeren. His family were landowning Balts (German more than Russian) with a tradition of service to Russia. A career Navy man from the age of 10, he experienced long trips — he went around the world with Kruzenstern in 1803-06, and commanded ships in the Baltic and the Black Sea, being made captain in 1816. He was picked by the Tsar to circumnavigate the world at high southern latitudes in the *Vostok* and the *Mirnyy*, between Dec. 1819 and Feb. 1821, during the course of which he became the first man ever to see the actual Antarctic continent. In 1826 he married Anna Dimitrievna Baykova, and was promoted to rear admiral. In 1828-29 he fought the Turks, and his account of the Antarctic expedition was published in 1831. That year he was promoted to vice admiral, and in 1839 he was made governor of Kronstadt, in which position he died on Jan. 25, 1852.

Von Bellingshausen Expedition. 1819-21. Fabian von Bellingshausen was chosen by Tsar Alexander I to lead an expedition "to the South Pole" (the first since Cook almost 50 years before), and also to find southern harbors for the Russian fleet. **July 16, 1819**: von Bellingshausen left Kronstadt with two ships, the *Vostok* and the *Mirnyy*, and 189 men. Much to the expedition leader's regret no naturalists could be found to go to the frozen wastes of Antarctica. The expedition consisted of: on the *Vostok*: 117 men, including von Bellingshausen (leader), Ivan Zavadovskiy (ship's captain), Konstantin P. Torson (lieutenant), Arkady Leskov (3rd Lt.), Lt. Ivan Ignatiev, Yakov Poryadin (navigator), Yakov Bergh (surgeon), Pavel N. Mikhaylov (artist), Ivan Rezanov (paymaster), Ivan Kupriyanov and Roman Adams (midshipman), 1 bosun, 71 seamen (including Yegor Kiselyov), 4 quartermasters, 4 stewards, 2 gunnery petty officers, 11 gunners 1st grade, 1 bombardier, 1 drummer, 1 bugler, 1 assistant mate with the rank of petty officer, 4 second mates with the rank of petty officer, 1 blacksmith, 1 carpenter 2nd class, 1 carpenter's apprentice 2nd class, 1 caulker, 1 sailmaker, and 1 cooper. On the *Mirnyy*: 72 men, including Mikhail Lazarev (captain and 2nd-in-command of the expedition), Lt. Dimitri Demidov, Lt. Nikolay Obernibessov, Lt. Ivan Simonov (astronomer), Nikolai Il'in (navigator), Lt. Mikhail Annenkov, Nikolai Galkin (surgeon), 1 second mate with the rank of petty officer, 1 assistant mate, 1 bosun, 1 steward, 1 drummer, 1

gunnery petty officer, 6 gunners 1st grade, 2 quartermasters, 44 seamen 1st class, 2 carpenters, 1 locksmith, 1 caulker, 1 sailmaker, and 1 cooper. **Nov. 20, 1819**: The expedition left Portsmouth. **Dec. 1819**: They mapped South Georgia. **Jan. 17, 1820**: Simonov and Demidov landed on an iceberg in order to capture penguins. **Jan. 26, 1820**: They crossed the Antarctic Circle for the first time (the first to do so since Cook). **Jan. 27, 1820**: They reached 69°21' S, 2°14' W, on which day they saw an "icefield covered with small hillocks." They did not realize that this may well have been the first ever sighting of the Antarctic continental mass itself (they were at the Princess Martha Coast, as it is called today). They then sailed north for the winter. **April 11, 1820**: The *Vostok* arrived in Sydney. **April 19, 1820**: The *Mirnyy* arrived at Sydney. **May 1820**: von Bellingshausen wrote home that "there is no southern continent, or, should there be one, it must be inaccessible." **May 20, 1820**: The ships left Sydney, to explore the Tuamotu Archipelago. **June 19, 1820**: Both ships met up in NZ. **Sept. 19, 1820**: They arrived back in Sydney, after exploring parts of the Pacific. The Russian consul told von Bellingshausen of the discovery of the South Shetlands. **Nov. 11, 1820**: They left Sydney bound again for Antarctic waters, their mission being to confirm the existence of the South Shetlands and to use them as a way south. Von Bellingshausen would also make a preliminary map of the islands. **Nov. 25, 1820**: They experienced an earthquake at Macquarie Island. **Nov. 30, 1820**: They left Macquarie Island. **Dec. 7, 1820**: They entered Antarctic waters in 163°E. **Dec. 8, 1820**: They encountered their first iceberg, 80 feet high, and a mile wide, in 62°18' S. They then met the pack-ice, and sailed along the edge of it, going east. **Dec. 24, 1820**: They crossed the Antarctic Circle again, in 164°W. **Dec. 25, 1820**: They saw 244 icebergs that day. **Jan. 10, 1821**: Again they crossed the Antarctic Circle. **Jan. 11, 1821**: They were in 67°50' S, and then headed north again. **Jan. 16, 1821**: They had now crossed the Antarctic Circle 6 times, making scientific observations and discovering new lands. **Jan. 21, 1821**: They reached a farthest south of 69°53' S, 92°19' W, as they explored the seas, and on that day discovered Peter I Island. **Jan. 28, 1821**: They discovered Alexander Island, which von Bellingshausen called Alexander I Land (by this time he had changed his mind about a continental mass). **Jan. 31, 1821**: They crossed the Antarctic Circle in 76°W. **Feb. 3, 1821**: They sighted Peter I Island again. **Feb. 5, 1821**: They sighted Smith Island, their first visit to the South Shetlands. **Feb. 6, 1821**: At 10 A.M., they met the *Hero*, commanded by American sealer Nat Palmer, between Deception Island and Livingston Island, in the South Shetlands. **Feb. 11, 1821**: They left Antarctica. **March 9, 1821**: They arrived at Rio. **May 4, 1821**: They left Rio. **July 5, 1821**: They arrived back in Kronstadt, after a trip of 55,000 miles.

Von Bellingshausenkysten. 68°49' S, 90°28' W. Coast on the E side of Peter I Island. Named by the Norwegians for Thaddeus von Bellingshausen. The Russians call it Bellinshausen Küste (Bellingshausen Coast).

Von Bertrab Nunatak *see* **Bertrab Nunatak**

Mount Von Braun. 71°59' S, 169°34' E. Rising to 3275 m, 6 km S of Mount Sabine, in the Admiralty Mountains. Named by US-ACAN in 1970, for Wernher von Braun (1912-1977), the German rocketeer later at NASA, who visited McMurdo in 1966-67.

Von der Wall, John Henry. Name usually seen as Vonderwall. b. Oct. 17, 1893, Brooklyn, son of Julius Von der Wall and his wife Mary H. Schmaltz. When he was 6 his father died, and, after finishing school, he went to work in a machine shop in Brooklyn. Just before World War I he joined the U.S. Navy, becoming a deep sea diver, and was torpedoed in the Atlantic Ocean. He was living in Ozone Park, NY, when he joined ByrdAE 1933-35, going south on the *Bear of Oakland*, and wintering-over in 1934, as one of the shore party at Little America. After the expedition, he moved to Connecticut, and died in Palm Springs, Fla., on Jan. 4, 1976.

Von der Wall Point. 72°32' S, 98°40' W. A low, ice-covered point on the S side of Thurston Island, it extends into Peacock Sound toward the NE extremity of Sherman Island. Delineated from air photos taken in Dec. 1946 by OpHJ 1946-47. Named by US-ACAN in 1960, for John Von der Wall. Originally plotted in 72°29' S, 98°50' W, it has since been replotted.

Von Drygalski, Erich Dagobert. b. Feb. 9, 1865, Königsberg, East Prussia. After an academic career (he had studied under von Richthofen), and an expedition to Greenland in 1892-93, he was professor of geography and geophysics at the University of Berlin when he led GermAE 1901-03. He became professor of geography at Munich, in 1906, and was president of the Geographic Institute, which he founded. In 1910 he went with Graf von Zeppelin to Greenland, and also went on various expeditions to the Americas. He wrote some books (see the Bibliography), and died on Jan. 10, 1949, in Munich.

Von Drygalski Basin *see* **Drygalski Basin**

Von Drygalski Bucht *see* **Drygalski Glacier**

Von Essen, Reinhold Gustaf David J. b. 1913, Sweden, son of Hussar officer Reinhold Gustav David von Essen. Commander of the Swedish Air Force Unit (1951-52) during NBSAE 1949-52.

Von Essen Mountain. 72°14' S, 2°23' E. Rising to 2665 m, it marks the SW end of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Von Essenskarvet, in honor of Reinhold von Essen. US-ACAN accepted the name Von Essen Mountain in 1966.

Von Essenskarvet *see* **Von Essen Mountain**

Von Goeldel, Wilhelm. Ship's doctor on the *Deutschland*, during GermAE 1911-12. A heavy drinker, he was one of those very hostile to Filchner on the expedition. He tried to kill König with a gun, and, when that failed, contemplated poisoning him. Not surprisingly, his career flourished with the Nazis, and on Nov. 1, 1936 he became a doctor in the SA. On May 1, 1937 he was promoted to Sanitäts-Standartenführer.

Von Guerard Creek *see* **Von Guerard Stream**

Von Guerard Glacier. 77°39' S, 163°20' E. Between Crescent Glacier (to the W) and Aiken Glacier, on the N slope of the Kukri Hills of Victoria Land. Named by US-ACAN in 1997, in association with Von Guerard Stream.

Von Guerard Stream. 77°37' S, 163°15' E. A glacial meltwater stream, 4 km long, flowing NW from Von Guerard Glacier, to enter Lake Fryxell close E of Hamish Creek, in Taylor Valley, in Victoria Land. The name Von Guerard Creek was suggested by Diane McKnight, leader of USGS teams which made extensive studies of the hydrology of streams in the Lake Fryxell basin. Paul B. von Guerard was a member of the field team here for 3 seasons between 1990 and 1994, and who, in the 1990-91 season, succeeded in establishing steam-gauging stations on streams flowing into Lake Fryxell. In 1992, US-ACAN accepted the name Von Guerard Stream.

Von Recum, Otto Freiherr. b. 1895. The Oberleutnant sur Zee (Freiherr is a title similar to Baron) in charge of the echo-sounding studies on board the *Meteor*, during the German Atlantic Expedition, 1925-27. He left the expedition at St. Vincent, and came back to Europe on the *Marconi*.

Cap Von Sterneck *see* **Apéndice Island**

Von Tunzelman, Alexander Francis Henry. Name also seen as von Tunzelmann. b. June 15, 1877, Nelson, NZ, son of John Emanuel von Tunzelman and his wife Eliza Philippa "Ella" Tatham. He was only 17 when he was recruited as a last minute replacement at Stewart Island, NZ, in late Nov. 1894 for the *Antarctic* Expedition 1894-95, led by Henrik Bull. He claimed to be the first ashore at Cape Adare (as did a few others). On Feb. 10, 1909 he married Elizabeth Catherine Adcock, in Invercargill, which is where he died on Sept. 19, 1957.

Von Tunzelman Point. 71°18' S, 170°11' E. The W point of the cuspate Ridley Beach, 1.5 km SW of Cape Adare, in the NE part of Victoria Land. Named by NZ-APC in 1982, for Alexander von Tunzelman. US-ACAN accepted the name.

Von Tunzelmann Point *see* **Von Tunzelman Point**

Von Willemöes-Suhm, Rudolf. b. Sept. 11, 1847, Glückstadt an der Elbe, son of Wilhelm Suhm and his wife Mathilde von Qualen. Naturalist recommended by Thomas Huxley for a post in the Ceylon Museum, instead he went on the *Challenger* expedition of 1872-76. His main concern was crustaceans. He died in the Pacific on Sept. 13, 1875, of erysipelas. His letters to his mother were published in Leipzig in 1877.

Vorinin, Vladimir. b. 1890, Russia. In the early 1930s he commanded the *Sibiryakov*, in the Arctic, and from 1938, for several years, the icebreaker *Joseph Stalin*, and pioneered new Arctic

passages. He led the first Soviet Whaling Expedition to Antarctica, in 1946-47. He died in Oct. 1952, only one year after becoming a communist.

Vornberger Glacier. 73°55' S, 125°04' W. About 16 km long, it drains the N side of Siple Island, off the coast of Marie Byrd Land. Named by US-ACAN on Jan. 31, 2003, for Patricia Vornberger, of NASA, specialist in field and remotely sensed data studies of ice motion in West Antarctica from the 1980s onwards.

Gora Vorob'ëva. 83°21' S, 55°28' W. A nunatak, NW of Mount Moffat, in the Neptune Range of the Pensacola Mountains. Named by the Russians.

Bukhta Voronina. 69°57' S, 12°53' E. A bay along the W edge of the Lazarev Ice Shelf, Queen Maud Land. Uragannyy Point forms its W flank. Named by the Russians.

Mys Voronina *see* **Cape Hudson**

Vorposten *see* **Vorposten Peak**

Vorposten Peak. 71°25' S, 15°31' E. Also called The Outpost. An isolated peak, rising to 1670 m, about 40 km NE of the Payer Mountains, in central Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Vorposten (i.e., "the outpost") because of its location at the E extremity of the area he explored. US-ACAN accepted the name Vorposten Peak in 1966. The Norwegians call it Forposten.

Vorrkulten *see* **Vorrkulten Mountain**

Vorrkulten Mountain. 73°04' S, 1°54' W. At the N end of Vestvorren Ridge, just N of Neumayer Cliffs, in the SE part of Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vorrkulten (i.e., "the jetty knoll"). US-ACAN accepted the name Vorrkulten Mountain in 1965. Some sources say that the Germans call it Gockelkamm, but this is not correct (*see* **Gockel Ridge**).

Vorrnipa *see* **Vorrnipa Peak**

Vorrnipa Peak. 73°08' S, 1°51' W. Rising to 2320 m, it surmounts Neumayer Cliffs just S of Vestvorren Ridge, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vorrnipa (i.e., "the jetty peak"). US-ACAN accepted the name Vorrnipa Peak in 1966.

Vorrtind *see* **Vorrtind Peak**

Vorrtind Peak. 73°05' S, 1°35' W. At the N end of Austvorren Ridge, just N of Neumayer Cliffs, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Vorrtind (i.e., "the jetty peak"), in association with Austvorren Ridge. US-ACAN accepted the name Vorrtind Peak in 1966.

Vorta *see* **Vorta Nunatak**

Vorta Nunatak. 72°05' S, 1°44' E. A small, isolated nunatak, 8 km NE of Brattskarvet Mountain, in the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during NorAE 1956-60, and named by them as Vorta (i.e., "the wart"). US-ACAN accepted the name Vorta Nunatak in 1966.

Vørterkaka *see* **Vørterkaka Nunatak**

Vørterkaka Nunatak. 72°20' S, 27°29' E. A rock outcrop, 1.5 km S of Bleikskoltane Rocks, at the SE extremity of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers from air photos taken during OpHJ 1946-47, and named descriptively by them as Vørterkaka. The name signifies a round, Norwegian malt loaf. US-ACAN accepted the name Vørterkaka Nunatak in 1965.

Vortesteinen. 72°11' S, 27°02' E. A small nunatak in the upper part of Byrdbreen, in the E part of the Sør Rondane Mountains. The name means "the wart stone" in Norwegian. The Russians call it Nunatak Burdenko.

Isla Vortex *see* **Vortex Island**

Vortex Col. 77°34' S, 160°25' E. A col leading from the Polar Plateau into the S side of Wright Upper Glacier, in Victoria Land. At this point, winds carrying clouds of snow from the Polar Plateau are deflected by Mount Fleming, and funneled down this depression, forming a vortex. Named by NZ-APC. US-ACAN accepted the name in 1976.

Vortex Island. 63°44' S, 57°38' W. An island, 0.8 km long, and rising to 245 m above sea level, in the NE part of Prince Gustav Channel, 3 km WSW of Corry Island, between that island and Red Island, close S of Trinity Peninsula. First sighted in 1902-03, by Gunnar Andersson's party during SwedAE 1901-04. First charted by FIDS from Base D in Aug. 1945, and named by them for a whirlwind snowstorm which forced them to lie up here for a while until it passed. It appears on a British chart of 1949. UK-APC accepted the name on Nov. 21, 1949. It appears on a Chilean chart of 1951, as Isla Remolino, and on a British chart of 1954 as Vortex Islet. In fact, UK-APC renamed it Vortex Islet on March 31, 1955. US-ACAN followed suit with this renaming in 1956. On an Argentine map of 1957 it is shown as Islote Remolino, but on a 1959 Argentine map as Islote Virgen del Carmen. The British redefined it yet again, on July 7, 1959, reverting to the original name of Vortex Island, and US-ACAN followed suit in 1963. It was resurveyed by FIDS in 1959-60. It appears as Isla Vortex on a Chilean map of 1961, but in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer of 1974 as Islote Remolino. So, it seems that the UK and USA now call it Vortex Island, and the South Americans call it Islote Remolino.

Vortex Islet *see* **Vortex Island**

Punta Vorweg *see* **Vorweg Point**

Vorweg Point. 65°57' S, 64°48' W. A point, NW of Huitfeldt Point, on the SW side of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for O. Vorweg, German skiing pioneer. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Punta Vorweg. Herr Vorweg wrote a book called "Das Schneeschuh Laufen." There are several contemporay (1890s) references to this man, but otherwise he remains a mystery.

Bukhta Voskhod *see* **Voskhod Bay**

Voskhod Bay. 67°40' S, 45°56' E. In the Thala Hills, 3.7 km E of Molodezhnaya Station, in Enderby Land. Photographed aerially by ANARE in 1956, and by SovAE 1957. Named by the Russians as Bukhta Voshod. ANCA translated the name on July 31, 1972.

Nunatak Voskhod-2. 79°58' S, 159°27' E. Just NE of Kirchner Peak, in the Nebraska Peaks. Named by the Russians, for the spacecraft. The name is also seen spelled as Voshod.

Nunatak Voskhod-5. 79°56' S, 160°00' E. Due E of the Cranfield Icefalls, near the Darwin Glacier. Named by the Russians for the spacecraft. The name is also seen spelled as Voshod.

Voshod *see* **Voshkod**

Skaly Vos'mogo Marta *see* **Vos'moy Mart Rocks**

Vos'mogo Martaknattane *see* **Vos'moy Mart Rocks**

Vos'moy Mart Rocks. 72°02' S, 14°40' E. A group of rocks (actually small nunataks), 0.8 km E of Mount Dzhalil', in the NE part of the Linnormen Hills, in the Payer Mountains, in the E part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during he same long expedition. Re-mapped by SovAE 1960-61, and named by them as Skaly Vos'mogo Marta (i.e., "March 8th rocks"), in recognition of International Women's Day. US-ACAN accepted the translated name in 1970. The Norwegians call them Vos'mogo Martaknattane.

Gora Vostochnaja. 72°56' S, 69°01' E. A nunatak, just NW of Cruise Nunatak, E of the Hay Hills, on the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Podlëjnaja Ravnina Vostochnaja. 84°00' S, 115°00' E. A plain, NW of the Ohio Range. Named by the Russians.

The *Vostok*. A 600-ton, 129-foot 8-inch Russian corvette designed by Kolodkin, and built in St. Petersburg in 1818. Made of pinewood and sheathed with copper, she (he) was a 28-gun man-o'-war not equipped for the Antarctic, but, nevertheless, was von Bellingshausen's flagship during that navigator's 1819-21 expedition, and

was commanded by Capt. Zavadovskiy, with 117 men on board, including Yakov Poryadin, the navigator. Her escort was the smaller *Mirnyy*, commanded by Lazarev. On Jan. 13, 1820, she was stopped by pack-ice just south of the South Sandwich Islands (not quite in Antarctic waters), and on Jan. 27, 1820, sighted the continental ice shelf. The name Vostok means "east."

Bereg Vostok *see* **Vostokkysten**

Cabo Vostok *see* **Cape Vostok**

Cape Vostok. 69°08' S, 72°09' W. A rocky mass forming the W extremity of the Havre Mountains, the NE entrance point of Lazarev Bay, and the NW extremity of Alexander Island. Discovered by von Bellingshausen in Jan. 1821. It was sighted again in Jan. 1909, by FrAE 1908-10. Mapped by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48, and plotted by him in 69°07' S, 72°10' W. Named by UK-APC on March 2, 1961, for the *Vostok*. US-ACAN accepted the name later that year. It appears on a British chart of 1961. It was replotted from U.S. Landsat images taken in Feb. 1975, and with the new coordinates it appears in the 1986 British gazetteer.

Lake Vostok *see* **Vostok Subglacial Lake**

Mys Vostok *see* **Cape Vostok**

Vostok 1. The Russians had planned to build an IGY station in the area of the South Geomagnetic Pole, and to call it Vostok Station. However, the sledging party that set out to build it, fell short, and were forced to settle for about 72°09' S, 96°34' E. They built the temporary station, beginning April 12, 1957, and called it Vostok 1. This station opened on April 20, 1957. Leader for that 1957 winter was Vyacheslav Grigor'yevich Aver'yanov. The station was closed on Nov. 30, 1957, and the real Vostok Station (*see* below) was built, in the proper place.

Vostok Station. 78°28' S, 106°48' E. Chronologically, this station was preceded by Vostok 1 (see above). Soviet IGY scientific station built at the South Geomagnetic Pole, 3420 m above sea level, on the Polar Plateau, and inland from the Knox Coast, it is the coldest inhabited place on Earth. 15 to 20 people winter-over each year. **Dec. 16, 1957**: Soviet tractor trains ran out from Mirnyy Station to build it. 11 men arrived overland at the Geomagnetic South Pole, and construction began on Vostok Station. **1958 winter**: 11 men wintered-over. Vasiliy Semenovich Sidorov (leader). **1959 winter**: Veniamin Stepanovich Ignatov (leader). **1960 winter**: Vasiliy Semenovich Sidorov (leader). **1961 winter**: Lev Nikolayevich Zhigalov (leader). **Jan. 21, 1962**: The station was closed temporarily. **Jan. 13-25, 1963**: The station was re-opened by air. **1963 winter**: Vasiliy Semenovich Sidorov (leader). **1964 winter**: Vladimir Anatol'yevich Anan'yev (leader). **1965 winter**: Aleksandr Vasil'yevich Shirochkov (leader). **1966 winter**: Aleksandr Nikitovich Artem'yev (leader). **1967 winter**: Boris Mikhaylovich Belyayev (leader). **1968 winter**: Oleg Nikolayevich Struin (leader). **1969 winter**: Aleksandr Nikitovich Artem'yev (leader). **1970 winter**: Vasiliy Semenovich Sidorov (leader). **1971 winter**: Vladimir L'vovich Ovsyannikov (leader). **1972 winter**: Vladimir Anatol'yevich Anan'yev (leader). **1973 winter**: Petr Georgiyevich Astakhov (leader). **1974 winter**: Oleg Nikolayevich Struin (leader). **1975 winter**: Vladimir L'vovich Ovsyannikov (leader). **1976 winter**: Nikolay Ivanovich Filippov (leader). **1977 winter**: Yuriy Mikhaylovich Zusman (leader). **1978 winter**: Vladimir Anatol'yevich Anan'yev (leader). **1979 winter**: Oleg Nikolayevich Struin (leader). **1980 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1981 winter**: Anatoliy Nikolayevich Semenov (leader). **1982 winter**: Petr Georgiyevich Astakhov (leader). On April 12, 1982, during the winter-over, a fire broke out. Serghei Kuznetsov, mechanic, smelled smoke at 4 A.M., looked outside, and saw the powerhouse on fire. As this contained the diesel generator, and it was 75 below outside, Aleksiy Karpenko tried to save it, but was killed. The fire extinguishers wouldn't work in the cold, and there were no face masks available. They lost power, heat, and light, and the IL-14 plane was not going to come back. It had already been in in March for an emergency evacuation of a sick doctor. The tractor party wouldn't arrive until November 23. For 229 days Pyotr G. Astakhov and his men survived. The story was hushed up at the time. **1983 winter**: Arnol'd Bogdanovich Artem'yev (leader). **1984 winter**: Vladimir Mikhaylovich Stepanov (leader). **1985 winter**: Vladislav Mikhaylovich Piguzov (leader). **1986 winter**: Oleg Nikolayevich Struin (leader). **1987 winter**: Vladimir Mikhaylovich Yakovelv (leader). **1988 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1989 winter**: Aleksandr Nikolayevich Shermet'yev (leader). On Dec. 2, 1989, the Americans built a field camp here, and used it until Jan. 15, 1990. **1990 winter**: Yevgeniy Nikolayevich Kononov (leader). **1991 winter**: Vladimir Mikhaylovich Stepanov (leader). **1992 winter**: Vladimir Nazarov (leader). **1993 winter**: Oleg Borisovich Medvedev (leader). In the summer of 1993-94, the station closed temporarily due to breakdown in the Kharkovchanka Train. It was open for the 1994-95 and 1995-96 summers. **1997 winter**: Nikolay Alekseevich Golosenko (leader). **1998 winter**: Aleksandr Viktorovich Frank-Kamenetskiy (leader). **1999 winter**: Vladimir Alaksandrovich Kuchin (leader). **2000 winter**: Aleksandr Vladimirovich Kondratyev (leader). Leaders from 2001 on, unknown.

Vostok Subglacial Highlands. 80°00' S, 102°00' E. A line of subglacial highlands trending NNW-SSE, and forming an E extension of the Gamburtsev Subglacial Mountains. Delineated by the SPRI-NSF-TUD airborne radio echo-sounding program, 1967-79, and named after the *Vostok* (i.e., von Bellingshausen's ship). ANCA accepted the name on July 26, 1983, and US-ACAN also accepted the name.

Vostok Subglacial Lake. 77°30' S, 106°00' E. At the base of the East Antarctica ice sheet, near the Pole of Relative Inaccesibility, it lies 3750 m beneath the ice, 1160 km N of Mirnyy Station. Its estimated dimensions are 210 km by 50 km (the Russians say 280 by 50), and the S portion of the lake is the deepest, at about 500 m. At least, so say the Americans. The Russians, who call it Vostok Lake (presumably they actually call it Ozero Vostok), say that at the S end, which is where Vostok Station is located, the depth is about 680 m. The Russians say that the maximum depth of the lake is 1200 m, but they do not say in which part of the lake this is. However, contrary to that statistic, they say that the depth in the N part of the lake is anywhere between 200 m and 4000 m. Somehow this might refer to distance of the feature beneath the ice, because seismic soundings and echo-soundings indicate that the lake is between about 3.5 and 4 km beneath the surface of the ice, at various points of its length. US-ACAN accepted the name Vostok Subglacial Lake in 2003. In 2011, it was revealed that the lake is the third largest in the world, and that the Russians were drilling down toward it, being 100 feet from it (at time of writing).

Vostok Traverse. An overland sledge and Caterpillar traverse from Wilkes Station to Vostok Station in the summer of 1962-63, the most ambitious trip of its kind ever pulled off by ANARE to that time. Their mission was to take ice core samples, and to fire seismic charges to plot the thickness of the ice sheet. **Sept. 17, 1962**: Led by Bob Thomson (officer-in-charge of Wilkes Station for the winter of 1962), with the two diesel mechanics Neville "Gringo" Collins and Desmond "Pancho" Evans, geophysicist Don Walker, glaciologist Alastair Battye, and American weather observer Danny Foster, they left Wilkes, with two D4 Caterpillar tractors, which were towing a train of sledges and caravans, and two 1944 Weasels. They had fuel for 800 km out. The previous year Nev Smethurst had laid two fuel dumps up to 400 km out, and in the winter of 1962 the Americans had agreed to airdrop fuel from a Globemaster to enable the traverse to get to the Russian Vostok Station, the coldest place on Earth. **Oct. 27, 1962**: Temperatures fell to-63 C. **Nov. 18, 1962**: They reached a deserted Vostok (they didn't know it was going to be deserted), but the Russians had given them permission to use it. **Nov. 24, 1962**: They left Vostok, heading back to Wilkes. **Jan. 14, 1963**: They returned to Wilkes Station, after 2896 km and 120 days, the longest trek in Antarctica ever undertaken by an Australian expedition.

Vostokkysten. 68°55' S, 90°29' W. The S and SE coast, about 14 km long, between Zavadovskijbreen and Kiwibukta, on Peter I Island. Named by the Norwegians for the *Vostok*, von Bellingshausen's ship.

Voyeykov Ice Shelf. 66°20' S, 124°38' E. It fringes the Banzare Coast, between Paulding Bay and Cape Goodenough. Discovered photographed, and mapped by SovAE 1958, and named by them as Shel'fovyj Lednik Voejkova, for the climatologist Aleksandr I. Voyeykov (1842-1916). US-ACAN accepted the name in 1961, and ANCA followed suit.

The *Voyou*. Australian yacht, skippered by Claude Appaldo, which visited the South Shetlands and the Antarctic Peninsula in 1998-99.

Voyteh Point. 62°35' S, 61°09' W. A point, 2 km ESE of Essex Point, and 2.6 km NW of Varadero Point, it forms the E side of the entrance to Richards Cove, on the N coast of Ray Promontory, Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Georgi Voyteh, 11th-century kavhan under Czar Konstantin-Petar of Bulgaria.

Bukhta Vozrozhdenija *see* **Vozrozhdenija Bay**

Vozrozhdenija Bay. 67°41' S, 45°45' E. An open bay between Cape Gaudis and Cape Kosistyy, on the coast of Enderby Land. Photographed aerially by ANARE in 1956, and again by SovAE 1957, and named by the latter as Bukhta Vozrozhdenija (i.e., "revival bay"). ANCA accepted the translated name on July 31, 1972.

Vrabcha Cove. 62°19' S, 59°41' W. A cove, 900 m wide, indenting the W coast of Heywood Island for 1 km, off the NW coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Vrabcha, in western Bulgaria.

Vrana, Attila. b. June 26, 1940, Czechoslovakia. Cosmic ray physicist who wintered-over at Mawson Station in 1965, 1968, and 1972. A good Australia Day moment came for him on Jan. 26, 1969, when he was naturalized as an Australian. He led the 1992 wintering-over party at Heard Island (53°S) in 1992.

Vrana Dome. 69°53' S, 73°28' E. A prominent, rounded ice dome, about 6.5 km NE of the Statler Hills, at the E side of the Amery Ice Shelf. ANARE set up a survey station here in 1968, during the tellurometer traverse from the Larsemann Hills to the Reinbolt Hills. Named by ANCA on Oct. 22, 1968, for Attila Vrana. He was on the survey that year. US-ACAN accepted the name in 1971.

Vrana Peak. 70°22' S, 63°59' E. Just SW of Mount Turnbull, 22 km (the Australians say about 28 km) SW of Mount Starlight, in the W extension of the Athos Range, in the Prince Charles Mountains. Mapped by Australian cartographers from terrestrial photos taken by Rob Lacey in 1955, and from ANARE air photos taken in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for Attila Vrana. US-ACAN accepted the name in 1970.

Vratsa Peak. 62°32' S, 59°38' W. A rocky peak rising to 470 m in Breznik Heights, between Targovishte Glacier and Musala Glacier, 1 km E of the summit of Viskyar Ridge, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the town of Vratsa, in northwestern Bulgaria.

Vrobel, William Henry. b. May 21, 1918, Primero, Colo., son of Slovenian immigrant coal miner Paul Vrobel and his Bohemian immigrant wife Louise. The family later moved to Albuquerque, NM. He joined the U.S. Navy at 18, and served as a coxswain on the *Bear*, during the first half of USAS 1939-41. During the 2nd half of the expedition, he was promoted to bosun's mate 2nd class. By 1955 he was a master-at-arms and a quartermaster. He died in May 1972, in Albuquerque.

Ostrov Vstrech *see* **Vstrech Island**

Vstrech Island. 66°18' S, 100°45' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Vstrech. The name was translated by ANCA.

Lednik Vstrechnyj. 80°37' S, 49°00' W. A glacier entering the Ronne Ice Shelf. Named by the Russians.

Vucetich, Colin George. b. 1918. NZ geologist at the University of Victoria at Wellington. He was the scientific leader of VUWAE 1969-70. For 25 years he and Alan Pullar (1912-1982) worked together as pioneers in tephrostratigraphy. He retired in 1982, and until 1991 was honorary lecturer at Massey University in North Palmerston. He died on April 25, 2007. There can only be one reason why Dr. Vucetich does not have an Antarctic feature named after him, and that is if he refused the honor.

Vukovich Peaks. 72°23' S, 74°59' E. A mountain with 2 well-defined peaks surmounting the northernmost rock outcrop in the Grove Mountains, about 57 km N of Mount Harding, in Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for John N. Vukovich, weather observer at Mawson Station in 1963. US-ACAN accepted the name in 1967.

Vulcan Hills. 73°40' S, 163°38' E. A group of small volcanic hills about 6 km SW of the Shulte Hills, in the Southern Cross Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1966-67, for the volcanic composition of the rocks which form these hills. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Vulcan Nunatak. 76°35' S, 144°37' W. A nunatak, badly sculptured away by ice, the remnant of a huge cone of an extinct volcano, 3 km SE of Mount Richardson, in the Fosdick Mountains of the Ford Ranges, in Marie Byrd Land. Discovered on Nov. 28, 1934, by Paul Siple and Stevenson Corey of ByrdAE 1933-35. They studied it and called it The Volcano. It was renamed as Vulcan Nunatak, by US-ACAN, in 1970.

Vulcano di Fango Vualt. 61°05°S, 56°43' W. A submarine mud volcano, about 94 sq km in area, 2216 m below the sea, and rising to about 255 m from the ocean floor, W of Elephant Island, in the South Shetlands. Discovered in 2003-04, from the *Explora*, during Project BSR. Named by the Italians on Dec. 6, 2007, after Mount Vualt, in the Alps. The leader of Project BSR was a woman, who came from that part of Italy.

Vund Point. 62°38' S, 61°11' W. A point forming the E extremity of Rugged Island, it lies 1.1 km NE of Radev Point, 1.3 km SE of Herring Point, and 2.1 km WNW of Laager Point (which is on Livingston Island), off the W coast of Byers Peninsula (which is also on Livingston Island), in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Vund, a Bulgar ruler in the Caucasus who established the principality of Vanand in 32-20 BC.

VUWAE. This stands for Victoria University of Wellington Antarctic Expedition. This NZ university has sent down an expedition to Antarctica every year. **VUWAE 1, 1957-58**. This first expedition was almost informal. The Ross Sea Committee (who planned NZ's participation in BCTAE 1955-58) and the NZ Navy, were planning to send the *Endeavour* on a trip to the Ross Sea. Prof. Bob Clark (*see* **Clark Glacier**), geologist at VUW, felt that two students from the university should be on board — Peter N. Webb (q.v.) and Barrie C. McKelvey (*see* **McKelvey Valley**). The *Endeavour*'s mission in the Ross Sea did not materialize, but the first VUWAE did. They arrived at Scott Base on the *Endeavour* on Dec. 30, 1957. With the help of Ron Balham, the zoologist wintering-over at Scott Base that year, Webb accompanied a small party of New Zealanders who helicoptered out to Victoria Valley, and, indeed, made the first ever geological mapping of the area. Webb and McKelvey later explored the area around the upper Taylor Glacier, and were the first to survey large parts of it. The two lads left Antarctica on the last Globemaster for NZ, in Feb. 1958. **VUWAE 2, 1958-59.** The second Antarctic expedition sent out by Victoria University of Wellington. Success breeds success, and, after the first expedition the year before, with it came funding. The expeditioners were all geologists — Colin Bull (q.v.; leader), Dick Barwick (deputy leader; *see* **Barwick Valley**), Peter Webb (q.v.), and Barrie McKelvey (*see* **McKelvey Heights**). They studied Wright Valley, and named Lake Vanda. **VUWAE 3, 1959-60**: VUWAE was now formalized as an ongoing event, summer after summer. The expeditioners were: Ron Balham (q.v.; leader and biologist), Ralph Wheeler (deputy leader and geographer; *see* **Wheeler Valley**), Tony Allen (geologist) (*see* [1]**Mount Allen**), Graham Gibson (geologist; *see* **Gibson Spur**), and Ian Willis (*see* **Willis Glacier**) (geologist and geophysicist. He replaced Dawn Rodley; the U.S. government would not allow a woman in Antarctica, and they would have been the ones who would have had to transport her between Scott Base and McMurdo). The Victoria Valley work done by Webb and McKelvey in the first VUWAE was continued, and biology was conducted. **VUWAE 4, 1960-61**. Geographer Ralph Wheeler (*see* **Wheeler Valley**) was expedition leader, and the rest of the team were also geologists — American Dick Blank (deputy leader; *see* **Blank Peaks**), Ian Willis (*see* **Willis Glacier**), and Roger Cooper (*see* **Cooper Nunatak**). Physicist Colin Bull (q.v.) was with the team, but worked detached. The main team conducted investigations in the area around Koettlitz Glacier. Wheeler coined the term VUWAE, and this expedition became known as VUWAE 4, and the three earlier ones were numbered in retrospect. **VUWAE 5, 1961-62**. Geology professor

Harold "Bill" Wellman (q.v.) and chemist Alexander Thomas "A.T." Wilson (q.v.), both senior staff members of VUW, formed the expedition. They studied Lake Vanda. **VUWAE 6, 1962-63**. All the men were geologists — Ian Willis (leader; *see* **Willis Glacier**), American Dr. Charles C. Rich (deputy leader; *see* **Mount Rich**), Tom Haskell (*see* **Haskell Ridge**), Warwick Prebble (q.v.), Jim Kennett (*see* **Kennett Ridge**), and G.J. Smith (also a chemist; *see* **Smith Heights**). They studied the Brown Hills and the Darwin Mountains, and then Taylor Valley. **VUWAE 7, 1962-63**. Physicist T. Shirtcliffe led this unscheduled Antarctic expedition. He, and physicist R.F. Benseman, and chemist K. Bruce Popplewell, studied Lake Bonney for a short time that season. This unexpected expedition, because it was also from VUW, is referred to as VUWAE 7. **VUWAE 8, 1963-64**. Geologist Warwick Prebble (q.v.) was leader. The first part (Nov. and Dec. 1963) was led by chemist A.T. Wilson (*see* **Wilson, Alexander Thomas**) in Taylor Valley, and the 2nd part (Jan. and Feb. 1964) by geologist Prof. Bill Wellman (q.v.). Other expeditioners were: physicist Ray Hoare (*see* **Lake Hoare**), geologist Robert A. "Bob" Henderson, and chemists Don House (*see* **Lake House**) and K. Bruce Popplewell. Lakes in Taylor Valley, Wright Valley, and Victoria Valley were studied, and reconnaissance flights made over White Island and Black Island, and Brown Peninsula. Wilson and House spent a week at Pole Station, conducting ice studies. **VUWAE 9, 1964-65**. Geologist Warwick Prebble (q.v.) was overall leader. The first part of the expedition, to study the islands and the peninsula scouted out in the previous year, was led by geologist Dr. P.P. Vella (*see* **Vella Flat**), with geologist Jim Cole and technician Alec Frame (*see* **Frame Ridge**). Physicist Ray Hoare (*see* **Lake Hoare**) was with the party, but detached at Lake Vanda. Tony Ewart, of the NZGS, worked for a short time with this group. Part 2 was led by geologist Prof. J. Bradley, and with Dr. D. Zimmerman (economic geologist), Fred Schafer (technician), and American exchange student geologist at VUW, Don Palmer. Alan Baker (deputy expedition leader and biologist) and Robin Bell (physicist) worked on both parts. **VUWAE 10, 1965-66**. All geologists. American Dr. Ed Ghent (leader), Robert A. "Bob" Henderson (deputy leader), Graham T. Hancox (*see* **Mount Hancox**), and Ian Smith (*see* **Ian Peak**). They studied petrology in Taylor Valley and Victoria Valley. **VUWAE 11, 1966-67**. Three separate groups. 1. Prof. Harold Wellman (expedition leader and geologist) and Andrew Duncan (geologist) worked in Wright Valley. 2. Ian Smith and Vince Neall (geologists) in Taylor Valley. 3. Dr. D.A. Christoffel (geophysics team leader) and Ian M. Calheim in McMurdo Sound. There has been a VUWAE every year since.

VX-6. Air Development Squadron Six, or AirDevRonSix. **Jan. 17, 1955**: The 6th VX squadron, it was named VX-6 by Ed Ward, and was commissioned at Naval Air Station, Patuxent River, Md., to be the flying arm of Task Force 43 during IGY. It would operate the National Science Foundation's airplanes and the U.S. Navy's helicopters, and provide airlift, aerial photography, search and rescue operations, reconnaissance support, and other transportation services, and long-range explorations, including courier flights between NZ and Antarctica. In other words, it would be the U.S. Navy air squadron that supported U.S. research in Antarctica, and it would fulfill that role for decades afterwards, the USA's only government aerial support squadron to operate in Antarctica. Ward wanted to command it, but Gordon Ebbe got the job, and Ward became the first operations officer. There were 53 VX-6 officer places to be filled and places for 260 enlisted men, and there were 4000 volunteers. That first year they employed 2 R5D Skymasters, 2 R4D Skytrains, 2 P2V Neptunes, and two UF-1 Grumman Albatrosses. **June 1956**: VX-6 was relocated to Naval Air Station, Quonset Point, RI. **Oct. 1956**: The pararescue team was organized. **June 27, 1968**: It was announced that VX-6 would become known as VXE-6, effective Jan. 1, 1969. *See* **VXE-6**. Commanding officers of VX-6 were (all commanders, and all biographized in this book one way or another): Ed Ward (Jan. 1955-April 1955); Hal Kolp (April 1955-June 1955; the only Marine to hold this position); Gordon Ebbe (June 1955-June 1955); Ed Ward (June 1955-June 1956); Doug Cordiner (June 1956-March 1957); Vernon Coley (March 1957-July 1958); Robert John Slagle (July 1958-May 1959; he was born on Nov. 27, 1921, and died on Jan. 18, 1995, in Farmington, NM); Jerry M. Barlow (May 1959-July 1959; he was born June 25, 1921, and died Jan. 19, 1993, in Los Angeles); Bill Munson (July 1959-June 1961); Martin Greenwell (June 1961-April 62); William Everett (April 1962-April 1963); George Kelly (April 1963-May 1964); Fred Gallup (May 1964-May 65); Moe Morris (May 1965-June 1966); Daniel Balish (June 1966-April 1967); Arthur Schneider (April 1967-June 68); Gene Van Reeth (June 1968-Jan. 1, 69). It became VXE-6 (q.v.).

Mount VX-6. 72°38' S, 162°12' E. A sharp and distinctive mountain, with a spire on its N side, rising to 2185 m, 6 km N of Minaret Nunatak, and 8 km S of Mount Stuart, in the central part of the Monument Nunataks, in Victoria Land. Surveyed by the Victoria Land Traverse Party of 1959-60, who named it for VX-6 (q.v.), which supported the traverse party in the field. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

VXE-6. The old VX-6 (q.v.) re-named, as from Jan. 1, 1969. It was now Antarctic Development Squadron Six. In Oct. 1973 headquarters moved to Point Mugu, Calif. Commanding officers have been (all commanders): Eugene W. Van Reeth (Jan. 1, 1969-July 1969); Jerome P. Pilon (July 1969-June 1970); David B. Eldridge (June 1970-July 1971); Claude H. Nordhill (July 1971-June 18, 1972); John B. Dana (June 18, 1972-June 1973); Vernon W. Peters (June 1973-July 1974); Fred C. Holt (July 1974-May 75); Daniel A. Desko (May 1975-May 1976); William A. Morgan (May 1978-May 1979); David A. Srite (May 1979-May 1980); Victor L. Pesce (May 1980-May 1981); Paul R. Dykeman (May 1981-May 1982); Michael J. Harris (May 1982-May 1983); Matthew J. Radigan (May 1983-May 1984); Dwight Douglas Fisher (May 1984-May 1985); Paul J. Derocher (May 1985-May 1986); Joseph D. Mazza (1986-May 1987); Jack Rector (May 1987-May 1988); John V. Smith (May 1988-1989). In 1996-97 a private helicopter contractor began taking over that service from VXE-6, and although the U.S. Navy's participation in Antarctica formally came to an end on March 12, 1998, VXE-6 continued to provide air support in Antarctica until it was disestablished at Point Mugu, on March 27, 1999. Air support was transferred to the USAF and to the New York Air National Guard's 109th Airlift Wing stationed at Scotia, NY.

Vyatskaya Peak. 71°57' S, 13°32' E. Rising to 2455 m, on the N part of Skavlrimen Ridge, in the Weyprecht Mountains, in the W part of the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped again by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966, as Gora Vjatskaja, perhaps for the Vyatka, the river in their home country, or perhaps for the oblast of Vyatskaya, or even for the Academy called Volgo-Vyatskaya. The Norwegians call it Vjatskatoppen (which means the same thing).

Vysockijfjellet *see* **Vysotskiy Peak**

Gora Vysockogo *see* **Vysotskiy Peak**

Sopka Vysokaja. 66°36' S, 99°44' E. One of the Obruchev Hills, in Queen Mary Land. Named by the Russians.

Gory Vysokie. 73°25' S, 62°00' E. A group of nunataks just NE of Mount Menzies, in Mac. Robertson Land. Named by the Russians.

Vysotskiy Peak. 71°34' S, 11°40' E. Rising to 2035 m, in the N part of Gorki Ridge, overlooking Schüssel Moraine to the W, in the N part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966, as Gora Vysockogo, for hydrologist, forester, and soil scientist Georgiy Nikolayevich Vysotskiy (1865-1940). The Norwegians call it Vysockijfjellet.

Gora Vystrel *see* **Vystrel Mountain**

Vystrel Mountain. 71°37' S, 15°04' E. A partly snow-covered mountain rising to 1995 m, 1.5 km S of Mount Rukhin, at the S end of the Lomonosov Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped by Norwegian cartographers

from 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped again by SovAE 1960-61, and named by them as Gora Vystrel (i.e., "shot mountain"). US-ACAN accepted the translated name in 1970.

Gora Vystup. 73°25' S, 62°43' E. A nunatak, immediately NE of Mount Bayliss, in Mac. Robertson Land. Named by the Russians.

[1]**Gora Vytjanutaja**. 72°50' S, 68°25' E. A nunatak, NW of the Hay Hills, at the N end of the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

[2]**Gora Vytjanutaja**. 73°12' S, 63°09' E. A nunatak, immediately S of Mount McCauley, on the N side of the Fisher Glacier, in the southern Prince Charles Mountains. Named by the Russians.

Mys Vyvodnoj. 67°39' S, 46°11' E. A cape, immediately E of Vechernyy Hill, at the E end of the Thala Hills of Enderby Land. Named by the Russians.

Nunatak Vzgorok. 70°49' S, 67°20' E. A nunatak, SE of Murray Dome, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Gora Vzlëtnaja. 70°35' S, 71°48' E. A nunatak, S of Bain Crags, in the Amery Ice Shelf. Named by the Russians.

Kap W. Spring *see* **Spring Point**

Wa Dao *see* **Jesson Island**

Bahía Waddington *see* **Waddington Bay**

Waddington Bay. 65°16' S, 64°05' W. A bay, constantly filled with floating ice, 1.5 km wide, indenting the W coast of Graham Land for 3 km in a NW-SE direction, on the E side of Penola Strait, immediately N of Cape Tuxen and between that point and Rasmussen Island. Discovered and partially charted in Feb. 1898, by BelgAE 1897-99. More fully charted by FrAE 1908-10, and named by Charcot as Baie Waddington, for Senator Richard Waddington (1838-1913), president of the Rouen Chamber of Commerce, 1897-1913. It appears as Waddington Bay on the Discovery Investigations chart of 1934. It was further charted in 1936 by BGLE 1934-37, and appears as Waddington Bay on their expedition chart. It was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on a 1946 Argentine chart as Bahía Waddington, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. The feature was further surveyed by an RN Hydrographic Survey unit, assisted by FIDS, in 1958.

Waddington Bay Glacier *see* **Bussey Glacier**

Waddington Glacier. 78°03' S, 161°27' E. A tributary glacier, 5 km long, flowing WNW along the S side of Ugolini Peak, on the Colwell Massif, to enter Palais Glacier, in Victoria Land. Named by US-ACAN in 1995, for Edwin Donald Waddington (b. 1950), University of Washington geophysicist who, from 1990 was field investigator at Taylor Dome, in an extended program of glacier geophysical studies.

Mount Wade. 84°51' S, 174°19' W. A mountain massif, capped by beacon sandstone, and rising to 4084 m (the New Zealanders say about 4572 m), next to Mount Fisher, and 6 km NW of Mount Campbell, in the Prince Olav Mountains, in the Queen Maud Mountains, just to the E of Shackleton Glacier, the stern flank of which it dominates at the head of the Ross Ice Shelf. The most distinctive landmark in the area, it can easily be seen as a landmark from many positions on both the Shackleton Glacier and the Ross Ice Shelf. Discovered and photographed aerially by Byrd in Nov. 1929, during ByrdAE 1928-30. He named it Mount Bush (*see* **Bush Mountains**), and estimated its height at about 15,000 feet. It was re-named in 1947 by US-ACAN, for Alton Wade. NZ-APC accepted the name.

Wade, Franklin Alton "Al." b. Feb. 5, 1903, Akron, Ohio, son of life insurance salesman Mulford Wade and his English wife Margaret Carse Pope (*see* **Mount Fitzsimmons**). He went to Miami University, and became a geologist (PhD, Johns Hopkins, 1937), one of the shore party who wintered over at Little America in 1934, during ByrdAE 1933-35. He married Sarah Jane Richards (known as Jane; *see* [2]**Mount Gray**) in 1938. He was the senior scientist at West Base, and in charge of the "snowcruiser," during USAS 1939-41. During World War II he was a major in the Army Air Corps, and base commander of the Greenland Ice Cap Detachment, 1943-44. During the Korean War he was operations analysis officer with the Far East Air Forces. From 1954 to 1964 he headed the geology department at Texas Tech, at Lubbock, and declined the post of leader of Byrd Station for the winter of 1957. From 1964 to 1973, when he retired, he was Horn Professor of Geosciences at Texas Tech, and led the Texas Tech Shackleton Glacier Expeditions of 1962-63 and 1963-64, and the Marie Byrd Land Survey of 1966-68. He died on Oct. 1, 1978, in Lubbock, Tex.

Wade, Robert W. b. May 16, 1947. He joined BAS in 1971, as a radio operator, and wintered-over at Base F in 1972. From 1974 to 1987 he served on the *John Biscoe* and the *Bransfield*.

Wade Glacier *see* **Shackleton Glacier**

Wade Ice Rise. 69°01' S, 67°05' W. A small ice rise in the Wordie Ice Shelf, SSW of Hag Pike, and 13 km NW of Triune Peaks, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially by RARE 1947-48, and surveyed from the ground by Fids from Base E in 1958. Named by US-ACAN in 1977 for George W. Wade, Jr., USN, who wintered-over as chief construction electrician at Palmer Station in 1970. UK-APC accepted the name on May 21, 1979.

Wade Point. 70°41' S, 67°41' W. A rocky mass rising to 915 m above sea level (the British say about 600 m), and fronting the E side of George VI Sound, it marks the W extremity of the rock ridge that separates Millett Glacier from Bertram Glacier, on the W coast of Palmer Land. Photographed aerially and surveyed from the ground in Oct. 1936, by BGLE 1934-37, and plotted in 70°42' S, 67°43' W. Re-surveyed by Fids from Base E in 1949. Named by Rymill in 1954 for Mrs. Muriel H. Wade, secretary of BGLE. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a 1955 U.S. Hydrographic Office chart. It has since been re-plotted.

Cape Wadsworth *see* **Cape Wadworth**

Wadsworth, Samuel. The cooper aboard the *Huron*, in the South Shetlands, 1820-22. He was from Connecticut.

Cape Wadworth. 73°19' S, 169°47' E. Also seen spelled (erroneously) as Wadsworth. The NE extremity of Coulman Island, in the Ross Sea, just off Victoria Land. Discovered on Jan. 17, 1841, by Ross, and named for Wadworth Hall, near Doncaster, Yorks, the residence of his wife's uncle, Robert John Coulman. The name was accepted by US-ACAN in 1947, and it appears in the 1958 NZ gazetteer.

Mount Waesche. 77°10' S, 126°54' W. A large and prominent mountain of volcanic origin, snow-covered except for rock exposures on the S and SW slopes, and rising to 3290 m, standing immediately SW of Mount Sidley, it marks the S end of the Executive Committee Range, in Marie Byrd Land. Discovered on Dec. 15, 1940, on a USAS flight. Named by US-ACAN in 1947, for Vice Admiral Russell Randolph Waesche (b. 1886, Thurmont, Md. d. 1946, Bethesda, Md.), commandant of the U.S. Coast Guard (1936-45) and member of the USAS executive committee.

Wafer, Lionel. b. about 1658, Wales. He first went to sea in 1676 as an assistant surgeon on the *Great Anne*, bound for Bantam, in the Dutch East Indies. In 1680 he settled in Jamaica, where his brother worked on a plantation, and became a buccaneer. He was part of Bart Sharpes's privateering expedition to the South Seas, that included William Dampier. On Dec. 25, 1687, on his way from the Pacific to the West Indies, he found himself in 62°45' S, and thus in Antarctic waters. In 1688 he was imprisoned in Jamestown, Va. That year he became one of the first setlers of Philadelphia, in Pennsylvania, but by 1689 was back in England again. In 1698 he was a consultant to the Darien expedition to New Caledonia, in Panama, and wrote *A New Voyage & Description of the Isthmus of America* (*see* the Bibliography). Some say he married Maria Levasseur, and that they had a daughter, Sarah. He died in London about 1705.

Wager, Andrew Chester. b. March 4, 1946, Sheffield, son of Harry Chester Wager and his wife Barbara Dorothea Cliffe. He joined BAS in 1967, as a glaciologist, and wintered-over at Halley Bay Station in 1968, and at Fossil Bluff Station in 1969 (where he was also officer-in-charge). On March 20, 1971, in Derby, he married Barbara Yarker. He wintered-over again at Fossil Bluff in 1972.

Wager Glacier. 69°48' S, 69°23' W. A small, heavily crevassed glacier occupying a trench-like valley on the NE coast of Alexander Island, and flowing E into George VI Sound, immediately S of Marr Bluff, between that bluff and Sedgwick Glacier. Surveyed by Fids from Base E in 1948, and named by them for petrologist Lawrence

Rickard Wager (1904–1965), professor of geology at Durham, and at Oxford (from 1950), and a member of the 1933 Mount Everest expedition. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Waglenabben. 74°16' S, 9°37' W. The most northerly nunatak in Milorgfjella, which in turn is the most northerly of the 3 divisions of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for two Resistance brothers killed by the Nazis in 1940 when they discovered their secret Milorg radio near Oslo (*see* **Milorgfjella**)—businessman Ivar William Wagle (born 1914) and his bricklayer brother Tell Christian Wagle (born 1919).

Wagner, Reginald Clarence Alvin "Reggie." b. Aug. 31, 1933, French Lick, Indiana, son of farmer Carel Wagner and his wife Thelma Nolan. In 1951 he joined the U.S. Navy, went to San Diego for boot camp, then as a Seabee to Korea. He was in Japan in 1955 when he saw the notice for "volunteers for the South Pole." He married Mary Katherine in 1955, and then went to Davisville, RI, and from there, with Ed Hubel, to Detroit for cold-weather building training. He shipped south on the *Wyandot* (q.v. for itinerary) to McMurdo Sound, where, as a utilitiesman 1st class, he helped build the base, and wintered-over there in 1956. On Nov. 25, 1956 he was among the 2nd party of Seabees flown to the South Pole, to build the base there, and, at the end of the mission, was part of the 2nd party to be flown back to McMurdo, in a P2V-7, on Dec. 29, 1956. In March 1957 he shipped out of McMurdo on the *Curtiss*, bound for NZ. From Christchurch he was one of the few from his group who flew to the States (rather than by ship). He was posted to Port Hueneme, Calif., as assistant bridge warden, and in 1959 volunteered for Antarctic duty again. He flew down in the 1959-60 summer to McMurdo, was based there that season, and wintered-over there in 1960, as the Seabee who ran the plumbing shop. After a short time back in the USA, he was back at McMurdo again for the 1960-61 summer season, and again for the 1961-62 summer. He was now a chief petty officer, and Ed Hubel helped him get a job on Kennedy's White House staff, a job that carried over to Lyndon Johnson's administration, until 1967, when he went back to Davisville. For the next 3 years he was working on "urban development" at McMurdo, going down twice, in the summers of 1967-68 and 1968-69, as a company commander. In 1970 he was in Vietnam, then in 1971 was in Diego Garcia Island proving the existence of fresh water there, and retired from the Navy on Oct. 13, 1971, to Rhode Island, and became plant engineer for Colonial Linen (supplying linen to hospitals throughout New England). His 2nd wife was Alice Furtado, and his 3rd wife, whom he married in 1983, was Janice Plante. He retired in 1995, but continued to work part-time.

Wagner Ice Piedmont. 69°39' S, 72°39' W. About 14 km long in a WSW-ESE direction from Bates Peak to Schenck Peak, and 6 km wide, it overlies the SW part of Rothschild Island, S of Fournier Ridge, in the Desko Mountains. Seen and photographed aerially by USAS 1939-41. Mapped in 1959-60 by Searle of the FIDS from air photos taken by RARE 1947-48, and plotted by him in 69°28' S, 72°38' W. Named by UK-APC on March 2, 1961, for the German composer Richard Wagner (1813-1883). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Wagner Nunatak. 83°58' S, 66°30' W. Rising to about 850 m, it is one of the Rambo Nunataks, 14 km S of Blackburn Nunatak, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for John K. Wagner, USARP radioscientist who wintered-over at Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971.

Wagner Spur. 70°09' S, 159°36' E. A pointed rock and ice spur along the N flank of Pryor Glacier, 20.4 km SSE of Mount Gorton, at the SE end of the Wilson Hills, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for John E. Wagner, CRREL glaciologist at McMurdo Station in 1967-68.

Wagoner Inlet. 72°01' S, 99°47' W. An ice-filled inlet between Tinglof Peninsula and Starr Peninsula, on the N side of Thurston Island. Delineated from air photos taken by OpHJ in Dec. 1946, and named by US-ACAN in 1960, for Charles Wagoner, a seaman on the *Glacier*, during the Bellingshausen Sea Expedition, and a member of the field party engaged in scientific work on Thurston Island in Feb. 1960. Originally plotted in 71°57' S, 100°02' W, it was replotted. The Russians plotted it even farther south, in 72°06' S, 99°45' W.

Wahl Glacier. 83°59' S, 165°06' E. A glacier, 16 km long, flowing NW from Grindley Plateau into the upper part of Lennox-King Glacier, westward of Mount Mackellar, and just to the W of Beardmore Glacier. Named by US-ACAN in 1966, for Bruno W. Wahl (b. Jan. 2, 1928. d. Dec. 4, 2000, Maui), USARP ionosphere physicist at McMurdo in 1962. Originally plotted in 84°03' S, 165°15' E, it was later replotted.

Wahlborg, John Erik. b. Oct. 13, 1882, Finland, as Johan Erik Walborg, of Swedish parents. He went to sea, and in 1901 was an able seaman on the *Philae*, as that vessel pulled into Cardiff. He arrived in the US, at New York, on the *Main*, out of Bremen, on Dec. 22, 1903, and was naturalized as a U.S. citizen in Washington state on July 22, 1909. In 1910 he married Carrie Larsen, a Norwegian who had come over in 1896, and had been naturalized in 1903, and they lived in Seattle. He went to work for a steamship company, as a navigator and carpenter, working occasionally with Charlie Salenjus (q.v.), and progressed through the ranks to 2nd mate, which is what he was on the *North Star*, during USAS 1939-41. His son, John Oliver Wahlborg (see the entry below) was also aboard the *North Star*, as a seaman. After World War II, John Erik Wahlborg was skipper of the *Wideawake*, and retired to Kitsap, Wash., and died in Seattle, on Oct. 24, 1976, aged 94.

Wahlborg, John Oliver. b. Jan. 3, 1917, Seattle, son of John Wahlborg (see the entry above) and his wife Carrie Larsen. He was a seaman on the *North Star* during USAS 1939-41. He died on Dec. 23, 1985, in Santa Clara, Calif.

Wahlstrom Peak. 78°33' S, 85°31' W. A high, sharp peak rising to 4677 m, at the SE side of the summit plateau of the Vinson Massif. Named by US-ACAN on Nov. 1, 2006, for Richard W. Wahlstrom, member of the American Antarctic Mountaineering Expedition of 1966-67 that made the first ascent of Vinson Massif and of other high mountains in the Sentinel Range.

The Waif *see* **The Waifs**

Les Waifes *see* **The Waifs**

Les Waifs *see* **The Waifs**

The Waifs. 64°33' S, 62°42' W. A group of small snow-covered islands and rocks lying in the middle of the SE entrance to Schollaert Channel, between Strath Point (on Brabant Island) and Ryswick Point (on Parker Peninsula, Anvers Island), in the Palmer Archipelago, off the NW coast of the Antarctic Peninsula. The largest is 5 km long and rises to 87 m above sea level. Discovered and roughly charted by BelgAE 1897-99. Surveyed in 1927 by personnel on the *Discovery*, and possibly named by them, although it is possible that the name had been long in use by whalers in the area. It appears on the Discovery Investigations chart of 1929. US-ACAN accepted the name in 1951, and US-ACAN followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1959. It appears on a 1949 Argentine chart as Islotes Waifs (i.e., "waifs islets"), and on a 1953 Argentine chart as Islas Waifs (i.e., "waifs islands"), but it was the name Islotes Waifs that was accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer (the Chileans rejected Islotes The Waifs). It appears on a 1951 French chart as Les Waifs, but on one of their 1954 charts as Les Waifes. Photographed aerially by FIDASE in 1956-57, who set up a triangulation station on the northeasternmost islet in this group, and named that islet The Waif. However, this was an unofficial name.

Islotes (The) Waifs *see* **The Waifs**

Waikato Spur. 78°03' S, 162°27' E. In the vicinity of Ball Glacier, in the Royal Society Range. Named by US-ACAN in 1994, for the University of Waikato, in Hamilton, NZ.

Waiparahoaka Mountain. 78°17' S, 162°55' E. Rising to 3608 m, S of Mount Huggins, in the Royal Society Range, along the W shore of McMurdo Sound. Named by NZ-APC on March 1, 1994. US-ACAN accepted the name later in 1994. It means "mountain of many glaciers" in Maori.

Waipuke Beach. 77°14' S, 166°24' E. Between

McDonald Beach and Caughley Beach, 10 km SW of Cape Bird, on Ross Island. So named by NZGSAE 1958-59 (who visited it in Jan. 1959), because of its periodic flooding by meltwater from the Mount Bird Ice Cap, which has been destructive to the Adélie penguin rookeries here (waipuke is Maori for "flood"). There are 3 Adélie penguin rookeries in the area of Cape Bird, and this beach contains the middle one of these. The beach merges with a low gravel stream-fan which extends inland to high rock bluffs topped by the edge of the meltwater that comes off the Mount Bird ice-cap or from the sudden outbreak of a sub-glacial stream. The rookery on the seaward end of the stream-fan was cut into isolated remnants elevated a foot or more above their surroundings by erosion along the braided channels of the stream. There are signs of another, long-abandoned, rookery on the S end of the beach. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

The Waist. 64°38' S, 61°24' W. A col, at an elevation of about 2000 m above sea level, connecting the Herbert Plateau with the Foster Plateau, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers in 1959, from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base D during a sledge traverse to Portal Point in Oct.-Nov. 1957. Named by UK-APC on Sept. 23, 1960, for its narrowness. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Waitabit Cliffs. 71°31' S, 68°14' W. A line of sedimentary cliffs extending 5 km N from Mercury Glacier, between that glacier and Uranus Glacier, on the E coast of Alexander Island. The cliffs face E onto, and rise to about 500 m above, George VI Sound. Ellsworth partially photographed this feature from the air on Nov. 23, 1935, but it was first (roughly) surveyed from the ground in Oct. 1936, by BGLE 1934-37. In Dec. 1949, Fids from Base E surveyed the feature in much more detail. Two groups within the party independently examined rock strata at two different points, and this rather time-consuming process caused them to wait a bit at this feature before they resumed their journey down George VI Sound. UK-APC named it on March 31, 1955, and US-ACAN accepted the name in 1956.

Cape Waite. 72°42' S, 103°03' W. At the NW extremity of King Peninsula, it marks the SW side of the entrance to Peacock Sound. Delineated from air photos taken in Dec. 1946, by OpHJ 1946-47, and plotted by various countries anywhere between 72°44' S, 103°16' W and 72°50' S, 103°24' W. It was named by US-ACAN in 1960, for Bud Waite, and has since been re-plotted.

Waite, Amory Hooper "Bud," Jr. b. Feb. 14, 1902, Newton, Mass., son of accountant Amory Hooper Waite and his wife Alice Frances Wade. Radio engineer and operator on ByrdAE 1933-35, he went south as one of the crew of the *Bear of Oakland*, and was one of the shore party who wintered over at Little America in 1934. He was one of the 3 who rescued Byrd (*see* **Bolling Advance Weather Station**). He took part in OpHJ 1946-47, was communications specialist on the *Atka* during the United States Navy Antarctic Expedition of 1954-55, and during OpDF II (1956-57) was leader of the U.S. Army Signal Corps Antarctic Research Team (*see* **Signal Corps Antarctic Research Team**). He was in Greenland in 1959, and then on the USN Bellingshausen Sea Expedition of 1959-60. In 1961 he initiated the first aerial surveys of the Antarctic ice-cap. He retired from the Army in 1965, and died on Jan. 15, 1985, in Sarasota, Fla.

Waite Islands. 72°44' S, 103°40' W. A group of small islands in the Amundsen Sea, 10 km W of Cape Waite (the NW extremity of King Peninsula). Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, in association with Cape Waite.

Waitt Peaks. 71°29' S, 62°34' W. A cluster of pointed peaks, mostly snow-covered, and rising to an elevation of about 1650 m above sea level, at the SW end of a large, horseshoe-shaped ridge at the head of Cline Glacier, 6 km NW of the Schirmacher Massif, at Odom Inlet, on the Black Coast, in the E part of Palmer Land. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for geologist Richard B. Waitt (b. May 1943), a member of the USGS geological and mapping party to the Lassiter Coast, 1972-73. UK-APC accepted the name on July 21, 1976.

Wakadori Island. 69°00' S, 39°32' E. The southernmost in a cluster of 3 small islands N of Ongul Island and W of East Ongul Island, and 0.8 km NW of the strait that separates those two islands, near Showa Station. Photographed aerially by LCE 1936-37, and roughly mapped from these photos by Norwegian cartographers in 1946, but not named at that time. Accurately mapped from ground surveys and air photos conducted and taken by JARE between 1957 and 1962, and named by the Japanese on June 22, 1972, as Wakadori-zima, or Wakadori-jima (i.e., "young bird island"). US-ACAN accepted the name Wakadori Island in 1975.

Wakadori-jima *see* **Wakadori Island**

Wakadori-zima *see* **Wakadori Island**

Monte Wakefield *see* **Mount Hope, Wakefield Highland**

Mount Wakefield *see* **Mount Hope**

Wakefield Highland. 69°17' S, 65°11' W. An ice- and snow-covered plateau in the south-central part of Graham Land, extending N-S from 69°00' S to 69°35' S, and rising to 2080 m at its N end. To the N it is bounded by Hermes Glacier and the heads of Weyerhaeuser Glacier and Aphrodite Glacier; to the W it is bounded by the heads of Airy Glacier, Rotz Glacier, and Seller Glacier; to the S it is bounded by Fleming Glacier; and to the E it is bounded by the heads of Lurabee Glacier, Sunfix Glacier, and Grimley Glacier. Aerially photographed on Dec. 22, 1947 by RARE 1947-48, and surveyed by Fids from Base E in Nov. 1960. Named by UK-APC on Aug. 31, 1962, for Charles Cheers Wakefield, 1st Viscount Wakefield (1859-1941), great philanthropist and a sponsor of BGLE 1934-37. The British wanted a feature in this area to be named Wakefield, in order to replace the old Mount Wakefield (now called Mount Hope). US-ACAN accepted this name later in 1962. It appears on a 1959 Argentine chart as Monte Wakefield. Remarkably, it appears in the 1974 British gazetteer as Wakefield Highlands.

Wakefield Highlands *see* **Wakefield Highland**

Wakeford Nunatak. 67°49' S, 63°02' E. A small nunatak, with 2 rock exposures, 6 km ENE of Dallice Peak, in the Central Masson Range, in the Framnes Mountains of Mac. Robertson Land. Plotted from ANARE aerial photos taken in 1960, and visisted by John "Snow" Williams' ANARE party of Dec. 1962, while collecting geological specimens and lichens in the Framnes Mountains Named by ANCA for Reg Wakeford, cook at Mawson Station in 1962. US-ACAN accepted the name in 1965.

Walbach. 62°10' S, 58°58' W. A little stream flowing SW from the lake the Germans call Walsee, and emptying into Walbucht, at Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Walbom, Kristian. b. Husvik, Norway. Skipper of the whale catcher *Graham*, when she went down in the South Shetlands on Nov. 6, 1924 with all hands. Like most of the deceased in the Whalers Graveyard, this man is uncorroborable.

Walbucht. 62°10' S, 58°58' W. A small bay at Bothy Bay, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Cabo Walcott *see* **Cape Walcott**

Cape Walcott. 69°05' S, 63°19' W. A bold, ice-covered headland, rising to 625 m above sea level, and which forms not only the S entrance point of Casey Inlet, but also the seaward extremity of Scripps Heights, projecting into the Larsen Ice Shelf, to the NW of Hearst Island, on the Wilkins Coast, on the E side of the Antarctic Peninsula. Discovered and photographed aerially by Wilkins on Dec. 20, 1928, and named by him for Frederic Collin Walcott (1869-1949) of the Council of the American Geographical Society, and former U.S. senator from Connecticut. Wilkins plotted it in 70°05' S, 64°20' W, and it appears as such on a 1933 British chart. Photographed again, aerially, by Ellsworth, on Nov. 23, 1935, and plotted for the first time in its correct relative position by U.S. cartographer W.L.G. Joerg, in 1936, from these photos. Surveyed from the ground in 1940 by USAS, 1939-41. US-ACAN accepted the name in 1947, but with the coordinates 69°02' S, 63°15' W. However, after a joint survey in Nov. 1947, by Fids from Base E and USAS 1947-48, UK-APC followed suit with the naming on Sept. 8, 1953, but with the amended coordinates, and that was how it appeared in the 1955 British gazetteer. US-ACAN accepted these new coordinates. It appears on a Chilean chart of 1947, as Cabo

Walcott, and that was the name accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Mount Walcott. 85°21' S, 87°23' W. Rising to 2155 m and mostly ice-free, 4 km E of Mount Powell, in the E part of the Thiel Mountains. Named by Peter Bermel and Arthur Ford, U.S. geologists here in 1960-61, for paleontologist Charles Doolittle Walcott (1850-1927), 3rd director of USGS, 1894-1907, and head of the Smithsonian (1907 until his death). US-ACAN accepted the name in 1962.

Walcott, Richard Irving "Dick." b. May 14, 1933, Dunedin, NZ, son of James Farrar Walcott and his wife Lily Stewart Irving. In 1940 the family moved to Auckland, and in 1952 he went to Auckland University College, where climbing was his main passion. In Feb. 1955 he worked his passage to England as a ship's steward at £9 a week, arriving there with £45 in tips and the same amount in wages. He climbed in Wales for several weeks, then, running out of money, and having heard that FIDS was looking for keen young men, he went to London for the interview. He told Fuchs he had come all the way to England just to join the FIDS, and was taken on, as a meteorological assistant in July 1955, and sent for met training at Stanmore. In Oct. 1955 he left Southampton on the *John Biscoe*, and while in Montevideo the ship was laid up for a month, so Walcott went clmbing in central Uruguay. Finally he got down to Base D, where he wintered-over in 1956 and 1957. In June 1958 he returned to the UK on the *Shackleton*, traveled in Europe, lectured, then returned to NZ, where, in order to be able to go back to Antarctica, he began studies in geology at Auckland University in March 1959, working his way as a postman. By Nov. 1959 he had been taken on as a dog handler by DSIR (NZ), and was flown down to the Ross Ice Shelf for the 1959-60 season. He became a geological assistant, and upon his return to NZ was given as job as technical assistant within the Antarctic Division, which meant a move to Wellington and a transfer to Victoria University. On April 16, 1960 he married Genevieve Rae Lovatt Simmonds. He was in Antarctica briefly in 1960-61, accompanying ex-FIDS dogs that Wally Herbert was bringing in for the NZ expedition. In 1961-62 he led the Beardmore Glacier mapping party, and graduated in geology in 1962, getting his PhD in geology in 1965. He left DSIR in 1963, in 1966 moved to British Columbia, and in 1967 began work at the Dominion Observatory in Ottawa, returning to NZ in 1975. Also a surveyor, he was a scientist at the Geophysics Division of DSIR, 1975-83, and professor of geology at VUW from 1984 to 1998. He wrote much on tectonic plates.

Walcott Bay. 78°14' S, 163°37' E. An indentation in the coast of Victoria Land, between Walcott Glacier and Heald Island. Named by BAE 1910-13 in association with the glacier, and plotted by them in 78°15' S, 163°42' E. US-ACAN accepted the name in 1962, and NZ-APC followed suit in Dec. 1993. The feature has since been re-plotted.

Walcott Glacier. 78°14' S, 163°15' E. A small glacier, flowing from the Royal Society Range, between on the one hand Heald Island and Radian Glacier and on the other Howchin Glacier and Mount Dromedary, into Walcott Bay, in southern Victoria Land. Named by Grif Taylor during BAE 1910-13, probably for Charles D. Walcott (*see* **Mount Walcott**). Taylor plotted it in 78°13' S, 163°00' E. US-ACAN accepted the name in 1962. The feature has since been re-plotted.

Walcott Lake. 78°14' S, 163°28' E. One of several lakes in the Alph River system, this one lies 2.1 km E of the snout of Walcott Glacier, on the Scott Coast of Victoria Land. Named by NZ-APC in 1994, in association with Walcott Glacier. US-ACAN accepted the name later in 1994.

Walcott Névé. 84°23' S, 162°40' E. A large névé, between 350 and 400 sq miles in area, between the Marshall Mountains and Mount Achernar, or between Law Glacier and Beardmore Glacier. It is bounded by the Marshalls, Lewis Cliffs, and Mount Sirius. Named by NZGSAE 1961-62, for geologist in the area Dick Walcott (q.v.). This was the location of their second base line and re-supply, in Jan. 1962. US-ACAN accepted the name in 1966.

Walcott North Stream. 78°14' S, 163°23' E. A meltwater stream flowing E from the N part of the snout of Walcott Glacier into Walcott Lake, on the Scott Coast of Victoria Land. Named by NZ-APC in Dec. 1993, in association with the glacier. The name was accepted by US-ACAN in 1994.

Walcott Peak. 71°49' S, 64°22' W. A large nunatak, rising to about 1700 m, midway between Mount Jukkola and Lokey Peak, in the S sector of the Guthridge Nunataks, in the Gutenko Mountains of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Lt. (later Lt. Cdr.) Fred Perry Walcott, USN, officer in charge of Pole Station in 1973. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Walcott South Stream. 78°15' S, 163°23' E. A meltwater stream flowing E from the S part of the snout of Walcott Glacier into Walcott Lake, on the Scott Coast of Victoria Land. Named by NZ-APC in Dec. 1993, in association with the glacier. The name was accepted by US-ACAN in 1994.

Pico Waldeck *see* **Waldeck-Rousseau Peak**

Waldeck Island *see* **Waldeck-Rousseau Peak**

Waldeck Peak *see* **Waldeck-Rousseau Peak**

Cape Waldeck-Rousseau *see* **Cape Evensen, Waldeck-Rousseau Peak**

Monte Waldeck-Rousseau *see* **Waldeck-Rousseau Peak**

Waldeck Rousseau Cape *see* **Cape Evensen**

Waldeck-Rousseau Island *see* **Waldeck-Rousseau Peak**

Waldeck-Rousseau Peak. 66°09' S, 65°38' W. A conspicuous monolith, rising to about 1200 m, 5.5 km ENE of Cape Evensen, on the Graham Coast, on the W coast of Graham Land. During FrAE 1903-05, Charcot charted a cape in this area, and named it Cap Waldeck-Rousseau, for his brother-in-law, the French statesman Pierre Waldeck-Rousseau (1846-1904), who helped finance the expedition. It appears on a 1908 map as Cape Waldeck-Rousseau. In 1908-10 Charcot, on his 2nd expedition (FrAE 1908-10), sighted it from Pendleton Strait, 40 km distant, and re-defined it as a small island, Île Waldeck (Waldeck Island), near the coast. On Bongrain's 1914 map from the same expedition, Île Waldeck-Rousseau is shown as (what is now called) Wooden Peak and the present-day peak combined. It appears on a 1914 British chart as Waldeck-Rousseau Island, and as such again on a 1932 Discovery Investigations chart. Wilkins called it Waldeck Island, on his map of 1929. It was correctly defined as a peak in 1935, by BGLE 1934-37 (they did ground and aerial surveys), but they descriptively named it Pillar Peak. The name Waldeck-Rousseau they incorrectly applied to Cape Evensen (which they named Cape Waldeck-Rousseau). However, on Rymill's 1938 map of that expedition, it also appears as Mount Waldeck Rousseau and Waldo Rousseau Peak (both without hyphens), which indicates that Rymill had changed his mind about the naming of Cape Evensen. Reflecting Rymill more than anyone else, it appears on a 1940 British chart as Waldeck Rousseau Peak (i.e., without the hyphen), on a 1943 U.S. Hydrographic Office chart as Mount Waldeck Rosseau (without the hyphen, and misspelled), and again as such on a 1948 British chart. Yet another 1948 British chart showed it as Mount Waldeck Rousseau (again without the hyphen). It appears on a 1949 Argentine chart as Monte W. Rousseau. Finally, in 1950, US-ACAN accepted the name Waldeck-Rousseau Peak, and that it is how it was shown in the 1951 U.S. gazetteer. UK-APC accepted that name on Sept. 20, 1955, and it appears as such on a British chart of 1961. It appears on a 1953 Argentine chart as Monte Waldeck-Rousseau, and that was the name accepted by the 1970 Argentine gazetteer, and also by the Chilean gazetteer of 1974 (the Chileans rejected Pico Waldeck-Rousseau). However, today, the Argentines tend to call it Pico Waldeck. It was photographed from the air by FIDASE in 1956-57. In 1960 UK-APC decided to change the name of this feature to Waldeck Peak, and it appears as such on a British chart of 1961.

Cape Walden. 71°50' S, 96°53' W. An ice-covered cape at the NW end of Evans Peninsula, and marking the E entrance to Koether Inlet, on Thurston Island. Delineated from air photos taken by VX-6 in Jan. 1960, and plotted in 71°44' S, 96°55' W. Named by US-ACAN in 1960, for Arthur Walden. The feature has since been re-plotted.

Walden, Arthur Treadwell. b. May 10, 1871, Indianapolis, son of Rev. Treadwell Walden and his wife Elizabeth Leighton. His father later moved to New York City, and then to Boston, to be rector of St. Paul's Church. Educated at Shattuck Military Academy in Faibault, Minn, Walden then became a farmer in NH. In 1896

he went north to Alaska for the gold rush and drove dogs for 7 years on the Circle City to Dawson route, when the country was really wild. He then returned to Boston to marry Kate Sleeper, granddaughter of the former mayor of Roxbury. He settled down in Wonalancet, NH, and introduced dog-sledge racing to the East, winning many races with his great dog Chinook (q.v.). He wrote *A Dog Puncher on the Yukon*. He was dog driver, and leader of the Queen Maud Mountains supporting party during ByrdAE 1928-30. On March 26, 1947, at his house in Wonalancet, the fire in the grate caught his wife's dress. Although she was severely burned, he got her to safety, went to the kitchen for a pail of water to try to extinguish what had now become a house fire, and collapsed. Although burned himself, it was his heart that gave out. The house was destroyed.

Waldrip Ledge. 79°57' S, 157°43' E. A conspicuous area of relatively level exposed rock, about 6 sq miles in area, and rising to about 900 m above sea level, on the E side of the terminus of Ragotzkie Glacier, at the juncture of that glacier with Hatherton Glacier, along the N margin of the Britannia Range. Named by US-ACAN in 2000, for David Waldrip, of Holmes & Narver, Inc., camp manager of the nearby USARP Darwin Glacier field camp in 1978-79. NZ-APC accepted the name on Feb. 20, 2001.

Cape Waldron. 66°34' S, 115°33' E. An ice-covered cape, just westward of Tottan Glacier, between the Budd Coast and the Sabrina Coast, in Wilkes Land. Delineated in 1954 by U.S. cartographer Gard Blodgett from air photos taken by OpHJ 1946-47, plotted in 66°30' S, 115°05' E, and named by US-ACAN in 1955, for R.R. Waldron. It has since been re-plotted. ANCA accepted the name.

Mount Waldron. 78°27' S, 84°53' W. Rising to 3100 m, 5 km N of Mount Tuck, it surmounts the ridge between Dater Glacier and Hansen Glacier, in the Sentinel Range of the Ellsworth Mountains. Discovered and photographed aerially by VX-6 on Dec. 14-15, 1959, and mapped from these photos by USGS. Named by US-ACAN in 1961, for Ken Waldron.

Waldron, James Edgar "Jim," Jr. b. May 19, 1925, New Orleans, son of ship's engineer James Edgar Waldron and his wife Cecilia L. Borne. He entered the U.S. Navy in Jan. 1943, under the Aviation Cadet Program, and became an ensign in May 1945. When the war ended he was a ferry pilot at Norfolk, got out of the Navy in May 1946 and became a commercial photographer. Recalled for Korea, he was an Air/Sea Rescue helicopter pilot. After 2 years as a helo pilot instructor, he volunteered for OpDF II (1956-57), and became a VX-6 pilot of helicopters and R4D airplanes. He arrived at McMurdo by plane on Oct. 17, 1956, made several flights in support of tractor trains to Byrd Station, flew twice to the South Pole, and wintered-over in 1957 as leader of Little America V, returning to the USA in the spring of 1958. During that time he flew several times to the Pole. From 1958 to 1960 he was doing something similar in Morocco, and then 3 years back in Pennsylvania as projects officer with the Anti-Submarine Warfare Lab. Then California, Japan and Pensacola. He retired as a lieutenant commander on June 30, 1970, and went to work for the Veterans Administration, finally retiring in May 1987.

Waldron, Kenneth L. "Ken." b. Oct. 30, 1935, Atchison Co., Mo. USN. Electrician. Wintered-over at Pole Station in 1957.

Waldron, Richard Russell. b. Portsmouth, NH. Purser on the *Vincennes* during USEE 1838-42. He died in hospital in New York on Oct. 30, 1846.

Waldron, Thomas W. Captain's clerk on the *Porpoise* during USEE 1838-42.

Waldron Glacier. 66°31' S, 130°00' E. A channel glacier flowing to the E side of Porpoise Bay, halfway between Sandford Glacier and Morse Glacier, on the Banzare Coast of Wilkes Land. Delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1955, for Thomas W. Waldron. Originally plotted in 66°27' S, 130°00' E, it has since been re-plotted. ANCA accepted the name.

Waldron Spurs. 84°35' S, 175°40' W. A group of 4 or 5 rocky spurs at the E side of the terminus of Shackleton Glacier, in the NW portion of the foothills of the Prince Olav Mountains, in the Queen Maud Mountains. Discovered and photographed on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Named by US-ACAN in 1962, for Jim Waldron. NZ-APC accepted the name.

Wales, William. b. 1734, Warmfield, near Wakefield, Yorks, son of banksman John Wales and his wife Sarah Cay. As a youth he walked to London with John Holdroyd, who was to become plumber to George III. In 1762 he published *Ode to Mr. Pitt*, and became a writer on subjects mathematical. In 1765 he was appointed to help draw up the tables for the *National Almanack and Astronomical Ephemeris*, and that year, on Sept. 5, he married Mary Green, at Greenwich. In 1769 he wintered-over in Hudson's Bay. He was the astronomer on the *Resolution* during Cook's 2nd voyage, 1772-75. After the expedition he became a master at Christ's Hospital, where he taught mathematics. Samuel Taylor Coleridge was one of his pupils. Severe, yet jolly at the same time, is how he was described. He died in 1799.

Wales Glacier. 77°37' S, 163°31' E. A short alpine glacier just W of Mount Barnes, between Double Curtain Glacier and Taylor Valley, it drains N into that valley, at the E end of the Kukri Hills, in Victoria Land. Named by BAE 1910-13, presumably for the country. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Wales Stream. 77°35' S, 163°30' E. A meltwater stream draining from Wales Glacier into Explorers Cove in New Harbor, Victoria Land. The name, in association with the glacier, was used by NZ geologist Burton Murrell in 1973, but he claimed that it had perhaps been coined by NZ geologists Bill Wellman (q.v.) and Colin Vucetich, when they were here with VUWAE 12 in 1967-68. Either way, US-ACAN accepted the name in 1976.

Walfe, James C. *see* **USEE 1838-42**

Walford, George Brian. Known as Brian Walford. b. April 13, 1916, Birmingham, son of Hugh Walford, of Layer-de-la-Haye, Essex. After Dover College, he took a short-service RAF commission in 1937, in 1938 became an acting pilot officer, and on Nov. 10, 1939, was promoted from pilot officer to flying officer. In Oct. 1945, in Jerusalem while a wartime wing commander, as chief intelligence officer at Air Force HQ Levant, he married Pauline Mary Miller, a WAAF based in Haifa. Back to his peace time rank of squadron leader, he led the RAF Antarctic Unit during the 1949-50 season of NBSAE 1949-52, and in 1951 was promoted back to wing commander (and awarded an OBE). In 1958 he was promoted to group captain, and in 1962 became assistant commandant of the RAF Staff College at Andover. He later lived in Kensington, and then moved to the Isle of Wight, and died on Jan. 27, 2008.

Walgreen Coast. 75°30' S, 107°00' W. That portion of the coast of Marie Byrd Land, between Cape Herlacher and Cape Waite. Discovered by Byrd in Feb. 1940, during flights from the *Bear*, and named by him for Charles Rudolph Walgreen (1873-1939), founder and president of the Walgreen Drug Company of Chicago, one of Byrd's sponsors for USAS 1939-41, and also for ByrdAE 1933-35. US-ACAN accepted the name in 1947. The coast was mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Originally plotted in 75°15' S, 105°00' W, it has since been re-plotted.

Walgreen Peak. 77°03' S, 145°43' W. A prominent rock peak, rising to 570 m, it forms the NW extremity of the Sarnoff Mountains, in the Ford Ranges of Marie Byrd Land. Named by its discoverer, Byrd, in 1940, for Charles Rudolph "Buck" Walgreen, Jr. (1906-2007), at the time vice-president (1933-39; he was later chairman of the board) of Chicago's Walgreen Drug Company, who contributed malted milk powder to USAS 1939-41. US-ACAN accepted the name in 1970.

Walinsel. 62°09' S, 58°58' W. A small island 5 km NNE of the W tip of King George Island, in the South Shetlands. This was named by the Germans, but it may well be their name for Square End Island, which occupies exactly the same co-ordinates.

Walk Glacier. 73°38' S, 94°18' W. Flows westward from Christoffersen Heights to the S of Forbidden Rocks, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by US-ACAN in 1963, for Lt. (later Lt. Cdr.) Donald Richard "Don" Walk (b. May 1933), officer-in-charge and medical officer of Byrd Station, 1961. That was the season he had his hands full with Leonid Kuperov (q.v.). Dr. Walk was later a psychiatrist in Carmichael, Calif.

Walkabout Rocks. 68°22' S, 78°32' E. Prominent rock exposures at the edge of the

plateau ice along the coast, at the NE extremity of the Vestfold Hills, about 0.8 km S of the Wyatt Earp Islands. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. First landed on by Sir Hubert Wilkins, on Jan. 11, 1939, in a party from the *Wyatt Earp*, during Ellsworth's last expedition to Antarctica. They left records wrapped in a copy of the Australian geographical magazine, *Walkabout*. An ANARE party led by Bruce Stinear recovered these on May 10, 1957, and thus named the rocks. US-ACAN accepted the name in 1965.

Bahía Walker *see* **Walker Bay**

Cap Walker *see* **Walker Point**

[1]**Cape Walker** *see* **Walker Point**

[2]**Cape Walker**. 72°33' S, 95°57' W. An ice-covered cape forming the SE end of Thurston Island. Named by US-ACAN in 2003, for Edward Keith Walker, Sr. (b. Oct. 3, 1904, Portland, Maine. d. Sept. 25, 1988), captain of the *Canisteo*, the tanker of OpHJ 1946-47. He retired as a rear admiral.

[1]**Mount Walker** *see* **Mount Siple**

[2]**Mount Walker**. 64°49' S, 62°01' W. A snow-covered mountain, rising to about 2350 m from the NE section of Forbidden Plateau, near the head of Rozier Glacier, and 3 km S of the head of Blanchard Glacier, on the Danco Coast, on the W coast of Graham Land. Surveyed by FIDS in 1955, plotted in 64°48' S, 62°03' W, and photographed aerially by FIDASE 1956-57. Named by UK-APC on Sept. 4, 1957, for Richard Walker (q.v.), of the *Discovery II*. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. The feature has since been replotted. The British Army Antarctic Expedition of 2004-05 were the first to climb this peak.

Point(e) Walker *see* **Walker Point**

Punta Walker *see* **Walker Point**

Walker, Alexander John "A.J." b. June 22, 1874, in Peterhead, Aberdeenshire, the illegitimate son of Helen Walker by a gentleman named Mr. Robb. Curiously, 6 years later, Helen's sister, Isabella, also had a child, Elizabeth, by a gentleman named Mr. Robb. Young Alick grew up using that name, but had mutated into Alexander J. Walker by the time he became a ship's stoker as a teenager. He was an able seaman, skinman and lampman on ScotNAE 1902-04. On his return to Peterhead he married Hanna Molt Cowap on Sept. 23, 1904. He married again, in Glasgow, on April 17, 1919, to Mary Alice Hayden, and died in Killester, Dublin, on Oct. 23, 1946.

Walker, John. Captain of the *John*, in the South Shetlands for the 1820-21 season, and again for the 1821-22 season (*see also* **Kincaid, Thomas**). The first season he took 12,000 fur seal skins, and also provided George Powell with descriptions and sketches of the southern shores of the islands in the South Shetlands for use in Powell's chart of 1822. He reported 30 American vessels in the South Shetlands in the 1820-21 season.

Walker, John Dargie. b. Oct. 31, 1873, Dundee, son of Samuel Walker and his wife Elizabeth Harvey. A merchant seaman and whaler, he married Ann, and they lived in Dundee. He was an able seaman on the *Discovery*, 1901-04, and, after a season in Antarctica, he returned to the UK on the *Morning* (as did Shackleton), in 1903. His nephew, also named John Dargie Walker, was a ship's engineer who died on active service during World War II.

Walker, Paul Thomas. b. Aug. 18, 1934, Los Angeles. Glaciologist in Greenland in 1956, then at Ellsworth Station in Antarctica, during IGY, 1957-58. He was a member of the first party to visit the Dufek Massif in Dec. 1957. He had to pull out of the Ellesmere Island Shelf Expedition to the Arctic in 1959, and died on Nov. 9, 1959, in Pasadena.

Walker, Richard. b. 1904. He was promoted to sub lieutenant, RNR, in 1931, and was 2nd officer (and lieutenant) on the *Discovery II*, 1933-35, and 1st officer, 1935-37. By 1942, he was a lieutenant commander.

Walker, Richard Simon "Dick." He joined BAS in 1969, as a diesel electric mechanic, and wintered-over at Base T in 1970. He wintered-over at Fossil Bluff Station in 1971, as general assistant, tractorman, and base leader, and during that winter broke his thigh while sledging down a steep slope. He did a third winter, at Halley Bay Station in 1973, again as a diesel electric mechanic.

Walker, Robert. b. 1846. Mate on the *Polar Star* during DWE 1892-93.

Walker, William Archibald "Archie." Some knew him as "Jock." b. 1923, Glencoe, Argyllshire. He joined FIDS in 1949, as a general assistant and meteorological assistant, and wintered-over at Port Lockroy Station in 1950, and at Base F in 1951.

Walker, William McCreary. b. Sept. 2, 1813, Baltimore, son of Samuel P. Walker and his wife Caroline Hite Lee. He entered the U.S. Navy on Nov. 1, 1827, as a midshipman, and on June 10, 1833, became a passed midshipman. On Dec. 8, 1838, he was promoted to lieutenant, and went on USEE 1838-42. At Tierra del Fuego, on the way down to Antarctica, in 1838, he replaced the previous captain of the *Flying Fish*. He himself was replaced as commander of that vessel by Lt. Pinckney. On Sept. 14, 1855, he was promoted to commander, and on July 16, 1862, during the Civil War, was promoted to captain, commanding the *De Soto* throughout the war. The most successful of the blockaders, he captured more prizes than any other skipper during the war. He died of heart disease on Nov. 19, 1866, in a NYC hospital.

Walker Bay. 62°38' S, 60°41' W. Between John Beach and Hannah Point, along the S coast of Livingston Island, in the South Shetlands. This bay was known to the early 19th-century sealers, who tended to use the name Elephant Bays to refer collectively to this bay, South Bay, and False Bay (*see* **Elephant Bays**). This bay was charted by the Discovery Investigations in 1930-31, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for John Walker. US-ACAN accepted the name in 1960. It appears on a British chart of 1962. The Argentines call it Bahía Walker. Last plotted by the UK, in late 2008.

Walker Cirque. 79°32' S, 156°31' E. A prominent, glacier-filled cirque at the W side of the terminus of McCleary Glacier, opening to Darwin Glacier near the head, in the Cook Mountains. Named by US-ACAN in 2001, for Carlton Walker, facilities, maintenance, and construction supervisor for Raytheon Polar Services, at Pole Station during the time USAP was modernizing the station.

Walker Glacier. 77°20' S, 160°37' E. An attenuated glacier flowing NE in Caffin Valley, and closely following the E side of Gibson Spur, in the Willett Range, and terminating in Barwick Valley just before it reaches the S flank of Webb Glacier, in Victoria Land. Named by NZ-APC on Sept. 12, 2005, for geologist Barry Walker, who made 3 trips to this area with VUWAE (1979-80, 1981-82, and 1982-83). He was the field leader for basement geology studies at Mount Bastion. US-ACAN accepted the name in 2006.

Walker Mountains. 72°13' S, 99°02' W. A range of peaks and nunataks mostly composed of quartz-diorite-gneiss, most of which are steep-sloped and ice-covered, and, although the individual features within the range are somewhat scattered and quite well separated one from the other, the range, nevertheless, trends roughly E-W, to form the axis, or spine, of Thurston Island. Mount Dowling, Mount Noxon, Mount Simpson, Mount Leech, Mount Hubbard, Mount Kazukaitis, Mount Hawthorne, Mount Bramhall, Mount Borgeson, Dickens Peak, Parker Peak, Smith Peak, and Low Nunataks are in this group. Discovered on Feb. 27, 1940 by Byrd on a flight from the *Bear* during USAS 1939-41, and named by him as the Demas Mountains (for Pete Demas). Re-named by US-ACAN in 1952, for Lt. William M. Walker, of the old Wilkes expedition. Originally plotted in 72°07' S, 99°00' W, they have since been replotted.

Walker Nunatak. 67°55' S, 63°15' E. A small nunatak, about 9 km SE of Dallice Peak, and 16 km E of Branson Nunatak, on the E edge of the Framnes Mountains, in the Central Masson Range of Mac. Robertson Land. Photographed aerially by ANARE in 1962, and seen by an ANARE dog-sledge party led by Ian Landon-Smith in Jan. 1963, while they were on their way from the Amery Ice Shelf to Mawson Station. Named by ANCA for Kevin George Walker (known as George, or "Mumbles"; b. April 13, 1927), who wintered-over as assistant cook, handyman, dog handler, and field equipment officer at Mawson Station in 1962, and who was also a member of Landon-Smith's sledge party. US-ACAN accepted the name in 1965. Walker was in the Prince Charles Mountains in 1969-70. On Feb. 19, 1970 he was returned in a Medevac to Mawson and operated on for appendicitis.

Walker Peak. 82°38' S, 53°13' W. A sharp peak, rising to 1495 m, it marks the SW extremity of the Dufek Massif, in the Pensacola Moun-

tains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 by the USGS Pensacola Mountains Project, and mapped by USGS from all these efforts. Named by US-ACAN in 1968, for Paul T. Walker. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Walker Point. 61°09' S, 54°42' W. A point, 5 km SW of Cape Valentine, it forms the S point of the E coast of Elephant Island, in the South Shetlands. Roughly charted by Powell and Palmer in Dec. 1821, it appears on Powell's chart of 1822, as Walker's Point, named, probably by Powell, probably for Capt. John Walker. It appears as Point Walker on an 1839 British chart, and also on Frank Wild's 1923 map. On the 1838 chart of FrAE 1837-40, it appears as Pointe Walker, but as Cap Walker on their 1842 map, and even as Pointe Walter (sic) in certain editions. On British translations of the French maps, it might also be seen as Cape Walker. It appears on a British chart of 1940 as Walker Point, and on a 1949 British chart, with the same name, but with the coordinates 61°08' S, 54°38' W. US-ACAN accepted the name Walker Point in 1952, with the coordinates 61°08' S, 54°46' W, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears as Walker Point on a British chart of 1962, but with the coordinates 61°06' S, 54°38' W. On Nov. 3, 1971, UK-APC amended the coordinates to 61°08' S, 54°42' W, and US-ACAN conformed to this. It appears on an Argentine chart of 1949 as Punta Walker, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines also call it Punta Walker. Last plotted by the UK, in late 2008.

Walker Ridge. 72°34' S, 168°22' E. A high mountain ridge between Stafford Glacier and Coral Sea Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for English-born Dr. Eric Arthur Walker (1910-1995), president of Penn State, president of the National Academy of Engineering, and chairman of the National Science Board (USA), 1964-66 (he had been a board member since 1960).

Walker Rocks. 76°14' S, 161°36' E. A group of high rocks, 5 km in extent, 5 km SW of Mount Murray, near the mouth of Mawson Glacier, in Victoria Land. Named by US-ACAN in 1965, for Carson B. Walker, utilitiesman at Pole Station in 1961. NZ-APC accepted the name.

Walker Spur. 85°01' S, 91°12' W. A notable rock spur forming the E side of Compton Valley, in the N part of the Ford Massif, in the Thiel Mountains. Named by Pete Bermel and Art Ford, co-leaders of the U.S. Thiel Mountains party which surveyed here in 1960-61, for Capt. Joseph G. Walker, USMC, a VX-6 pilot here that season. US-ACAN accepted the name in 1962.

Walker Valley. 70°41' S, 67°33' E. A large, wide, snow-filled valley, immediately W of the Manning Massif, in the Aramis Range of the Prince Charles Mountains. Mapped from ANARE air photos. Named by ANCA for Mumbles Walker (*see* **Walker Nunatak**). US-ACAN accepted the name in 1973.

Walker's Point *see* **Walker Point**

The Wall. 69°24' S, 76°23' E. A steep ridge, like a high wall blocking the flow of ice from the S, in the Larsemann Hills, just to the SW of the Russian base Progress 1. Named descriptively by ANCA on Nov. 24, 1987. The Chinese call it Hunan Shan.

Cadena Wall *see* **Wall Range**

Wall Peak. 71°03' S, 65°23' E. The largest and northernmost of a group of 3 sharply defined mountains, about 8 km SE of the Husky Massif, and about 30 km E of Mount Hicks, in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for Brian Henry Wall, South Australian ionosphere physicist who wintered-over at Wilkes Station in 1960. US-ACAN accepted the name in 1967.

Wall Range. 64°49' S, 63°22' W. It is actually a ridge, 5 km long, with steep wall-like cliffs and jagged peaks, the highest being 1095 m above sea level (Mount Wheat), and runs NE-SW from Thunder Glacier to Channel Glacier, in the central part of Wiencke Island, in the Palmer Archipelago. First seen and mapped in Feb. 1898, by BelgAE 1897-99, and surveyed in 1944 by Port Lockroy personnel of Operation Tabarin, who gave it this name. UK-APC accepted the name on Nov. 21, 1949, and it appears on a 1950 British chart. US-ACAN accepted the name in 1951. It appears in the British gazetteer of 1955, and on a 1959 British chart. It was re-surveyed in 1955 by Fids from Base N. The N end of this feature appears incorrectly as Copper Peak (q.v.) on a U.S. Hydrographic Office chart of 1960. It appears in the 1974 Chilean gazetteer as Cadena Wall (which means the same thing).

Wall Rock. 83°08' S, 56°57' W. Rising to 980 m, 6 km N of Robbins Nunatak, at the N end of the Schmidt Hills, in the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for John Wall, a member of the U.S. Air Force Electronics Test Unit (q.v.), here in 1957-58. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Wall Valley. 77°29' S, 160°51' E. An upland valley next W of Virginia Valley, and next E of Priscu Valley, it opens N to McKelvey Valley, in the Olympus Range of Victoria Land. Minotaur Pass is at its head, between Apollo Peak and Mount Electra. Named by US-ACAN in 2004, for Diana Wall, of the Natural Resources Ecology Laboratory, at Colorado State University at Fort Collins, who was a USA soils biologist in the McMurdo Dry Valleys for 13 field seasons from 1989 to 2002. NZ-APC accepted the name on Nov. 30, 2004.

Wallabies Nunataks. 81°12' S, 156°20' E. A large group of nunataks near the Polar Plateau, 16 km NE of the All-Blacks Nunataks, at the E side of Byrd Névé, about 44 km NW of Mount Albert Markham. Discovered by NZGSAE 1960-61, and named by them for the famous NZ rugby team. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Cabo Wallace *see* **Cape Wallace**

Cap Wallace *see* **Cape Wallace**

Cape Wallace. 63°14' S, 62°12' W. Marks the NW end of Low Island, in the South Shetlands. Charted by Foster in 1829, during the *Chanticleer* Expedition of 1828-31, and named by him (although no one knows for whom). It appears on the expedition's charts, and also on an 1839 British chart. It appears as Cap Wallace, on a 1902 chart made up by de Gerlache (based on his work during BelgAE 1897-99), and there is an Argentine reference to it in 1908, as Cabo Wallace. Everything was fine at that point, but then, on the Discovery Expeditions chart of 1933, it was confused with Cape Garry, and that error carried over into US-ACAN accepting the name Cape Wallace in 1952, but giving it to what is now Cape Garry. UK-APC did the same on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, on a British chart of 1957, and in the 1962 British gazetteer. Finally, on July 21, 1976, the name was applied by UK-APC to the right cape, and US-ACAN followed suit. The Chileans call it Cabo Wallace. Last plotted by the UK, in late 2008.

Mount Wallace. 85°39' S, 151°24' W. Rising to 1490 m, in the Tapley Mountains, at the S side of the mouth of Roe Glacier at the junction with Scott Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for J. Allen Wallace, Jr., U.S. Weather Bureau meteorological technician who wintered-over at Pole Station in 1960.

Wallace, Joseph William, Jr. b. Feb. 23, 1914, Spokane, Wash., son of British immigrant Joseph William Wallace, an insurance agent, and his wife Florence Mitchell. As a child, Joe Jr. was raised partly at Haller Lake, just outside Seattle, and in the 1920s, Doc Wallace took the family to Temescal, Riverside County, Calif., where he became a chiropractor at a health resort. Florence became a nurse at the same resort. Joe Jr. joined the U.S. Navy, and was a yeoman 1st class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition, he was promoted to chief yeoman. He died on July 29, 1969, in Riverside.

Wallace, Thomas *see* **USEE 1838-42**

Wallace Rock. 75°55' S, 128°27' W. A rock outcrop 1.5 km E of Peter Nunatak, and 8 km NW of Mount Petras, at the SE extremity of the McCuddin Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for James W. "Jim" Wallace (b. Jan. 14, 1934, Lima, Ohio), who joined the U.S. Navy in June 1952, and who was chief utilities man who wintered-over at Pole Station in 1965 and 1969. He retired from the Navy in April 1977.

Cape Wallaston *see* **Cape Neumayer**, **Cape Wollaston**

Wallend Glacier. 64°58' S, 62°13' W. A

deeply entrenched glacier which flows eastward from the Forbidden Plateau into Green Glacier, on the Oscar II Coast, in the N part of Graham Land. Surveyed by Fids from Base D in Sept. 1955. So named by UK-APC on Sept. 4, 1957, because it is walled in on 3 sides by the escarpment of the Forbidden Plateau. US-ACAN accepted the name in 1963.

Waller Hills. 72°46' S, 68°18' E. A group of rock outcrops in the N part of the Mawson Escarpment, N of Rofe Glacier. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1958, 1960, and 1973. Named by ANCA for John Keith Waller (b. 1914; known as Keith, or Sir Keith after he was knighted), assistant secretary of the Australian Department of External Affairs, 1953-57.

Cape Walleston *see* **Cape Wollaston**

Wallin, William Richard "Dick." b. June 16, 1907, Stroud Cottage, Cold Ash, Thatcham, near Newbury, Berks, son of William James Wallin and his wife Eliza Hamblin. He moved to the Falkland Islands in 1925, and married a local girl, Violet Caroline Lanning, in Stanley, on Sept. 7, 1929. In 1945 he joined FIDS as handyman, and wintered-over at Base D in 1946 and 1947. He then became chief steward on the *John Biscoe*, and left the Falklands in 1953, with his wife, back to the UK, arriving in Southampton on Jan. 20, 1953, on the *Alcantara*. He died in Southampton at the end of 1976, and Violet died in Kingsclere, Hants, in 1989.

Walling, J. Seaman on the 2nd half of ByrdAE 1928-30.

Wallis, James. Carpenter on Cook's voyage of 1772-75. Afterwards, he became carpenter on the *Firm*.

Wallis, Percy J. b. Sawyers Bay, NZ. Sailmaker from Dunedin on the first part of ByrdAE 1928-30. He went down on the *Eleanor Bolling*, but transferred to the *City of New York*, being told that he was going to be a member of the wintering-over party (this did not happen, in the end). He went back to NZ on the *City of New York*, on Feb. 22, 1929. On Jan. 5, 1930, he left for Antarctica again, on the *City of New York*.

Wallis Glacier. 71°14' S, 168°15' E. Nearly 30 km long (the New Zealanders say about 24 km long), in the NW part of the Admiralty Mountains, it flows N and then NW to coalesce with the lower portions of Dennistoun Glacier and Nash Glacier just before all three reach the sea just E of Cape Scott, on the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Staff Sgt. Nathaniel Wallis, USAF (*see* **Deaths**, 1958). NZ-APC accepted the name.

Wallis Nunataks. 66°52' S, 55°39' E. Four nunataks with steep rock faces on their S and E sides, and with ice banked up behind them on the N and W sides, 6 km (the Australians say about 9 km) ENE of Mount Storegutt, in Kemp Land, in Enderby Land. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1954-66. First visited by Dave Trail's ANARE party on Feb. 22, 1965. Named by ANCA on July 29, 1965, for Graham R. Wallis, geologist on the *Nella Dan* in 1965, on an expedition led by Phil Law. US-ACAN accepted the name in 1970.

Wallnerspitze. 74°18' S, 9°44' W. Named by the Germans. This seems to be the same feature the Norwegians call Vikenegga, in Milorgfjella, in the Heimefront Range of Queen Maud Land.

The Wallows. 60°42' S, 45°37' W. A low-lying area, 0.5 km S of Berry Head, between Starfish Cove and Heywood Lake, in the NE part of Signy Island, in the South Orkneys. It is sheltered by low ridges on all sides, and has a small freshwater pond in the middle of it. Roughly surveyed by the Discovery Investigations in 1933, and re-surveyed in 1947 by FIDS, who so named it because most of the moulting elephant seals wallow here in the summer. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Walmsley, Aaron *see* **USEE 1838-42**

Mount Walnum. 72°06' S, 24°10' E. A large mountain rising to 2870 m, 6 km E of Mount Widerøe, between Gunnestad Glacier and Jennings Glacier, in the central part of the Sør Rondane Mountains. Included on this mountain are the following features: Høgryggen, Verheyefjellet, Svindlandfjellet, Smalegga Ridge, Blaiklockfjellet, and Deromfjellet. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Walnumfjellet, for Ragnvald Walnum (1883-1953), former chairman of the Norwegian Whaling Board, who prepared an ice chart of Antarctica. US-ACAN accepted the name Mount Walnum in 1952. Re-mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47.

Walnumfjella *see* **Mount Walnum**

Walnumfjellet *see* **Mount Walnum**

Walsee. 62°10' S, 58°57' W. A little lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Walsh, Don. b. Nov. 2, 1931, Berkeley, Calif. He graduated from the U.S. Naval Academy in 1954, was in the U.S. Navy from 1948 to 1975, 14 of those years being at sea, mostly in submarines, in the Korean war and in Vietnam, where he commanded a sub from 1968 to 1970. It is as a naval researcher and explorer that he is most famous, being commander of the bathyscaphe *Trieste* from 1959 to 1962, in 1960 descending in the *Trieste* to the Challenger Deep with Jacques Piccard. In 1955 he made the first of 10 trips to the Arctic, and, in 1970-71, the first of 16 trips to Antarctica. In 1971-72, he was special assistant to the assistant secretary of the Navy, for research and development. He retired as a captain in 1975, and became dean of marine programs and professor of marine engineering at the University of Southern California, and developed USC's Institute for Marine and Coastal Studies. In 1983 he went into private business.

Walsh, John Stanley. A bus driver, who joined FIDS in 1956, as a diesel electric mechanic, and wintered-over at Base D in 1957 and 1958.

Walsh Glacier. 69°33' S, 158°45' E. A tributary glacier which flows ENE along the S side of the Goodman Hills, to enter the lower part of Tomilin Glacier, in the central part of the Wilson Hills, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Gary Walsh, USARP biologist at Hallett Station in 1968-69. ANCA accepted the name on July 31, 1972.

Walsh Knob. 72°13' S, 96°03' W. A small but distinctive ice-covered elevation rising midway along the S side of Lofgren Peninsula, in the E part of Thurston Island. It has a rounded appearance, except for a cliff at the S side. Named by US-ACAN in 2003, for R.W. Walsh, USN, photographer's mate in the Central Task Group during OpHJ 1946-47.

Walsh Nunatak. 73°09' S, 63°11' W. Rising to about 1600 m, N of the head of Haines Glacier, 13 km SW of Mount Axworthy, on the W side of the Dana Mountains, on the Lassiter Coast, on the E coast of Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for biologist John J. Walsh, a member of the Palmer Station-*Eastwind* expedition of 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Walsh Spur. 72°40' S, 169°22' E. A pointed rock spur 6 km E of Mount Northampton, it forms the W side of the terminus of Whitehall Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from NZGSAE 1957-58 ground surveys, and from USN air photos. Named by US-ACAN in 1973, for Don Walsh.

Rocas Walsham *see* **Walsham Rocks**

Walsham Rocks. 64°50' S, 64°32' W. Two rocks, 1.5 km E of Buff Island, near the W mouth of Bismarck Strait, S of Anvers Island, at the SW end of the Palmer Archipelago. Mapped by the *Iquique*, during ChilAE 1947, and named respectively Islote Edgardo and Islote Jorge by the captain of that ship, Ernesto González Navarrete, for his sons Edgardo and Jorge. Surveyed by an RN Hydrographic Survey unit in 1956-57, and named collectively on July 7, 1959, by UK-APC, as Walsham Rocks, for one of the survey recorders in this unit, able seaman John "Wally" Walsham, RN. US-ACAN accepted the name in 1965. In 1947 the Chileans grouped these rocks together with Buff Island, and called the whole group Islotes Buff. However, by 1962, they had changed their mind, and began to use the collective name, Rocas Walsham, even though they also name the two (Edgardo and Jorge) separately as well. Buff Island had, for them, become Islote Buff. The overall group concept of Islotes Buff, however, impressed the Argentines, and they adopted it.

Mount Walshe. 86°11' S, 152°15' W. A bare rock peak, rising to 2050 m, at the N side of Bartlett Glacier where it joins Scott Glacier, in the S part of the Hays Mountains, in the Queen

Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. (later Cdr.) Edward Canice Walshe, Jr. (b. May 5, 1925. d. June 14, 1997, Norfolk, Va.), serving in Antarctica on the *Arneb* in 1957-58 and 1958-59. He was back in 1966-67, on the staff of the commander, U.S. Naval Support Force, Antarctica.

Pointe Walter *see* **Walker Point**

Walter, Rolf. b. Norway. He went to sea, and became a whaling gunner. He was skipper of the *Thorgaut*, 1930-31.

Walter Glacier. 69°17' S, 70°26' W. Flows ENE, merging with the S side of Moran Glacier, to enter Schokalsky Bay, in the extreme NE part of Alexander Island. Surveyed by Fids from Base E between 1948 and 1950. Named by US-ACAN for Lt. Cdr. Howard John Walter (b. Oct. 28, 1931, Buffalo, NY), who joined the U.S. Navy in Sept. 1950, and who was VXE-6 commander of LC-130 Hercules aircraft during OpDF 1970 and OpDF 1971. He retired from the Navy in Nov. 1974. UK-APC accepted the name on June 11, 1980. Originally plotted in 69°17' S, 70°21' W, then in 69°17' S, 70°24' W, it has since been replotted.

Walter Kohler Range *see* **Kohler Range**

The *Walter Rau*. A 13,752-ton German whaler, built in 1937 by Deutsche Werft, in Hamburg, for Rau Neusser Oelwerke. She was in Antarctic waters in 1937-38 and 1938-39. From 1940 to 1945 she was a depot ship stationed at Gdynia, and in Nov. 1945 was in the UK. In Dec. 1946 she was in Norway when Anders Jahre bought her and renamed her *Kosmos IV* (q.v.)

Walters Peak. 85°39' S, 128°45' W. A sharp peak, rising to 2430 m, on the spur descending the N slope of the Wisconsin Range between Faure Peak and Lentz Buttress. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Robert E. Walters, USN, who wintered-over at McMurdo in 1960.

Waltham, Henry *see* **USEE 1838-42**

The *Walther Herwig*. West German Fisheries research ship, named for the famous Prussian lawyer of the 19th century, and skippered by Theodor Frerichs and Edwin Littkemann, and which, with the *Julius Foch*, made a krill and fish research expedition to the Bellingshausen Sea in 1977-78. She was in Antarctic waters again, in 1980-81, skippered by Capt. Littkeman, and took down the first West German Antarctic Expedition. She also took part in BIOMASS that season, with the *Meteor*. She was part of the West German Antarctic Expeditions of 1984-85 (skippers Littkemann and Capt. Hohengarten).

Mount Walton. 72°29' S, 160°18' E. A sharp, bare mountain, rising to 2460 m, midway between Oona Cliff and Mount Chadwick, in the Outback Nunataks, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Fred W. Walton, geomagnetist and seismologist at Pole Station in 1968.

Walton, Austen Nevil. b. Sept. 5, 1923, in North Bierley, Yorks, son of Fred S. Walton and his wife Fanny C. Butterfield. He joined FIDS in 1949, as a meteorologist, and wintered-over at Base B in 1950 and 1951. He died in July 2001, in Slough, Berks.

Walton, David Winston Harris. b. Aug. 25, 1945, Fylde, Lancs. BAS botanist at Signy Island Station from Oct. 1967 to April 1968; Sept. 1968 to May 1970; and Oct. 1974 to April 1975. In 1974, in Birmingham, he married Sharon A. Cooke. He was also at Signy from Nov. 1981 to March 1984.

Walton, Eric William Kevin. Known as Kevin. b. May 15, 1918, Kobe, Japan, but raised and educated mostly in England, son of missionary Murray Walton and his wife Myra Hebbert. Shackleton's sledge was kept at the school Walton attended, Monkton Combe, and this inspired an interest in Antarctica. A mountain climber (his godfather was Howard Somervell, the Everest climber of the 1920s), he joined the Navy for World War II, as an engineer officer, and was on the *Rodney* for a while, hunting the *Bismarck*. It was on this ship that he heard a sermon by Launcelot Fleming, who had been a member of BGLE 1934-37, and this further inspired young Walton. He took part in the Battle of the Barents Sea, and was highly decorated. He was a temporary lieutenant, RN (his parents were living at the Vicarage, Bromley, Kent), when he joined FIDS in 1945 as an engineer, and he wintered over at Base E in 1946 and 1947. In 1946 he rescued fellow FIDS member John Tonkin from a crevasse in Northeast Glacier, and was awarded the Albert Medal (which was later called the George Cross). In 1948 he returned to Port Stanley, where he caught the *Lafonia* back to London, arriving there on April 21, 1948. Shortly after his return to England he married Ruth Yule. He was back in South Georgia for 7 months, and did a variety of jobs, including Outward Bound instructor and SIS (i.e., MI5) work in the Mediterranean. Father of Jonathan Walton. He celebrated his 90th birthday in 1998, but not his 91st — he died on April 13, 2009.

Walton, Jonathan Launcelot William. b. June 1, 1950, Millom, Cumberland, son of Kevin Walton (q.v. above) and his wife Ruth Yule, and godson of Launcelot Fleming (q.v.). In the late 1960s he was in Canada for a while, then attended Imperial College, London, 1969-72, graduating in civil engineering, after which he joined BAS, and wintered-over as glaciologist and surveyor at Fossil Bluff station in 1974 and 1975 (i.e., from Nov. 1973 to Feb. 1976, an unbroken span of 31 months). He summered at Rothera Station in 1978-79, working at the Rutford Ice Stream. In 1982 he married Wendy-Jane Stephenson, and, for 3 years, was a teacher in Telford, Shropshire. He was back on the Rutford Ice Stream in 1985-86. The fact that he and his father both wintered-over in Antarctica may be unique. He is also the cousin of Paul Goodall-Copestake, who was with BAS in South Georgia in the 1980s. In 1993 he was back in Antarctic waters, as a guest lecturer on the tourist ship *World Discoverer*, and in 1996 and 1998 worked for Adventure Network International, looking for and mapping blue-ice runways in Antarctica.

Walton Heights. 70°15' S, 69°39' W. Rising to about 800 m, at the head of Haydn Inlet, on Alexander Island, they form part of the Douglas Range. Photographed aerially in late 1947 by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Named by UK-APC on June 11, 1980, for Jonathan Walton.

Walton Mountains. 71°12' S, 70°20' W. An isolated chain of 3 predominantly snow-covered mountain masses, rising to about 1450 m (in Mount McArthur), it extends N-S for 40 km from Schubert Inlet (i.e., from about 71°00' S to about 70°20' S), E of Lewis Snowfield, on Alexander Island. Also included in this feature are Palindrome Buttress, Richter Peaks, and Sevier Nunatak. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936. Photographed again, aerially, in 1940, during USAS 1939-41, and in late 1947, by RARE 1947-48. Finn Ronne named them in 1948 for Lt. Col. Robert C. Walton, U.S. Marine Corps, with the Office of Naval Research, who helped get a ship and naval assistance for RARE 1947-48. The feature appears on Ronne's 1948 map, plotted in 71°15' S, 74°20' W. US-ACAN accepted the name in 1949. It appears on a 1956 U.S. Hydrographic Office chart with the same coordinates as on the 1948 Ronne map. UK-APC accepted the name on March 2, 1961, with the coordinates 71°10' S, 71°15' W, which is how it had been plotted in 1959-60 by Searle of the FIDS working from RARE photos. The coordinates were corrected from U.S. Landsat images of Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer. On a 1970 USAF chart they appear (erroneously) as Hamilton Mountains.

Walton Peak. 68°09' S, 66°48' W. A sharp peak rising to 825 m, 3 km N of Mount Rhamnus, between that mountain and Northeast Glacier, it is, in fact, part of the irregular ridge separating Northeast Glacier from Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37, and again by Fids from Base E between 1946 and 1948. Named by UK-APC on March 31, 1955. for Kevin Walton. US-ACAN accepted the name in 1956.

Walts Cliff. 76°01' S, 135°42' W. A rock cliff that can be seen for miles, it marks the NE base of Mount Berlin, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Dennis Shelby Walts (b. 1944), National Weather Service meteorologist at Pole Station in 1970.

Wanda Glacier. 62°06' S, 58°21' W. Flows out of Krakow Ice Field, between Smok Hill and the Warkocz Hills, at Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for their legendary princess, daughter of Prince Krak (*see* **Krak Glacier**).

Île Wandel *see* **Booth Island**

Wandel Island *see* **Booth Island**

Wandel Peak. 65°05' S, 64°00' W. Rising to 980 m, it is the highest peak on Booth Island (formerly named Wandel Island), 0.8 km S of Gourdon Peak, in the Wilhelm Archipelago, off the coast of Graham Land. Named in order to preserve the name Wandel in the area. *See* **Booth Island** for history. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1971.

The *Wanderer*. Stonington sealer, under the command of Walter Chesebro, in the Falklands, South Georgia, the South Sandwich Islands, the South Orkneys, and the South Shetlands, for the 1880-81 season. On Oct. 16, 1881, while going back south for a return trip, she was wrecked at the Falklands, and her crew were saved by the *Mary E. Higgins*, commanded by Ben Rogers.

Wanderer Automatic Weather Station. An American AWS, installed on Iceberg B-15A, in Oct. 2003.

Wandering albatrosses *see* **Albatrosses**

Wang, Edmund. b. 1877, Tønsberg, Norway. He went to sea at 17, and by 1915 was a sailor working for the Royal Mail Steam Packet Company, plying between Liverpool and Buenos Aires on the *Desna*. He was skipper of the whaling ship *Teie*, in Antarctic waters in 1920-21. He moved to Oslo, married Anna, and went to work for Wilhelm Wilhelmsen, of Tønsberg, and on April 5, 1924, at Hamburg, signed on as skipper of Wilhelmsen's ship *La Habra*, bound for New York. He was still on the *La Habra* as it made the run from Antwerp to San Francisco in 1926. On June 14, 1934, at Oslo, still with the Wilhelmsen Line, he signed on as skipper of the *Talisman*, for her trip to Buenos Aires and New York, and was still plying the American seas in 1936, and then transferred to the *Pilsudski*. He was then living in Oslo.

Wange, Hans L. *see* **Órcadas Station**, 1919, 1922

Wangennabben. 74°42' S, 11°54' W. A mountain crag close by Bieringmulen, in Skjønsbergskarvet, in the SW part of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Johan Wangen (b. 1882), railway engineer, who transported great amounts of equipment and weapons from Sweden to the central Resistance groups in Oslo during World War II.

Wangjing Dao. 69°22' S, 76°22' E. An island in the Larsemann Hills. Named by the Chinese.

Wanglong Yan. 62°13' S, 58°57' W. A rock on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Wangzi Shan. 69°26' S, 76°01' E. A hill in the Larsemann Hills. Named by the Chinese.

Wanigans. Modern, boxlike refuge shelters usually made of plywood, and containing survival food and clothing.

Mount Wanous. 84°52' S, 62°20' W. A prominent, bare, conical mountain, rising to 1660 m, 7.5 km E of Pierce Peak, at the NE edge of the Mackin Table, in the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Richard E. Wanous (b. 1939), University of Wisconsin student, and USARP geophysicist in that area for the Pensacola Mountains Project of 1965-66. He had spent the 1963-64 summer season in Antarctica, as well, and then gone straight to the North Pole in 1964. UK-APC accepted the name on Nov. 3, 1971.

Îles Wanwermans *see* **Wauwermans Islands**

The *War Baby*. A 62-foot American aluminum ocean-racing sloop, custom-designed by Sparkman and Stevens, and built by Palmer and Johnson in 1972, for Lynn Williams, as the *Dora IV*. The vessel was sold to Ted Turner, and became the *Tenacious*, and was sold again, to Warren James Brown, of Bermuda, who renamed her *War Baby*, and skippered her to the Antarctic Peninsula and the South Shetlands in 1986-87.

Waratah Islands. 67°24' S, 47°25' E. Two small islands close to a coastal outcrop on the W side of Casey Bay, just off the coast of Enderby Land, about 1.5 km NW of the Hannan Ice Shelf. Plotted by Australian cartographers from air photos taken by ANARE in 1956, and named by ANCA for the Australian native plant, waratah (*Telopea truncata*). US-ACAN accepted the name in 1965.

Warburton Ledge. 80°13' S, 157°47' E. A massive, flat, ice-covered, steep-sided ridge, at an elevation of about 3200 m above sea level, 6 km E of Mount McClintock, in the Britannia Range. Named by US-ACAN in 2000, for Joseph A. Warburton, of the Desert Research Institute, at the University of Nevada at Reno, USARP scientist in charge of the RISP (Ross Ice Shelf Project) meteorological program, 1974-75. NZ-APC accepted the name on Feb. 20, 2001.

Glaciar Ward *see* [1]**Ward Glacier**

[1]**Mount Ward**. 67°47' S, 62°49' E. An isolated peak, rising to 1030 m above sea level, in the S part of the North Masson Range, in Mac. Robertson Land. Discovered in 1930 by BANZARE. First climbed in Jan. 1956, by an ANARE party led by John Béchervaise. Named by ANCA on Sept. 4, 1956, for John Livingstone "Jack" Ward, radio operator who wintered-over at Mawson Station in 1955. He had also wintered at Macquarie Island in 1950.

[2]**Mount Ward**. 71°36' S, 66°57' W. Rising to about 800 m at the NE end of Steeple Peaks, S of the Batterbee Mountains, near George VI Sound, in western Palmer Land. On Dec. 23, 1947, during a flight by RARE 1947-48, a high mountain was seen S and E of the Batterbees, and plotted in 71°55' S, 66°00' W. Ronne named it Mount Ward, for Wendell Wadsworth "W.W." Ward (1894-1978), of Beaumont, Tex., editor of the Beaumont *Journal*, and a supporter of RARE. No such peak exists, not in those coordinates anyway, and in 1947 US-ACAN selected this one to be the one the expedition saw. UK-APC accepted the name on Dec. 20, 1974.

[3]**Mount Ward**. 85°40' S, 167°10' E. A rock peak, rising to 3213 m, 5 km SE of Davis Nunataks, and about 14 km SE of Mount Nimrod, it is a S outlier of the main body of the Dominion Range. Discovered by BAE 1907-09, and named by Shackleton for Sir Joseph George Ward (1856-1930), prime minister of NZ, 1906-12, and again 1928-30, a supporter of the expedition. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Ward, Basil Chrystie Matthias. b. June 6, 1915, Dovercourt, Essex, son of Lt. Col. Harold Matthias A. Ward and his wife Kathleen Frances Underwood. He joined the RN in 1932, as an officer cadet, was promoted to sub lieutenant in 1936, served on the minesweeper *Stoke*, in the Mediterranean, and was on the *Duncan* for a China cruise, during which he was promoted to lieutenant. He served on destroyers during World War II, being highly decorated, and in 1943 was given command of the MTB *Wasp*. On Feb. 9, 1946 he was promoted to commander, and on April 2, 1953 was given command of the *St Austell Bay*, of which he was the commander for the pleasant contretemps with the Argentines in the South Shetlands in March 1954 (*see* **The *St Austell Bay***). In 1953 he married Mavis Barbara "Genie" Stewart (née Leapman). He latter skippered the *President*, and retired in 1958. He died in London in 1970.

Ward, Derek George. Meteorologist at the Met Office, who went on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and wintered-over at Halley Bay in 1957 and 1958 as meteorologist, seismologist, glaciologist, and geomagnetician.

Ward, Edward Michael d'Invilliers "Ed." b. Oct. 16, 1918, Germantown, Pa., son of Raymond Cyril Ward (who worked for the city of Philadelphia Department of Highways) and Adelaide d'Invilliers. In 1938 he joined the Marine Reserve Corps, and was a corporal when he transferred to the Naval Reserve, as an aviator ensign, in May 1941, and flew seaplanes in the Atlantic and Pacific fleets during World War II. After the war he became a regular naval officer, and in Jan. 1946 was assigned to the Office of Naval Research, and went to Alaska as officer in charge of Project SPAM (Special Alaskan Magnetic Survey). In 1947 he was back there heading Project Volcano, in 1951 headed Project Skijump I, and in 1952 was on Project Skijump II, flying on all these missions. He met Admiral Byrd while at the Navy's Bureau of Aeronautics, and in Sept. 1954 Admiral Dufek asked him to be Air Operations Officer for the fledgling Task Force 43. On Jan. 5, 1955 he was given the task of recruiting for VX-6, the air arm of Task Force 43, and on Jan. 11, 1955 was taken off Dufek's staff and re-assigned to VX-6. On Jan. 17, 1955 he reported to the new VX-6 headquarters on the Patuxent River, as acting commanding officer of the new outfit, and for three weeks he "was" VX-6. There was no one else. He wanted to command VX-6, but in April 1955 Gordon Ebbe got the job. Instead Ward looked after Patuxent, as operations officer, and because his wife Marilyn (Hesser) was having problems with the birth of their 5th child, he didn't make it south for OpDF I (1955-56). In Feb. 1956, when the Otter disappeared in Antarctica and a Neptune set out

from the Patuxent via South America to rescue it, but crashed in Venezuela, Ward and Ed Frankiewicz flew down to Trinidad to pick up the survivors of the downed Neptune and bring them back to Maryland. He did not get to Antarctica until OpDF II (1956-57), when he was executive officer of VX-6 and pilot of an R5D. He flew the third plane in from NZ (a Skymaster) to McMurdo on Oct. 18, 1956 (*see* that date under **Operation Deep Freeze II**). He returned to the USA in March 1957 and became CO of VU-4, a utility flying squadron. He never did polar work again. He retired in 1970, to Ocean City, NJ, where he died on Aug. 22, 2006.

Ward, Frederic George "Fred." b. 1901, Melbourne, son of Arthur Thomas Ward and his wife Jane Rosina Cairns. Able seaman on the *Discovery* during the 2nd half of BANZARE, 1929-31.

Ward, Herbert George V. "Digger." b. Aug. 13, 1908, Portsmouth. Chief engineer on the *John Biscoe* from 1948 to 1955, and on the second *John Biscoe* from 1959 to 1962. His view of the perfect life was, "9 months away on the ship, 3 months back with the wife." He died in Hounslow, London, in 1978.

Ward, John Livingstone "Jack." b. Oct. 1, 1920. Radio telegraphist at Mawson Station in 1955. He had also been at Macquarie Island in 1950.

Ward, Michael *see* **USEE 1838-42**

Ward, Stanley Molyneux "Staff." b. 1935, Edmonton, London, son of Stanley Ward and his wife Kitty Molyneux, later of Palmer's Green. He did his national service in the RAF, where he learned to be a radio operator, and in 1955 joined FIDS as a radio operator, in October of that year leaving Southampton on the *John Biscoe*, bound for Port Stanley. He wintered-over at Signy Island Station in 1956, and in 1957 transferred to the FIDS radio station in the Falklands. He was drowned on April 1, 1958, while swimming at Port Stanley.

Ward, Walter Stephen Peter "Steve." b. Jan. 15, 1920, Doncaster, Yorks, son of lawyer George S. Ward and his wife Ivy O. Allen. His parents called him Peter. He went to Leeds University, trained to be a lawyer, but World War II got in the way. He was in Singapore when it fell, but got out and went to India, where he married Hetty. His interests were theatre and chamber music, and after the war, back in England, his father staked him to a year as an actor. In 1949, in rep at Bromley, he met actress Faith Rogers, and they were married (after his divorce from Hetty) on May 16, 1950, in Kensington. In 1951 he went to sea as a radio operator in the Merchant Navy, but the following year settled down to a government job in Slough. He joined FIDS in 1952, and was base leader at Port Lockroy Station for the winter of 1953. At the end of his tour he returned to Port Stanley, and caught the Danish vessel *Hanne* (on charter to FIDS), arriving back in London on May 23, 1954, back to his job in Slough, and in 1956 was offered a job in Ottawa by the Canadian government, to do with naval statistics. He had been in Newfoundland with the theatre, in the late 40s. He went to Canada in the fall of 1956, and Faith followed with the children in April 1957. Soon after this Ward was in the Canadian Arctic, where he ran into his old FIDS friend Helier Robinson. From 1965 the Wards lived in Halifax, NS, then back to Ottawa for two years, then to Halifax again. In 1978 they decided to return to England, Faith going back that year, and Stephen at Christmastime 1979. But it didn't work, and in 1980 they returned to Halifax, Steve retiring in 1981. He died on Aug. 7, 2001, in Halifax.

[1]**Ward Glacier**. 67°14' S, 67°24' W. Flows SW into Vallot Glacier, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Surveyed near its mouth by Fids from Base E in 1947-48, and photographed (in its entirety) aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for William Hallam Ward (1917-1996), British geotechnical engineer and glaciologist who studied glacier flow and mass balance. He was a member of the Imperial College expedition to Jan Mayen Island in 1938; a member of the Arctic Institute of North America expeditions to Baffin Island (in the Arctic) in 1950 and 1953; and secretary of the International Commission of Snow and Ice, 1959-71. US-ACAN did not accept the name until 2006. The Argentines call it Glaciar Ward.

[2]**Ward Glacier**. 78°10' S, 163°27' E. A small glacier between Terminus Mountain and Howchin Glacier, on the E side of the Royal Society Range, in Victoria Land. Named by Grif Taylor of BAE 1910-13 for Leonard Keith Ward (1879-1964), assistant government geologist and inspector of mines in Tasmania, 1907-11, and government geologist in South Australia from 1912. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Ward Islands. 67°38' S, 69°35' W. Two small islands and a group of rocks that form the S section of the Amiot Islands, off the SW coast of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for Herbert G.V. "Digger" Ward (q.v.). US-ACAN accepted the name later in 1964. Mr. Ward's ship, the *John Biscoe*, assisted the RN Hydrographic Survey unit who surveyed this area in 1963.

Ward Lake. 78°10' S, 163°35' E. A small lake at the snout of Ward Glacier, on the E side of the Royal Society Range, in Victoria Land. Named by Grif Taylor of the Western Journey Party, during BAE 1910-13, in association with the glacier. US-ACAN accepted the name in 1960, and NZ-APC followed suit.

Ward Nunataks. 68°07' S, 49°36' E. A linear group of nunataks, 6 km N of Alderdice Peak, in the E part of the Nye Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for David J. "Dave" Ward, radio officer at Wilkes Station in 1960. US-ACAN accepted the name in 1965.

Ward Rock. 67°08' S, 51°21' E. A rounded rock exposure, just E of the Howard Hills, in the NE part of the Scott Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for Fred Ward. US-ACAN accepted the name in 1965.

Ward Stream. 78°11' S, 163°42' E. A melt stream flowing from Ward Glacier to Ward Lake, on the E side of the Royal Society Range, in Victoria Land. Named by US-ACAN in 1994, in association with the glacier and the lake. NZ-APC had already accepted the name on Dec. 1, 1993.

Ward Tower. 80°06' S, 158°33' E. A prominent mountain, rising to 2760 m, 5 km ENE of Mount Aldrich, on the main ridge of the Britannia Range. Named by US-ACAN in 2000, for Ed Ward. NZ-APC accepted the name on Feb. 20, 2001.

Ward Valley. 78°10' S, 163°37' E. A valley in the area of Ward Glacier and Ward Lake, on the E side of the Royal Society Range, in Victoria Land. In association with these two features, it was named by US-ACAN in 1964.

Mount Warden. 86°00' S, 146°37' W. A snow-covered peak rising to 2860 m, close SE of Hunt Spur, and surmounting a projecting buttress on the NW face of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. (later Lt. Cdr.) George W. Warden (b. May 8, 1913, St. Louis. d. March 14, 2003, Redmond, Wash.), who joined the U.S. Navy in Dec. 1941, and who was a pilot on OpHJ 1946-47. He retired from the Navy in May 1973. *See also* **Mount Andrews**.

Warden Pass. 80°28' S, 28°20' W. A snow pass trending E-W at an elevation of about 1000 m, S of Flat Top, and connecting the NW side of Fuchs Dome with Stratton Glacier, in the Shackleton Range. Surveyed by BCTAE in Oct. 1957. Named by UK-APC on Jan. 5, 1972, for Michael Anthony "Mike" Warden (b. 1946, Chippenham, Wilts), BAS general assistant who wintered-over at Halley Bay Station in 1970 and 1971, and who worked in this area. US-ACAN accepted the name. It appears in the 1974 British gazetteer. Originally plotted in 80°28' S, 28°08' W, it has since been replotted.

Warden Rock. 67°32' S, 67°20' W. A rock, 3 km NW of Guardian Rock, on the N side of Bigourdan Fjord, in Graham Land. Mapped by FIDS cartographers from ground surveys and air photos taken between 1946 and 1957, and named by UK-APC on July 7, 1959, in association with Guardian Rock. US-ACAN accepted the name in 1960.

Pasaje Wardle *see* **Wardle Entrance**

Wardle Entrance. 65°27' S, 65°26' W. The small SE entrance to Johannessen Harbor, running NW-SE between Snodgrass Island and Weller Island, in the Pitt Islands, in the Biscoe Islands. Mapped by FIDS cartographers from 1956 aerial photos taken by FIDASE. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Pasaje Wardle.

Mount Ware. 70°27' S, 65°36' E. A moun-

tain, 1.5 km N of the W end of the Martin Massif, and just S of Mount Kerr, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from 1965 ANARE air photos. Named by ANCA for William R. "Bill" Ware, weather observer at Mawson Station in 1968. US-ACAN accepted the name in 1971.

Waring Bluff. 73°01' S, 161°05' E. A rock bluff in the N part of the Sequence Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for James T. Waring, USN, air controlman at McMurdo Station in 1967.

Warkocz. 62°06' S, 58°19' W. A group of hills, whose elevations range from 100 to 300 m, between Wanda Glacier and Krak Glacier, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the warkocz (i.e., "the braid") in the hair of the legendary princess Wanda.

Mount Warner. 77°05' S, 144°00' W. An isolated mountain just S of the head of Arthur Glacier, and 8 km N of Mount Crow, in the Ford Ranges of Marie Byrd Land. Discovered by USAS 1939-41, and named for Larry Warner. US-ACAN accepted the name in 1947.

Warner, Lawrence Allen "Larry." b. April 20, 1914, Monroe, Ohio, son of blacksmith Clarence F. Warner and his wife Mary. He attended Miami University (in Ohio), and, later, while, a geologist at Johns Hopkins University, became part of USAS 1939-41, being stationed at West Base. He led a geological party into the Ford Ranges during that expedition. He retired in 1981 after 35 years as professor of geology at the University of Colorado, and died on Dec. 20, 1991, in Boulder, Colo.

Punta Warnes. 64°02' S, 60°53' W. A point projecting into Curtiss Bay, on the Davis Coast, on the W coast of Graham Land. Named by the Argentines.

Warning Glacier. 71°32' S, 170°21' E. Flows steeply on the W side of Adare Peninsula into the E part of Robertson Bay, 6 km N of Nameless Glacier, in northern Victoria Land. First charted in 1899 by BAE 1898-1900, and so named by Borchgrevink because the warning snow clouds over this glacier foretold a southerly gale at Cape Adare, his base. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Mount Warnke. 84°20' S, 64°50' W. Rising to 915 m, 5 km NE of Martin Peak, in the Thomas Hills of the Patuxent Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, as part of their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Detlef Andreas "Dietz" Warnke (b. 1928, Germany), USARP biologist on the Palmer Station-*Eastwind* expedition of 1965-66, and who was at Palmer Station in 1966-67. He taught geology at California State University East Bay at Hayward, for almost 30 years, and died in San Mateo on Oct. 24, 2008. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Originally plotted in 84°20' S, 64°55' W, it has since been replotted.

Warnock, John Fleming. b. 1887, Glasgow, son of postal clerk Alexander Fleming Warnock and his wife Mary Smith. He moved to Burnley, Lancs, served as an engineer lieutenant in the Merchant Navy during World War I, and in 1917 married Ethel Turner, a Burnley girl. He was 2nd engineer on the *William Scoresby*, 1935-38. He died in Quebec in 1940, following an accident.

Warnock Islands. 67°12' S, 59°44' E. A group of 4 small offshore islands, 1.5 km S and SW of Dales Island, at the N end of the William Scoresby Archipelago, off the coast of Kemp Land, in Enderby Land. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them for John Warnock. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Warpasgiljo Glacier *see* **Arthur Glacier**

Warr, William George Harry "Bill." b. 1922, Reading, Pa., son of steel mill worker William Irvin Warr and his wife Mabel Mary Gruber. As a petty officer, and aviation machinists's mate 2nd class, USN, he was the mechanic and flight engineer on the Martin Mariner which crashed on Dec. 31, 1946, during OpHJ 1946-47. Warr survived, with only a cut on his head. He returned to Reading and married his schoolteacher, Jean Zwoyer. For 30 years he worked as a roll grinder for Carpenter Technology Corporation, a local steel mill, and after a divorce married Geraldine Habel. But drinking, brought on by guilt at being relatively unhurt after the crash, wrecked the second marriage as well, and Bill died in Feb. 1980, in Reading.

Warr Glacier. 72°11' S, 98°19' W. A broad glacier flowing N into the SW arm of Murphy Inlet, Thurston Island. Named by US-ACAN in 2003, for Bill Warr.

Mount Warren. 77°43' S, 85°57' W. Rising to 2340 m, in the N part of the Sentinel Range, just N of the turn in Newcomer Glacier. Named by US-ACAN in 1961, for Aviation Master Sgt. Cecil O. Warren, U.S. Marine Corps, in this area on Dec. 14-15, 1959, as navigator on VX-6 photographic flights.

Warren, George William. A man by this name, claiming to have been a signalman on the *Terra Nova*, was alive in Jan. 1956 [the London *Times*]. This may well be the George William Warren, b. Oct. 22, 1882, Rye, Sussex, who was an ordinary seaman in 1901, at Gibraltar, on the *Prince George*.

Warren, Guyon. b. April 19, 1933, Christchurch, NZ, son of Harman Warren and his wife Doris Ruth Minson. Just after joining NZGS he was the assistant geologist who wintered-over at Scott Base in 1957, and who was with the NZ party of BCTAE 1957-58. On April 5, 1958 he married Sally Ann Sumpter. He later participated in (more than that, actually; it was through his initiative that the expedition was launched) the Allan Hills Expedition of 1964, but had an accident, when he slid down an ice face on the first outcrop on the first day, and had to be medevac'd with a severely broken leg. It took 9 months to heal. He was president of the NZ Geological Society, 1976-78. He was back in Antarctica, for a visit, in 2000, for the Millennium Project (survivors of BCTAE and IGY). On Oct. 29, 2003, in Nelson, NZ, he was cycling on a motorway when he was hit by a loaded log truck.

Warren, John Thomas "Shortie." b. 1879, Minster, Isle of Sheppey, Kent, son of laborer John Warren and his wife Sarah. In Sydney he was working as a casual laborer on the *Aurora*, during the ship's refit, when he was taken on as able seaman, for BITE 1914-17. He was in charge of tarpaulins, lead lines, and stove fuel. He died in 1945, in Chatswood, in Sydney.

Warren Ice Piedmont. 70°00' S, 68°15' W. On the Rymill Coast, at the N end of George VI Sound, on the W coast of Palmer Land, westward of the Traverse Mountains, and bounded to the NW and SE by (respectively) Terminus Nunatak and Riley Glacier, the latter once considered to include this ice piedmont. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E between 1970 and 1973. Named by UK-APC on Dec. 8, 1977, for Douglas Ernest Warren (1918-1993), (the last) director of surveys in Kenya, 1961-65; and director of Overseas Surveys (DOS), 1968-80, with overall responsibility for British mapping in Antarctica. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Warren Icefall. 77°33' S, 160°25' E. An icefall entering the S part of Wright Upper Glacier, N of Vortex Col, in the Asgard Range, in Victoria Land. Named by US-ACAN in 2004, for Alden Warren, geographer with USGS, photographer (scientific and technical) in the preparation of USGS maps of Antarctica, from 1956 onwards. NZ-APC accepted the name on Nov. 30, 2004.

Warren Island. 67°23' S, 59°36' E. A small island in William Scoresby Bay, close S of the W end of Bertha Island, off the coast of Kemp Land, in Enderby Land. Discovered and named by personnel on the *William Scoresby* in Feb. 1936. ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1963.

Warren Nunatak. 79°32' S, 82°50' W. A nunatak, 6 km E of Mount Capley, along the E side of the Nimbus Hills, in the Heritage Range. Named by US-ACAN in 1966, for Arthur D. Warren, aurora scientist at Ellsworth Station in 1958.

Warren Peak. 76°41' S, 159°52' E. A high rock peak SE of Halle Flat, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZ Allan Hills Expedition of 1964, and named by them for Guyon Warren. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA accepted the name on Aug. 10, 1966.

Warren Range. 78°28' S, 158°16' E. A range, between 24 and 28 km long, behind (i.e., just W of, and parallel to) the Boomerange Range, in southern Victoria Land. Discovered by the NZ Northern Survey Party in 1957-58, during

BCTAE. They named the highest peak in this range Mount Warren, for Guyon Warren (q.v.), one of their party. As there was already another Mount Warren close by, the name was expanded to take in the whole range. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Warren Ridge. 77°28' S, 169°05' E. Trending NW-SE for 3 km, it rises to about 1100 m at the SW end, and culminates in Dibble Peak, 1.5 km N of Ainley Peak, on the N slope of the Kyle Hills, on Ross Island. Named by US-ACAN in 2000, for Stephen George Warren (b. Sept. 20, 1945, Madison, Wisc.), University of Washington (Seattle) visiting atmospheric scientist and geophysicist with the Australians in 1988-89 and again in 1996, and station leader at Pole Station in 1992. The name was accepted by ANCA on June 19, 2000, and by NZ on Feb. 20, 2001.

Warriner, Anthony "Tony." b. May 24, 1936, Hammersmith, London. Australian radio operator who wintered-over at Davis Station in 1961, at Mawson Station in 1963, at Wilkes Station in 1965, and at Casey Station in 1971. In 1973 he wintered-over at Macquarie Island.

Warriner Island. 68°37' S, 77°54' E. A small island, one of the Donskiye Islands, just off the W end of Breidnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. The area was re-photographed aerially by OpHJ 1946-47, by ANARE in 1954, 1957, and 1958, and by SovAE 1956. Named by ANCA on June 28, 1962, for Tony Warriner. US-ACAN accepted the name in 1970.

Warrington Island. 66°20' S, 110°28' E. A rocky island, 1.1 km long, immediately S of Pidgeon Island, and about 1 km W of Mitchell Peninsula, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for William H. Warrington, USN, photographer's mate 3rd class, here on the *Currituck* during OpHJ. ANCA accepted the name on July 4, 1961.

Wars. The 1982 Falklands War did not touch Antarctica. World War II did. One effect World War II had on the Americans in Antarctica was that it brought a halt to USAS 1939-41. As for the British, they were sending ships to patrol sub-Antarctic waters as early as Dec. 1939. On Jan. 13, 1941 Germans, from their raider *Pinguin*, captured the Norwegian whalers *Ole Wegger*, *Solglimt*, and *Pelagos*. In March that year the armed British merchant cruiser *Queen of Bermuda* destroyed the fuel left in the Hektor Whaling Company tanks on Deception Island, in the South Shetlands, thus denying it to the Nazi raiders who used these seas (*see also* **The *Carnarvon Castle***). The British kept the northern Antarctic Peninsula under surveillance, and Deception Island became the scene of a struggle for ownership between Britain and the pro-Nazi Argentines, which resulted in Operation Tabarin (q.v.), in which Britain established military bases here. Then there was the famous and interesting post-war martially-oriented incident, all of which hangs on the fact that both countries have always claimed the Falklands, but also on the inescapable fact that Britain had the big guns. Chile was also mounting a challenge to British authority (not in the Falklands, of course, but definitely in Antarctica), and Guatemala was supporting Chile and Argentina. **Dec. 17, 1947**: The British protested formally against the Argentines' annoying habit of establishing bases in the South Shetlands. **Dec. 23, 1947**: Britain particularly protested the setting up of an Argentine base on Deception Island. **Jan. 28, 1948**: Argentina replied to the British protests, claiming the Falklands and the Dependencies for themselves. **Jan. 26, 1952**: The *John Biscoe* left Port Stanley, in the Falklands, to resupply British Antarctic bases, and, primarily, to drop off a FIDS crew at Hope Bay to re-establish their Base D there (after the fire of 1948). **Jan. 30, 1952**: The *John Biscoe*, after a stop at Deception Island to collect a sledge, and after a few surveying runs, arrived at Hope Bay in the evening, only to find an Argentine party there, under the command of Lt. Emilio L. Díaz. **Jan. 31, 1952**: Bad weather prevented any movement on the part of FIDS. **Feb. 1, 1952**: The Argentines, after issuing a warning (which was ignored) fired machine guns over the heads of the Fids as they attempted to come ashore that morning. The unarmed Fids were then surrounded by men with rifles, and escorted back to the *John Biscoe*. The British government filed an official protest with Buenos Aires, who informed the British that Díaz had acted in error, and that that error had now been rectified. **Feb. 4, 1952**: The Royal Navy frigate *Burghead Bay* was dispatched from the Falklands, carrying the governor, Miles Clifford, and several Fids bound for the different bases. Steaming at 18 knots in foul weather, toward Hope Bay. **Feb. 6, 1952**: The *Burghead Bay* arrived at Hope Bay, guns pointing at the Argentine tug. The Argentines on Deception Island agreed, at that point, to allow the British back into Hope Bay. So, the Fids went back to get on with construction. That day the governor heard that King George had died, and they fired off a 21-gun salute to the new monarch, and a 56-gun salute (at one-minute intervals) to the departed king. **Feb. 11, 1952**: PM Churchill proposed sending in a secret infantry squad. **Feb. 18, 1952**: The British government decided to send in the *Veryan Bay*, with 30 Royal Marines, due to arrive there on April 11, 1952. **Feb. 1953**: Royal Marines landed on Deception Island from the *Snipe*, and dismantled some offending refuge huts — one Chilean and one Argentine — and deported a couple of Argentines to South Georgia. The *Snipe* remained on patrol until mid-April 1953, having been joined in March by the *Bigbury Bay*. The Royal Marines spent 3 months on Deception Island, to make sure that their "territory" was not invaded again by South Americans. In early 1954 Royal Marines spent 4 months on Deception Island, more as training than anything else. Flashing forward to the famous Falkland Islands War of the 1980s, some Britons were captured by Argentine forces on South Georgia in 1982, but nothing happened south of 60°S.

Warszawa Dome. 62°12' S, 58°35' W. An ice dome rising to 450 m, and bounded by Ezcurra Inlet, Admiralty Bay, Bransfield Strait, and Maxwell Bay, in the SW part of King George Island, in the South Shetlands. Named by the Poles in 1980, as Warszawa Icefield, for their capital city (it is the Polish name for Warsaw). UK-APC accepted that name on July 8, 2003. US-ACAN accepted the name Warszawa Dome in 2004.

Warszawa Icefield *see* **Warszawa Dome**

Wasa Station. 73°03' S, 13°25' W. A Swedish scientific station at Basen Nunatak, Vestfjella, on the Princess Martha Coast of Queen Maud Land. Opened during the 1988-89 season, it was joined together with the Finnish Aboa Station in 1991-92, to form an informal combination of stations called Nordensjköld Base.

Mount Washburn. 77°37' S, 86°08' W. Rising to 2725 m, midway between Mount Ulmer and Mount Cornwell, in the N part of the Sentinel Range, in the Ellsworth Mountains. Mapped by the Marie Byrd Land Traverse Party of 1957-58, and named by that traverse's leader Charles Bentley, for geologist Albert Lincoln "Link" Washburn (b. June 15, 1911, NY. d. Jan. 30, 2007, Seattle), Olympic skier, explorer, authority on Arctic soil, first director of the Arctic Institute of North America (1945-50) and an IGY committeeman. He was in Antarctica in 1957-58, and helped plan the international Dry Valley Drilling Project (1972-75). US-ACAN accepted the name in 1960.

Cape Washington. 74°39' S, 165°25' E. A prominent truncated cape, or headland, rising to an elevation of 275 m, with vertical sides forming the S tip of the long peninsula named by the Germans as Polar-3-Halbinsel (which separates Wood Bay from Terra Nova Bay), in Victoria Land. It also forms the S end of Wood Bay. Discovered by Ross on Feb. 18, 1841, and named by him for Cdr. (captain in 1842, and retired as rear admiral in 1862) John Washington (1800-1863), RN, secretary of the Royal Geographical Society, 1836-41, and later hydrographer to the Admiralty (1855-63). It was Washington who pushed the expedition, and for Ross to lead it. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. An American refuge hut was here from Oct. 28, 1989 to Jan. 2, 1990.

Estrecho Washington *see* **Washington Strait**

Washington Escarpment. 83°42' S, 55°08' W. About 80 km long, it is the major west-facing escarpment of the Neptune Range, extending N-S from the vicinity of Mount Dasinger to the vicinity of Gambacorta Peak, in the Pensacola Mountains. It is the point of origin of a number of west-trending rock ridges. In 1963-64 it was photographed aerially by USN and surveyed from the ground by USGS, and USGS mapped it from these efforts. Named by US-ACAN in 1965, for the University of Washington, at Seattle, 5 alumni of which took part in the Neptune Range field party of 1963-64. In those days it

was plotted in 83°45' S, 55°08' W, but these coordinates were corrected by 1969. UK-APC accepted the name on Nov. 3, 1971, and it appears (with the new coordinates) in the 1974 British gazetteer.

Washington Ridge. 78°06' S, 154°48' W. A high rock ridge surmounted by 3 prominent peaks, 2.5 km SE of Mount Franklin, in the southern group of the Rockefeller Mountains of Edward VII Land. Discovered aerially on Jan. 27, 1929, during ByrdAE 1928-30, seen again on another flight over Edward VII Land, on Feb. 18, 1929, and named Mount Helen Washington by Byrd for his niece, Helen A. Washington. This expedition plotted it in 78°05' S, 155°15' W. In 1966, US-ACAN accepted the shortened name for the ridge, which is what it actually is, rather than a mountain. It was replotted. The New Zealanders still tend to use the name Mount Helen Washington, and, indeed, this has led some references to believe that they are two separate and distinct features, which, of course, they are not.

Washington Strait. 60°43' S, 44°56' W. A marine passage, 5 km wide, it separates Powell Island and Frederiksen Island (on the W) from Laurie Island and several smaller islands (on the E), in the South Orkneys. Discovered, charted, and navigated on Dec. 11, 1821, by Powell and Palmer. Named, probably by Palmer, possibly for George Washington (1732-1799), first president of the USA, 1789-97. It appears on Powell's chart published in 1822, and on an 1839 British chart. It was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The Argentines call it Estrecho Washington.

Wount Wasilewski. 75°11' S, 71°24' W. A prominent, isolated mountain, rising to 1615 m (the British say 1585 m), 15 km ESE of the Merrick Mountains, between the English Coast and the Orville Coast, where Ellsworth Land meets southern Palmer Land. Discovered aerially by RARE 1947-48. Surveyed from the ground during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Peter Joseph "Pete" Wasilewski, Jr. (b. April 1939), then a student at George Washington University, in DC, who turned down a tryout with the Baltimore Colts football team (John Unitas was their quarterback at the time) in order to become a U.S. Coast and Geodetic Survey expeditionary in the area in 1961-62 (he was geomagnetic observer on the Antarctic Peninsula Traverse that season) and 1965-66, both times with the University of Wisconsin. He made several other trips south, over a period of 25 years all told, often collecting meteorites. He was later a NASA scientist. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Wasko. 84°34' S, 176°58' W. A double-peaked, saddle-shaped mountain rising to 1170 m (the New Zealanders say about 1300 m), on the W side of Shackleton Glacier, near the terminus of that glacier, 5 km N of Mount Franke, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed by USAS 1939-41, on Flight C, Feb. 29-March 1, 1940. Surveyed by Bert Crary in 1957-58, and named by him for Lt. Cdr. Frank Wasko, USNR, with VX-6 in 1957-58. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

The *Wasp*. A 123-ton, two-masted New York sealing schooner of 76½ feet long, with a single deck. Built at East Haddam, Conn., in 1821, and registered on June 16, 1821. Owned by a cartel led by James Byers, and under the command of Robert Johnson, she left New York, arriving in the South Shetlands on Oct. 16, 1821, as part of the 2nd phase of the New York Sealing Expedition. First mate was Ben Morrell. His brother was 2nd mate. **June 30, 1822**: The *Wasp* left New York again, this time commanded by Morrell. Capt. Johnson left at about the same time in the *Henry*. Other crew members on the *Wasp* included: William Cox, Charles Cox, John Simmonds, all of New York, and two Connecticut boys, Pratt and Murray. The 2 ships made their own separate ways to the Falklands. They would avoid the yellow fever outbreak which was about to strike New York. **July 23, 1822**: The *Wasp* crossed the Tropic of Cancer. **Aug. 12, 1822**: The *Wasp* crossed the Equator. **Sept. 2, 1822**: The *Wasp* reached Brazil. **Sept. 4, 1822**: The *Wasp* pulled into Rio. **Sept. 7, 1822**: The *Wasp* left Rio. **Sept. 21, 1822**: The *Wasp* was the first American vessel ever to pull into Rio Negro. **Sept. 23, 1822:** The *Wasp* left Rio Negro, and headed south down the Patagonian coast, stopping at many harbors. **Oct. 18, 1822**: The *Wasp* arrived at the Falkland Islands, where they found some of the crew of the *Henry*. Capt. Johnson was off on a 6-week cruise looking for the Aurora Islands. **Oct. 23, 1822:** The *Henry* arrived back at the Falklands, and this was the first time the two ships had seen each other since leaving New York. **Nov. 2, 1822**: The *Wasp* set sail for the SE, in her own search of the Aurora Islands**. Nov. 6, 1822**: The *Wasp* crossed the co-ordinates where the Aurora Islands were meant to be, but found nothing. **Nov. 18, 1822**: The *Wasp* abandoned her search for the Aurora Islands, and set sail for South Georgia. **Nov. 20, 1822**: The *Wasp* arrived at South Georgia, and spent 3 fruitless days looking for seals. **Nov. 24, 1822**: The *Wasp* left South Georgia, headed for Bouvet Island. **Dec. 6, 1822**: Men from the *Wasp* made the first ever landing on Bouvet Island. **Dec. 8, 1822**: The *Wasp* left Bouvet Island, after taking some seals, and headed SW. **Dec. 13, 1822**: The *Wasp* was in 60°11' S, 10°23' E, and was hampered by the ice for 2 days. **Dec. 15, 1822**: Being too early in the season to penetrate the pack-ice, Morrell made the decision to head north, for the Kerguélen Islands. **Dec. 31, 1822**: The *Wasp* arrived at the Kerguélens. **Jan. 11, 1823**: The *Wasp* left the Kerguélen Islands, heading back to Antarctic waters. **Jan. 21, 1823**: The *Wasp* was in the southern Indian Ocean, in 62°27' S, 94°11' E, and was then going in and out of Antarctic waters all the time. **Feb. 1, 1823**: The *Wasp* was in 64°52' S, 118°27' E, off the Sabrina Coast (as it became known later) of Wilkes Land. Morrell then cruised westward, out to sea beyond Queen Maud Land, in about 65°S most of the way. **Feb. 23, 1823**: The *Wasp* was in 69°42' S, 0°00'. **Feb. 24, 1823**: The *Wasp* was in 68°12' S, 4°17' W. She then headed N to the South Sandwich Islands. **Feb. 28, 1823**: The *Wasp* was in the South Sandwich Islands. **March 6, 1823**: The *Wasp* left the South Sandwich Islands, heading SW. **March 10, 1823**: The *Wasp* was stuck in the ice for a day. **March 11, 1823**: The *Wasp* broke free of the ice, in 64°21' S, 38°51' W. **March 14, 1823**: The *Wasp* reached 70°14' S, 40°03' W, in the Weddell Sea. The temperature was 47°F. Morrell was sorely tempted to try for the Pole, but realized that he didn't have enough fuel. Aside from the fuel problem, he would never have made it, because he, like most others at that time, thought that the Pole was surrounded by water, and that if a ship just kept going south they would get to it. The one thing they didn't know about was "the barrier." Explorers would find this soon enough. **March 15, 1823**: Morrell reported being close by New South Greenland, which Johnson had discovered and named the year before. **March 19, 1823**: in 62°41' S, 47°21' W, Morrell claimed to be off the south cape of New South Greenland. Then he headed north toward Chile. **March 24, 1823**: The *Wasp* arrived at Staten Island, Chile. **March 28, 1823**: The *Wasp*, in company with the *Hersilia*, sailed from Staten Island for the Falklands. **March 30, 1823**: They arrived at the Falklands. **March 31, 1823**: The *Wasp* again set sail for the SE, toward Antarctic waters. **April 3, 1823**: The *Wasp* was in 62°08' S, 66°14' W. On this short trip she got as far south as 65°42' S, 110°16' W. **April 19, 1823**: The *Wasp* headed north. **April 24, 1823**: The *Wasp* arrived back at Staten Island. **April 29, 1823**: The *Wasp* left Staten Island. **May 1, 1823:** The *Wasp* arrived in the Straits of Magellan. **1823 austral winter**: The *Wasp* spent most of the winter along the coast of Chile, the men exploring the interior and making friends with the natives. **July 31, 1823**: The *Wasp* docked at Valparaíso. **Aug. 3, 1823**: The *Wasp* left Valparaíso. **Aug. 7, 1823**: The *Wasp* arrived at Coquimbo, where overhauling of the vessel began. **Aug. 22, 1823**: The *Wasp* left Coquimbo. **Oct. 3, 1823**: The *Wasp* arrived at the Galapagos Islands. **Dec. 2, 1823**: The *Wasp* left the Galapagos. **Jan. 12, 1824**: The *Wasp* arrived at Juan Fernandez Island (the inspiration for Robinson Crusoe). **Feb. 22, 1824**: The *Wasp* was sold at Valparaíso to the American consul.

Wasp Hill. 62°40' S, 61°08' W. Rising to 70 m above sea level, 1.1 km NW of Sealer Hill, on Byers Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993, for the *Wasp*.

Wasserfall, Karl Falch. b. Aug. 5, 1882, Tvedestrand, Nedre Stalsberg, Norway, but raised in Skedsmo, son of magistrate Karl Falch

Wasserfall and his second wife, Ragnhild Beate Marie Vanelius. He was 2nd-in-command at Órcadas Station for the winter of 1909. In 1927 he wrote a small book on terrestrial magnetism.

Wasson Rock. 73°50' S, 161°45' E. A prominent, mainly ice-free rock along the N wall near the head of Priestley Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for William G. Wasson, VX-6 electrician's mate at McMurdo, in 1966.

Watanabe, Chikasaburo. b. 1885, Gifu, Japan. Seaman on the *Kainan Maru* during the first half of Shirase's Japanese South Polar Expedition of 1910–12. During the 2nd half of the expedition he was promoted to expedition cook. He died in 1962.

Watanabe, Kitaro. First name also seen as Onitaro. b. 1883, Ehime, Japan. One of the helmsmen on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910–12.

Watanuki Pond. 77°31' S, 160°46' E. A pond, 2.7 km SSW of Apollo Peak, in the NW part of the feature known as Labyrinth (in Wright Valley), 0.4 km ENE of Kurasawa Pond, and 1.3 km E of Wright Upper Glacier, in Victoria Land. Named by US-ACAN in 2004, for Kunihiki Watanuki, of the department of chemistry at the University of Tokyo, who took part in the McMurdo Dry Valleys Drilling Project, 1973–74, and who conducted Labyrinth pond studies in 1985–86. NZ-APC accepted the name on Nov. 8, 2006.

The Watch Tower *see* **The Watchtower**

The Watchkeeper. 62°18' S, 59°49' W. A low rock in water, fringed on the N side by sunken rocks, 4 km N of Table Island, and NW of Fort William (on Robert Island), in the South Shetlands. Originally known (by the early sealers) as Flat Rock (Capt. Fildes refers to it as such on his 1821 chart) or Flat Isle (it appears as such on Powell's chart, published in 1822), it appears as Flat Isle on Foster and Kendall's 1829 chart from the *Chanticleer* Expedition of 1828–31, and also (much later) on a 1943 U.S. Hydrographic Office chart. It appears as Isla Flat on a Spanish chart of 1861. On a British chart of 1901 it appears as Flat Island, and this name also appears on a 1930 British chart. Charcot, in 1912, refers to it as Île Flat (reflecting his FrAE 1908–10). Surveyed by personnel on the *Discovery II* in 1934–35, and renamed The Watchkeeper, for its outlying position, it appears as such on their 1935 chart, and also on a 1948 British chart. There is a 1942 British reference to it as The Watch-keeper, and it appears on a 1948 Argentine chart as Roca Watchkeeper. UK-APC accepted the name The Watchkeeper on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer, and on a 1968 British chart. On an Argentine chart of 1953 it appears as Roca Vigía ("vigía" meaning "watchkeeper"), on one of their 1954 charts as Isla Vigía, and on one of their 1957 charts as Islote Vigía, which is what the Argentine gazetteer of 1970 settled for. It appears (misspelled) as Isla Fiat on a 1961 Chilean chart, and the Chilean gazetteer of 1974 accepted the name Isla Flat.

Roca Watchkeeper *see* **The Watchkeeper**

The Watchtower. 64°23' S, 57°22' W. An isolated, flat-topped, steep-sided rock mass, rising to 395 m, SW of Hamilton Point, at the SE extremity of James Ross Island. Nordenskjöld discovered, and roughly surveyed it on March 9, 1902, during SwedAE 1901–04, and descriptively named it The Watch Tower. Re-surveyed by Fids from Base D in 1952–53. UK-APC accepted the name The Watchtower on Sept. 4, 1957, and US-ACAN followed suit in 1967.

Watchtower Hill. 73°16' S, 163°08' E. A small, pointed hill at the SE side of Pinnacle Gap, in the Mesa Range of Victoria Land. So named by the Northern Party of NZGSAE 1962–63 because the features provides a good "watchtower" to the entrance of Pinnacle Gap. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Water. Fresh water in Antarctica is scarce. Seawater, of course, is abundant, because of the surrounding oceans. Seawater above -2°C cannot sustain ice; it melts. Water in Antarctica boils at 86°C, not 100°C; at least, that is the case at Vostok Station.

Water bears *see* **Tardigrades**

Water Boat Point *see* **Waterboat Point**

Punta Waterboat *see* **Waterboat Point**

Waterboat Point. 64°49' S, 62°51' W. The low, westernmost termination of the peninsula of black rock, joined to the continent by an isthmus which is covered at high tide (thus occasionally making the point an island), at the N end of Paradise Harbor, between that harbor and Andvord Bay, on the E coast of the Aguirre Passage, off the Danco Coast, on the W coast of Graham Land. The coast in this vicinity was roughly surveyed in Feb. 1898, by BelgAE 1897–99. This particular feature was surveyed by Lester and Bagshawe, of the British Imperial Antarctic Expedition, which fielded these two men here for the winter of 1921. They named it on Jan. 12, 1921, as Water Boat Point, or as, simply, The Island. A ruined waterboat lay beached here, left by the whaler *Neko* 8 years before, and the two lived in it between Jan. 12, 1921 and Jan. 13, 1922. That was the way it appeared on their charts, and also on a 1948 British chart. Surveyed by ChilAE 1950–51, and named by them as Península Munita, for Diego Munita Whittaker (*see* **Racovitza Islands**). It appears that way on their 1951 chart. On the same chart, the name Punta Waterboat applies to a point on the mainland opposite the island, and not to the island itself. That situation was accepted by the Chilean gazetteer of 1974. The Chileans established Presidente Gabriel González Videla Station here that season (1950–51). On a 1953 Argentine chart the island part is called Islote Pingüuino, and on one of their 1954 charts it is called Isla Pingüino (this is not the same feature as a nearby island with the same name given by the Chileans). Photographed aerially by FIDASE in 1956. UK-APC accepted the name Waterboat Point on Sept. 4, 1957, and it appears as such on a British chart of 1959. US-ACAN accepted the name in 1964. *See also* **Caleta Gloria**.

Waterfall Bluff. 64°53' S, 62°51' W. A bluff, about 200 m high, consisting of basaltic-andesitic lavas and agglomerates cut by numerous dykes, at the N entrance to Porphyry Cove, in the SW part of the Jantar Hills, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. It has a large waterfall, hence the name given by the Poles on Sept. 1, 1999.

Waterfall Cliffs. 63°48' S, 57°42' W. Steep rock and scree coastal cliffs, immediately SW of Keltie Head, Vega Island, James Ross Island. The area inland produces large amounts of meltwater during the austral summer, and, as a result, the cliffs give an impressive display of waterfalls, which tumble into the sea below. Named by UK-APC in 2008.

Waterfall Lake. 68°33' S, 78°20' E. A small freshwater lake in the Vestfold Hills. It lies beneath a steep cliff, which itself feeds the lake during the summer melt. This lake overflows in a waterfall (hence the name) to Lake Hand below. Named by ANCA on July 26, 1983.

Waterfalls. There are two waterfalls coming off The Ramp, in the W part of Ross Island. They flow toward Cape Evans. When the weather is cold enough to freeze, as it is in most places on the continent, these become known as icefalls. *See also* **Hanging waterfalls**, **Waterfall Cliffs**.

Mount Waterhouse. 81°25' S, 155°42' E. Rising to about 1800 m at the NE extremity of the All-Blacks Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Emma Waterhouse, environmental manager with Antarctica New Zealand from 1993. Her first trip to Antarctica was in 1987. US-ACAN accepted the name later in 2003.

Waterhouse, John Valentine. b. Feb. 14, 1911, Bucklow, Cheshire, son of Humphrey Waterhouse and his wife Ruth. The family moved to Millbay, East Portlemouth, Devon, and then John's father died in 1916, aged 38. John was appointed a naval cadet on Nov. 16, 1928, and on Sept. 1, 1931, became a sub lieutenant. He was promoted to lieutenant on Feb. 1, 1933, and on May 12, 1936, was transferred to the *Iron Duke*. On April 3, 1937, at Bovey Tracey, in Devon, he married Laleah Farquharson. He was promoted to lieutenant commander on Feb. 1, 1941, and on Dec. 9, 1941, was transferred to the destroyer *Viscount*, being awarded the DSO on Jan. 5, 1943. On Aug. 27, 1943, he was acting commander of the *Egret* when that vessel got attacked by a guided German bomb, and sank off Vigo, killing 194 of the crew. He was promoted to commander on Dec. 31, 1944. On Jan. 26, 1945, when in command of the *Manners*, he got hit by a U-boat off the Isle of Man, and the *Manners* was cut in half. He was skipper of the *Sparrow*, in Antarctic waters in 1948–49. On Jan. 2, 1950, he was awarded the OBE, and on June 30, 1952, was promoted to captain. On April 26, 1955, he took up the command of RN Air Station Abbotsinch, and on Jan. 7, 1961, he was made Naval ADC to the Queen, and retired from the Navy

on June 10, 1961, to Kingsbridge, Devon. He died in March 1984, in Plymouth.

Waterhouse Island. 68°32' S, 77°57' E. Just SSW of Lugg Island, in the Vestfold Hills, about 3.5 km NNW of Davis Station. Named by ANCA on Nov. 27, 1973, for Robbin S. Waterhouse, medical officer at Davis in 1971. Dr. Waterhouse was at Macquarie Island Station (not in Antarctica) the following winter.

Waterhouse Névé *see* **Flight Deck Névé**

Waterhouse Spur. 86°37' S, 147°25' W. A spur of well-exposed strata that projects SW from the S portion of Ackerman Ridge, 10 km NE of Johansen Peak, in the La Gorce Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969-70, for Barry C. Waterhouse, who was there as a geologist. NZ-APC accepted the name in 1970, and US-ACAN followed suit that year.

Waterloo Island *see* **King George Island**

Mount Waterman. 84°27' S, 175°25' E. A massive mountain (the New Zealanders describe it as a short, high, summit ridge), rising to 3880 m, in the Hughes Range, 5 km NE of Mount Wexler, and about 10 km N of Mount Kaplan. Discovered and photographed by Byrd on the baselaying flight of Nov. 18, 1929, during ByrdAE 1928-30, and surveyed by Bert Crary in 1957-58, during his Marie Byrd Land Traverse. Named by Crary for Alan Tower Waterman (1892-1967), first director of the National Science Foundation. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Waterpipe Beach. 60°43' S, 45°37' W. A flat shingle beach on the W side of Borge Bay, Signy Island, in the South Orkneys. Surveyed in 1933 by personnel on the *Discovery II*. Re-surveyed by FIDS in 1947, and named by them. An old pipeline from a pumping station by Pumphouse Lake (the southernmost lake in Three Lakes Valley) leads down to this beach, and was used by the Tønsbergs Hvalfangeri for watering whaling vessels in the 1920s. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Waters, Ian Bernard. b. Feb. 18, 1945. Radio technical officer at Casey Station in 1970 and 1973.

Isla Watkins *see* **Watkins Island**

Watkins Island. 66°22' S, 67°06' W. A low, ice-covered island, 8 km long in a NE-SW direction, 5 km SW of Lavoisier Island (and separated from that island by Lewis Sound), it is one of the largest of the Biscoe Islands. Mapped by FrAE 1903-05 and by FrAE 1908-10. Next seen and surveyed in 1935-36, by BGLE 1934-37, and named by Rymill as Mikkelsen Island, for Ejnar Mikkelsen (1880-1971), Danish Arctic explorer. It appears as such on Rymill's 1938 map of the expedition. The personnel from East Base were evacuated to this island by Condor aircraft, which landed on the island's ice-cap on March 22, 1941; they were then taken off the island by the *Bear*, and the aircraft was abandoned (*see* **Condor Peninsula**). It appears as such on a 1943 U.S. Hydrographic Office chart, and on a 1948 British chart. It appears on a 1946 Argentine chart as Isla Mikkelsen, and on a 1948 Chilean map as Isla Isidoro Errázuriz, named for Isidoro Errázuriz (1835-1898), founder of the Chilean newspaper *La Patria*. However, when he named it, Rymill was unaware of the existence of the Mikkelsen Islands, about 120 km to the SW, named by Charcot in 1908-10, so, in order to avoid confusion, it was renamed by FIDS as Watkins Island, for Gino Watkins, Arctic pioneer. It appears as such on a 1952 British chart. US-ACAN accepted that name in 1952, and UK-APC followed suit on Jan. 28, 1953. *See also* **Mikkelsen Bay**. It appears as such in the 1955 British gazetteer, and also on a 1961 British chart. It appears on a 1953 Argentine chart as Isla Watkins, and that was the name accepted by the 1970 Argentine gazetteer. Indeed, an Argentine refuge hut was built on the W coast of this island in 1956, and named Capitán Estivariz. Gino Watkins died in 1932, at the age of 25. If he hadn't, he would have been in Antarctica, without question. He had so much to do with so many famous names in Antarctica that he deserves more than just a mere mention. He was born Henry George Watkins, on Jan. 29, 1907, in London, son of Col. Henry George Watkins, and, while at Cambridge, studying under James Wordie and Ray Priestley, became a well-known mountain climber, in 1927 organizing his own expedition to the Arctic. He was 20. He was back in 1928-29, exploring and mapping Labrador, and then, in 1930-31, led the famous British Arctic Air Route Expedition, on Shackleton's old vessel, the *Quest*, surveying the E coast of Greenland, and monitoring weather conditions, that work being necessary for a planned England to Winnipeg air route. The expedition, which also included Freddy Chapman, Quintin Riley, and John Rymill, was a success, and made him famous. He next planned an Antarctic expedition, but could not get the funds, the Depression then being at its height (the expedition did finally materialize, as BGLE 1934-37). Instead, he returned to Greenland, to carry on his work of the previous year. On Aug. 20, 1932, he went hunting for seals in his kayak. His kayak was found, floating upside down, but Gino was never seen again. Jamie Scott, Gino's fellow expeditioner, wrote *Gino Watkins*, in 1935, and John Ridgway wrote another book with the same name in 1974. Mr. Scott's son, Jeremy Scott, wrote *Dancing on Ice*, another Watkins biography in 2008, and Simon Courtauld's *The Watkins Boys* was published in 2010.

Watlack Hills. 79°26' S, 85°22' W. A line of mainly ice-free hills, 16 km long, bounded by the White Escarpment, Splettstoesser Glacier, and Dobbratz Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party here in 1963-64, for CWO Richard George Watlack (b. April 4, 1932, Pa. d. June 11, 2001, Fayetteville, NC), pilot with the 62nd Transportation Detachment, who helped the party. US-ACAN accepted the name in 1966.

Watman, William. Name also seen as Whatman. b. 1732, Reigate. He was with Cook on the *Resolution* on the 2nd and 3rd voyages. He died in Hawaii on Feb. 1, 1779.

Península Watson *see* **Watson Peninsula**

Watson, Andrew Dougal. b. June 27, 1885, Lambton, NSW, son of William Watson and his wife Jane. After graduating in science at Sydney University, he became a geologist on AAE 1911-14. A schoolteacher, he retired in 1949, and died on June 18, 1963, in Cremorne, Sydney.

Watson, Donald E. He joined the U.S. Navy, and was a hospital corpsman when he became attached to the Seabees for OpDF I (i.e., 1955-56), as medical assistant and member of the construction crew that built Little America V. He was the surgical technician at Little America in the winter of 1956. He was also the medic on the oversnow Byrd Traverse of that year.

Watson, Evan. FIDS diesel electric mechanic who wintered-over at Base G in 1959, and at Port Lockroy Station in 1960.

Watson, Garry. Wintered-over at Davis Station in 1981, at Mawson Station in 1983, at Casey Station in 1985, and at Davis again in 1994.

Watson, George Ernest "Gus." b. Feb. 10, 1922. A major in the REME, loaned by the War Office to the British Royal Society Expedition, for the first part of that expedition (i.e., 1955-57), as chief scientist and electronics engineer, as well as 2nd-in-command of the expedition. He wintered-over in 1956, at Halley Bay, and returned to London on the *Magga Dan* on March 13, 1957. He lived in Bromley, Kent, and worked for the Ministry of Defence. He married Clare. He died on Aug. 26, 1970, at St. George's Hospital, Hyde Park.

Watson, John. b. June 30, 1817, Aberdeen. On Dec. 30, 1839, at Hobart, he embarked as a junior seaman on the *Zélée* for the 2nd Antarctic venture of FrAE 1837-40. He left the expedition at Coupang on June 24, 1840.

Watson, John Frampton. b. about 1805, Pa., son of Joseph Watson and Margaret Rodman. A medical doctor, he was one of the scientists who went on the Palmer-Pendleton Expedition of 1829-31. In 1832 he was working as a lithographer in Philadelphia, and from 1833 until 1838 operated a company with C.A. Watson. In 1846 he married Susan Abbott Newbold. He himself continued in business until he died in 1866.

Watson, Richard D. b. 1910, Dover, NH, son of Robert M. Watson and his wife Dora. They all lived and worked on grandfather John Watson's farm, for years. Robert eventually became a schoolteacher, and his son Richard went into radio. He was the radio operator on the *Bear of Oakland*, during both halves of ByrdAE 1933-35.

Watson, William "Willie." b. Carnoustie, son of a sailor. He ran away to sea as a youth, then (not necessarily in this order) is "rumored" to have gone round the Horn plenty of times working on ships in the nitre trade, done herring fishing in the North Sea, traveled with Wombwell's menagerie, been a golf caddie at Carnoustie, fished for salmon in the Tay, whaled in the frozen North, and served in the French army as a mercenary during the Franco-Prussian War. All

this led up to being a crew member on the *Balaena* during DWE 1892-94. Burn Murdoch called him "one of the jolliest characters on board."

Watson, William Henry "Billy." Also known as Willie. b. Feb. 4, 1926, North Arm, East Falkland, son of shepherd James Watson and his wife Rica Alexandrina Anderson. He joined FIDS in 1945, as a handyman, and wintered-over at Base C in 1946, and at Base F in 1947. He drowned at Goose Green, in the Falklands, on Feb. 1, 1954, and was buried in Stanley, on Feb. 5, 1954, aged 28.

Watson Bluff. 66°25' S, 98°57' E. A dark bluff, it is the largest of the rock exposures on David Island, and rises to 227 m above sea level at the E end of the island. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Andrew D. Watson. US-ACAN accepted the name in 1953, and ANCA followed suit.

Watson Escarpment. 86°00' S, 145°00' W. A major escarpment, somewhat arcuate in shape, about 140 km long, and rising to between 1000 and 1500 m above the surrounding terrain, it rises to 3550 m above sea level, between the La Gorce Mountains and the Horlick Mountains, overlooking Leverett Glacier, and trending northward along the E margin of Scott Glacier, then eastward to Reedy Glacier, where it turns southward along that glacier's W side. The N central part of it was observed for the first time from a vantage point on Supporting Party Mountain in Dec. 1929, by Larry Gould's party, and they were the first to survey and map part of it, that month, during ByrdAE 1928-30. Quin Blackburn surveyed more of it in 1934, during ByrdAE 1933-35. That year Byrd named it Thomas Watson Escarpment for Thomas John "Tom" Watson (1874-1956), founder of IBM, a friend of Byrd's and a supporter of ByrdAE 1933-35. The name was accepted by US-ACAN as Watson Escarpment, in 1947. Mapped in detail from surveys and from air photos taken by USN, 1960-64.

Watson Nunatak. 67°58' S, 62°45' E. Rising to 1170 m, between Price Nunatak and Van Hulssen Nunatak, in the Trilling Peaks of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartogaraphers in 1946. Used as a trigonometrical station by surveyor Max Corry in 1965. Named by ANCA on Aug. 10, 1966, for Keith Douglas Watson (b. Sept. 13, 1935. d. July 20, 1995, Gove, NT), diesel mechanic at Mawson Station in 1965, who helped in Corry's Framnes Mountains-Depot Peak Survey that year. He was back at Mawson as senior diesel mechanic, for the winter of 1968, and as plant inspector in 1970. In the 1970s he attempted a circumnavigation of the world in a 32-foot yacht, but came to grief in the Indian Ocean. He tried again, in a 36-footer, and succeeded. US-ACAN accepted the name in 1970.

Watson Peaks. 73°45' S, 62°36' W. A linear group of peaks, rising to an elevation of about 1500 m, and trending in a NW-SE direction for 14 km, 3 km NE of Rivera Peaks, between those peaks and the Werner Mountains, on the Lassiter Coast, on the E coast of Palmer Land. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN for George E. Watson III (b. Aug. 13, 1931, NYC), USARP biologist on the Palmer-*Eastwind* Expedition of 1965-66 (*see also* the Bibliography). They appear on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Watson Peninsula. 60°42' S, 44°32' W. A narrow peninsula, 3 km long, and terminating in Cape Valavielle, between Macdougal Bay and Marr Bay, on the N coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce for George Lennox Watson (1851-1904), Scottish naval architect and yacht designer (he designed the royal yacht, *Britannia*), who re-designed the *Scotia* free of charge. It appears on Bruce's maps, and on a British chart of 1930. It was re-charted by the Discovery Investigations in 1933, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart as Península Watson, that being the name still used by the Argentines today.

Watson Ridge. 67°00' S, 55°46' E. A partially snow-covered rock ridge, 15 km SE of Mount Storegutt, and about 20 km NNE of Twin Peaks, in Kemp Land, in Enderby Land. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1954-66. First visited by Ian McLeod's ANARE party on Feb. 21, 1965. Named by ANCA for Robert A. "Bob" Watson, of West Preston, Vic., weather observer at Mawson Station in 1963. US-ACAN accepted the name in 1970.

Watson Valley. 77°14' S, 161°34' E. Ice-free (except for a small glacier at the head wall), E of Mount Lewis, it opens southward to Victoria Upper Glacier, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Donald Watson. NZ-APC accepted the name on April 7, 2008.

Mount Watt. 72°28' S, 166°09' E. An isolated peak rising to 2715 m (the New Zealanders say 2621 m), 5 km NW of Mount Roy, and 13 km SW of Mount Aorangi, in the Barker Range of Victoria Land. Named by the Southern Party of the New Zealand Federated Mountain Clubs Expedition of 1962-63, for B.H. Watt, secretary of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Watt Bay. 67°02' S, 144°00' E. An indentation, between 22 and 26 km wide, into the coast of George V Land, W of Cape de la Motte, between that cape and Garnet Point, or (to put it another way) between Mertz Glacier and Commonwealth Bay. Discovered by AAE 1911-14, and named by Mawson for William Alexander Watt (1871-1946), premier of Victoria, 1912-13. US-ACAN accepted the name in 1947, and ANCA followed suit.

Watt Ridge. 84°45' S, 173°47' W. A ridge, 11 km long, extending NW from Mount Llano (in the Prince Olav Mountains) and terminating at the E side of Barrett Glacier. Named by US-ACAN in 1966, for Lt. Cdr. Robert C. Watt, USN, supply officer during OpDF 64 (i.e., 1963-64).

Wattenberg, Hermann. b. April 16, 1901, Berlin. He was the marine chemist on the *Meteor*, during the German Atlantic Expedition of 1925-27. He was working at the Institut für Meereskunde, in Kiel, when it was bombed by the Allies on July 14, 1944. He was one of the victims.

Mount Watters. 76°44' S, 159°38' E. A massive peak, westward of Scythian Nunatak, and SW of Trudge Valley, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZ Allan Hills Expedition of 1964, and named by them for William A. "Bill" Watters, a geologist with the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Wattle Island. 67°17' S, 46°46' E. A small island, close to the coast, and 11 km E of Kirkby Head, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for their tree. US-ACAN accepted the name in 1965.

Wattled sheathbill *see* **Sheathbills**

Watton, Raymond Hemming "Ray." b. April 25, 1927, Alcester, Warws, son of Harry Watton and his wife Kathleen Mary Tansell. He worked as an engineer for Royal Enfield, and in 1953 was seconded to FIDS as diesel electric mechanic. He wintered-over at Port Lockroy Station in 1954, and after his tour, returned to Port Stanley, then to Montevideo, where he picked up the *Highland Chieftain*, bound for London, where he arrived on March 10, 1955. He later bought a small supermarket in Worcester, then another in Wyre Piddle, Pershore, Worcs. He died in Pershore in Aug. 1996.

Watts, Harold. Petty officer telegraphist, RN. Radio operator on the *Quest*, 1921-22.

Watts Lake. 68°36' S, 78°13' E. Just SW of Ellis Rapids, in the S part of the Vestfold Hills, on the Ingrid Christensen Coast. Named by ANCA for Edward Paul Watts (known as Paul) (b. March 14, 1931), senior diesel mechanic and plant inspector at Davis Station in 1969, and at Mawson Station in 1975. He had also been at Macquarie Island in 1968. An ANARE field hut was established at Watts Lake.

Watts Needle. 80°44' S, 24°59' W. A needle-shaped peak, rising to 1450 m, at the SW end of the ridge E of Glen Glacier, in the Read Mountains of the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS from Halley Bay Station between 1968 and 1971. Named by UK-APC in 1971 for William Whitehead Watts (1860-1947), professor of geology at Imperial College, London, 1906-30, who worked primarily on the Precambrian rocks of the Midlands.

Watts Nunatak. 72°38' S, 74°13' E. An isolated nunatak, 20 km NW of Mason Peaks, and about 41 km NW of Mount Harding, in the

Grove Mountains. Named by ANCA for John P. Watts, supervising technician (radio) at Mawson Station in 1962. US-ACAN accepted the name in 1967.

Watts Summit. 83°12' S, 50°31' W. A peak rising to 1785 m, in the SW corner of Lexington Table, in the Forrestal Range of the Pensacola Mountains. Mapped by USGS in 1967 from ground surveys, and USN air photos taken in 1964. Named in 1979 by US-ACAN for Raymond Douglas "Ray" Watts (b. Feb. 4, 1945, Ventura Co., Calif.), USGS geophysicist working in the Forrestal Range and the Dufek Massif in 1978-79. The Russians call it Nunatak Sokolina.

Mount Waugh. 65°31' S, 64°07' W. Rising to 585 m, W of Chiloé Point, on the S side of Beascochea Bay, 5.5 km NE of Nuñez Point, on the Graham Coast, on the W coast of Graham Land. Roughly charted by FrAE 1908-10. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for William A. Waugh, biochemist at the University of Pittsburgh who, in 1932, with his old professor Glen King, first identified the antiscorbutic component of lemon juice, making possible the production of synthetic Vitamin C to prevent scurvy. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Waugh Peak. 86°04' S, 160°36' W. A rock peak, rising to 2430 m, just SE of Breyer Mesa, on the W side of Amundsen Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Douglas Waugh, chief cartographer with the American Geological Society from 1963.

Cabo Wauters *see* **Wauters Point**

Cap Wauters *see* **Wauters Point**

Cape Wauters *see* **Wauters Point**

Wauters Point. 64°06' S, 61°43' W. An ice-covered point forming the N end of Two Hummock Island, in the Palmer Archipelago. Charted on Jan. 25-26, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Wauters, for Belgian archivist and historian Alphonse Wauters (1817-1898), a sponsor of the expedition. It appears as such on the expedition's charts, and on the 1900 English language version (prepared by Dr. Frederick Cook) it appears as Cape Wauters. It appears as Cape Wauters on a British chart of 1942, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. After aerial photography by FIDASE in 1956-57, it was redefined by UK-APC on Sept. 23, 1960, as Wauters Point, and US-ACAN accepted that name later in the year. It appears as such on a 1961 British chart. It appears on a Chilean chart of 1947 as Cabo Wauters, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Îles Wauwermans *see* **Wauwermans Islands**

Islas Wauwermans *see* **Wauwermans Islands**

Wauwermans Islands. 64°55' S, 63°53' W. A group of small, low, snow-covered islands, the northernmost group in the Wilhelm Archipelago, extending for 15 km in an E-W direction in Bismarck Strait (this strait actually forms the N boundary of this group), and 5 km W of Cape Errera (the southernmost point on Wiencke Island). The group is bounded to the E by Butler Passage, and to the S by Nimrod Passage. Discovered by Dallmann in 1873-74. Sighted again by BelgAE 1897-99, and on Feb. 9, 1898 a landing was made on one of the islands by this expedition, and the group was roughly charted. They were named by de Gerlache as Îles Wauwermans, for military historian Lt. Gen. Henri-Emmanuel Wauwermans (1825-1902), of Antwerp, president of the Belgian Royal Geographical Society, and a supporter of the expedition. They appear as such on the expedition's maps, and as Wauwermans Islands on Dr. Frederick Cook's 1900 English language version of these maps. Misspellings of such a name are bound to occur; on a 1901 British map it appears as Wauwerman Islands. The group was re-surveyed by FrAE 1903-05, and appears on their chart as Îles Wauwermans (just as de Gerlache had named them), but Charcot also refers to them as Archipel Wauwermanns. On a 1943 U.S. Hydrographic Office chart, the group appears as both Wauwermanns Islands and Wauwermann Islands, and on a Chilean chart of 1947 as Islas Wauwermann. It appears as Wauwermans Islands on a British chart of 1948, and on an Argentine chart of 1949 as Islas Wauwermanns. Wauwermans Islands was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, and on a British chart of 1958. On an Argentine chart of 1953 it appears as Islas Wauwermans, and on a Chilean chart of 1962 as Grupo Wauwermans, but the name Islas Wauwermans was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. In the 1961 British gazetteer, the name appears as Wauwermanns Group. The group includes Brown Island, Clear Island, Friar Island, Guido Island, Herd Rock, Host Island, Knight Island, Manciple Island, Miller Island, Prevot Island, Prioress Island, Reeve Island, Sinclair Island, Squire Island, Wednesday Island, many of these being named for characters in Chaucer's *Canterbury Tales*.

WAVE *see* **West Antarctic Volcano Exploration**

Wave Peak. 60°37' S, 45°36' W. A conspicuous peak, rising precipitously to 960 m from the head of Laws Glacier, and with a prominent ridge running in a southwesterly direction, at Marshall Bay, in the north-central portion of Coronation Island, in the South Orkneys. To the N and E it slopes gently to the level of Brisbane Heights. Surveyed by Fids from Signy Island Station in 1948-49, and named by them for its resemblance to a breaking wave. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by FIDS between 1956 and 1958.

Waverly Glacier. 74°02' S, 61°41' W. A narrow glacier flowing NE along the SE flank of Mount Tricorn, and entering Wright Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Photographed aerially on Dec. 30, 1940, during USAS 1939-41, but, due to an error in navigation, it was plotted in 74°40' S, 60°30' W. It appears as such on a 1942 USAAF chart, and also on a 1943 U.S. Hydrographic Office chart. It was photographed aerially again on Nov. 21, 1947, during RARE 1947-48, named by Ronne as Kasco Glacier, and roughly plotted by them in 74°03' S, 62°00' W. Marc Ivy and J. Edwin "Ed" Knapp, owners of the Kasco Dog Food Company's mills in Waverly, NY, supplied 20 tons of dog food for Ronne's expedition. It appears as such on the American Geographical Society's 1948 map. However, it appears on Ronne's 1948 map as Waverly Glacier, but with the same coordinates. US-ACAN accepted the name Waverly Glacier (and those coordinates) in 1949, and UK-APC followed suit on Jan. 28, 1953 (but with the coordinates 74°03' S, 71°56' W). With those new coordinates it appears in the 1955 British gazetteer. It was re-photographed aerially by USN between 1965 and 1967, and mapped anew by USGS from these photos. It appears with the corrected coordinates on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and, with those new coordinates, it appears in the 1977 British gazetteer. The Americans plot it in 74°01' S, 61°38' W.

Mount Wawel *see* **Wawel Hill**

Wawel Hill. 62°07' S, 58°24' W. Rising to 290 m, N of Point Hennequin, on the E side of Admiralty Bay, on King George Island, in the South Shetlands. Named by the Poles in 1980, as Gora Wawel, for a hill of that name in Krakow. UK-APC accepted the name Wawel Hill on April 3, 1984, and it appears as such in the 1986 British gazetteer and on a British chart of that year. US-ACAN accepted that name too.

Way Archipelago. 66°53' S, 143°40' E. More than 120 small islands and rocks running from the vicinity of Cape Gray (at the E side of the entrance to Commonwealth Bay) to the vicnity of Garnet Point (at the W side of the entrance to Watt Bay), and distributed close offshore in the form of an arc. The largest is Stillwell Island. Mawson discovered it in 1911-14 during AAE, and named it for Sir Samuel Way (1836-1916), chancellor of the University of Adelaide, 1883-1916, and chief judge of the Supreme Court of South Australia from 1876 until his death. US-ACAN accepted the name in 1947, and ANCA followed suit.

Wayne, Tony *see* **Kelczewski, Anthony W.**

Wearden, Allan Jeffrey. They called him "Al," but not all the time, only in the 1980s and 90s. b. Sept. 22, 1947, Blackburn, Lancs, son of James Wearden and his wife Margaret Holliday. After a bit of college, he worked as a cook in a mental hospital for 3½ years, then saw an ad in a catering journal, for BAS cooks (who were notoriously hard to find). He applied, went to London for the interview (with Bill Sloman and Maurice Sumner), and left England in the first week of Oct. 1968, aboard the *Shackleton*, bound for Montevideo, Port Stanley, South Georgia, and finally arrived at Signy Island. Here he

helped with the relief, and then continued on to Base B (Deception Island), where he cooked for 2 or 3 days, before taking the *Endurance* on to Base F (Argentine Islands), to replace the late Ken Portwine as cook there for the winter of 1969. The *Endurance* couldn't get in through the pack-ice, so he had to be helicoptered off the edge of the ice to the base. That was Dec. 6, 1968, 5 A.M., a sunny morning. The first thing he did on arriving was ski to the Jalour Islands for amusement. He stayed on at Base F through the 1969-70 summer, and wintered-over there again in 1970. While he was there he ran the greenhouse. The *John Biscoe* took him off in 1971, to Montevideo, from where he did a trip around South America, and then left Montevideo for home on the new *Bransfield*. He spent 6 months in the UK, then re-applied for FIDS, was accepted on a one-year contract (a Fid almost always did 2 years on his first contract, and only on his subsequent tours — if there were any — could he get to specify the length of his contract), and left England in Oct. 1971, on the *Bransfield*, which took him all the way to Base E (Stonington Island), where he cooked for 2 weeks before catching the *Bransfield* on to Adelaide Island (Base T), where he wintered-over in 1972. He spent two weeks again at Base E, in the summer of 1972-73, before the *Bransfield* picked him up and took him to Port Stanley, and then on to Montevideo. This time he did 6 months in South America, winding up in Ecuador, from where he flew home. In 1974 he emigrated to Canada, spending some time in the Arctic, working for Norwhale Explorations. He returned to England in Dec. 1979, worked as a catering manager, and in 1988 applied to be a cook at Halley Bay Station, and BAS jumped at the idea. He did the following summers at Halley —1988-89, 1989-90, 1990-91, 1991-92, 1992-93, and 1993-94, and then the 1994-95 summer at Rothera Station. In Jan.-Feb. 2000 he was with several other ex-Fids and BAS lads on the Marguerite Bay trip, on the tourist ship *Orlova*, and then, for the summer of 2001-02 was at South Georgia, and from Jan.-April 2002 was at Signy Island Station. He still cooks, through an agency in Blackburn, and is a good friend of Ben Hodges and John Huckle.

Weasel Gap. 70°12' S, 64°37' E. A gap with a névé surface and a low gradient, running at an elevation of about 1670 m, and offering a feasible N-S route between Mount Starlight and Mount Lacey (of the Athos Range), in the Prince Charles Mountains. Discovered on Nov. 26, 1955, by an ANARE party led by John Béchervaise. Named by ANCA in 1955 for the Weasel vehicles. US-ACAN accepted the name in 1965.

Weasel Hill. 64°15' S, 59°33' W. A small but distinctive elevation rising to 835 m in the ice piedmont 8 km N of Larsen Inlet, on the Nordenskjöld Coast, on the E coast of Graham Land, between Pyke Glacier and Polaris Glacier. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from those surveys. Named by UK-APC on Feb. 12, 1964, for the Weasel vehicles. US-ACAN accepted the name later in 1964.

Weasels. Fast, but not strong, Caterpillar vehicles, used mostly for exploration. The Weasel is an M-29 Tracked Cargo Carrier, made by Studebaker, and designed by Geoffrey Nathaniel Pyke (he was British) in 1941, originally as an all-terrain bren-gun carrier. Eight M-29Cs were used during OpHJ 1946-47. These were ¾-ton amphibious cargo carriers. Four were used sparingly on OpW 1947-48, and Finn Ronne took two on RARE 1947-48. Weasels were much used during IGY (1957-58) by the British, French, Australians, and Americans (who used 13), and have been much used since.

Weather Central. Collection point at Little America V for all meteorological data gathered in Antarctica during IGY (1957-58). The data were sent in to McMurdo from stations run by all countries in Antarctica (and not just Antarctica, either), and also from ships, trail parties, whalers, and aircraft. The data were then sent on from McMurdo to Little America, where they were processed and analyzed, and made into records. It was Harry Wexler's idea. In 1955-56 Mort Rubin went to Little America on a feasibility study, and was back the following summer (1956-57) to set it up. Data collection began on May 20, 1957, and broadcasting of analyses began on May 29, 1957. By mid-June 1957 it was receiving surface and upper air reports from all stations. Bill Moreland was met man in charge for the winter of 1957.

Weather Cock Hill *see* **Cathedral Crags**

Weather Guesser Nunataks. 75°30' S, 71°45' W. An isolated group of nunataks, rising to an elevation of about 1080 m, 16 km WNW of the Thomas Mountains, between those mountains and the Behrendt Mountains, on the Orville Coast, in the E part of Ellsworth Land, where Ellsworth Land meets southern Palmer Land. Discovered and photographed aerially by RARE 1947-48. Surveyed from the ground during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named descriptively by Russell R. White, Jr., USN, aerographer here in 1965-66, with the University of Wisconsin survey party, which established a base camp WNW of the nunataks in 1965-66. US-ACAN accepted the name in 1966, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Weather Island *see* **Veier Head**

Weather stations. There are two types — manned and automatic. The manned ones are usually an integral part of scientific stations (q.v.). *See also* **Automatic weather stations**.

Weatherall, Kevin McIntyre. b. Oct. 30, 1950, Dunedin, NZ. Science technician who wintered-over at Scott Base in 1972 and 1977.

Weathercock Hill *see* **Cathedral Crags**

Mount Weatherson. 68°02' S, 55°26' E. A prominent mountain in the Dismal Mountains, about 8 km SW of Cyclops Peak, in Kemp Land, in Enderby Land. Plotted by Australian cartographers from 1959 ANARE air photos. Named by ANCA on Aug. 27, 1975, for Terry Weatherson.

Weatherson, Terence William "Terry." b. June 16, 1943. Radio technical officer at Mawson Station in 1970, at Casey Station in 1972, and senior radio technical officer at Mawson in 1974. That last season he was a member of the ANARE tractor train party that established a base camp at Knuckey Peaks.

Weatherwax Glacier. 77°38' S, 163°36' E. A glacier occupying the elevated basin S of Mount Barnes, it flows SE from a height of about 800 m in the Kukri Hills, and terminates in a narrow glacial snout on rock bluffs 200 m above New Harbor, in Victoria Land. Named by Theodore J. Rosenberg, for Allan T. Weatherwax, physicist at the Institute of Physical Science and Technology, at the University of Maryland, who conducted investigations of the atmosphere, ionosphere, and magnetosphere at McMurdo, Pole Station, and several of the automated geophysical observatories (AGOs) on the Polar Plateau. He did 10 field seasons in Antarctica between the 1988-89 season and the 1998-99 season. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Mount Weaver. 86°58' S, 153°50' W. Rising to 2780 m (the New Zealanders say 3048 m), 3 km W of Mount Wilbur, at the head of (and marking the S portal of) Scott Glacier, in the Queen Maud Mountains. Discovered and climbed by Quin Blackburn's party in Dec. 1934, during ByrdAE 1933-35, and named by them for Charles Edwin Weaver (1880-1958), professor of paleontology at the University of Washington. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Punta Weaver *see* **Weaver Point**

Weaver, John A. *see* **USEE 1838-42**

Weaver Nunataks. 79°51' S, 81°11' W. A cluster of nunataks just S of the Meyer Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for William E. Weaver, USARP meteorologist at Ellsworth Station in 1962.

Weaver Peninsula. 62°12' S, 58°47' W. A small peninsula, terminating in North Spit, on the NW side of Marian Cove, between that cove and Collins Harbor, in the area of Buddington Peak, at Maxwell Bay, on the SW side of King George Island, in the South Shetlands. BAS did geological work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for Stephen Donald Weaver (b. 1947), geologist with the University of Birmingham, who was with the BAS party (he did not winter-over). It appears in the 1980 British gazetteer, and on a British chart of 1990. US-ACAN accepted the name. Last plotted by the UK, in late 2008.

Weaver Point. 65°31' S, 65°46' W. The N point of Renaud Island, 4 km W of Tula Point, in the Biscoe Islands. Photographed aerially by FIDASE in 1956. First accurately shown on an Argentine chart of 1957, but not named. Named by UK-APC on July 7, 1959, for geographer John Carrier Weaver (b. May 21, 1915, Evanston, Ill. d. March 10, 1995, Rancho Palos Verdes, Calif.), American authority on ice, and author of *Ice*

Atlas of the Northern Hemisphere (1946). He was also president of the University of Wisconsin, 1971-77. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Punta Weaver.

Cape Webb. 67°52' S, 146°52' E. A cape marking the W entrance to the depression containing the Ninnis Glacier, and separating Ainsworth Bay from Doolette Bay, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Eric Webb. US-ACAN accepted the name in 1947, and ANCA followed suit.

Île Webb *see* **Webb Island**

Isla Webb *see* **Webb Island**

Islote Webb *see* **Webb Island**

Mount Webb. 71°11' S, 163°00' E. Rising to 2430 m, 6 km SE of Mount Glasgow, at the W side of Edlin Névé, in the Explorers Range of the Bowers Mountains. Named by NZGSAE 1967-68, for William James Webb, the leader of the Scott Base wintering-over party of 1968. He had been deputy leader in 1966. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Webb, Benjamin *see* **USEE 1838-42**

Webb, Eric Norman "Azi." b. Nov. 23, 1889, Lyttelton, NZ, son of Samuel Rollin Webb and his wife Sophie Dohrmann. After training as a teacher and then as an engineer, he became chief magnetician at Main Base during AAE 1911-14, during which expedition he was one of Bage's party of 3 to go to the area of the South Magnetic Pole, in 1912. From 1914 to 1915 he worked in various government posts as an engineer, and from 1915 to 1918 served with the 7th Field Company, Royal Australian Engineers (commanding for the last 2 years), mostly in Egypt and France. On March 3, 1920, he married Kathleen Ira Baker, of Christchurch, and went to work for a pulp and paper firm based out of London. He spent 14 years in India with the company, being general manager in London from 1930, and in 1936 moved to Chipstead, Surrey. In 1941 he joined English Electric, as a globe-trotting hydro-electric engineer. In 1959 he retired to Cornwall, and later to North Wales, and died on Jan. 23, 1984, in Caterham, Surrey, the last survivor of Mawson's expedition.

Webb, Peter-Noel. b. Dec. 14, 1936, Wellington, NZ. One of the two geology students (Barrie McKelvey was the other) who made up VUWAE 1957-58 (the first VUWAE) (*see also* **McKelvey Valley**). He and McKelvey were also on VUWAE 1958-59. He married in 1964. In 1966 he was at the State University of Utrecht, in the Netherlands, and from 1980 was professor of geology at Ohio State University.

Webb Cirque. 77°15' S, 160°45' E. A prominent cirque occupied by the névé of Webb Glacier, at the head of which this cirque is situated, bounded by Vishniac Peak, Skew Peak, and Parker Mesa, in Victoria Land. Named by US-ACAN in 2005, in association with the glacier. NZ-APC accepted the name on Sept. 12, 2005.

Webb Glacier. 77°19' S, 160°45' E. Just N of Mount Bastion and Gibson Spur, it flows SE into the head of Barwick Valley, in southern Victoria Land. Named by VUWAE 1958-59 for Peter-Noel Webb. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Webb Icefall. 77°16' S, 160°29' E. Just S of Vishniac Peak, it flows from the Willett Range, into the W tributary at the head of Webb Glacier, in Victoria Land. Named by Parker Calkin, U.S. geologist here, in association with the glacier. US-ACAN accepted the name in 1970.

Webb Island. 67°27' S, 67°56' W. An island, rising to a bare rock cone, 2.5 km long, in Laubeuf Fjord, off the E coast of Wright Peninsula, about 5 km S of the entrance to Stonehouse Bay, on Adelaide Island. Discovered and charted in Jan. 1909, by FrAE 1908-10, and (later) named by Charcot as Île Webb, for Captain (later Admiral) Richard Webb (1870-1950; knighted in 1920), RN, skipper of the British cruiser *Amethyst* (from Jan. 1909) in Argentine waters at the time. Capt. Webb was the first to welcome Charcot back to Montevideo in 1910, after the expedition. It appears as such on Charcot's maps. It appears as Webb Island on a USAAF chart of 1946. Surveyed by Fids from Base E in 1948, it appears on their chart of that year as Webb Islet, but the name Webb Island was the one accepted by US-ACAN in 1953, and by UK-APC on March 31, 1955. It appears as such on a British chart of 1957. It was surveyed by ChilAE 1946-47, and named by them as Isla Escribiente Rebolledo, after a naval writer on the expedition (this is what we are told in the British gazetteer). It appears as such on their chart of 1947. However, it appears on a 1962 Chilean chart as Isla Webb, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1957 Argentine chart as Islote Webb, and that is the name the Argentines use today.

Webb Islet *see* **Webb Island**

Webb Lake. 77°20' S, 160°52' E. A meltwater lake at the terminus of Webb Glacier, in Barwick Valley, in southern Victoria Land. So named by American geologist Parker Calkin in 1964 because of its proximity to the glacier. US-ACAN accepted the name in 1970.

Webb Névé. 72°42' S, 166°20' E. At the head of Seafarer Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1966-67, for Dexter Norman Webb, public relations officer for Scott Base that season, who was killed on Sept. 25, 1966, days before flying down to Antarctica to take up his appointment. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Webb Nunataks. 83°24' S, 56°42' W. A group of nunataks, 3 km W of Madey Ridge, between that ridge and Roderick Valley, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1963-64, surveyed that same season by USGS, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Dalton Dillard Webb, Jr. (b. Sept. 1, 1929. d. June 16, 1978), an electronics engineer with the Raydist Corp., a member of the U.S. Air Force Electronics Test Unit here in 1957-58. In Oct. 1957, he was one of the Raydist crew tracking Sputnik. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

[1]**Webb Peak**. 69°38' S, 66°28' W. Rising to 1480 m at the W end of Crescent Scarp, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41, and surveyed by FIDS in 1958. Named by US-ACAN in 1977 for John E. Webb, USARP geodesist with the U.S. Army Topographic Command, who wintered-over at Palmer Station in 1969. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

[2]**Webb Peak**. 77°39' S, 162°23' E. A peak on the W side of Mattherhorn Glacier, in the Asgard Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1998. NZ-APC accepted the name.

Webb Subglacial Trench. 70°00' S, 146°00' E. A trench running NE-SW on the NW side of the Wilkes Subglacial Basin, it is separated from the main part of that basin by the Southern Cross Subglacial Highlands to the E. Discovered and mapped by the radio echo-sounding program conducted by SPRI-NSF-TUD, 1867-79. Named for Eric Norman Webb. ANCA accepted the name on Dec. 3, 1982, and US-ACAN followed suit.

Webber Island. 77°17' S, 153°05' W. The large, central island of the White Islands, between Olson Island and Chandler Island, in the S part of Sulzberger Bay, on the coast of Marie Byrd Land. First rudely delineated on a map drawn up by ByrdAE 1928-30, and described thereon as "low ice cliffs" rising above the ice shelf. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for James Webber, USARP ionosphere physicist at Byrd Station in 1968-69.

Webber Nunatak. 74°47' S, 99°50' W. Rising to 495 m, 10 km W of Mount Manthe, in the Hudson Mountains. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for George E. Webber, electrical engineer at Byrd Station in 1967.

Caleta Weber. 64°30' S, 61°50' W. A cove about 1.5 km wide, which indents the W coast of Cape Reclus for about 1.5 km, the tip of the peninsula which forms the W coast of Charlotte Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de corbeta Pablo Weber Münnich, skipper of the *Leucotón* during ChilAE 1955-56. The Argentines call it Caleta Marcos.

Weber, Albert. b. Dec. 15, 1895, Lehe, Lower Saxony, Germany. He went to sea in 1914, and in 1938-39 was a sailor on the *Schwabenland* for GermAE 1938-39. In the 1950s he was sailing the Atlantic as 1st engineer on the Hamburg-Amerika Line ship *Lahnstein* out of Bremen (*see also* **Ulpts, Jürgen**).

Weber Inlet. 71°57' S, 73°28' W. A broad, ice-filled inlet, 15 km wide, indenting the SE part of Beethoven Peninsula for 22 km, SW of

Bennett Dome, and forming the NW arm of the Bach Ice Shelf, in Alexander Island. First mapped by Searle of the FIDS in 1959-60, from air photos taken in Dec. 1947, during RARE 1947-48, and plotted by him in 71°50' S, 72°55' W. Named by UK-APC on March 2, 1961, for the German composer Carl Maria Friedrich Ernst von Weber (1786-1826). US-ACAN accepted the name later that year, and it appeared as such on a 1963 U.S. Hydrographic Office chart. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

Weber Ridge. 84°20' S, 63°12' W. A bare rock ridge, 13 km long and rising to about 870 m, at the NE end of the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Named by US-ACAN in 1968, for Max K. Weber, USGS topographic engineer during the Pensacola Mountains Project of 1965-66, when this feature was surveyed. From that survey, and from USN air photos taken in 1964, USGS mapped this ridge. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Webers Peaks. 79°28' S, 84°40' W. A line of peaks on a ridge bounded by Splettstoesser Glacier on the N, Balish Glacier on the E, and (on the W) Dobbratz Glacier and Fendorf Glacier, in the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party 1962-63, for geologist Gerald Frank Webers (b. April 14, 1932, Racine, Wisc. d. Feb. 14, 2008), a member of the party. He was in Antarctica four times between 1960 and 1965 with the university's expeditions. In 1979-80, while professor of geology (for 32 years) at Macalaster College, he led his own expedition to Antarctica, the USARP Ellsworth Mountains Expedition. He was later a lecturer on cruise ships to the Antarctic Peninsula (14 different summers). US-ACAN accepted the name in 1964.

Mount Webster. 85°40' S, 144°24' W. A prominent, isolated mountain, rising to 1610 m, 5 km N of Leverett Glacier, and 20 km NW of Mount Beazley, in the Byrd Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. John B. Webster, USN, who wintered-over as flight surgeon at McMurdo Station in 1962.

Webster, Alexander. b. 1874, England. He moved to Dunedin, NZ, and was chief steward on the *Aurora*, 1917, during the relief of the Ross Sea Party during BITE 1914-17. He arrived back in Wellington on Feb. 9, 1917, and the very next day signed on to the *Paloona*, as 2nd chief steward, heading for San Francisco, where he arrived on May 22, 1917. He repeated this exercise later in the year.

Webster, William Henry Bayley. b. 1793, London. British scientist and medical doctor who made plant and animal studies and collections, as well as ice experiments, on Deception Island, during the austral summer of 1828-29, during the *Chanticleer* Expedition (q.v.). He was the first scientist to work in Antarctica, and wrote a book about the expedition (*see* the Bibliography). He married a Limerick girl named Mary, and died on Nov. 24, 1875, at his long-time home, Ipswich.

Webster Bay. 69°26' S, 76°02' E. In the SW part of the Larsemann Hills, between Tonagh Promontory and Priddy Promontory. Named by ANCA on Sept. 29, 1988, for James Webster, Australian minister responsible for Antarctic matters, 1975-79. The Chinese call it Putuo Wan.

Webster Bluff. 76°06' S, 145°03' W. An ice-covered bluff, 15 km long, with a steep N rock face, it forms a N extension of the Phillips Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for David O. Webster, ionosphere physicist at Byrd Station in 1964. Originally plotted in 76°06' S, 144°55' W, it has since been replotted.

Webster Glacier. 79°06' S, 86°11' W. Flows generally N between Frazier Ridge and Pipe Peak, in the Founders Peaks of the Heritage Range, to enter the Minnesota Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Charles W. Webster (d. 2010), USARP meteorology electronics technician who wintered-over at Wilkes Station in 1963.

Webster Knob. 85°18' S, 166°30' W. A prominent rock outcrop, rising to about 2500 m, at the head of Strom Glacier, near the extremity of a spur which descends from the NE shoulder of Mount Fridtjof Nansen, in the Queen Maud Mountains. Discovered and visited by Larry Gould in Nov. 1929, during ByrdAE 1928-30, and named by Byrd for May Webster (b. May Rogers; 1873-1938), wife of Laurence J. Webster of Boston and Holderness, NH. She was a humming bird expert, founder of the New Hampshire Nature Camp, sponsor of Byrd's expedition, and the inspiration behind her husband's invention of the humming bird feeder. US-ACAN accepted the name in 1956, and NZ-APC followed suit.

Webster Pass. 74°34' S, 111°09' W. A snow pass in the central part of Bear Peninsula, at the divide between Brush Glacier and Holt Glacier, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from USN air photos taken in 1966. Named by US-ACAN in 1978, for William O. Webster, USN, aerographer, 7 times in Antarctica with OpDF, including one winter-over.

[1]**Webster Peaks**. 63°55' S, 59°40' W. A group of 4 rocky peaks, running NE-SW, and rising to 1065 m (the British say 1195 m), W of Whitecloud Glacier, at the head (i.e., on the S side) of Charcot Bay, on the Davis Coast, on the W coast of Graham Land. Surveyed and charted by Fids from Base D in 1948, and named by them for W.H.B. Webster. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. Photographed aerially by FIDASE in 1956-57. The feature appears in the 1955 and 1961 British gazetteers.

[2]**Webster Peaks**. 70°28' S, 65°25' E. A group of 5 peaks, 6 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Mapped by Australian cartographers from 1965 ANARE air photos. Named by ANCA for Gilbert Keith "Gil" Webster, ionosphere physicist at Mawson Station in 1965. US-ACAN accepted the name in 1971. The Russians named these peaks individually, viz. Gora Vize, Gora Zubova, Gora Pronchishcheva, Gora Vil'kickogo, and Gory Poljarnikov.

Mar (de) Weddell *see* **Weddell Sea**

Weddell, James. Scottish navigator, explorer, and seal hunter. He was born on Aug. 24, 1787, in Ostend (then part of the Austrian Netherlands), son of an upholsterer and an English Quaker mother. He joined the RN in 1796 (at the age of 9), was later in the Merchant Navy, then again in the RN. In the wake of the discovery of the South Shetlands, Weddell suggested to Scottish shipbuilder James Strachan a sealing and fishing expedition to the new southern islands, to be commanded by Weddell. He took the brig *Jane* on 3 voyages into Antarctic waters, with the prime purpose of sealing and fishing, and also (on his first one) of discovering the mythical Aurora Islands (they were to remain mythical). His first voyage was 1819-21, to the South Shetlands and South Orkneys. After this successful commercial trip he bought a share of the *Jane*, while Strachan bought a second vessel, the 65-ton sloop *Beaufoy of London*, to act as tender for Weddell's second voyage, 1821-22. **July 7, 1821**: The two ships left London. **July 10, 1821**: The two ships left Gravesend, Kent, bound for Madeira. **July 20, 1821**: The two ships arrived at Madeira. They left there, bound for the Falkland Islands. In the Falklands, Weddell ran into Capt. Charles H. Barnard, American skipper of the *Charity*, and they teamed up. **Late Oct. 1821**: The 3 ships headed to the South Shetlands. However, the islands were teeming with British and American sealers (*see* **Expeditions**), and the 3 vessels separated. **Dec. 11, 1821**: The *Beaufoy* sighted the South Orkneys, which Powell had discovered only 4 days before. **Dec. 22, 1821**: The three captains made a rendezvous at Yankee Harbor, Greenwich Island. From here they split up again, Barnard going back to the USA, the *Beaufoy* heading to South Georgia, and the *Jane* going to the South Orkneys, where seals were taken, surveying work was carried out, and the island group was named by Weddell. **End of March 1822**: Weddell set out for South Georgia. **July 15, 1822**: The *Jane* and the *Beaufoy* arrived

back in Gravesend, with 1200 sealskins and 145 casks of oil. The southern seas, with their newly-found seal islands, from being unknown in 1819 had, within a few years, become one of the most densely-populated areas in the world, so time was of the essence for Weddell as he prepared for his 3rd voyage. However, this was a different expedition from the others, in that his instructions included exploration as well as sealing, if sealing wasn't going to be profitable. **Sept. 13, 1822**: Taking all the latest charting equipment, the *Jane* and the *Beaufoy* left London, the tender under the command of Capt. Matthew Brisbane. **Jan. 12, 1823**: They were at the South Orkneys, anchoring between Saddle Island and Melville's Island (later re-named Laurie Island). Good sealing was scarce, so they headed south. **Jan. 27, 1823**: They arrived in 64°58' S, and then turned north again. **Feb. 10, 1823**: Heading south yet again, they reached 66°S. **Feb. 16, 1823**: The two vessels were in 70°S. **Feb. 20, 1823**: Weddell set a new southing record of 74°15' S (in 34°16' W), and concluded that the South Pole was in an ocean (he was wrong) and that there was no land south of 73°S. He was in a new sea, which he called the George IV Sea (later re-named the Weddell Sea), and only 2 days sail from what would later be called Coats Land. To the disappointment of his men he turned back, via the South Orkneys, to South Georgia, where they again, unsuccessfully, looked for seals. **April 17, 1823**: They headed for the Falklands. **May 11, 1823**: They arrived at the Falklands, and wintered-over there. **Oct. 7, 1823**: They sailed again for the South Shetlands. **Oct. 15, 1823**: They arrived at Basil Hall's Island (later re-named Snow Island). They took 2000 sea elephants and more than that in seals, and even saw a mermaid, but then, after coasting the islands for 50 miles, some of the time in a desperate hurricane, they were unable to make further landings due to the pack ice. **Nov. 18, 1823**: They left for Cape Horn. **Nov. 23, 1823**: They arrived at Cape Horn, in a last-ditch attempt to find seals. **Dec. 1823**: They made another attempt at the South Shetlands, but it was still packed in ice, so they gave up. **Early Jan. 1824**: The two vessels separated. The *Beaufoy* stayed in Tierra del Fuego, while the *Jane* went off on a cruise of the Patagonian coast. **Jan. 20, 1824**: The *Beaufoy* left Tierra del Fuego for England. **March 2, 1824**: The *Jane* arrived at the Falklands. **March 19, 1824**: Weddell headed for Montevideo. **April 3, 1824**: Weddell arrived at Montevideo, then went on to Patagonia to rendezvous with the *Beaufoy*, but Brisbane had already left for England. The *Jane* sprang a leak during a severe storm and put in at Montevideo. **May 4, 1824**: The *Jane* finally left Montevideo. **June 20, 1824**: The *Beaufoy* arrived back in London. **July 9, 1824**: the *Jane* arrived back in London. Weddell brought back to London, from that 3rd voyage, one fur-seal and some leopard seal specimens (sea-leopards, as he called them). **Oct. 18, 1825**: Weddell's book, *A Voyage Towards the South Pole*, was published (*see* Bibliography), and a revised version in 1827. The *Beaufoy* had a history after this (*see* **The *Beaufoy of London***). In 1826 Weddell's proposal for a government-sponsored expedition to Antarctica was turned down, and he continued as a ship's captain until 1832, of the *Jane*, in fact, until that vessel leaked so badly in the Atlantic that it was scuppered. He died in poverty in London on Sept. 9, 1834.

Weddell Abyssal Plain. 72°00' S, 45°00' W. A submarine feature running between the Weddell Sea and Maud Seamount. Named in association with the Weddell Sea, the name Weddell Plain was accepted by international agreement in June 1987. The name has since been amended.

Weddell Arm. 68°32' S, 78°08' E. A cove, the southernmost and westernmost arm of Langnes Fjord, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. First visited in Jan. 1955, by an ANARE party led by Phil Law. It was visited again in 1957, by parties from Davis Station, who named it for the large number of Weddell seals they found here. ANCA accepted the name on April 29, 1958, and US-ACAN followed suit in 1965.

Weddell Barrier *see* **Filchner Ice Shelf**

Weddell Bay *see* **Mobiloil Inlet**

Weddell Coast Sledge Party. Joint British-American effort between RARE and FIDS in 1947-48. Finn Ronne, leader of RARE, met Major Ken Butler, leader of FIDS, and the two drew up a complex agreement, actually a contract, whereby representatives from both countries would join in a sledging expedition to the Weddell Sea coast. Four men left Stonington Island (the base for both parties) on Oct. 9, 1947. They were Ken Butler and Dougie Mason for FIDS, and Walter Smith and Art Owen for RARE. With 3 teams of dogs, 23 dogs in all, they crossed the Antarctic Peninsula to its E side, and then down to Mount Tricorn, on Wright Inlet, on the coast of the Weddell Sea. To this point the expedition was known as the Joint British-American Weddell Coast Sledge Party, but now the two teams split up. The British stayed at Mount Tricorn, while the 2 Americans pressed on south, as the Ronne Weddell Coast Party, and then east, getting as far as Bowman Peninsula overlooking Mount Austin, on Dec. 13, 1947. They then turned back. The 4 men returned to Stonington Island on Jan. 22, 1947, having covered 1180 miles in 105 days. The term Weddell Coast Sledge Party was also used during USAS 1939-41.

Weddell Fan. A submarine feature, associated with the Weddell Abyssal Plain. It covers 0.75 million sq km. Discovered in 1985.

Weddell Ice Shelf *see* **Filchner Ice Shelf**

Weddell Islands. 60°38' S, 44°50' W. A group of small islands and rocks, 1.5 km S of Saddle Island and 7.5 km N of the W end of Laurie Island, just to the E of Cape Faraday (on Powell Island), in the South Orkneys. Probably seen by Powell and Palmer in Dec. 1821. Roughly charted as a single island by Weddell in Jan. 1823, and named by him as Weddell's Island. It appears as such on his 1825 chart. On Dumont d'Urville's 1842 map of FrAE 1837-40, it appears as Île Weddell, and in Vincendon-Dumoulin's 1847 atlas it appears as Île Weddel (sic). It appears as Weddell Island on a 1903 chart drawn up by ScotNAE 1902-04, and on British charts of 1916, 1927, and 1930. The Argentines were calling it Isla Weddell (or misspelling it Isla Weddel) as early as 1907, or even before that, and it appears as such on one of their 1945 charts. It was re-charted as a group of islands by Petter Sørlle in 1912, and appears on his chart of that year as the Weddel islands, on his (and Borge's) chart of 1913 as Veddels, and on Sørlle's 1930 chart as Weddel Øya. The group was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Weddell Islands. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1948 as Islas Weddell, but on a 1957 Argentine chart as Islotes Weddell. The name Islas Weddell was the one accepted by the 1970 Argentine gazetteer.

Weddell Islets *see* **Vedel Islands**

Weddell Lake. 68°33' S, 78°06' E. A lake in the valley which extends S from Weddell Arm, on Breidnes Peninsula, in the Vestfold Hills. It was one of several lakes investigated by ANARE biologists wintering-over at Davis Station in 1974. Named by ANCA on Aug. 27, 1975.

Weddell Plain *see* **Weddell Abyssal Plain**

Weddell Polynya. 65°00' S, 0°0.' An ice-free area in the E part of the Weddell Sea. It was discovered as it was forming between 1974 and 1976, just to the E of the Weddell Sea proper.

Weddell Polynya Expedition. Better known, perhaps, as WEPOLEX 81. US-USSR joint oceanographic field expedition, Oct. 9, 1981 to Nov. 25, 1981. Their mission was to study the Weddell Polynya. Eduard Iosifovich Sarukhanyan led a team of 12 Russians, as well as the expedition itself. Deputy leader Arnold L. Gordon of Columbia University's Lamont-Doherty Geological Observatory led his 12 Americans. They all integrated into a single scientific team. The two heads of physical oceanography were Bruce A. Huber and Ivan Chuguy. The other participants in this particular discipline were David Woodroffe, Walter Richter, and Jan Szelag (USA), and Nikolai Antipov, Nikolai Bagriantsev, and Vladimir Romanov (USSR). The chemists were: Arthur Chen-Tung of Oregon State, Joe Jennings, and Gerry Metcalf (USA), and Victor Haritonov and Vladimir Feodorov (USSR). Biologists were Jan Stepien, David Boardman, and Diane Clark (USA), and Valeriy M. Zhuravlev (USSR). Sea-ice specialists were Stephen F. Ackley (USA), and Boris Sustenov and Alexandre Samoshkin (USSR). The meteorologists were Ed Andreas (USA), and Alexandre Makshtas and Ed Lysakov (USSR). Pyotr Bogarodsky (USSR) studied velocity of ice in the ocean. The *Mikhail Somov*, skippered by Feliks Aleksandrovich Pes'yakov, left Leningrad, stopping at Helsinki on Sept. 9, 1981, to pick up equipment and 3 of the Americans. The rest of the U.S. team boarded in Montevideo, from where the *Somov* departed on Oct. 9, 1981. On Oct. 20,

1981, they reached the edge of the Weddell Sea pack-ice at 5°E, and plowed through the ice to 62°30' S.

Weddell Sea. Centers on 72°00' S, 45°00' W. A great sea forming the southernmost part of the Atlantic Ocean. It is bounded on the W by the Antarctic Peninsula, on the E by Cape Norvegia (in Queen Maud Land), and on the S by the Filchner Ice Shelf and the Ronne Ice Shelf. It is deep, with an area of 3 million square miles, and is usually heavily iced, the Weddell Sea pack-ice reaching as far N as 60°S. James Weddell discovered it in Feb. 1823, penetrated it as far S as 74°15' S, 34°17' W, on Feb. 20, 1823, and named it George IV's Sea, or The Sea of George IV, for his new king. It appears as such on his chart of 1825. Morrell may have gotten there in the *Wasp* in March 1823, in fact probably did, but it is certain that ScotNAE was here in 1903. By that time the name had been changed (in 1900 Dr. Karl Fricker had proposed the new name, to honor its discoverer). US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. Its current limits were set in 1977. The Chileans tend to call it Mar Weddell, and the Argentines Mar de Weddell. The Norwegians call it Weddellhavet.

Weddell Sea Station *see* **Ellsworth Station**

Weddell seals. *Leptonychotes weddelli*. Gray seals first described by James Weddell in 1823. They are nonmigratory, unafraid of man, and can be solitary, although they are generally gregarious creatures. They number about 500,000. They grow to 10½ feet long, and 1000 pounds in weight. The female is the larger. They live on fish, cephalopods, and other marine fauna, including penguins. Good divers, they can go to 1000 feet down, and can stay under water for 43 minutes. They are unique in that they can survive under fast ice, even in winter, by maintaining open breathing holes in the ice with their teeth.

Weddell's Island *see* **Weddell Islands**

Îles Wedel *see* **Vedel Islands**

Islas Wedel *see* **Vedel Islands**

Wedel Islands *see* **Vedel Islands**

Mount Wedel-Jarlsberg. 85°39' S, 165°08' W. An ice-covered mountain rising to 3505 m, between Cooper Glacier and Bowman Glacier, 3 km SW of Mount Ruth Gade, in the Quarles Range, in the Queen Maud Mountains. Discovered in Dec. 1911 by Amundsen, and named by him as Mount Alice Wedel-Jarlsberg, for Alice Thekla Louise von Wagner (1861-1913), the first wife of Fritz Wedel-Jarlsberg, the Norwegian ambassador to Paris. The name was also seen (erroneously) as Mount Alice Wedel-Jarlsburg. US-ACAN accepted the (shortened) name in 1956, and NZ-APC followed suit.

Wedemeyer Rocks. 76°06' S, 135°56' W. A group of rocks that ourtcrops near the base of the S slope of Mount Berlin, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for for Charles H. Wedemeyer (of Philadelphia), USN, who was mechanic on Jack Bursey's Byrd Station trail party of Jan.-Feb. 1956. He later helped establish Byrd Station in 1956-57.

Wedge Face. 84°12' S, 171°30' E. A prominent wedge-shaped rock spur which projects as a buttress from Mount Patrick into the E part of the Beardmore Glacier. Almost certainly first seen by Shackleton in Dec. 1908, as he made his way up the Beardmore en route to the Pole during BAE 1907-08, but named descriptively by Scott on his way to the Pole in 1911, during BAE 1910-13. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Wedge Peak. 84°12' S, 172°05' E. Rising to 2316 m, due E of Wedge Face (hence the name) on the Mount Patrick massif, in the Commonwealth Range. Although it is not the highest point on this massif, it commands a clear panoramic view of the Hood Glacier and the Beardmore Glacier to the north. It was climbed by the NZ Alpine Club Antarctic Expedition, on Jan. 2, 1960, in order to complete the survey of Hood Glacier, and so named by them. NZ-APC accepted the name.

Wedge Ridge. 80°38' S, 29°12' W. A conspicuous rock ridge, rising to 1145 m, and running NW-SE, at the S end of the Haskard Highlands, in the W part of the Shackleton Range, near the head of Blaiklock Glacier, immediately W of Pointer Nunatak. Surveyed by BCTAE in Oct. 1957. Named descriptively by UK-APC on Aug. 31, 1962. US-ACAN accepted the name later in 1962.

Wedgwood Point *see* **Azufre Point**

Isla Wednesday *see* **Wednesday Island**

Wednesday Island. 64°56' S, 63°45' W. An island, 1.5 km (the Chileans say 2.5 km) long, the easternmost of the Wauwermans Islands, in the N part of the Wilhelm Archipelago, 5 km WSW of Cape Errera on Wiencke Island. The Wauwermans Islands were discovered by Dallmann in 1873-74, and were roughly mapped by BelgAE 1897-99 and FrAE 1903-05. Wednesday Island was first charted individually on Wednesday, Jan. 29, 1936, by BGLE 1934-37, and, for the obvious reason, so named by Rymill. It appears on his 1938 expedition map, as well as on a 1946 U.S. Hydrographic Office chart, and on a 1948 British chart. On a 1947 Chilean chart, it appears as Isla Viernes (i.e., "Friday island"). UK-APC accepted the name Wednesday Island on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955, and on a 1958 British chart. On a 1953 Argentine chart it appears as Isla Mara, named for an Argentine rodent, but on one of their 1954 charts it is Isla Miércoles (i.e., "Wednesday island"). It was photographed aerially by FIDASE in 1956-57, and surveyed between 1956 and 1958 by an RN Hydrographic Survey unit. On a 1957 Argentine chart this island and offlying smaller islands were shown as Islas Articuladas, and that is the name the Argentines use today, after rejecting Islas Maras and Islas Miércoles. It appears on a Chilean chart of 1962 as Isla Wednesday, and that was the name accepted by the Chilean gazetteer of 1974.

Weed, George Henry. b. May 31, 1915, Seattle, son of state highways maintenance engineer (later a county office auditor) George M. Weed and his wife Eveleyn E. "Lena" Ingraham. He went to sea as a messboy in Nov. 1934, on the *President Jefferson*, on the run to Japan, repeating that performance on the *President Jackson* and the *President Grant* in 1936. He was a steward on the *North Star* for the 2nd half of USAS 1939-41. He died on Dec. 27, 1999, in Brinnon, Wash.

Weeder Rock. 70°23' S, 162°02' E. A small, isolated coastal rock, 10 km NNW of Mount Belolikov, between the mouths of Rennick Glacier and Gannutz Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for storekeeper 2nd class Courtland Craig Weeder (b. Feb. 6, 1943, Hugo, Colo.), who joined the U.S. Navy in June 1961, and who wintered-over at Pole Station in 1965. He retired from the Navy as a lieutenant commander in Dec. 1989.

Mount Weeks. 83°33' S, 160°54' E. A prominent tabular peak on the E side of Marsh Glacier. about 11 km N of Cranfield Peak, in the S sector of the Queen Elizabeth Range, on the W edge of the Prince Andrew Plateau. Named by the Northern Party of NZGSAE 1961-62, for Lt. James W. Weeks, USN, pilot in the area that season. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Weeks, Brian. b. Jan. 18, 1932, Bristol, son of Edward A. Weeks and his wife Winifred Gwendoline I. Leaver. He was living at Frome, Somerset, when he joined FIDS in 1953, as an ionosphere physicist and assistant surveyor, and wintered-over at Port Lockroy Station in 1954. At the end of his tour he returned to Port Stanley, and then to Montevideo, where he caught the *Andes* heading back to Southampton, arriving on Feb. 24, 1955. He moved to NZ in 1955, became a bank manager in Hamilton, and then later moved to a bigger bank job in Australia, with ANZ.

Weeks, Joseph. On Sept. 1, 1820, he was appointed captain of the London sealer *Horatio*, and took her down to the South Shetlands for the 1820-21 sealing season.

Weeks Stack. 62°14' S, 59°03' W. A sea stack off the N tip of Nelson Island, in the NW approach to Fildes Strait, in the South Shetlands. Charted by the Discovery Investigations in 1935, it appears on a 1948 British chart. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for Joseph Weeks. It appears on a British chart of 1962. US-ACAN accepted the name in 1965.

Mount Weems. 77°27' S, 86°10' W. A prominent mountain, rising to 2210 m, 13 km N of Mount Ulmer, in the N part of the Sentinel Range, in the Ellsworth Mountains. Discovered by Ellsworth during his fly-over on Nov. 23, 1935. Named by US-ACAN in 1961, for Philip Van Horn "P.V.H." Weems (1889-1979), Olympic wrestler, air navigator, inventor, consultant to Ellsworth, and later Naval captain.

Isla Weertman *see* **Weertman Island**

Weertman Island. 66°58' S, 67°44' W. The largest and most southerly of the Bennett Islands, in Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. Surveyed by ChilAE 1946–47, and named by them as Isla Runcumilla, for a submarine (not in Antarctic waters). It appears as such on their 1947 chart. It was also the name accepted by the 1974 Chilean gazetteer. It appears on a 1957 Argentine chart as Islote Susini (*see* **Mount Susini**). It was mapped by FIDS cartographers in 1959 from air photos taken by RARE 1947–48 and by FIDASE in 1956–57, and from ground surveys conducted by Fids from Base W between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Johannes Weertman (b. 1925), American metallurgist and glaciologist. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965. The Argentines today call it Isla Weertman.

Canale Wega. 65°15' S, 144°00' E. A submarine channel, 30 km long and about 100 km wide, and trending S-N along the continental rise off George V Land, between Jussieu Channel and Buffon Canyon. Discovered in March 2000, during the WEGA Project, a joint Italian and Australian program studying the glacial history of the Wilkes Basin. Named by the Italians on Dec. 6, 2007.

Mount Wegener. 80°44' S, 23°31' W. Rising to about 1385 m, in the central part of the Read Mountains, in the Shackleton Range. Mapped by USGS in 1974 from USN air photos taken in 1967, and from ground surveys conducted by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Alfred Lothar Wegener (b. Nov. 1, 1880, Berlin), German astronomer, meteorologist, a pioneer of the theory of continental drift (which he proposed in 1912), and professor of geophysics and meteorology at the University of Graz, 1924–30. He took part in Danish expeditions to Greenland in 1906–08 and 1911–13, and was leader of a German expedition to Greenland in 1929 and 1930. He died on the Greenland ice cap in Nov. 1930. The Alfred Wegener Institute for Marine and Polar Research, in Bremerhaven, was established in 1980, and named after him. The mountain appears in the 1974 British gazetteer. US-ACAN accepted the name.

Wegener Canyon. 70°45' S, 14°00' W. An undersea feature off the Princess Martha Coast. Discovered from the *Polarstern* in 1985. Named in July 1987, by Hans Werner Schenke, of the Alfred Wegener Institute of Polar and Marine Research, in Bremerhaven. The name, for Alfred Wegener (*see* **Mount Wegener**) was accepted by international agreement in June 1991.

Wegener Range. 72°42' S, 62°23' W. A mountain range with peaks rising to about 1800 m, it trends WNW-ESE for about 70 km between Maury Glacier and Fenton Glacier, on the Black Coast, on the SE coast of Palmer Land. First photographed aerially in Dec. 1940, during USAS 1939–41. Re-photographed aerially by USN between 1966 and 1969, and mapped by USGS from this latter series of photos. Named by US-ACAN for Alfred Wegener (*see* **Mount Wegener**). It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Wegenerinlandeis. 73°00' S. 5°00' E. A German name (and only German) for Wegenerisen and Amundsenisen together. In the S part of Fimbulheimen, in Queen Maud Land. It means "Wegener inland ice." On the surface, at least, this naming strikes one as unnecessary.

Wegenerisen. 73°00' S, 9°00' E. An area of inland ice in the S part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (it means "the Wegener ice") for Alfred Wegener (*see* **Mount Wegener**). This feature, together with Amundsenisen, go to form a larger feature the Germans call Wegenerinlandeis.

Wegert Bluff. 69°42' S, 159°20' E. The NE extremity of a truncated ridge, about 22.2 km SE of Parkinson Peak, it overlooks the E margin of Noll Glacier, in the Wilson Hills of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Sidney J. Wegert, USN, LC-130F Hercules aircraft pilot in Antarctica during OpDF 67 (i.e., 1966–67) and OpDF 68 (i.e., 1967–68). ANCA accepted the name on July 31, 1972.

Wegger Peak. 62°06' S, 58°30' W. Rising to 305 m, at the W side of the entrance to Mackellar Inlet, Admiralty Bay, on King George Island, in the South Shetlands. In 1908–10 Charcot named a single peak in these co-ordinates as Le Poing (i.e., "the fist"). However, later investigation showed that there are 4 individual peaks close together, and confusion arose as to which one of the four Charcot meant. In 1958 FIDS came up with a possible answer. When viewed from the area round Chabrier Rock, the four appear as one, and look like the knuckles of a clenched fist. It was proposed to name all four collectively, as The Fist, and that's the way is was for a while. However, in 1960 UK-APC determined that this collective naming was unsuitable, and gave each of the peaks a new name. This feature received the name Wegger Peak, after Ole Wegger (1859–1937), Norwegian ship builder, and director for 47 years of the Framnaes Mek. Shipyard. This feature was last plotted by the UK, in late 2008. *See also* **Admiralen Peak**.

Wehrend, Richard. 1st carpenter on the *Schwabenland* during GermAE 1938–39.

Wehrle Dome. 76°02' S, 65°25' E. A large, heavily crevassed ice dome, measuring about 15 km by 15 km. The pressure ridges especially make this feature stand out. Named by ANCA on April 27, 1995, for Egon Wehrle, former glaciological technical officer who contributed to the success of ANARE traverses by providing technical support, especially by building and operating ice drills.

Weidner Ridge. 78°28' S, 163°26' E. Immediately to the NE of Barlow Rocks, below the NW slopes of Mount Morning, on the S margin of the upper Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1994, for George A. Weidner, of the department of meteorology at the University of Wisconsin, who, with Charles Stearns, developed the use of automatic weather stations in Antarctica between 1982 and 1992. cf **Savage Ridge**.

Weigelnunatak. 74°16' S, 9°37' W. A nunatak, about 20 m by 40 m in area, projecting from the ice surface to a height of about 10 m, in the N part of the Heimefront Range, between Waglenabben and Laudalkammen. Easily accessible, it has been used since 1986 as a geodetic control station for scientific measurements. On Feb. 24, 1997, a brass plaque was affixed to it. Named by the Germans on Sept. 25, 2000, for Ursula Weigel, who wintered-over at Georg Neumayer Station in 1990.

Mount Weihaupt. 72°37' S, 161°02' E. A large, bare rock mountain rising to 2285 m, westward of the Monument Nunataks, 16 km E of Mount Bower, and about 30 km W of Mount VX-6, it is the dominant feature in the E part of the Outback Nunataks. First mapped by the U.S. Victoria Land Traverse Party of 1959–60. Named by US-ACAN in 1964, for John George Weihaupt (b. March 5, 1930, La Crosse, Wisc.), seismologist with that traverse party, which also discovered the Usarp Range. Much later, and for many years, he was professor of geology at the University of Colorado at Denver. NZ-APC accepted the name.

Weihnachtsgrat. 73°32' S, 166°47' E. A crest on the E side of Wylde Glacier, in the Mountaineer Range of Victoria Land. Named by the Germans. Name means "Christmas crest."

Weiken Basin. 70°24' S, 4°00' W. A submarine feature of the Ross Sea. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997. Karl Weiken (1895–1982), a geodesist, was a member of Alfred Wegener's Greenland expedition.

Weikman Nunataks. 76°30' S, 143°59' W. Two nunataks on the divide separating the upper reaches of Balchen Glacier and Crevasse Valley Glacier, 3.2 km E of Mount Perkins, in the Ford Ranges of Marie Byrd Land. First mapped by USAS 1939–41. Named by US-ACAN in 1970, for construction mechanic 2nd class Edward R. Weikman, Jr., USN, at Byrd Station in 1967.

Weiland, Eric Huber. b. Nov. 19, 1920, Philadelphia. He joined the U.S. Navy on June 1, 1942, and served in World War II. He was a pilot on OpDF I (i.e., 1955–56), and was the official pilot of the Otter that took a plunge in 1955 (*see* **Hawkes, Trigger**, for details of this flight). He retired from the Navy on July 1, 1964, as a lieutenant commander, and died on Feb. 12, 1996, in Van Buren, Arkansas.

Weiland, Franz. Flight mechanic specialist on the *Schwabenland* during GermAE 1938–39.

Weimar Eishöcker. 71°30' S, 7°57' W. An ice rumple at the SE promontory of the Ekström Ice Shelf. Its maximum length running NE-SW is 2.5 km, and its width is about 1 km. Named by the Germans on June 21, 2002, for their city of Weimar.

Mount Weininger. 84°47' S, 65°30' W. A large, mainly ice-free mountain, rising to 1970

m, at the NW extremity of the Mackin Table, to which it is joined by a short ridge, in the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for USARP ionosphere physicist Richard B. Weininger, who wintered-over as scientific leader at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Weir. 84°59' S, 177°10' E. A steep section of the Polar Plateau escarpment with almost all of the rock exposed facing NE, just S of the base of Fulgham Ridge, at the head of one of the tributaries of Ramsey Glacier, about 40 km W of Mount Rosenwald, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed on Feb. 15-16, 1947, on Flight 8-B, during OpHJ. Named by US-ACAN in 1962, for Maj. Robert R. Weir (q.v.), the pilot on that flight. NZ-APC accepted the name.

Weir, Charlie. Australian plant inspector. He wintered-over at Wilkes Station in 1967, at Casey Station in 1969, at Davis Station in 1985, and at Mawson Station in 1987 and 1991. He also did two winters at Macquarie Island, in 1989 and 1993.

Weir, Robert R. b. Nov. 6, 1915, Pa. He joined the U.S. Marine Corps, and as a major was pilot of Flight 8-A during Byrd's flight to the South Pole on Feb. 15-16, 1947, during OpHJ. He was promoted to colonel and served in Korea and Vietnam. He died on Nov. 28, 2002, in Jacksonville, NC.

Weir Glacier. 66°04' S, 64°42' W. About 13 km long, it is the western of 2 glacier flowing N into the S part (i.e., the head) of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Discoverd and roughly charted in 1909 by FrAE 1908-10. Surveyed in its lower reaches in 1935-36 by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. Later named by Rymill for 2 of the sponsors of that expedition, William Douglas Weir, 1st Viscount Weir (Baron Weir at the time of the expedition) (1877-1959) and his son, James Kenneth Weir (1905-1979), the future 2nd viscount. UK-APC accepted the name on Sep. 22, 1954, and US-ACAN followed suit in 1956.

Weir Icefall. 78°02' S, 161°41' E. At the head of Rotunda Glacier, between the Colwell Massif and the feature named Battleship, in Victoria Land. Named descriptively by NZ-APC in 1994. The feature has a weir-like appearance caused by a dam or rock over which the ice passes. US-ACAN accepted the name.

Weiss Amphitheatre. 77°04' S, 126°06' W. A caldera, shaped like an amphitheatre, 3 km wide, and breached at the S side, it occupies the S central part of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Bernard D. Weiss (b. May 7, 1921. d. Jan. 27, 2010, Fort Lauderdale, Fla.), chief meteorologist at Byrd Station in 1959.

Weiss Point. 62°04' S, 58°25' W. A promontory on the W coast of Keller Peninsula, W of Mount Flagstaff, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Jozef Weiss, seismologist with PolAE 1979-80.

Weiss-Spitze. 72°50' S, 166°17' E. One of the Lawrence Peaks, in Victoria Land. Named by the Germans.

Weissenborn, Carl Dalgleish. b. July 27, 1914, Richmond Heights, Wash., son of German immigrant interior decorator Charles Weissenborn and his Scottish immigrant wife, Mabel Dalgleish. He went to sea in July 1934, as a painter, serving on ships such as the *President McKinley*, the *President Jackson*, and the *Mount McKinley*, usually on the run to the Far East, and also working on board as scullyman and mess boy. He was mess boy on the *North Star*, during USAS 1939-41. On Dec. 15, 1941, the week after Pearl Harbor, he joined the Army in Seattle, for World War II. In 1954, after getting out of the Army, he moved to El Cerrito, Calif, and became foreman painter for the Berkeley Unified School District, a job he held for over 25 years. His first wife, Hilda Irene, died on July 30, 1979, in Contra Costa, and he married again, in Contra Costa, on Sept. 6, 1980, to Victoria Bustamante Pillsbury. He died on July 1, 2004, in El Sobrante, Calif.

Weissenstein. 80°26' S, 21°24' W. A rock feature on the NW side of Mummery Cliff, in the Pioneers Escarpment of the Shackleton Range. Named by the Germans. It is possible, though unlikely, that it is the German name for the Mummery Cliffs themselves.

Welch, Bernard Francis "Frank." b. July 24, 1901, South Stoneham, Hants. He was 2nd engineer on the *Discovery* during both halves of BANZARE 1929-31. In 1935, in South Shields, Durham, he married Olive G. Miller, and they lived in Southampton. In 1950 he was assistant inspector at the Aeronautical Inspection Directorate, Ministry of Supply, in Manchester. He died in Winchester, in 1974.

Welch Crag. 77°17' S, 160°37' E. A steep, rugged peak, marked by secondary spires rising to about 1500 m, in the NE part of McSaveney Spur, in the Willett Range of Victoria Land. Named by US-ACAN in 2005, for Kathleen A. Welch, of the department of geology at the University of Alabama, in Tuscaloosa, a member of the USAP McMurdo Dry Valleys Long-Term Ecological Research program, for 11 field seasons between 1994 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Welch Island. 67°34' S, 62°56' E. About 1.75 km long, it lies about 1.5 km offshore in the E side of Holme Bay, about 6 km NE of Mawson Station, in Mac. Robertson Land. It has a prominent truncated rock pinnacle, or cone, on it, rising to 130 m. Discovered on Feb. 14, 1931 by BANZARE, and named by Mawson for Frank Welch. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Welch Mountains. 70°57' S, 63°30' W. A group of mountains that dominate the area, the highest rising to 3015 m (in Mount Acton), about 40 km N of Mount Jackson, between that mountain and Clifford Glacier, on the E margin of the Dyer Plateau, in the central part of Palmer Land. Probably seen aerially by Ellsworth in 1935, their N extremities were sketched in 1936 by a sledging party during BGLE 1934-37. They were photographed aerially and surveyed from the ground by USAS 1939-41, and, in the expedition's reports, it is clear that these mountains were assumed to be (part of) Ellsworth's Eternity Range. Named as a separate feature by US-ACAN in 1971, for David Fife "Kelly" Welch (b. Sept. 5, 1918, Fort Wayne, Ind. d. April 5, 2005, Tucson), rear admiral, USN, commander of U.S. Naval Support Force, Antarctica, 1969-71 (*see* **Operation Deep Freeze**). Mapped in detail by USGS in 1974, from USN air photos taken between 1966 and 1969. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land. The group also includes (aside from the aforementioned Mount Acton), running from N to S: Gatlin Peak, Mount Schimanskiy, Liston Nunatak, Steel Peak, Mount Nordhill, Heintz Peak, Kosky Peak, and Fry Peak.

Welch Peak. 85°39' S, 149°15' W. Rising to 1010 m, at the N side of the Tapley Mountains, 14 km NW of Mount Gould, in the Queen Maud Mountains, overlooking the Ross Ice Shelf. Mapped by USGS from ground surveys and from air photos taken by USN, 1960-63. Named by US-ACAN in 1967, for Walton Denny Welch, Seabee electronics technician during the first winter-over at Byrd Station in 1957.

Welch Rocks. 67°33' S, 62°54' E. Two rocks, 0.8 km (the Australians say about 2 km) N of Welch Island (hence the name given by the Australians), in the E part of Holme Bay, off the Mawson Coast of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1958 and 1959. Named by ANCA on July 4, 1961. US-ACAN accepted the name in 1965.

Welchness. 63°29' S, 56°14' W. A gravel spit forming the W extremity of Dundee Island, in the Joinville Island group, and therefore serving as a cape. Discovered and roughly surveyed by DWE 1892-93, described by Dr. Donald of the expedition, and named by them for Capt. George Welch (b. May 28, 1814, Ferry Port on Craig, Fife. d. 1891, Forgan, Fife), a ship's chandler and shipping agent, who was also manager (from about 1860 onwards, with Robert Kinnes) of the Tay Whale Fishing Company, which, for many years, owned the *Active*. It appears on the expedition's charts. In Nov. 1935, Ellsworth built a cairn on the escarpment to the E of this feature, at a height of about 65 m, near the site of his snow runway. It appears on a British chart of 1938, plotted in 63°21' S, 56°25' W. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953, both with corrected coordinates, and, as such, the name appears in the 1955 British gazetteer, and also on a British chart of 1962. It appears on an Argentine chart

of 1949, as Cabo Welchness, and on one of their 1953 charts as Punta Welchness, but the name accepted by the 1970 Argentine gazetteer was Cabo Welchness. However, the Chilean gazetteer of 1974 accepted Punta Welchness. Fids from Base D re-surveyed it between 1952 and 1954. There is a 1983 British reference to it as Welchness Peninsula. The extreme W part of the feature appears as Punta Bajos on a 1957 Argentine chart, and that was accepted as a separate feature by the Argentine gazetteer of 1970.

Cabo Welchness *see* **Welchness**

Punta Welchness *see* **Welchness**

Welcome Mountain. 72°14' S, 160°12' E. A very prominent mountain surmounted by 3 distinct peaks, the highest being 2505 m, 8 km SE of Mount Southard, SW of the Emlen Peaks, and about 33 km N of Roberts Butte, in the Outback Nunataks. Discovered by the U.S. Victoria Land Traverse Party of 1959-60, it was the first mountain they saw in 3 months after coming off the Polar Plateau, hence the name they gave it. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Welcome Nunatak. 79°06' S, 86°54' W. A relatively small, but truly distinctive cone-shaped nunatak, standing in near isolation to the N of the Reuther Nunataks, in the Founders Peaks, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64. For the members of the party using motor toboggans, it signaled nearness to their base at Camp Hills. US-ACAN accepted the name in 1966.

Welcome Pass. 82°35' S, 52°45' W. A snow pass running in a NE-SW direction, at an elevation of about 800 m, N of Czamanske Ridge, between that ridge and Cairn Ridge, and providing access to Tranquillity Valley, in the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, and surveyed from the ground by USGS from 1965. So named by US-ACAN for 2 reasons: In association with Tranquillity Valley, and also because, in 1976-77, Art Ford and Willis H. Nelson, of USGS, discovered a SovAE helicopter cache left here the previous summer, and left a note of welcome to the Dufek Massif for Garrik Grikurov, leader of SovAE. UK-APC accepted the name on May 21, 1979. Mr. Grikurov had once been a Fid (*see* **Grikurov Ridge**).

Weldon Glacier *see* **Weldon Ice Stream**

Weldon Ice Stream. 77°12' S, 31°50' W. An ice stream flowing NW into the SE part of the Weddell Sea, NE of Vahsel Bay, midway between that bay and Hayes Glacier (which lies about 50 km to the ENE), on the Luitpold Coast. Discovered and photographed on Nov. 5, 1967, in a USN flight over Coats Land, and roughly mapped by USGS from these photos. Named by US-ACAN in 1970, as Weldon Glacier, for Don W. Weldon, USN, photographer on the flight. It appears as such on a 1970 American Geographical Society map of 1970, plotted in 77°15' S, 30°05' W. In the 1977 U.S. gazetteer, it appears plotted in 77°05' S, 31°30' W. U.S. Landsat images of Feb. 1974 plotted it in 76°33' S, 29°29' W, and those coordinates appear in the 1980 U.S. gazetteer. US-Landsat images of 2002 corrected the coordinates to those that appear at the head of this entry, and the 1982 British gazetteer determined it to be an ice stream, rather than a glacier. US-ACAN does not seem to have agreed with this (at time of writing). Last plotted by the UK, in late 2008.

Cabo Well-Met *see* **Cape Well-met**

Cape Well-met. 63°47' S, 57°19' W. A dark, conspicuous headland near the center of the N side of Vega Island, on the Prince Gustav Channel, close S of Trinity Peninsula. Because it rises to 220 m, and is ice-free, it is very visible. Discovered in Oct. 1903, during SwedAE 1901-04, and mapped by them as Kap Dreyfus (why that name we do not know). In the expedition account, written in 1905, they tell us that they renamed Cape Dreyfus as Cape Well Met. It also appears on their maps as Møtesudden (i.e., "meeting cape"), and Vorgebirge der Guten Begegnung (i.e., "cape of the good meeting"). It was here on Oct. 12, 1903, that the two parties of the expedition met up after a year and a half apart. A happy meeting indeed. It appears on Charcot's 1912 map as Cap Well-Met, and on British charts of 1921 and 1937 as Cape Well-met. It was surveyed by Fids from Base D in 1945. US-ACAN accepted the spelling Cape Well-met in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was re-surveyed by Fids in 1960-61. It appears on a 1957 Argentine chart as Cabo Visible, and that was the name accepted by the 1970 Argentine gazetteer. However, today, the Argentines have translated it as Cabo Feliz Encuentro. It appears in the 1974 Chilean gazetteer as Cabo Well-Met.

Isla Weller *see* **Weller Island**

[1]**Mount Weller**. 67°17' S, 50°40' E. Rising to 1080 m, W of Auster Glacier, and 3 km E of Reference Peak, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA on Nov. 24, 1961, for Prof. Gunter Ernst Weller (b. June 14, 1934, Haifa), Australian meteorologist at Mawson Station in 1961. In 1965 he was professor of geophysics at the University of Alaska, at Fairbanks when he went back to Mawson again, as glaciologist. US-ACAN accepted the name in 1965.

[2]**Mount Weller**. 77°50' S, 160°26' E. Rising to 2420 m, above the W side of Beacon Valley, 6 km SW of Pyramid Mountain, in the Quartermain Mountains, in southern Victoria Land. The name appears to be first used on a 1961 NZ Lands and Survey Department map compiled from NZ field surveys conducted between 1957 and 1960, and also from USN air photos taken during that period. Named for William Weller (q.v.) who, with Thomas Kennar, accompanied Hartley Ferrar in the first geological reconnaissance of the Quatermain Mountains, during BNAE 1901-04. US-ACAN accepted the name in 1992.

Weller, William Isaac. b. 1878 (baptized on Oct. 6), Clapham, London, son of fireman and ex-sailor James Weller and his wife Mary Ann Maria, who later lived in Whitstable. When he was 3, the family moved to the City, and then shortly thereafter to Rotherhithe. He became a merchant seaman at 15, spent several years on Arctic whalers, and then did 2 years with the New Cross Fire Department, in London, then on to the Clerkenwell department, and then the Camden Town department. But the life of a fireman didn't suit him, and he went back to sea, joining the *Discovery* at Lyttelton, NZ, with the dogs, as the mandolin-playing able seaman and general assistant for BNAE 1901-04. Midway during the expedition, back in NZ, he married Jessie Rinaldi, the daughter of a wealthy sheep rancher outside Christchurch, and at the end of the expedition, left London on Nov. 6, 1904, on the *Ruapehu*, bound for his new home, new wife, and new occupation (sheep rancher). He promised to return to England in 12 years, but never did. He served with the NZ forces in World War I. Apparently he was lost at sea. He had a daughter, who, at the age of 2, was placed in an orphanage in NZ.

Weller Island. 65°27' S, 65°24' W. An island, E of Snodgrass Island, it forms the E side of Johannessen Harbor, in the Pitt Islands, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57. Shown on a 1957 Argentine chart, but, apparently, unnamed. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. Today, the Argentines call it Isla Weller.

Glaciar Wellman *see* **Wellman Glacier**

Wellman, Harold William "Bill." b. March 25, 1909, Devonport, England, son of John Wellman and his wife Ruth Sims. Cartographer, Antarctic veteran, and the most influential NZ geologist of the 20th century (*The Man Who Moved Antarctica*, 2005, by Simon Nathan). Prof. Wellman was part of VUWAE 1961-62, VUWAE 1963-64, and 1966-67. He died on April 28, 1999, in Wellington.

Wellman Cliffs. 82°27' S, 156°10' E. A prominent escarpment in the form of cliffs, about 19 km (the New Zealanders say about 46 km) long, on the E side of the Boucot Plateau, bordering the Geologists Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for Bill Wellman (q.v.), who devised a simple method of map-making from air photos, used by the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Wellman Glacier. 64°29' S, 61°26' W. Flows SW into the NE part of Recess Cove, in Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O in 1957-58. Named by UK-APC on Sept. 23, 1960, for American Arctic explorer Walter Wellman (1858-1934), who attempted (unsuccessfully) to reach the North Pole in 1907 and again in 1909 in a semi-rigid airship. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Wellman.

Wellman Nunatak. 67°52' S, 52°00' E. A

small nunatak about 300 m in diameter, 65 km from Knuckey Peaks, in Enderby Land. Named by ANCA for Peter Wellman, geophysicist with the Australian Bureau of Mineral Resources, who visited this feature in 1976-77.

Wellman Valley. 79°55' S, 156°40' E. A broad, mainly ice-free valley, N of Mount Ash, in the Darwin Mountains, it ends in steep spurs and gullies rising to the Midnight Plateau on the E and Kennett Ridge on the north. Explored by VUWAE 1962-63, and named by them for Bill Wellman. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1968.

Mount Wells. 85°10' S, 169°48' W. A massive, ice-covered mountain, at the W side of Liv Glacier, about 6 km NW of June Nunatak, in the Prince Olav Mountains. Named by US-ACAN in 1966, for Harry Wells, executive secretary of the Committee on Polar Research, National Academy of Sciences, 1962-66.

Wells, Harold. A young Tasmanian who shipped on to the *Sir James Clark Ross* at Hobart in 1924, as a laborer, for the 1923-24 whaling season in Antarctic waters. Alan Villiers say he was thrown heavily to the deck in a storm, and stunned.

Wells, Loran "Joe." b. June 4, 1904, Stearns, Whitley Co., Ky., but raised primarily in Lake Creek Township, Williamson Co., Illinois, son of Mississippi-born coal miner Charles Edward "Ed" Wells and his wife Delilah "Lila" King. He joined the U.S. Navy, and was a bosun's mate 1st class when he became photographer and meteorological observer at West Base during USAS 1939-41. He was also a sail maker. He died in Feb. 1981, in Carbondale, Ill.

Wells, William *see* **USEE 1838-42**

Wells Glacier. 73°32' S, 61°11' W. A glacier, 14 km W of Cape Brooks, it flows N into New Bedford Inlet, on the E Lassiter Coast, on the E coast of Palmer Land. Roughly mapped in late 1947 by a combined sledging team of personnel from RARE 1947-48 and Fids from Base E. Surveyed from the ground in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James T. Wells, who wintered-over as storekeeper at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Wells Ridge. 76°58' S, 144°45' W. A rocky ridge, 6 km long, between the Swanson Mountains and Mount Gilmour, in the Ford Ranges of Marie Byrd Land. Discovered aerially from West Base during USAS 1939-41. Named for Loran Wells (q.v.), observer and photographer with the USAS geology party that visited this ridge in 1940. US-ACAN accepted the name in 1947.

Wells Saddle. 76°03' S, 135°35' W. A broad, snow-filled saddle between Mount Berlin and Mount Moulton, in the Flood Range of Marie Byrd Land. Photographed aerially in Dec. 1940 by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for James H. Wells, a member of the USARP team that studied ice sheet dynamics in the area NE of Byrd Station in 1971-72.

Mount Welser. 76°43' S, 162°09' E. Rising to 1150 m in the central part of the ridge S of Albrecht Penck Glacier, and 4.5 km ENE of Mount Davidson, on the Scott Coast of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Lt. Gen. William Welser III (b. Aug. 2, 1949, Mineola, NY), commander of the 18th Air Force, at Scott Air Force Base, in Illinois, in recognition of his efforts, and those of the Air Mobility Command, in providing airlift support to USAP. NZ-APC accepted the name on April 7, 2008.

Welsh, Peter *see* **USEE 1838-42**

Wenchenggongzhu Di. 78°08' S, 76°00' E. A stretch of land between the American Highland and the Polar Plateau. Named by the Chinese.

Punta Wendell. 64°37' S, 63°00' W. A point projecting from the SE side of Parker Peninsula, in the NE part of Anvers Island, in the Palmer Archipelago. Named by the Argentines.

Mount Wendland. 84°42' S, 175°18' W. Rising to 1650 m, near the head of Massam Glacier, 3.2 km NE of Mount Kenney, in the Prince Olav Mountains. Geologically mapped on Nov. 18, 1970, by the Ohio State University Party of 1970-71, and named by US-ACAN for Vaughn P. Wendland (b. 1948), geologist and field assistant with the party.

Wendler Spur. 77°22' S, 160°58' E. A rock spur descending N between Albert Valley and Papitashvili Valley, in the Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for Gerd Wendler, of the Geophysical Institute, at the University of Alaska at Fairbanks, with USAP studying katabatic winds on the coast of Adélie Land and the George V Coast for several field seasons between 1979 and 2001. NZ-APC accepted the name on Sept. 12, 2005.

Kap Wennersgaard *see* **Wennersgaard Point**

Punta Wennersgaard *see* **Wennersgaard Point**

Wennersgaard, Ole Kristian. b. 1881, Larvik, Norway, son of policeman Laurits Theodore Wennersgaard and his wife Kaspara. He was going for his mate's license when he went as an able seaman on the *Antarctic*, during SwedAE 1901-04. He had been ill for some weeks with heart disease, and died on June 7, 1903. He was buried temporarily in a snowdrift and then in the spring they gave him a better funeral.

Wennersgaard Point. 63°51' S, 59°54' W. Forms the E side of the entrance to Lanchester Bay, on the Davis Coast, on the W coast of Graham Land. First charted in Nov.-Dec. 1902 by SwedAE 1901-04, and named by them as Kap Wennersgaard, for Ole Kristian Wennersgaard. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Wennersgaard Point on Sept. 23, 1960, and US-ACAN followed suit that year. The Argentines call it Punta Wennersgaard.

Monte Wensley *see* **Wensleydale Beacon**

Punta Wensley. 62°57' S, 60°40' W. A point named by the Chileans for its proximity to Wensleydale Beacon (which they call Monte Wensley), just N of Primero de Mayo Bay, on the W side of Port Foster, Deception Island, in the South Shetlands. Charted (but not named) by Foster in 1828-31, during the *Chanticleer* Expedition. The Argentines, who plotted it in 62°58' S, 60°43' W, named it Punta Murature, for José Luis Murature (1876-1929), foreign minister of Argentina, 1914-16, and editor of the Buenos Aires newspsper, *La Nación*.

Wensley Beacon *see* **Wensleydale Beacon**

Wensley Walker, Adrian James. No hyphens. Known in Antarctica as Wensley, or "Drain." b. March 6, 1932, only son of Simon Robert Wensley Walker, of London, and his wife Norah Wickham. He joined FIDS in 1956, as a diesel electric mechanic, left Southampton on the *Shackleton* (with, among others, his good friend Dick Hillson, and Geoff Monk), in Oct. 1956, bound for Montevideo and the Falkland Islands, and wintered-over at Base G in 1957. He was a commercial film director, and did yacht delivery work. He lived in Kinsale, Ireland, and ran a restaurant. In 1971 he married for a second time, to Susan Elizabeth Mary "Susie" Radcliffe, daughter of the 6th Baronet Radcliffe. He died on Oct. 4, 1996. His widow lives in Oxfordshire.

Colina Wensleydale *see* **Wensleydale Beacon**

Wensleydale Beacon. 62°57' S, 60°42' W. Also called Wensley Beacon. A hill, rising to 110 m, just N of Primero de Mayo Bay, on the W side of Port Foster, Deception Island, in the South Shetlands. Charted (but not named) by Foster in 1828-31, during the *Chanticleer* Expedition. Named for the area in Yorkshire, by Lt. Cdr. David Penfold, RN, in 1949, after he had surveyed this island that austral summer (1948-49). US-ACAN accepted the name in 1953. The Argentines call it Colina Wensleydale (i.e., "Wensleydale hill"), and the Chileans call it Monte Wensley.

Wensleydale Valley. 62°57' S, 60°42' W. A wide valley N of the hill called Wensleydale Beacon, between Punta Murature and Cross Hill, on the W coast of Port Foster, Deception Island, in the South Shetlands. Mapped geologically by Don Hawkes in 1961, it was named by the Poles on Sept. 1, 1999, in association with the hill.

Wenzelberg. 72°49' S, 166°12' E. One of the Lawrence Peaks, in Victoria Land. Named by the Germans.

Werenskiold Bastion. 67°26' S, 65°32' W. A bold rock headland rising very steeply to about 1250 m, and forming the coastline between Demorest Glacier and Matthes Glacier, on the W side of Whirlwind Inlet, on the Bowman Coast, on the E coast of Graham Land. It was observed and photographed aerially by USAS 1939-41, and again by RARE 1947-48, and mapped by FIDS in 1947-48. Surveyed by the BAS Larsen Ice Shelf party, 1963-64. Re-photographed aerially by USN in 1968. Named by UK-APC on Dec. 20, 1974, for Norwegian geologist, geographer, and glaciologist, Werner Werenskjiold (1883-1961), who had explored in the Arctic.

US-ACAN accepted the name in 1975. It appears in the British gazetteer of 1976.

Werlein Island. 66°25' S, 110°26' E. A rocky island, 1.3 km long, 0.3 km SE of Holl Island, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in Feb. 1947, during OpHJ 1946–47. Named by US-ACAN in 1956, for Ensign Richard Orme Werlein (b. Nov. 14, 1924, New Orleans), USN, assistant hydrographic officer on OpW 1947–48. ANCA accepted the name on July 4, 1961.

The *Werner Kube*. ROS-42. An East German Fisheries vessel, launched on May 18, 1966, investigating fish and krill in the Antarctic Peninsula, the South Shetlands, and the South Orkneys, between Feb. and April 1980. The expedition was led by Günter Gubsch.

Werner Mountains. 73°28' S, 62°08' W. A group of mountains, rising to about 1560 m (in Mount High), just WSW of New Bedford Inlet, N and S of Douglas Glacier, bounded to the N by Meinardus Glacier and to the E and S by Bryan Glacier, on the Lassiter Coast, on the E coast of Palmer Land. First seen and photographed aerially in 1940 by members of East Base, during USAS 1939–41. Surveyed from the ground by USGS in 1961–62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. The feature appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. Named by US-ACAN for German geologist and mineralogist Abraham Gottlob Werner (1749–1817). UK-APC accepted the name on Dec. 20, 1974. The group also includes (aside from the aforementioned Mount High), running from N to S: Mount Hemmingsen, Mount Fell, Mount Virdin, and Mount Broome.

Werner Peak. 68°43' S, 65°14' W. Rising to about 1550 m just E of the N end of Norwood Scarp, it is the highest and most conspicuous peak on the SE side of the Mercator Ice Piedmont, at Mobiloil Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. A steep rock ridge on its N side is easily recognizable from any point on the ice piedmont. Photographed aerially on Sept. 28, 1940, during USAS 1939–41. Surveyed by Fids from Base E in 1957–58. Named by UK-APC on Aug. 31, 1962, for Johannes Werner (1468–1522) German parish priest, mathematician, astronomer, instrument maker, and pioneer in meteorology. US-ACAN accepted the name later in 1962.

Wesele Cove. 62°10' S, 58°09' W. A cove in front of Wyspianski Icefall, between Boy Point and Low Head, on the S coast of King George Island, at Bransfield Strait, in the South Shetlands. Named by the Poles in 1980, for the the Stanislaw Wyspianski play *The Wedding* (Wesele in Polish). It appears on Krzysztof Birkenmajer's map of 1980. UK-APC accepted the name on April 3, 1984, and it appears in the British gazetteer of 1986, and on a British chart of 1990.

Wessbecher, Howard Otto "Wes." b. Oct. 7, 1925, Brooklyn, but raised all over New York, son of German parents, machinist Ludwig Wessbecher and his wife Karolina Margarita "Lina" Gierend, both immigrants from Karlsruhe. As a child he was back and forth between New York and Karlsruhe, on one occasion having to relearn English. He went into the Army on Jan. 28, 1944, in NYC, and served in World War II, in the Pacific theatre, spending a year in Okinawa. He went to Montana State University on the GI Bill, graduating as a forester, but went to work for the U.S. Weather Bureau, making weather maps in Washington, DC. He joined their Arctic project, under Glenn Dyer and Eddie Goodale, and after 3 years in the frozen north, went south and wintered-over at McMurdo, in Antarctica, in 1956, as IGY logistics representative during the preparation of South Pole Station in 1956–57. He was the barber, and also the man who painted the bamboo pole that became the South Pole (as it were), as well as an actor (he played Prince Rainier in a topical variety show produced at the base that winter). In March 1957 he returned to the USA, married Dian Cameron in Larchmont, NY, on April 6, 1957, moved to Arlington, Va., and finally went to work for the U.S. Forestry Service. He never returned to polar regions. On Sept. 6, 1974, in Corvallis, Ore., he married Sondra Best, and retired from the government on Oct. 30, 1980. After a year traveling all 50 states, he became a part-time mail carrier for Oregon State University.

Wessbecher Glacier. 78°53' S, 84°18' W. About 11 km long, it flows S between Wilson Peak and Marze Peak, at the S end of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Howard Wessbecher. Originally plotted in 78°55' S, 84°25' W, it has since been replotted.

Wesson, George *see* **USEE 1838–42**

Mount West. 77°25' S, 145°30' W. A somewhat isolated mountain, 14 km SE of Mount Woodward, surmounting the ice-covered ridge between Hammond Glacier and Swope Glacier, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939–41. Paul Siple named it Mount James E. West, for James Edward West (1876–1948), the first professional chief Scout executive with the Boy Scouts of America (1911–43). US-ACAN acepted the shortened name in 1970.

Récif West *see* **West Reef**

West Aisle Ridge. 78°20' S, 163°12' E. A ridge trending N-S, immediately to the W of Central Aisle Ridge, in the area of The Stage, on the N side of the lower Renegar Glacier. US-ACAN accepted the name in 1995.

West Antarctic Ice Sheet. 80°00' S, 120°00' W. Formed much more recently than the East Antarctic Ice Sheet, this is the ice covering West Antarctica.

West Antarctic Volcano Exploration. 1989–92. Known, of course, as WAVE. A cooperative project between NZ, UK, and USA, in Marie Byrd Land, designed to help scientists understand the volcanic and geochemical evolution of the volcanoes in West Antarctica. Phil Kyle was the principal investigator. John A. Gamble was a NZ geologist on this expedition (*see* **Gamble Cone**). Bill McIntosh (NZ), Kurt Panter (graduate student from New Mexico Tech), John Smellie (BAS), Chris Griffith (BAS), Bill Atkinson (NZ).

West Antarctica. Centers on 79°00' S, 100°00' W. Also called Lesser Antarctica, and Andean Province (because it seems to represent a geological extension of South America. *See also* **Andean Chain**). On the Pacific Ocean side of Antarctica, and falling wholly within the Western Hemisphere, it consists largely of an archipelago of mountainous islands covered and joined together by ice, or, looking at it from the surface, it comprises Marie Byrd Land, Ellsworth Land, and the Antarctic Peninsula. It was covered with temperate vegetation until about 37 million years ago. It was named before 1900. Edwin Swift Balch calls it by that name in 1902, as does Nordenskjöld in 1905, but the name didn't really catch on until IGY (1957–58), when it was discovered that the Transantarctic Horst forms a reasonable geographical separation of East Antarctica and West Antarctica. US-ACAN accepted the name in 1962, and UK-APC followed suit on May 13, 1991.

West Arm. 67°36' S, 62°52' E. A rock mass forming the W limit of Horseshoe Harbor, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936–37, and mapped from these photos by Norwegian cartographers in 1946. Re-photographed aerially during OpHJ 1946–47. An ANARE party, led by Phil Law, were the first to visit it, on Feb. 5, 1954, and they named it. ANCA accepted the name, and US-ACAN followed suit in 1965. Also called West Bay.

West Balch Glacier *see* **Drummond Glacier**

West Barrier *see* **West Ice Shelf**

West Base *see* **Little America III**

West Base Antarctic Service Expedition *see* **United States Antarctic Service Expedition**

[1]**West Bay** *see* **West Arm**

[2]**West Bay**. 69°21' S, 68°26' W. Between Brindle Cliffs and Mount Guernsey, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934–37, and by Fids from Base E between 1948 and 1950. Photographed aerially by USN in 1966. Named by US-ACAN in 1977, for Capt. William Edwin West, U.S. Coast Guard, skipper of the *Glacier* during OpDF 73 (i.e., 1972–73) and OpDF 74 (i.e., 1973–74). It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

West Beach. 77°38' S, 166°24' E. A small beach, about 90 m long, on the coast of North Bay, about 180 m NW of Cape Evans. It is one of the few beaches in the area of McMurdo Sound, and is visible only in exceptionally warm summers. Otherwise, it is covered in deep snow. Named by BAE 1910–13. It appears in the 1958 NZ provisional gazetteer.

West Beacon. 77°49' S, 160°48' E. The prominent western peak rising to 2420 m above sea level, high above the plateau-type ridge that

joins it to East Beacon, between Beacon Valley and Arena Valley, in the Beacon Heights, on the S side of the upper Taylor Glacier, in the Quartermain Mountains, in southern Victoria Land. Originally called Beacon Heights West by BNAE 1901-04. NZGSAE 1958-59 shortened the name. NZ-APC accepted the new name, and US-ACAN followed suit in 1962.

West Budd Island. 67°35' S, 62°50' E. The western of 2 larger islands at the N end of the Flat Islands, in Holme Bay, about 6 km NW of Mawson Station. The Flat Islands were photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named the N portion of the group as Flatøynalane (i.e., "the Flat Island needles"). Plotted by Australian cartographers from ANARE air photos. This western island was named by ANCA on July 4, 1961, for mountain-climbing doctor Grahame Murray Budd, medical officer at Mawson Station in 1959. He had been team leader at Heard Island in the winter of 1954, and was again from Jan. to March 1963. US-ACAN accepted the name in 1965. This island and East Budd Island form what the Russians seem to call the Budd Islands.

[1]**West Cape** *see* **Return Point**

[2]**West Cape**. The W side of the entrance to the Bay of Whales. It disappeared when the Bay of Whales was re-configured.

West Dailey Island. 77°53' S, 164°54' E. An island, reaching an elevation of 182 m above sea level, it is the largest and most westerly of the Dailey Islands, 8 km NE of Mount Chocolate, in McMurdo Sound. BNAE 1901-04 visited this group, and named it, but this particular island was named by Grif Taylor's Western Journey Party, who climbed it on March 6, 1911, during BAE 1910-13. Their name for it was West Dailey Isle. Although NZ-APC favors the original name, US-ACAN accepted the name West Dailey Island in 1972.

West Dailey Isle *see* **West Dailey Island**

West End Nunatak *see* **Target Hill**

West Foreland. 62°09' S, 58°55' W. An ice-free headland W of Bellingshausen Dome, between Porebski Cove and Gradzinski Cove, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Poles in 1980.

West Germany. In 1977-78 the West German Fisheries vessels *Walther Herwig* and *Julius Foch* carried down an expedition, led by scientific leaders Gotthilf Hempel, Dietrich Sahrhage, and Schreiber Steinberg, to investigate krill and fish resources in the Bellingshausen Sea. In 1978 Karl Hinz led an expedition to the Weddell Sea in the *Explora*, for the Federal Institute of Geoscience and Natural Resources (Hanover). In 1979-80 Franz Tessensohn led an expedition in the *Schepelsturm*, and they established a field camp at the base of Lillie Glacier, nicely calling it Lillie-Marleen Station. West Germany was ratified on Feb. 5, 1979, as the 21st signatory of the Antarctic Treaty, and on March 3, 1981, as the 14th nation to achieve Consultative status within the Antarctic Treaty system. The country sent out the GANOVEX expeditions, and had a disaster in 1981-82 when the *Gotland II* sank. West Germany also took part in the Filchner Ice Shelf Program. It built Georg von Neumayer Station, in New Schwabenland, in 1981, when Filchner Station was aborted. West Germany is now part of a unified Germany (q.v.). These were the West German Antarctic Expeditions (WGAE). **WGAE 1980-81**. Led by marine biologist and oceanographer Gotthilf Hempel (b. 1929; he was co-founder and first director of the Alfred Wegener Institute, in Bremerhaven), Manfred Stein, and Karl-Heinz Koch. The ships were the *Meteor*, the *Walther Herwig*, the *Polarsirkel*, the *Gotland II*, and the *Titan*. Georg von Neumayer Station was established. **WGAE 1981-82**. Ships were the *Polar Queen* and the *Gotland II*. **WGAE 1982-83**. Ships were the *Polarbjørn*, the *Polarstern*, and the *Polar Queen*. **WGAE 1983-84**. The ship was the *Polarstern*. Gondwana Station was opened. **WGAE 1984-85**. The ship was the *Walther Herwig*. **WGAE 1985-86**. The ship was the *Polarstern*. **WGAE 1986-87**. The ships were the *Icebird* and the *Polarstern*. Drescher Station was opened. **WGAE 1987-88**. The ship was the *Polarstern*. **WGAE 1988-89**. Ships were the *Polarstern* and the *Polar Queen*. WGAE 1989-90. The ships were the *Polarstern* and the *Meteor*. West Germany and East Germany unified in 1990, and henceforth all German expeditions are to be found under the heading German Antarctic Expeditions.

West Gould Glacier *see* **Erskine Glacier**

West Groin. 77°39' S, 160°48' E. A prominent rock spur between Mudrey Cirque and Flory Cirque, on the S side of the Asgard Range, in Victoria Land. Named by BAE 1910-13, for its position relative to Flory Cirque. cf **East Groin**. US-ACAN accepted the name in 1976.

West Ice Shelf. 66°40' S, 85°00' E. Also called West Barrier (especially in the old days, before the term "ice shelf" caught on). A prominent ice shelf, extending for about 280 km in an E-W direction, between Barrier Bay and Posadowsky Bay, it fronts the Leopold and Astrid Coast of East Antarctica. Discovered by GermAE 1901-03, and named by von Drygalski as Westeis because of the direction in which he saw it. US-ACAN accepted the name West Ice Shelf in 1953, and ANCA followed suit.

West Melchior Archipelago *see* **West Melchior Islands**

West Melchior Islands. 64°19' S, 63°00' W. A group of small, ice-covered islands and rocks lying W of The Sound, in the Melchior Islands. Those in this group include Rho Islands, Lambda Island, Delta Island, Kappa Island, and Gamma Island, as well as smaller islands and rocks. Roughly sketch-surveyed and named by the Discovery Committee in 1927, it appears on their 1929 chart. It appears on a 1947 British chart as West Melchior Archipelago. UK-APC accepted the name West Melchior Islands on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer and on a 1956 British chart. US-ACAN accepted the name in 1956. There is a 1947 Chilean reference to it as Islas Melchior del Oeste, and on a 1955 Chilean chart it appears as Islas Melchior Oeste. *see* **Melchior Islands** for more history.

West Nunatak *see* **Peak Seven** (under **S**)

West Ongul Island *see* **Ongul Island**

West Peak. 77°40' S, 166°22' E. An almost always ice-free mountain rising to 159 m above sea level, it is the western peak on Inaccessible Island, in the Dellbridge Islands, in McMurdo Sound. It appears in the 1958 NZ provisional gazetteer of the Ross Dependency, but no one else seems to use this name but the New Zealanders.

West Point. 62°57' S, 60°45' W. The westernmost headland of Deception Island, on the outer coast of the island, in the South Shetlands. It was charted by Don Hawkes in 1961, and named by the Poles on Sept. 1, 1999.

West Prongs. 83°54' S, 57°34' W. Three distinctive rock spurs that form the W end of the ridge just N of Elliott Ridge and Jones Valley, in the Neptune Range of the Pensacola Mountains. Surveyed by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Clyde E. West, USN, cook who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

West Quartzite Range. 72°00' S, 164°45' E. About 26 km long, on the E side of Houliston Glacier, it is the western of 2 quartzite ranges (it runs parallel to, and about 13 km distant from, the East Quartzite Range) in the Concord Mountains. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for the distinctive geological formation of the feature. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

West Reef. 61°05' S, 55°36' W. A reef with rocks awash, 5 km WNW of Cape Lindsey, on Elephant Island, in the South Shetlands. It was roughly charted by Powell, and so named (perhaps by Powell, perhaps not) because it lies off the W entrance to Sealers Passage. It appears on his chart published in 1822. In 1838, Dumont d'Urville referred to it as Récif West (which means the same thing), during FrAE 1837-40. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears in the 1974 British gazetteer. The Argentines call it Arrecife Oeste (which means the same thing).

West Russell Glacier *see* **Russell West Glacier**

West Stack. 67°03' S, 58°03' E. A coastal rock outcrop, rising to 120 m (the Australians say 130 m), 22 km SE of Edward VIII Bay, on the W side of Hoseason Glacier, in Kemp Land, in Enderby Land. Discovered in Feb. 1936 by the personnel on the *William Scoresby*, and so named by them because of its proximity to East Stack. US-ACAN accepted the name in 1947, and ANCA followed suit. The Norwegians call it Vestskotet.

West Stenhouse Glacier *see* **Stenhouse Glacier**

Cape Westbrook. 71°50' S, 75°26' W. A

snow-covered cape forming the N entrance to Rameau Inlet, on Beethoven Peninsula, and also, therefore, the SW extremity of Alexander Island. Mapped by USGS from air photos taken by RARE 1947-48, and by USN in 1967-68, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Darrel E. Westbrook, Jr. (b. Feb. 12, 1933), USN, commander of U.S. Naval Support Force, Antarctica, from June 1978 to June 1980. UK-APC accepted the name on May 13, 1991.

Westbucht. 66°47' S, 89°03' E. A small bay on the W side of Posadowsky Bay, just E of the West Ice Shelf. Named by the Germans.

Westeis *see* **West Ice Shelf**

Western Basin. 72°00' S, 174°30' E. A tectonic valley with horizontal successions, in the sea off Cape Adare and Cape Hallett. Discovered by Anna Del Ben, Icilio Finetti, and Michele Pipan, and named by them for its geographical position. Italy accepted the name on July 17, 1997.

Western Claw. 62°54' S, 60°35' W. A steep cliff in the form of a claw, W of Eastern Claw, in the NE part of Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named by the Poles on Sept. 1, 1999.

Western Crater. 77°32' S, 167°07' E. A small circular crater, at an elevation of 3561 m above sea level, on the W slope of the summit of Mount Erebus, on Ross Island. Named by US-ACAN in 2000, for its position. NZ-APC accepted the name on Feb. 20, 2001.

Western Indian Antarctic Basin *see* **Atlantic-Indian Basin**

Western Mountains. Scott's name, in 1902, for the section of the Transantarctic Horst which he discovered, and which was visible from McMurdo Sound.

Western Plain *see* **Maud Subglacial Basin**

Westernmost Rocks. 67°43' S, 45°17' E. A group of about 8 low rock outcrops on the coast of Mac. Robertson Land, the westernmost rock feature in the Australian Antarctic Territory. Named by ANCA on Sept. 26, 1978.

Westfalengletscher. 70°42' S, 164°10' E. A glacier, due W of George Glacier, in the W part of the Anare Mountains. Named by the Germans.

Westhaven Nunatak. 79°51' S, 154°14' E. A prominent nunatak, rising to 2240 m (the Australians say 2420 m; someone has transposed a digit) above sea level, and rising 450 m above the surrounding Polar Plateau, 5 km S of Turnstile Ridge, in the NW part of the Britannia Range, just to the W of the Darwin Mountains, and W of the Darwin Glacier, in southern Victoria Land. First seen aerially, by John Claydon, who suggested the name in 1956-57, because it is the westernmost rock outcrop in this part of the range. In Dec. 1957, the Darwin Glacier Party of BCTAE set up a survey station on its summit. ANCA accepted the name on Oct. 11, 1960, and US-ACAN followed suit in 1962.

Westlake, Brian Paul. b. 1937, London, son of George J. Westlake and his wife Kathleen F. Gray. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base B in 1960, and at Signy Island Station in 1961. After FIDS he went to the McGill Sub-Arctic Research Lab, in Canada, then went down to Guyana, working at the Savanna Weather Station. He later moved to Kent.

Westliche Petermann Range. 71°35' S, 12°10' E. The western of the three Petermann Ranges, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. This range is in the N part of the Petermanns, extending N-S for 26 km, from Mount Hansen to Aurdalen Valley. Discovered and photographed aerially in 1939 by GermAE 1938-39, and named by Ritscher. It was first plotted from these photos. US-ACAN accepted the name Westliche Petermann Range in 1970. The Norwegians call it Vestre Petermannkjeda, and the Russians call it Hrebet Bardina. Today, the Germans call it Westliche Petermannkette.

Westliche Petermannkette *see* **Westliche Petermann Range**

Westliches Hochfeld *see* **Vestre Høgskeidet** (under **V**)

Mount Westminster. 84°59' S, 169°22' E. Rising to 3370 m (the New Zealanders say 3526 m), 6 km (the New Zealanders say 10 km) SE of Mount Kinsey, in the Supporters Range, between the Grosvenor Mountains and Mill Glacier, on the E side of the Beardmore Glacier. Discovered by BAE 1907-09, and named by them for one of their supporters, Hugh Richard Arthur Grosvenor (1879-1953), 2nd Duke of Westminster. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Mount Weston. 80°28' S, 29°10' W. The highest mountain in the Haskard Highlands, it has several peaks, the highest being 1245 m, in the area of Stratton Glacier, in the W part of the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE, and named by them for Peter Weston. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Weston, Peter Douglas. b. March 4, 1921, Swaziland, son of colonial policeman Charles Weston. The family returned to Ealing, in London, in 1924, and then to Chelmsford, Essex. He joined the RAF as a teenager, being a flight sergeant when he became part of the RAF Antarctic Unit during the first season of NBSAE 1949-52, on which expedition he was responsible for the engines. He was also involved in BCTAE 1955-58, returning, after the expedition, to Wellington, and from there on the *Rangitoto* back to London, where he arrived on May 12, 1958. He died in Lincoln in May 1995.

The *Westwind*. AGB-6. A 6515-ton steel-hulled twin-screw U.S. icebreaker of the Wind-class (*see also* ***Northwind***, ***Southwind***, ***Eastwind***) built at Western Pipe & Steel, San Pedro, Calif., launched on March 31, 1943, at San Pedro, and commissioned on Sept. 18, 1944. 269 feet long, she could travel at 16.8 knots. She had room for 21 officers and 295 enlisted men. On Feb. 21, 1945, at Seattle, she was transferred to the Soviet Navy, as part of the lend-lease program, and renamed *Severny Polyus*. On Dec. 19, 1951, at Bremerhaven, Germany, she was returned to the US, arriving in Boston on Feb. 25, 1952. On March 13, 1952, she was decommissioned, and transferred to the Coast Guard on March 19, 1952, being struck from the Navy List on Sept. 8 of that year. She was re-designated *WAGB-281*, and served throughout the 50s mostly in the Arctic, but did go to Antarctica for OpDF III (1957-58; Captain W.J. Conley), OpDF 67 (1966-67; Captain Frederick H. Goettel), and OpDF 68 (1967-68; Captain Jack S. Thuma). In the 1970s she was in the Great Lakes of North America. She was in Antarctica again in 1983-84, Captain J. Honke. On Jan. 1, 1984, she was severely damaged by ice off the Larsen Ice Shelf.

Westwood Point. 68°37' S, 77°55' E. On Mule Peninsula, it forms the S entrance to Ellis Fjord, in the Vestfold Hills of Princess Elizabeth Land. Parts of this feature are inundated by the sea. Named by ANCA on Nov. 27, 1973, after Richard B. "Dick" Westwood, radio officer at Davis Station in 1970.

Westye Egeberg Glacier *see* **Egeberg Glacier**

Wet Crag. 62°08' S, 58°09' W. A wet basaltic crag rising to about 165 m above sea level, at the N margin of White Eagle Glacier, S of the Sukiennice Hills, in the area of Lions Rump, at King George Bay, on King George Island, in the South Shetlands. Mapped by the Poles in 1988, and named descriptively by them on Sept. 1, 1999.

Wetherall, Robert. Commander and co-owner of the London sealer *Mercury*, in the South Shetlands for the 1820-21 season.

Glaciar Wetmore *see* **Wetmore Glacier**

Wetmore Glacier. 74°38' S, 63°35' W. About 60 km long, it flows SE between the Rare Range and the Latady Mountains, into Irvine Glacier, at the N part of Gardner Inlet, on the Orville Coast, on the E coast of the Antarctic Peninsula. Discovered and partially photographed aerially on Nov. 21, 1947, during RARE 1947-48, roughly plotted by them in 74°46' S, 64°08' W, and named by Ronne as Alexander Wetmore Glacier, for ornithologist Frank Alexander Wetmore (1886-1978; known as Alexander Wetmore), 6th secretary of the Smithsonian Institution, 1945-52, who had helped Ronne prepare his scientific program. It appears as such on the American Geographical Society's map of 1948, but on Ronne's map of the same year it appears as Wetmore Glacier, but still with those coordinates. The name Wetmore Glacier was accepted by US-ACAN. Re-mapped by USGS from USN air photos taken between 1965 and 1967, it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. It appears on a Chilean map of 1966 as Glaciar Wetmore, and that is what the Chileans call it today. The Argentines call it the same thing.

Wetmore Peak. 71°28' S, 167°35' E. Rising to 2120 m, in the N sector of the Lyttelton Range, 10 km ENE of Mount Bierle, in the Admiralty Mountains of Victoria Land. Mapped

by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Clifford M. "Cliff" Wetmore, USARP lichenologist at Hallett Station in 1963-64.

Wetter Island *see* **Veier Head**

Wetterinsel *see* **Veier Head**

Mount Wever. 72°10' S, 62°45' W. The N outlier of the Du Toit Mountains, it rises to about 1700 m, S of Beaumont Glacier, and 21 km SW of Dietz Bluff, on the Black Coast, on the E coast of Palmer Land. Named by P.D. Rowley, of the USGS, for Hein Ette Wever (b. 1959), BAS geologist at Rothera Station, member of a joint BAS-USGS field party to the Black Coast in 1986-87. US-ACAN accepted the name in 1988, and UK-APC followed suit on May 13, 1991.

Gora Wewel *see* **Wewel Hill**

Mount Wexler. 84°30' S, 175°01' E. A high, prominent, ice-free mountain (the New Zealanders describe it as a short ridge), rising to 4025 m, 5 km SW of Mount Waterman, and 6 km NW of Mount Kaplan, in the Hughes Range. Discovered aerially by Byrd on Nov. 18, 1929, during the baselaying flight, and surveyed in 1957-58 by Bert Crary, who named it for Harry Wexler (1911-1962), U.S. Weather Bureau meteorologist and chief scientist for U.S. IGY Antarctic programs, 1957-58. It was Wexler who selected 80°S, 120°W for the site of Byrd Station in the 1950s. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Wexler Mountains *see* **Heritage Range**

Mount Weyant. 77°33' S, 162°42' E. A prominent ice-free summit rising to 1929 m, between Loftus Glacier and Newall Glacier, in Victoria Land. Named by US-ACAN in 1964, for William S. Weyant, of the U.S. Weather Bureau, who wintered-over as chief meteorologist at Little America in 1958. NZ-APC accepted the name.

Glaciar Weyerhaeuser *see* **Weyerhaeuser Glacier**

Weyerhaeuser Glacier. 68°55' S, 65°28' W. A large glacier flowing N into the Mercator Ice Piedmont, close W of Mobiloil Inlet and Norwood Scarp, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Although it lies in the area first explored and photographed aerially by Wilkins in 1928 and by Ellsworth in 1935, it was first defined in aerial photos taken in 1940 by members of East Base, during USAS 1939-41. Re-sighted aerially on Aug. 14, 1947 by personnel from RARE 1947-48 and Fids from Base E, and named by Ronne for Frederick King "F.K." Weyerhaeuser (1895-1978), of the Weyerhaeuser Lumber Company, who contrubuted lumber and insulating material to Ronne's expedition. US-ACAN accepted the name in 1953. It appears in the 1956 American gazetteer, plotted in 68°45' S, 66°00' W. It was surveyed by Fids from Base E in 1958-59. UK-APC accepted the name on Aug. 31, 1962, and plotted it in 68°52' S, 65°22' W. The coordinates were corrected by the time of the 1977 British gazetteer. The Argentines call it Glaciar Weyerhaeuser. Note: The Americans plot it in 68°45' S, 65°32' W. Charles E. Twining wrote a biography of Mr. Weyerhaeuser in 1997.

Weyprecht Berge *see* **Weyprecht Mountains**

Weyprecht Mountains. 71°58' S, 13°25' E. A small group of mountains, about 16 km W of the Payer Mountains, they form the W half of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially in 1939 by GermAE 1938-39, and named by Ritscher as Weyprecht Berge, for Karl Weyprecht, Arctic explorer, who, in company with Julius Payer discovered Franz Josef Land in 1873, and who initiated the First International Polar Year, 1882-83 (he didn't live to see it). US-ACAN accepted the name in 1966. Today, the Germans tend to call them Weyprechtberge.

Weyprechtberge *see* **Weyprecht Mountains**

Weyprechtfjella *see* **Weyprecht Mountains**

Whakawhiti Saddle. 82°34' S, 164°05' E. A low, broad snow-saddle at the head of (i.e., the lower portion of) the Robb Glacier, between that glacier and Oliver Glacier, close E of the Taylor Hills. Named by NZGSAE 1959-60 as they were traversing from the Robb Glacier to the Lowery Glacier. Whakawhiti means "crossing over" in Maori. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Originally plotted in 82°38' S, 163°35' E, it is plotted today in 82°34' S, 164°05' E (by the Americans) and 82°40' S, 164°20' E (by the New Zealanders).

Islote Whale Back *see* **Whaleback Rocks**

Whale Bay. 60°44' S, 45°11' W. A small bay between the SE end of Coronation Island and the NW side of Matthews Island, W of The Divide, in the South Orkneys. During his surveys here in 1912-13, Petter Sørlle charted a feature of undefined extent between the S coast of Coronation Island and the Robertson Islands, giving it the name Hvalbugten (i.e., "the whale bay"). It appears on his 1930 chart as Hval Bukt. Following re-surveying by the Discovery Investigations in 1933, the name Whale Bay was restricted to the present feature, and appears that way on the 1934 DI chart. US-ACAN accepted that in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1948 Argentine chart as Bahía Ventisquero (i.e., "glacier bay"), and that was the name accepted by the Argentine gazetteer of 1970. The bay was further surveyed by Fids from Signy Island Station between 1956 and 1958.

Whale Bay Furrows. 77°50' S, 170°00' W. Also called Whales Bay Furrows. A shallow submarine feature, actually a furrows, on the central part of the Ross continental shelf, in the Ross Sea. Named in association with the Bay of Whales. The name was accepted by US-ACAN in 1980. It appears in the German gazetteer of April 1980 as Whales Bay Deeps. However, by 2004 it became apparent that this feature did not exist.

Whale catchers. Small, fast, maneuvrable vessels working for a floating factory, and doing the actual catching. Each was commanded by a gunner. By the 1940s each catcher had a radio, radiotelephone, and radar. They would go out looking for whales to harpoon, and every 4 days or so would return to the factory for refueling. *See also* **Buoy boats**.

Whale Rock. 60°48' S, 45°39' W. A term no longer used (except by the Russians), for a rock in the South Orkneys.

Whale Skerries. 60°42' S, 45°06' W. A small group of islands and rocks in Lewthwaite Strait, close W of Cape Disappointment (which is on Powell Island), in the South Orkneys. Sørlle surveyed them in 1912-13, and named them singularly as Hvalskjaer. He later changed the name to the plural, Hvalskjaerene. The feature was recharted by the Discovery Investigations in 1933. UK-APC accepted the translated name Whale Skerries on March 31, 1955, and US-ACAN followed suit in 1956.

Whaleback *see* **Mount Marston**

Whaleback Islet *see* **Whaleback Rocks**

Whaleback Rocks. 63°39' S, 59°04' W. Also called Whaleback Islet. A group of low rocks, 3.2 km W of Blake Island, in Bone Bay, off the N coast of Trinity Peninsula. Charted and aptly named by FIDS in 1948. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit in 1964. The Argentines call this feature Islote Whale Back (i.e., in the singular).

Whalebone whales *see* **Baleen whales**

Whalers Bay. 62°59' S, 60°34' W. As one goes through Neptune's Bellows into the caldera of Port Foster, Deception Island, in the South Shetlands, this small bay, the most visited site on the island, is on the east (to the right), between Fildes Point and Penfold Point. In the summer of 1906-07 Norwegian whaling captain Adolf Amandus Andresen brought his floating factory *Gobernador Bories* into the bay, and moored here, thus being the first whaler to operate out of Deception Island. The early Norwegian whalers called this bay (and all of Deception Island, by extension) New Sandefjord, after their home Norwegian port. In 1908 a cemetery was established here (*see below*, **Whalers Bay Cemetery**). Charcot aptly named the bay Anse des Baleiniers in 1910, during FrAE 1908-10. From 1912 to 1931 the Hektor Whaling Company operated a shore-based whaling factory here, and, much later, the British established Base B here. The British had long before translated Charcot's naming, and called it Whaler's Bay (the apostrophe being deleted when US-ACAN accepted the name in 1952). The Chileans and Argentines had been calling it Caleta Balleneros for a long time, and it first appears as such on a Chilean map of 1947. In 1969 a volcano created a mud slide that pretty much wiped out the cemetery. Whalers Bay was designated historic site #71. Much still remains today of the old whaling activities and from the days of the British, but not much of the cemetery.

Whalers Bay Cemetery. In Whalers Bay, Deception Island, South Shetlands. It was decided to establish a cemetery here after the drowning of Nokard Davidsen in 1908. 33 Norwegian,

Swedish, Chilean and Russian whalers would be buried here, as well as Arthur Farrant of FIDS. There was also a monument to 10 men lost at sea (only one body was recovered) in the whale catcher *Graham*, on Nov. 6, 1924. Fortunately, before the volcano of 1969 wiped out the graveyard, two lists were made of those buried, one by the Norsk Polarinstitutt, and the other by members of Presidente Pedro Aguirre Cerda Station. Those buried here include, in order of burial (name, age, and date of death; all Norwegian, unless stated otherwise): **1.** Nokard Davidsen, 30, Jan. 22, 1908. **2.** Georg William Ødegaard, 16, Dec. 26, 1910. **3.** Henrik Lagerstedt, Swedish, 40, March 8, 1911. **4.** Hans Olsen, 42, Dec. 10, 1911. **5.** unknown, Dec. 18, 1912. **6.** Caetano Muñoz, Chilean, 34, Feb. 4, 1913. **7.** Sigurd Carlsen, 17, Dec. 16, 1913. **8.** Olav Nielsen, 46, Jan. 7, 1914. **9.** Nils Sørensen, 24, Feb. 16, 1914. **10.** Søren Hansen, 42, March 1, 1914. **11.** Anton Antonisen, 47, Dec. 18, 1914. **12.** Karl Moe Johansen, 34, Jan. 7, 1915. **13.** Max Slavonski, Russian, 29, Jan. 7, 1915. **14.** Axel L. Johnson, Swedish, 30, March 5, 1916. **15.** Olav A. Kristiansen (AKA Olav Kristensen and Arnov Arnouse), 52, Feb. 2, 1917. **16.** Herbert Högberg, Swedish, 29, Dec. 31, 1917. **17.** Nils Hansen, 17, Dec. 22, 1918. **18.** Harald Sjövold, 40, March 19, 1919. **19.** Emil Hansen Nybraaten, 29, April 3, 1922. **20.** Thorleif Bjarne Hansen, 19, March 6, 1924. **21.** Matthias Andressen, 19, March 11, 1924. **22.** Georg R. Christensen, 27, March 11, 1924. **23.** Niels Ernst Samuelsen, 58, March 11, 1924. **24.** Carl Olaf Gjerdøe, 35, March 11, 1924 (the last 4 buried in a common grave). **25.** Albert Johanessen, age unknown, Nov. 6, 1924 (his was the only body recovered from the sinking of the *Graham*). **26.** Einar Mathisen, 37, April 4, 1925. **27.** Carl Hansen, 45, Nov. 16, 1927. **28.** Hans Albert Gulliksen, 56, Jan. 4, 1928. **29**. Andreas Andersen, age unknown, April 7, 1928. **30.** Albert Langholt, 40, Jan. 7, 1928. **31.** Ivar Likness Torresen, 35, April 1, 1929. **32**. Leif Thorvaldsen (AKA A.M.S. Begann), 22, March 14, 1929. **33.** Oskar Andersen, 41, Dec. 31, 1929. **34**. Peder Knapstad, 45, March 14, 1931. **35**. Arthur Farrant, British, 40, Nov. 17, 1953. Those who went down on the *Graham* on Nov. 6, 1924 were all Norwegians: Kristian Walbom (the skipper; from Husvik), Haalion Strand (from Drammen), Reuben Larsen (from Larvik), Karstein Marla (from Nøtterøy), Alfred Hansen (from Tromsø), Albert Johanessen (from Tromsø), Erling Hansen (from Sandefjord), Karstein Andersen (from Sandefjord), Thorstein Tronsen (from Tjomo), and Kristian Evensen (from Tønsberg). Today, all that remains of the cemetery is a coffin and Knapstad's cross, which was recovered and re-erected in 2002. Gulliksen later had a cross erected for him, to the west of the cemetery. Note: Many of these men are not to be found in any Norwegian census. One would expect to find them listed therein, with one or another form of their names, but they are simply not there. This throws great doubt on the authenticity not so much of the fact of their deaths, perhaps, but on their real names.

Whalers Bay Refugio. 62°59' S, 60°35' W. Chilean refuge hut built on a rock surface at Whalers Bay, Deception Island, in the South Shetlands. It was open between Jan. and Feb. 15, 1953.

Whalers Bluff. 60°43' S, 45°39' W. Rising sharply to 210 m, E of Port Jebsen, on Signy Island, in the South Orkneys. On Capt. Moe's 1913 chart, the highest point on this bluff is shown as Consulens Hat, because it looks like a consul's hat. The bluff itself was named by UK-APC on May 13, 1991, for the old whalers in the area. US-ACAN accepted the name.

Whales. Whales are warm-blooded, sea-going carnivorous mammals, and form the order Cetacea. When the sea monsters of old disappeared about 65 million years ago, an animal void was created in the oceans, and was soon filled by certain large land mammals related to today's cattle [sic]. The first of these animals that went down to the sea had webbed hind feet at the semi-aquatic stage, and over the eons their physical structure adapted to their marine needs. By 50 million years ago, whales as we know them today were in existence. About 38 million years ago the order Cetacea split into two sub-orders: Odontoceti (*see* **Toothed whales**) and Mysticeti (*see* **Baleen whales**), the difference being teeth. Odontoceti have teeth, and Mysticeti have baleen (a strainer for plankton and krill). Whales have no gall bladder or appendix, no ears or hair (not really), no legs, of course, no sweat glands, and no external sex organs (*see* **Blue whale** for a description of these). However, most whales still have five fingers [sic], they have horizontal tail fins called flukes, and, being mammals, must breathe air, although they do so through one (for toothed) or two (for baleen) blowholes in the top of their head, and, interestingly, they breathe voluntarily, unlike humans. They have a subdermal layer of fat, oil, and connective tissue called blubber, which is a storehouse for energy. We know of 87 species of whales altogether; 76 are toothed, and 11 are baleen. Most baleen whales are bigger than most toothed whales, although the Sperm whale (a toothed whale) is an exception. Practically all whales breed and give birth in warm waters, and only a few species go to Antarctica. Dolphins and porpoises are toothed whales [sic]. In fact, the Orca, or killer whale, is actually a dolphin (*see* **Killer whales**, and **Dolphins**). Odontoceti males are much bigger than their females, while Mysticeti females are bigger than their males. Because of their blubber and oil, and other natural resources, whales have long been hunted by humans (*see* **Whaling**).

Bay of Whales. 78°30' S, 164°20' W. A Ross Sea indentation into the NE part of the Ross Ice Shelf, just northward of Roosevelt Island. An iceport and natural harbor, it was discovered by Borchgrevink during BAE 1898-1900, and Scott anchored here on Feb. 3, 1902 during BNAE 1901-04. On Feb. 4 Armitage led a sledging party from here, and Scott and Shackleton each went up in the balloon. The next visitor was Shackleton again, on Jan. 24, 1908, during his BAE 1907-09. "A veritable playground of these monsters," is how he described it, when he named it that day, the monsters being whales. Amundsen calculated it to be 60 miles closer to the Pole than Ross Island was, and so used it as his base for his successful assault on the Pole during NorAE 1910-12. ByrdAE 1928-30 and ByrdAE 1933-35 both used it as their port, and Little America I and Little America II were both close by. A 1934 survey, during ByrdAE 1933-35, determined that the bay lay at the junction of 2 separate ice systems, the movements of which were influenced by the presence of Roosevelt Island. The outline of the Bay of Whales was always changing, and it shrank between 1935 and the time Byrd came back in 1939 for USAS 1939-41, and Little America III was built. When the *Atka* arrived here in Jan. 1955, the calving had been such that the iceport was rendered unusable. The name appears in the 1958 NZ provisional gazetteer. In Oct. 1987 B-9 broke away into a massive iceberg, drastically re-configuring the Bay of Whales. An even greater re-configuration took place in March 2000 when the even larger B-15 broke away.

Whales Bay Deeps *see* **Whale Bay Furrows**

Whales Bay Furrows *see* **Whale Bay Furrows**

Whaling. Very important in Antarctic history. Whereas in the past there was no restriction on who hunted how many whales and where (same as sealing), today "whale harvesting" is regulated (in theory) by the International Whaling Commission (IWC). It is a sad fact that there is no real way for the IWC, or anyone else, to police any illegal Antarctic whaling racket. The big whaling company of the early 19th century was Enderby Brothers out of London, whose ships' captains included Biscoe and Balleny. This company opened up significant portions of Antarctica. Those were the days when the type of sailing ship known as whalers, went south, and on spotting a whale, a whale catcher (a smaller, fast, maneuvrable vessel accompanying the whaler) would go out with a group of very brave individuals on board, get to within 20 feet of their prey, and a man or men would stand up in this little boat and fling a harpoon at the enormous animal. This exercise would be repeated until someone or something was dead. Those were the days of Captain Ahab. In the 1860s Svend Foyn, a Norseman, invented the harpoon gun, which made slaughter much easier, quicker, and less dangerous (for the killers). Although Germany sent Eduard Dallmann (q.v.) down to Antarctica in 1873-74 on a futile (as it turned out) mission, Norway, one of the giants of the whaling business, was really the founder of modern Antarctic whaling. Chris Christensen's expedition of 1892-94, led by whaler Carl Anton Larsen, involving the *Jason*, the *Hertha*, and the *Castor*, and which explored Seymour Island, the South Orkneys, the South Shetlands, and the Weddell Sea, led to the whaling boom 10 years later around South Georgia (54°S). In those same years (mid 1890s) the Dundee Whaling Expedition also explored the possibilities in the waters of the Weddell Sea and off the Antarctic

Peninsula. **1904**: This was the year Antarctic whaling really began. Carl Anton Larsen formed the Compañía Argentina de Pesca Sociedad Anónima, in Buenos Aires, to fund expeditions to South Georgia, where he set up a whaling station at Grytviken on Nov. 16, 1904. It was so successful that soon scores of Norwegians were down there, extending operations into Antarctica proper. That whaling season also had another effect, a galvanizing effect, as a matter of fact, on the British government (see below, 1905-06), who until then had only vaguely claimed South Georgia, seeing no use for it. **1905-06**: Chris Christensen introduced the first factory ship, the *Admiralen*, to the South Shetlands. This was merely an extension of the Ahab technique, of course, but the factory ship was huge, and it did, indeed, serve as a factory. Each factory would have attendant on it a group of small (70-120 tons normally) steam whale catchers which went out, killed the whales, and then returned to the factory, towing their victims. The dead whale was then hauled aboard and "prepared," with blubber cutters, stewers, boilers, separators, and flensers, and assorted deck hands and sailors wading their way through the stench of carcasses day and night. Let it be known, lest history glamorize the whaling business of old, that the smell on board a factory ship was one of the strongest and most despicable ever experienced by the human nose, and it took a man a good while to acclimatize to it, let alone spend months at a time working and living in it. Even after he had retired, the smell never really left a whaling man. You could sniff him coming down the Sandefjord streets. However, it was a job, and some said it was better than the mines of northern Norway. The *Admiralen* was the only factory ship operating in Antarctic waters that season, with 4 whale catchers, and she took 707 whales. However, the British, ever alert to the possibility of money-making, decided to impose rules and regulations on whalers going to the South Shetlands — a licensing fee, a royalty on each whale caught, a Falkland Islands government customs officer placed on board to check on fair play, and the legal requirement that they call in at Port Stanley. The Norwegians objected to all of this, but, more or less played the game anyway, it being cheaper, in the end, than running up against a British gunboat. **1906**: Adolf Amandus Andresen opened up the first actual Antarctic whaling station, on Deception Island. Chris Christensen operated out of Whalers Bay, Deception Island. **1906-07**: 3 factory ships (*Admiralen*, *Nor*, and *Gobernador Bories*) and 8 catchers took 1122 whales. Note: Whale catch figures include those of South Georgia. The first Falkland Islands government customs officer (Robert Hurst) went on the *Admiralen*. **1907-08**: The Newfoundland Whaling Company operated the *Sobraon* out of the South Orkneys. That company, and three others — Ørnen and Nor (both owned by Christensen), and the Sociedad Ballenera de Magallanes (owned by Andresen) — operated in the South Shetlands that season. So, that season, there were 4 factory ships in Antarctica (*Admiralen*, *Nor*, *Sobraon*, *Gobernador Bories*) and 15 catchers. They took 2082 whales. **1908**: Tønsbergs Hvalfangeri began building a whaling station at Stromness, South Georgia. Sandefjord Hvalfangerselskab did the same with one at Husvik, South Georgia. That was the year that Great Britain claimed the South Shetlands. **1908-09**: 5 factory ships (*Admiralen*, *Nor*, *Sobraon*, *Gobernador Bories*, *Svend Foyn*) and 16 whale catchers took 2440 whales. The *Telefon* was also in Antarctic waters that season, but got wrecked early on. From now on, it is not intended to list every whaler in Antartcic waters every season (at least, not in this part of the book; that will be found under **Expeditions**). **1909**: Christian Salvesen's, the Scottish whaling firm, moved into South Georgia, with a shore station at Leith Harbor. **1909-10**: 6 factory ships and 37 whale catchers took 6099 whales. **1910**: the Sandefjord Hvalfangerselskab began operating their whaling shore factory at Husvik, South Georgia. **1910-11**: 9 factory ships and 48 catchers took 10,230 whales. **1911-12**: The Rethval Whaling Company, of Oslo, was the first to start whaling operations in the South Orkneys. 13 factory ships and 58 catchers took 11,727 whales in Antarctic waters. **1912**: Tønsbergs Hvalfangeri began operating their whaling stations in South Georgia. Britain leased a base on Deception Island to the Hektor Whaling Company, for 21 years, and during the first half of the 20th century Norway and Britain were the dominant members of the southern whaling fraternity. In fact, by 1914, Britain had licensed several whaling activities (*see* **Deception Island**). **1912-13**: There were 6 shore stations, 16 factory ships, and 62 whale catchers in Antarctica, most of them Norwegian. 10,760 whales were taken that season. **1913-14**: 16 factory ships and 63 catchers took 9408 whales. **1914-15**: 14 factory ships and 61 catchers took 9864 whales. **1915-16**: 10 factory ships and 57 catchers took 11,792 whales. **1916-17**: 5 factory ships and 44 catchers took 6474 whales. The war had an effect. **1917-18**: 6 factory ships and 48 catchers took 4304 whales. Wartime was a good time for the whales. **1918-19**: 6 factory ships and 50 catchers took 4787 whales. **1919-20**: 6 factory ships and 44 catchers took 5441 whales. **1920-21**: 9 factory ships and 47 catchers took 8448 whales. **1921-22**: 9 factory ships and 46 catchers took 7023 whales. **1922-23**: 13 factory ships and 60 catchers took 9910 whales. **1923-24**: 14 factory ships and 66 catchers took 7271 whales. **1924-25**: 13 factory ships and 65 catchers took 10,488 whales. The *Lancing* was the first modern factory ship equipped with a stern slip, so that whales could be easily hauled on board. **1925-26**: 14 factory ships and 70 catchers took 14,219 whales. This was the first year anyone tried pelagic (open sea) whaling in Antarctic waters, when the *Southern Queen* did so. **1926-27**: 17 factory ships and 70 catchers took 12,665 whales. **1927-28**: 18 factory ships and 84 catchers took 13,775 whales. **1928-29**: 26 factory ships and 111 catchers took 20,341 whales. **1929**: Argentina, an early whaler in Antarctic waters, ceased its activities. **1929-30**: 38 factory ships and 194 catchers took 30,167 whales. **1930-31**: A record-breaking season in Antarctica, 41 factory whalers and 232 whale catchers. Peace time was not a good time for the whales. Antarctic whaling here reached its peak about this time, but led to much charting and exploring. The most hunted were the blue, sei, and fin whales, and these have virtually left Antarctica now. Oil and baleen were the most profitable products. Lars Christensen, in the 1920s and 1930s, had a large whaling firm in Sandefjord, Norway, and his company, like Enderby Brothers a century before, was instrumental in opening up a lot of Antarctica. From the 1920s on, especially with the advent of the airplane as whale spotter, one enormous factory ship might lead a flotilla down from Norway. This leader would be called the mother ship. **1931**: Argentina stopped the killing of right whales. Tønsbergs Hvalfangeri's whaling station at Stromness, South Georgia, closed, and it became a repair yard. Sandefjord Hvalfangerselskab's station at Husvik, also closed. This year also marked the end of Deception Island as a whaling base. This was the year the Antarctic whaling industry virtually collapsed. **1931-32**: The Great Depression had a major effect on whaling. This factor, and the depletion of whales in the Antarctic, due to over activity in the past few seasons, especially during 1930-31, led to most fleets suspending activities for the 1931-32 season. There were only 5 factories and 45 catchers there that season, and they took 9572 whales. **1932-33**: 17 factory ships and 118 catchers took 24,327 whales. **1933-34**: 19 factory ships and 126 catchers took 26,078 whales. **1934-35**: 23 factory ships and 153 catchers took 31,808 whales. Japan entered the race this season, with the factory ship *Tonan Maru*. All of the Norwegian whaling companies, and all but one of the British companies, established a cartel to minimize competition and to avoid flooding the world market with whale oil. They allocated quotas to each company. This lasted until 1937. **1935-36**: 24 factory ships and 175 catchers took 30,991 whales. **1936-37**: 30 factory ships and 196 catchers took 34,579 whales. **1937**: South Africa began Antarctic whaling. Also that year an international convention was signed in London by 9 countries. Regulatory quotas were set in order to protect the industry from over-depletion. **1937-38**: The peak year for Antarctic whaling, with 31 factory ships and 256 catchers, representing expeditions from several nations going south that season. 46,039 whales killed. **1938-39**: 34 factory ships and 281 catchers took 38,356 whales. **1939-40**: 28 factory ships and 240 catchers took 32,900 whales. **1940-41**: 11 factory ships and 93 catchers took 16,363 whales. **1941-42**: No factory ships, but 12 catchers operated out of 2 shore stations, taking 1425 whales. This was a break for the whales, as most of the whalers were off killing one other in World War II. **1942-43**: No factory ships, and only six catchers operated out of one shore station, taking 998 whales. **1943-44**: One factory ship and 15 catchers took 1799 whales. **1944-45**: One factory

ship and 15 catchers took 2891 whales. **1945-46**: 9 factory ships and 93 catchers took 13,387 whales. **1946**: The IWC was formed. **1946-47 season**: 15 factory ships and 147 catchers took 25,593 whales. A Dutch whaler, the *Willem Barendsz*, was in Antarctic waters. **1947-48**: 17 factory ships and 183 catchers took 31,318 whales. **1948-49**: 18 factory ships and 212 catchers took 31,435 whales. **1949-50**: The whaling season began on Dec. 21, 1949. 18 factory ships (3 of them from the UK) and 237 catchers took 32,396 whales. Essentially, this was how a whale was taken at this period of history: The catcher would locate a whale, chase it, and then, when the whale surfaced, the gunner aboard the catcher would shoot the whale with the harpoon. This harpoon had 4 hinged grappling hooks, so that when the line attached to the harpoon took the strain, the harpoon would remain in the whale. In addition to this, the head of the harpoon contained a grenade, with a very large charge in it, and this grenade would explode upon impact, sending shrapnel throughout the body of the whale. This of course did not kill the whale, it just slowed him down, but it did begin the process of death. The whale would then take off, pulling everyone with it. It was definitely in the interest of the whalers to reduce this dying process as much as possible, not only to save wear and tear and strain on the men and boats, but also to preserve the eventual carcass in the best possible condition. After a varying period of time, usually between half an hour and several hours, the whale would tire, losing blood all the time, until eventually it had no more fight. At this point, still alive, it was winched under the bows of the catcher, and filled with compressed air to achieve great buoyancy. Then the catcher might tow it to the factory, or it might be marked and cast adrift, to be picked up later by a buoy boat or a corvette. When the whale finally made it to the factory, it was hauled up the slipway, tail first, onto the deck of the mighty factory. Here it was measured and recorded, the blubber was removed, in a process called flensing, and then the whale was moved forward to the lemming deck, where dismemberment continued. Anything not needed was shot down a chute, where the oil was extracted. The whole process for a blue (90 feet long sometimes, and 100 tons) could take 50 minutes, and for a fin whale only half an hour. The whole catching process might seem fairly brutal on the whale, and it was, but one must also realize how tough it was on the sensitive whaling lads. However, the joys of electric whaling were just around the corner, thanks to a Nazi engineer named Weber who had made a lot of progress in this field during World War II (and who committed suicide after the war, rather than be brought to trial). This was where the harpoon's rope contained a conductor that sent a massive electrical charge upon impact with the prey (exposure to the water would cause the really big shock), and would do pretty much what such a charge does to a man in a wet electric chair. The whaling season this year ended on April 7, 1950. Sir Vyvyan Board and Robert Marsden of General Electric, went to the Antarctic this season, Board serving as gunner on a whale catcher, to see what it was like. **1950-51**: 19 factory ships and 260 catchers took 33,997 whales. There were 5 catchers this season equipped with the new electric harpoon. **1951**: The USSR became an Antarctic whaling force, and from the 1960s the USSR and Japan were the dominant whaling nations here, at least until the Soviet break-up in 1990. **1951-52**: 20 factory ships and 289 catchers took 35,327 whales. **1952-53**: 16 factory ships and 251 catchers took 30,635 whales. A new method of killing whales was tested this year, rockets fired from a helicopter, rockets that also blew up the whale with oxygen so it would stay afloat. **1953-54**: 17 factory ships and 227 catchers took 34,872 whales. **1954-55**: On Jan. 7, 1955, when the whaling season opened for the year, there were 19 factory ships and 254 catchers ready to go to work. 37,654 whales were taken. **1955-56**: 19 factory ships and 278 catchers took 38,580 whales. **1956-57**: 20 factory ships and 246 catchers took 36,069 whales. **1957-58**: 20 factory ships and 257 catchers took 39,403 whales. **1958-59**: 20 factory ships and 256 catchers took 38,787 whales. **1959-60**: 20 factory ships and 241 catchers took 38,688 whales. **1960-61**: 21 factory ships and 268 catchers took 41,172 whales. **1961-62**: 21 factory ships and 269 catchers took 38,552 whales. **1962-63**: 17 factory ships and 201 catchers took 30,159 whales. **1963**: Britain stopped whaling, and "full protection" came to the blue and humpback whales in the Antarctic. **1963-64**: 16 factory ships and 194 catchers took 29,942 whales. **1964-65**: 15 factory ships and 177 catchers took 32,563 whales. **Dec. 1965**: Antarctic whaling was limited to factory ships. **1965-66**: 10 factory ships and 128 catchers took 24,680 whales. **1966-67**: 9 factory ships and 120 catchers took 20,255 whales. **1967-68**: 8 factory ships and 97 catchers took 15,080 whales. **1968**: Norway quit the business. **1968-69**: 6 factory ships and 84 catchers took 11,478 whales. **1969-70**: 6 factory ships and 85 catchers took 11,949 whales. **1970-71**: 6 factory ships and 86 catchers took 12,098 whales. Due to a sudden and infectious anti-whaling movement throughout the world, the business dropped off by 95 percent between 1970 and 1980, and by 1990 only Minke whales were being killed, for "scientific purposes." **1971-72**: 7 factory ships and 88 catchers took 11,508 whales. One factory with 4 catchers took Minke whales only (3054 of them). **1972-73**: 7 factory ships and 82 catchers took 9840 whales. Two factories with 4 catchers took only Minke whales (5754 of them). **1973-74**: 8 factory ships and 78 catchers took 10,607 whales. In addition to this catch, 2 of the factories took 7713 Minke whales. **1974-75**: 7 factory ships and 45 catchers took 9000 whales. In addition to this catch, 2 of the factories took 7000 Minke whales. **1975-76**: 5 factory ships and 76 catchers took 4856 whales. In addition to this catch, 2 of the factories took 3064 Minke whales. **1976**: fin whales became "fully protected" in Antarctica. **1976-77**: 4 factory ships and 43 catchers took 3860 whales. In addition to this catch, 2 of the factories took 7900 Minke whales. **1977-78**: 3 factory ships and 34 catchers took 2725 whales. In addition to this catch, 2 of the factories took 4978 Minke whales. **1978**: Sei whales became "fully protected" in Antarctica. **1978-79**: 3 factory ships and 30 catchers took 2304 whales. In addition to this catch, 2 of these factories took 5466 Minke whales. **1979-80**: 3 factory ships and 17 catchers took 7158 Minke whales and 916 killer whales. **1980-81**: 2 factory ships and 12 catchers took 6240 Minke whales. **1981-82**: 2 factory ships and 12 catchers took 7154 Minke whales. **1982-83**: 2 factory ships and 12 catchers took 6447 Minke whales. **1983-84**: 2 factory ships and 12 catchers took 6055 Minke whales. **1984-85**: 2 factory ships and 9 catchers took 4968 Minke whales. **Sept. 1985**: The members of the IWC were Antigua & Barbuda, Argentina, Australia, Belize, Brazil, Chile, China, Costa Rica, Denmark, Egypt, Finland, France, Iceland, India, Ireland, Japan, Kenya, Mauritius, Mexico, Monaco, Netherlands, New Zealand, Norway, Oman, Peru, Philippines, Republic of Korea, Great Britain, Saint Lucia, Saint Vincent & the Grenadines, Senegal, Seychelles, Solomon Islands, South Africa, Spain, Sweden, Switzerland, USA, USSR, Uruguay, West Germany. However, by the 1980s it was obvious that the IWC's policies were not satisfying everyone, so other, more economically driven and less sentimentally hamstrung individuals took it upon themselves to re-set whaling laws. **1985-86**: 2 factory ships and 9 catchers took 4969 Minke whales. **1986-87**: 2 factory ships and 9 catchers took 4969 Minke whales, the same number as the previous year. **1987**: Japan began "scientific whaling" in Antarctic waters, which was only a cover for the real thing. **1987-88**: One factory ship and 2 catchers took 273 Minke whales. **1991**: Greenpeace attempted to intercept Japan's whaling fleet in the Antarctic. This was but the first of Greenpeace's many similar attempts over the next several years. **1993**: Norway resumed commercial whaling. **1994**: The evidence came in that the USSR had been lying all along, as they did with everything else. Between 1948 and 1973 they reported to the IWC that they had killed 2710 humpbacks, whereas, in fact, they had taken 47,477. And the IWC had swallowed it. Well, they hadn't really, being well aware of under-reporting. But they were scared to act against the USSR. **2006**: The St. Kitts and Nevis Declaration was signed by St. Kitts & Nevis, Antigua & Barbuda, Benin, Cambodia, Cameroon, Côte d'Ivoire, Dominica, Gabon, Gambia, Grenada, Guinea, Iceland, Japan, Kiribati, Mali, Marshall Islands, Mauritania, Mongolia, Morocco, Nauru, Nicaragua, Norway, Palau, Russia, St. Lucia, St. Vincent & the Grenadines, the Solomons, Surinam, Togo, and Tuvalu. Their claim was that certain cultures were suffering by not being able to hunt whales, and decided to press on with the kill, regardless of any moribund body (IWC) trying to tell them what to do. Their claim was that control was the issue, not extermination, yet neither was sentiment.

Mount Wharton. 81°03' S, 157°49' E. Rising to over 2800 m (the Australians say it is about 2700 m), 9 km W of Turk Peak, and about 22 km SW of Mount Field, in the Churchill Mountains, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named for Sir William James Lloyd Wharton (1843-1905), hydrographer to the RN from 1884 to 1904. US-ACAN accepted the name in 1947, and ANCA followed suit.

Wharton Creek. 77°39' S, 162°45' E. A meltwater stream, 1 km long, flowing NE along the S edge of Suess Glacier to the SW corner of Lake Chad, in the Taylor Valley of Victoria Land. Named by US-ACAN in 1996, for Robert A. Wharton, Jr., biologist at the Desert Research Institute, in Reno, principal investigator in the first Long Term Ecological Research (LTER) project in the McMurdo Dry Valleys. He had conducted pioneering research with microbial mats in Lake Hoare, from 1978.

Mount Wheat. 64°50' S, 63°23' W. A prominent mountain, rising to about 1100 m, it forms the highest point in the Wall Range, rising immediately N of Thunder Glacier, in the central part of Wiencke Island, in the Palmer Archipelago. Probably discovered by BelgAE 1897-99, which circumnavigated Wiencke Island in 1898. ArgAE 1952-53 surveyed it, and it appears on their 1953 chart as Pico Luisa, in association with their name for what the British call Luigi Peak (Luigi in Spanish is "Luis"). Named by US-ACAN for Lt. Cdr. Luther William Wheat, USN, VXE-6 helicopter commander with OpDF during the period 1975 to 1978. In 1978 he became aviation projects manager with the NSF's Division of Polar Programs; and was a member of US-ACAN, 1979-88. UK-APC accepted the name on June 11, 1980.

Cape Wheatstone. 72°37' S, 170°13' E. A bold, steep rocky bluff, capped by a dome of ice, forming the S end of Hallett Peninsula, 6 km southwestward of Cape Cotter, and marking the N entrance to Tucker Inlet, in Victoria Land. Discovered on Jan. 15, 1841, by Ross, and named by him for Charles Wheatstone (1802-1875; knighted in 1868), physicist and inventor of the electric telegraph. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Wheatstone Glacier. 64°44' S, 62°31' W. A glacier, flowing NW from Arctowski Peninsula into Errera Channel, E of Danco Island, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O in 1956-57. Named by UK-APC on Sept. 23, 1960, for Sir Charles Wheatstone (*see* **Cape Wheatstone**). US-ACAN accepted the name in 1965.

Cabo Wheeler *see* **Cape Wheeler**

Cape Wheeler. 73°58' S, 60°58' W. An abrupt rock scarp rising to 460 m, it forms the N side of the entrance to Wright Inlet, on the Lassiter Coast, on the E coast of Palmer Land. It was photographed aerially on Dec. 30, 1940, during USAS 1939-41, but due to a navigational error, was plotted in 74°40' S, 60°30'W. As such, it appears on a 1942 USAAF chart, and on a 1943 U.S. Hydrographic Office chart. Photographed again aerially on Nov. 21, 1947, by RARE 1947-48, and surveyed from the ground in Dec. 1947, by a joint sledging party consisting of RARE personnel and Fids from Base E. Named by Ronne in 1948, as Cape John Wheeler, for John Neville Wheeler (1886-1973), president of the North American Newspaper Alliance (NANA), 1931-64, and a sponsor of the expedition. It appears as Cape John Wheeler on the 1948 American Geographical Society's map, but as Cape Wheeler on Ronne's own map of that year. US-ACAN accepted the shorter name in 1949, and UK-APC followed suit on Jan. 28, 1953. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. In those days it was plotted in 73°58' S, 61°05' W. It appears on a 1952 Argentine chart as Cabo Wheeler, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The coordinates were corrected by USGS from USN air photos taken in the mid-1960s, and it appears, with those new coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1977 British gazetteer.

Wheeler Bay. 66°18' S, 56°06' E. A bay, 5 km wide, indenting the Kemp Coast 3 km NW of Magnet Bay, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named this bay Brørvika (i.e., "brother bay"), and the rocks at its entrance Brødrene (i.e., "the brothers"). Re-mapped by ANARE in 1956-57, and, on April 29, 1958, ANCA changed the name (for themselves only; *see* **Brødrene Rocks**) of the rocks to Wheeler Rocks. ANARE renamed the bay at the same time for Graeme Trevor Wheeler (b. Nov. 21, 1928), schoolteacher and rock climber from Victoria, weather observer who wintered-over at Mawson Station in 1957. Interestingly, he went south on the *Glacier* in 1956 because the main ANARE expedition ship didn't have room for him.

Wheeler Rocks *see* **Brødrene Rocks**

Wheeler Valley. 77°12' S, 161°42' E. The ice-free hanging valley on the SW side of Miller Glacier, immediately SE of Mount Mahoney, in Victoria Land. Named by VUWAE 1959-60 for Ralph H. Wheeler, deputy leader and surveyor of the party. He was back as leader of VUWAE 1960-61. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Whelan Nunatak. 70°09' S, 64°17' E. An isolated nunatak, 8 km (the Australians say 13 km) NW of Mount Starlight, in the Athos Range of the Prince Charles Mountains. Mapped by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for Ronald F. "Ron" Whelan, radio officer at Davis Station in 1964. He also wintered-over at Macquarie Station in 1966. US-ACAN accepted the name in 1970.

Whetter, Leslie Hatton. b. Dec. 10, 1882, Dunedin, NZ, son of Richard Gill Whetter and his wife Edith Marion Hatton. After graduating from Otago University, he was surgeon on AAE 1911-14. He was a keen plantsman, and a member of the NZ Royal Society in 1944-45. He died in 1956, in Matakana, near Auckland.

Whetter Nunatak. 66°58' S, 143°01' E. A small but conspicuous rock outcrop on the coastal ice slopes near the sea, 13 km (the Australians say 15 km) ENE of Cape Denison, on the E shore of Commonwealth Bay, in George V Land, in East Antarctica. Discovered by AAE 1911-14, and named by Mawson for Leslie Whetter. US-ACAN accepted the name in 1955, and ANCA followed suit.

Mount Whewell. 72°03' S, 169°35' E. A massive, prominent mountain, rising to 2945 m, between the mouths of Ironside Glacier and Honeycomb Glacier, NE of Mount Sabine, in the Admiralty Mountains, in northern Victoria Land. Named by Ross on Feb. 15, 1841, for the Rev. Dr. William Whewell (1794-1866), master of Trinity College, Cambridge, and also a member of the 1838 committee of the British Association for the Advancement of Science, which advocated Ross's expedition. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Whewell Glacier. 72°04' S, 169°47' E. A steep, narrow glacier draining the E slopes of Mount Whewell (hence the name), and merging with the lower part of Honeycomb Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970.

Whichaway Nunataks. 81°33' S, 28°30' W. A group of rocky nunataks extending for 11 km, and marking the S side of the mouth of Recovery Glacier, in Coats Land. They rise to a height of about 1400 m (in Hopalong Nunatak, the highest and westernmost of the features in this group). Quest Nunatak is the most northeasterly of these features, with Nunatak Shakirova to its immediate W. First seen from the air on Jan. 20, 1957, during BCTAE 1956-58, and visited and surveyed from the ground in March 1957, during the same expedition. So named by them because they did not know which route from here would take them farthest inland. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. A feature, probably this one, appears on a 1959 Argentine chart as Cordón Entre Ríos, named after the Argentine province, but today the Argentines call them Nunataks Entre Ríos.

Mount Whillans. 84°27' S, 64°15' W. Rising to about 870 m, 6 km W of Mount Stroschein, in the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Named by US-ACAN in 1968, for Ian Morley Whillans (b. 1944. d. May 9, 2001), Canadian glaciologist who wintered-over at Palmer Station in 1967. He was back in Antarctica for various subsequent summer seasons until he died. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Whillans Ice Stream. 83°40' S, 145°00' W. An ice stream flowing W to the Gould Coast,

between Mercer Ice Stream and Kamb Ice Stream. It was formerly called Ice Stream B. *See* **Macayeal Ice Stream** for further details. Named by US-ACAN in 2001, for Ian Whillans (*see* **Mount Whillans**). NZ-APC accepted the name on May 15, 2003. The Americans built Upstream B Camp (also called Upstream Bravo) here, in 83°29' S, 138°05' W.

Whiplash Glacier. 72°16' S, 167°42' E. A tributary glacier, 10 km long and 5 km wide, in the Victory Mountains of Victoria Land, it flows northwestward from the Cartographers Range into the lower part of Pearl Harbor Glacier, near that glacier's junction with Tucker Glacier. At that point it is marked by a spectacultar icefall, and the glacier begins to flow E. Named for its shape by the Northern Party of the NZ Federated Mountains Clubs Antarctic Expedition of 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Bahía Whirlwind *see* **Whirlwind Inlet**

Ensenada Whirlwind *see* **Whirlwind Inlet**

Glaciar Whirlwind *see* **Whirlwind Inlet**

Whirlwind Glacier *see* **Whirlwind Inlet**

Whirlwind Glaciers. 67°24' S, 65°32' W. Four prominent converging glaciers — Flint Glacier, Demorest Glacier, Matthes Glacier, and Chamberlin Glacier — which flow from what Wilkins called the Lockheed Mountains into the W side of Whirlwind Inlet, on the E coast of the Antarctic Peninsula. Discovered aerially on Dec. 20, 1928, by Wilkins, and named by him (or rather, this spot where the four glaciers meet, was) because they looked like the radial cylinders of his Wright Whirlwind Engine. The feature appears on a 1933 British chart. Re-photographed aerially in 1940, during USAS 1939-41. On a Chilean chart of 1947 appears the name Glaciar Torbellino (i.e., "whirlwind glacier," which they meant to apply to this feature, but, in fact, misapplied to the glacier that ultimately became known as Robillard Glacier). Charted by FIDS in 1948. US-ACAN accepted the name in 1952. The history of the British rejection of this name is covered in the next entry, Whirlwind Inlet.

Whirlwind Inlet. 67°30' S, 65°25' W. An ice-filled inlet, 20 km wide at its entrance, indenting the Larsen Ice Shelf for about 11 km between Cape Northrop and Tent Nunatak, along the E coast of the Antarctic Peninsula, between the Bowman Coast and the Foyn Coast. Wilkins discovered it aerially on Dec. 20, 1928, and he reported 4 large glaciers flowing into it, which he named the Whirlwind Glaciers (q.v.). It appears on Wilkins' 1929 map, plotted in 67°50' S, 64°30' W. The glaciers were re-photographed aerially in 1940, by USAS 1939-41, but were confused with those flowing into Mobiloil Inlet. On a 1946 U.S. Hydrographic Office chart, there is a feature called Whirlwind Glacier, but the name was wrongly applied to a glacier flowing NE into Trail Inlet. This error was picked up on a 1959 Argentine chart, on which the name Glaciar Whirlwind appears, relating to a glacier on the S side of Trail Inlet. Following surveys and chartings by Fids from Base E in 1946-47, and from Base D in Dec. 1947, UK-APC, on Jan. 22, 1951, deleted the name Whirlwind Glaciers as being superfluous, and transferred the name Whirlwind to the inlet. US-ACAN accepted this in 1952, but, unlike the British, accepted the name Whirlwind Glaciers for the area where the 4 glaciers meet. Whirlwind Inlet appears on a British chart of 1952, and in the 1955 British gazetteer. On two Chilean charts of 1962, it appears, respectively, as Bahía Whirlwind and Ensenada Whirlwind. The Chilean gazetteer of 1974 accepted the name Ensenada Whirlwind. On an Argentine chart of 1954, it is translated as Caleta Remolino, but on one of their 1957 charts it is Caleta Whirlwind. The name Caleta Remolino was accepted by the 1970 Argentine gazetteer.

Whirly. A whirlwind carrying drift snow and pursuing a devious track. Plural: whirlies.

Whisky Bay. 63°53' S, 58°09' W. Between Rink Point and Stoneley Point, on the NW side of James Ross Island. Almost certainly discovered in Oct. 1903, by SwedAE 1901-04, who roughly mapped this area, and showed small bays in this position. Surveyed by Fids from Base D in Dec. 1945, and again in Aug. 1952. On the unpublished chart prepared by ArgAE 1958-59, it appears as Caleta Santa Eduvigis, named for the 13th-century German Saint Hedwig. Named by UK-APC on April 3, 1984, as Whisky Bay, in association with Brandy Bay. US-ACAN accepted the name without modification. It appears in the 1986 British gazetteer.

Whisky Glacier. 63°56' S, 58°02' W. A large tidewater glacier flowing northwestward for 16 km from the area of Massey Heights and Stickle Ridge, to Whisky Bay, on the NW side of James Ross Island. Named by UK-APC on Nov. 15, 2006, in association with the bay.

Whisnant, Jackson Runyon. b. Aug. 24, 1928, Elizabethton, Tenn., son of store clerk Hugh Reid Whisnant and his wife Helen Perry. An airman during OpHJ 1946-47, he married, on July 1, 1950, in Houston, Tex., Gretchen Elizabeth Van Trease. He retired as a lieutenant colonel, USAF, and died on Feb. 4, 1969.

Whisnant Nunatak. 69°59' S, 73°06' E. A small coastal nunatak protruding above the terminus of Rogers Glacier, between the McKaskle Hills and Maris Nunatak, at the E side of the Amery Ice Shelf. John H. Roscoe, U.S. cartographer, delineated it in 1952, working from air photos taken in March 1947 by OpHJ 1946-47, and named it for J.R. Whisnant (q.v.), who was an airman here on OpHJ 1946-47. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Whistle Pass. 69°48' S, 70°25' W. A snow pass trending NE-SW at an elevation of about 1050 m, at the head of Sullivan Glacier, between that glacier and Hampton Glacier, in the N part of Alexander Island, it provides access to and from the upper part of Hampton Glacier. Surveyed by BAS from 1968, it was so named by them because the pass falls away steeply to the SW between high cliffs, so that the descent by sledge is fast and exhilarating, as suggested by the name, which was accepted by UK-APC on Dec. 8, 1977, and subsequently by US-ACAN. It appears in the 1980 British gazetteer.

Whistler Nunatak. 74°50' S, 71°40' W. A nunatak, rising to about 1500 m, W of Mount Mende, in the Sky-Hi Nunataks of Ellsworth Land. Named by US-ACAN in 1987 for the whistler effect caused by amplitude change of radio signals in the upper atmosphere. UK-APC accepted the name on Feb. 15, 1988.

Whistlers. Very low frequency radio waves generated by lightning in the northern hemisphere, and received in Antarctica by its polar opposite points. They provide much information about the Earth's magnetosphere.

Whistling Bay. 67°30' S, 67°37' W. An open bay, 6 km wide, it indents the SW part of Arrowsmith Peninsula for 4 km between Longridge Head and Cape Sáenz, on the Loubet Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37. Re-surveyed by Fids from Base E in Sept. 1948, and they named it it for the curious and unidentified whistling sounds heard here at the time. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1961 British chart. The Argentines call it Bahía Silbido (which means the same thing).

Roca Whit *see* **Whit Rock**

Whit Rock. 66°03' S, 65°56' W. A rock awash, between the Trump Islands and the Saffery Islands, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57. First shown (but not named) on an Argentine chart of 1957. Named by UK-APC on July 7, 1959, for its small size. US-ACAN accepted the name in 1971. Today, the Argentines call it Roca Whit.

Whitaker, Terence Michael. b. Sept. 21, 1947. BAS marine biologist who wintered-over at Signy Island Station in 1972 and 1973.

Whitcomb Ridge. 73°07' S, 166°00' E. A high, ice-covered ridge along the S side of the head of Gair Glacier, 10 km SE of Mount Supernal, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Jean P. Whitcomb, electronics technician at the National Bureau of Standards, radio scientist at McMurdo in 1965-66 and 1966-67.

Mount Whitcombe. 76°47' S, 162°11' E. A large mountain, rising to 1425 m, just N of Mount Perseverance and connected to it by a high ridge, between the lower Fry Glacier and the lower Benson Glacier, 6 km southward of Mount Davidson, and W of Mount Arrowsmith, at the W side of Evans Piedmont Glacier, in Victoria Land. It is particularly prominent from the area around Granite Harbor. It was used as a reference point in Oct. 1957 by the Northern Survey party of BCTAE 1956-58, and named by them for its similarity to the mountain of that name in Canterbury, NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Mount White. 85°09' S, 170°18' E. A massive mountain rising to 3470 m (the New Zealanders say 3048 m), 4 km NNW of Mount Henry

Lucy, and E of Mount Iveagh, between the Keltie Glacier and the Mill Glacier, it is the highest elevation in the Supporters Range, on the E side of the Beardmore Glacier. Discovered by BAE 1907-09, and named by Shackleton for the secretary of the expedition. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

White, Frank. b. Aug. 26, 1895, South Petherton, near Yeovil, Somerset, son of mason Amos White and his wife Anna. He left Liverpool in 1913, bound for the Falkland Islands, and on June 24, 1921, in Stanley, married Falkland Islander Frederica May Newman. He joined Operation Tabarin in 1944, and was cook at Port Lockroy Station for the winter of 1945, i.e., during the second phase of Tabarin. He was due to go to Base B for the winter of 1946, but instead stayed on at Lockroy for that winter, and thus was one of the first Fids. He, Mike Hardy, and Gordon Stock left Lockroy on Jan. 27, 1947, on the *Fitzroy*. He went to work at Albermarle Sealing Station, on West Falkland, and died at Fox Bay, West Falkland, on Aug. 19, 1952.

White, Frederick William "Freddie." b. Aug. 29, 1916. A ship's captain with the Falkland Islands Company, he was skipper of the *Fitzroy* in 1946-47 and 1947-48, and 1953. He married Elena Jane, and they raised a family in Sussex. He died in Chichester in 1975.

White, George Frederick C. b. April 8, 1935, Wheatenhurst, Glos, son of George White and his wife Mary L. Short. He joined FIDS in 1957, as a diesel electric mechanic, and wintered-over at Signy Island Station in 1958 and 1959. They would refer to him as "George the Rough," to distinguish him from George Lewis, whom they called "George the Smooth." His only interest in Antarctica was in his job. He was back at Base D for the 1961 winter. He lived in Cheltenham, and died in Gloucestershire in April 2000, possibly as a result of heavy smoking.

White, James *see* **USEE 1838-42**

White, Martin Guy. b. Feb. 1, 1944, Brentford, Mdsx, and raised there and in Newhaven. He graduated in zoology, from Leicester, in 1965, and joined BAS, as a marine biologist, wintering-over at Signy Island Station in 1966 and 1967, primarily to study the biology of a giant isopod, and other life in the sea. He became an expert Antarctic diver, and was also at South Georgia, and later at Signy again. From 1977 his study was fish, and from 1977 to 1987 he was actively involved in the BIOMASS program, going into Antarctic waters on the *John Biscoe*, for 5 summers. In Jan.-March 1989 he was on the *Polarstern*, and was with the French at Adélie Land, Jan. and Feb. 1998. He died of stomach cancer on July 3, 1999, at Conington, Cambridgeshire.

White, Patrick Osmund "Paddy." Son of R.F. White, of Whitton Dene, Hounslow. He joined FIDS in 1956, as a meteorologist, and, after 3 months meteorological training at Stanmore, Mdsx, left England on the *Shackleton*, in Oct. 1956, bound for Montevideo and the Falkland Islands. He wintered-over at Base B in 1957, Base W in 1958, and Signy Island Station in 1960. In Antarctica, they called him "The Wag." At least one ex-Fid described him as an ex-paratrooper, 6 foot 2, a James Bond type. At least another ex-Fid described him as not a James Bond type. Everyone agrees he was a Catholic, and some say he became a monk. As for his origins, he does not seem to have had an Irish accent, although he was not born in England or Wales. He was a good friend of Colin Johnson's. Brother Patrick has proved elusive.

White, Peter. b. Scotland. Cook on the *Balaena* during DWE 1892-93.

[1]**White, William**. The mulatto cook on the *Huron*, in the South Shetlands, 1820-22.

[2]**White, William** *see* **USEE 1838-42**

[3]**White, William**. Able seaman on the *William Scoresby*, 1926-30.

White Basin. 78°00' S, 168°00' E. A subterranean feature (beneath the Ross Sea), between Ross Island and White Island. Named for the island.

White Cloud Glacier *see* **Whitecloud Glacier**

The White Company. 61°07' S, 55°09' W. A group of snow-covered peaks, rising to about 760 m, N of Endurance Glacier and W of Pardo Ridge, on the N side of Elephant Island, in the South Shetlands. Named in 1970-71 by the British Joint Services Expedition, as a descriptive name inspired by Conan Doyle's novel. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears in the 1974 British gazetteer. The Argentines translated it as Montañas Compañía Blanca, and it has been appearing as such since about 1977. Last plotted by the UK, in late 2008.

White Cross Mountains *see* **Mount Guernsey**

White Eagle Glacier. 62°08' S, 58°08' W. Above Lions Rump, it is an outlet of the Krakow Icefield, on King George Island, in the South Shetlands. Named by the Poles in 1980, for their national symbol.

White Escarpment. 79°29' S, 85°37' W. In the W part of the Heritage Range, it extends for 24 km between the heads of Splettstoesser Glacier and Dobbratz Glacier. Named by the University of Minnesota Geological Party here in 1963-64, for CWO Ronald B. White, pilot with the 62nd Transportation Detachment, who helped the party. US-ACAN accepted the name in 1966.

White Glacier. 75°45' S, 140°50' W. A broad tributary glacier, flowing westward into Land Glacier, on the N side of Mount McCoy, in Marie Byrd Land. Named by Byrd for Gen. Thomas Dresser White (1901-1965), USAF, OpDF planner. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970.

White Hill. 69°25' S, 76°06' E. A prominent hill on Stornes Peninsula, in the Larsemann Hills. It is distinguished by white quartz deposits, hence the name given by the 1986-87 ANARE field party here. ANCA accepted the name on Nov. 24, 1987. The Chinese call it Liupan Shandi.

[1]**White Island**. 66°44' S, 48°35' E. An ice-covered island, 22 km long and 8 km wide, between 10 and 13 km N of Sakellari Peninsula, in Enderby Land, between Amundsen Bay and the E part of the entrance to Casey Bay, more in the area of the latter. Discovered by Riiser-Larsen in Jan. 1930, and named by him as Hvitøya (i.e., "white island"). Also seen as Hvit Øya and Kvitøya. Subsequent to this discovery it was not seen again, and its existence was doubted, until March 1957, when the personnel on the *Lena* proved it. It was seen again by an ANARE party led by Don Styles on the *Thala Dan*, in Feb. 1960. ANCA translated the name, and US-ACAN followed suit in 1961.

[2]**White Island**. 78°08' S, 167°24' E. A huge, nunatak-type land mass, about 24 km long (the New Zealanders say more like 16 km) in a N-S direction, about 6 km wide, it has 4 craters, the highest of which rises to 701 m. The feature is in the form of a grounded island protruding through the Ross Ice Shelf, just S of Ross Island, and about 5 km E of Black Island, in the Ross Archipelago. Discovered in 1902 by BNAE 1901-04, and named by Scott for its mantle of snow. US-ACAN accepted the name in 1947, and NZ-APC followed suit. It was designated SSSI #18.

White Island Automatic Weather Station. 77°54' S, 168° 12' E. An American AWS at an elevation of 30 m, located on White Island (see the entry immediately above). Installed in Dec. 1998, it operated until Jan. 1999, when it was removed.

White Islands. 77°17' S, 153°10' W. A group of ice-covered islands, extending N-S group for about 16 km, at the E margin of the Swinburne Ice Shelf, and near the S terminus of Butler Glacier, in the S part of Sulzberger Bay. Described on the rude map drawn up of this area by ByrdAE 1928-30 as "low ice cliffs" that rise above the level of the ice shelf, they were later named by Byrd for Paul Dudley White (1886-1973), heart surgeon and consultant to Byrd during OpHJ 1946-47. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970. The group includes Chandler Island, Webber Island, and Olson Island.

White-Landspitze. 70°24' S, 161°06' E. A peak on the E side of Serrat Glacier, in the Kavrayskiy Hills, in the area of Rennick Glacier. Named by the Germans.

White Massif. 70°32' S, 67°13' E. A rock massif, about 5 km ENE of Thomson Massif, in the Aramis Range of the Prince Charles Mountains. Mount Johansen and Mount Cooper rise from it. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Robert F. "Bob" White, of Camberwell, Vic., senior technician (electronics), who wintered-over at Mawson Station in 1963 (*see* **Deaths**, 1963). He is buried under a rock cairn on West Arm, overlooking Mawson Station. US-ACAN accepted the name in 1967.

[1]**White Nunataks** *see* **Arkhangel'skiy Nunataks**

[2]**White Nunataks**. 84°46' S, 66°05' W. Three

nunataks, rising to about 1200 m, 5 km N of the NW tip of the Mackin Table, in the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1968, for Noah D. White, radioman who wintered-over at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

White Out Automatic Weather Station *see* **Whiteout AWS**

White-out-Hügel. 73°25' S, 167°09' E. A hill on the W side of Ridgeway Glacier, in the Mountaineer Range, on the coast of Victoria Land. Named by the Germans.

White Spur. 71°19' S, 160°16' E. Forms part of the S wall of Allegro Valley, as it projects eastward from the central portion of the Daniels Range, in the Usarp Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Russell F. White, USARP meteorologist at Pole Station in 1967-68.

White Strait. 78°13' S, 166°48' E. A small, ice-filled strait between Black Island and White Island, in the Ross Archipelago. Mapped by BNAE 1901-04. Named by NZGSAE 1958-59, for M. R. White, a mountaineer asssistant with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

White Valley. 76°39' S, 117°57' W. A broad, ice-covered valley, indenting the N part of the Crary Mountains, between Trabucco Cliff and Lie Cliff, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1975, for Franklin E. White, USARP ionosphere physicist at Byrd Station in 1966-67, 1967-68, 1969-70, and 1970-71.

Glaciar Whitecloud *see* **Whitecloud Glacier**

Whitecloud Cove *see* **Whitecloud Glacier**

Whitecloud Glacier. 63°55' S, 59°32' W. Flows N into Charcot Bay on the Davis Coast, on the W coast of Graham Land. The cove W of Almond Point, at the terminus of the glacier, was surveyed by Fids from Base D in 1948, and named by them as Whitecloud Cove, for the prevailing cloud conditions at the time of the survey. US-ACAN accepted this name, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. Following air photos taken by FIDASE in 1956-57, the name was transferred to this glacier, and UK-APC accepted the name Whitecloud Glacier on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such in the 1961 British gazetteer. On a 1963 U.S. Hydrographic Office chart it appears as White Cloud Glacier. The Argentines call it Glaciar Whitecloud. The British and Argentines plot it in 63°57' S, 59°31' W.

Whited Inlet. 69°50' S, 160°08' E. An ice-filled inlet along the coast, between Northrup Head and Anderson Peninsula, on the coastal edge of the Wilson Hills, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Master Chief Quartermaster Robert J. Whited, USN, leading chief for the staff and a member of Operations Division responsible for maintaining and updating charts for Task Force 43 during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69).

Whitehall, William. b. Feb. 12, 1931. Army man seconded to FIDS in 1958 as a diesel electric mechanic, and who wintered-over at Halley Bay Station in 1959. After the expedition, he left Cape Town on the *Carnarvon Castle*, arriving back in Southampton on March 18, 1960. His address was Lower Grange Farm, Cauldon Low, near Waterhouses, Stoke.

Whitehall Glacier. 72°43' S, 169°25' E. A large and major valley glacier flowing N into Tucker Inlet between Daniell Peninsula and the SE end of the Victory Mountains, in Victoria Land. Its terminal face abuts against the lower part of the Tucker, but does not contribute ice to it, being stagnant and probably afloat. It has a low gradient, and could probably be used as a sledging route between the Lady Newnes Ice Shelf and the Tucker Glacier-Hallett Station region, but for the fact that the extremely broken area near its terminal face is a maze of melt pools and ice ridges, so sledging in that area would be almost impossible, especially in January and February. So named by NZGSAE 1957-58 partly because of the literal meaning and partly because of its proximity to the Admiralty Mountains (the Admiralty office in London being in Whitehall). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Whitehorn, Daniel *see* **USEE 1838-42**

Whitehouse, John. b. 1740, London. On Dec. 17, 1771 he joined the *Resolution* as master's mate, for Cook's 2nd voyage, 1772-75. Immediately after the trip he was promoted to lieutenant, and was 2nd lieutenant on the *Arrogant* in 1780 when he died.

Whiteman, Paul Ian. b. Nov. 25, 1938. BAS meteorological observer who wintered-over at Halley Bay Station in 1962, 1963, and 1966, the last time as base leader.

Whiteout. Also spelled white-out, or white out. A dangerous weather and optical phenomenon caused by low cloud cover and snow crystals, wherein the overcast sky and the land surface (i.e., the snow) reflect each other, so that a pilot (for example) sees only white, and is disoriented. There are no shadows or contrasts, and no horizon or visible features. Larry Gould described a white out in 1927 thus: "Like marching into a milky white wall."

Whiteout Automatic Weather Station. 77°53' S, 168°09' E. An American AWS on Ross Island, at an elevation of 30 m, that was installed in Dec. 1998, and operated until Jan. 1999. Name also seen as White Out.

Whiteout Nunatak. 77°35' S, 86°24' W. A nunatak on the SE side of Mount Wyatt Earp, immediately SW of Matsch Ridge, in the N part of the Sentinel Range. This feature does not appear in the U.S. gazetteer, or the SCAR composite gazetteer, but there are many references to it elsewhere.

Whiteout Nunataks. 69°35' S, 65°08' E. A group of nunataks about 17 km NE of Summers Peak, in the Stinear Nunataks of Mac. Robertson Land. First visited in Feb. 1970 by geologists with the ANARE Prince Charles Mountains Survey Party, and so named by them for the weather conditions encountered by them. ANCA accepted the name. *See also* **King Nunataks**.

Mount Whiteside. 67°19' S, 59°29' E. A low, conical peak, rising to about 190 m to surmount the E extremity of Fold Island, about 1 km W of Green Point, in Kemp Land, in Enderby Land. Discovered in Feb. 1936 by the personnel on the *William Scoresby*. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Punta Whiteside *see* **Whiteside Hill**

Whiteside, Graham. He wintered-over at Casey Station in 1975, at Davis Station in 1980, at Mawson Station in 1990 and 1994, and at Macquarie Island in 1997.

Whiteside Hill. 65°08' S, 61°38' W. An ice-covered hill rising to 330 m (the British say about 345 m; the Chileans say 335 m), at the S side of the mouth of Evans Glacier, between that glacier and Foyn Point, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. The area around Evans Cove was discovered aerially by Wilkins on Dec. 20, 1928. The feature which is the subject of this entry was first surveyed and charted as a point by Fids from Base D in Nov. 1947, and named descriptively by them as Whiteside Point. UK-APC accepted that name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer. Further surveyed by Fids from Base D in Sept. 1955, and they redefined it as a hill. However, on an Argentine chart of 1957, it appears as Punta Whiteside, and that was the name accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. On July 7, 1959, UK-APC accepted the new name Whiteside Hill, and US-ACAN followed suit in 1960.

Whiteside Point *see* **Whiteside Hill**

Whitesided dolphin *see* **Dusky dolphin**, **Hourglass dolphin**, **Peale's dolphin**

Whiteston, Nicholas *see* **USEE 1838-42**

Whitewhale Bastion. 65°37' S, 62°30' W. A prominent L-shaped mass which rises to about 1150 m and dominates Starbuck Glacier, 16 km from that glacier's terminus, between that glacier and Pippin Peaks, on the Oscar II Coast, on the E side of Graham Land. Surveyed by BAS personnel from Base E in 1963-64. Its E face consists of walls of white granite, hence the name given by UK-APC on July 21, 1976, with the *Moby Dick* connotation in mind. US-ACAN accepted the name later in 1976.

Whitfield, Thomas. b. Nov. 1, 1868, Edgmond, Newport, Shropshire, son of gardener William Whitfield and his wife Esther Evans. He joined the RN in July 1889, and was a leading stoker 1st class when he transferred from the *Resolution* to the *Discovery* for BNAE 1901-04. The

biggest man on the expedition, and one of the strongest (Skelton describes him as "rather fat"), he went slightly insane at the end of 1903, after 2 winters in Antarctica, and, especially, after being part of Wilson's sledging party to the emperor penguin colony at Cape Crozier (although, and this may have been a subtle giveaway at the time, while the others were freezing inside the tent, and Blissett was suffering mightily from frostbite, Stoker Whitfield would stand oustide the tent during this trip, smoking his pipe contentedly, and looking as if he were idling in the garden of his home in Shropshire). He retired from the Navy in 1911, joined the Royal Fleet Reserve, and was called back into service in 1914, serving throughout World War I on the *Hirondelle*, the *Victory*, and the *Renown*, and retiring again in 1919, to Droxford, Hants, where he took up gardening. He died there in 1942.

Whitham Bluff. 62°38' S, 61°07' W. A rocky headland between Ocoa Point and Laager Rock, on President Beaches, Byers Peninsula, Livingston Island, in the South Shetlands. Important geologically for the exposed interbedded sedimentary rocks and lava. Named by UK-APC on Dec. 2, 1993, for Andrew Gordon Whitham (b. 1960), BAS sedimentologist between 1985 and 1988 (he did not winter-over).

Mount Whiting. 71°40' S, 62°37' W. A pyramidal mountain, largely ice-free and steep-cliffed on the S side, rising to about 1600 m at the SW side of Rankin Glacier, at Odom Inlet, near the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for topographic engineer Ronald F. Whiting, a member of the USGS geological and mapping party to the Lassiter Coast, in 1970-71. UK-APC accepted the name on July 21, 1976.

Whiting Nunatak *see* **Melfjellet**

Whiting Peak. 80°02' S, 159°29' E. Rising to about 1300 m, 9 km E of the N part of Gaylord Ridge, in the Nebraska Peaks. Named by US-ACAN in 2000, for Larry R. Whiting, a member of the USARP geophysical field party with the Ross Ice Shelf Project, 1973-74 and 1974-75. NZ-APC accepted the name on Feb. 20, 2001.

Whiting Rocks. 65°15' S, 64°20' W. Three rocks, rising to about 5 m above sea level, 0.8 km S of The Barchans, in the Argentine Islands, off the Graham Coast, on the W coast of Graham Land. Named by UK-APC on Nov. 3, 1971, for Colin Stuart Whiting (b. 1944), on the *Endurance*, survey assistant with the RN Hydrographic Survey unit here in Feb. 1969. US-ACAN accepted the name in 1972. It appears on a British chart of 1974, as well as in the 1974 British gazetteer.

Whitlock Automatic Weather Station. 76°12' S, 168°42' E. An American AWS on Franklin Island, in the Ross Sea, at an elevation of 206 m. Formerly known as Franklin Island AWS, it began operating on Jan. 23, 1982. Named for Lt. John Whitlock, USN, who was working on the *Glacier* when he deployed it. It was visited on Jan. 18, 2005, Feb. 5, 2005, and again on Feb. 10, 2005.

Whitmer Peninsula. 75°50' S, 162°45' E. A broad, ice-capped peninsula, about 11 km long, 11 km wide, between Cheetham Ice Tongue and Harbord Glacier Tongue, on the E coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for Lt. (jg) R.D. Whitmer, USN, who wintered-over at Williams Field in 1956. He was back with the U.S. naval construction battalion during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Whitmill Nunatak. 74°53' S, 73°09' W. Rising to about 1300 m in the W part of the Grossman Nunataks, 8 km SSW of the Smith Nunataks, and ESE of the Lyon Nunataks, where Ellsworth Land meets the S part of Palmer Land. Named by US-ACAN in 1988, for Leland D. Whitmill, USGS cartographic technician with the field party on Byrd Glacier and Darwin Glacier in 1978-79. UK-APC accepted the name on Feb. 15, 1988.

Whitmore Mountains. 82°35' S, 104°30' W. An isolated group that contains 3 mountains, including Mount Chapman, and a cluster of nunataks, extending over 24 km. Visited and surveyed on Jan. 2, 1959, by Bill Chapman (*see* **Mount Chapman**), cartographer with the Horlick Mountains Traverse Party of 1958-59, and named by him for George D. Whitmore, chief topographic engineer with USGS, and a SCAR cartographer. US-ACAN accepted the name in 1962.

Whitney, Herbert Walter "Herb." b. March 20, 1901, Revere, Mass., son of Arthur Jones Whitney and Anna Katherine Hoffman. He was a contractor for heavy construction work in New England when he joined the Seabees in 1942, for World War II, serving in the Philippines among other places. After the war, he returned to civilian life, and then 4 years later was back in uniform, as a lieutenant commander, USNR, in the Civil Engineer Corps, and accepted command of MCB-3 on Nov. 15, 1950. In 1951 he became CO of MCB-5, and as such was chief of the Seabees during OpDF I (i.e., 1955-56), and OpDF III (i.e., 1957-58), traveling south on the *Glacier*, and wintering-over at Little America in 1956, the highest ranking officer on the continent. He returned to Beachmont, Mass., in Feb. 1957. He married Grace Edith Crosby and died on May 27, 1985.

Whitney, Kembal *see* **USEE 1838-42**

Whitney Glacier. 85°39' S, 160°00' W. A tributary glacier, 10 km long, flowing NE from Mount Ellsworth into Amundsen Glacier just S of Robinson Bluff, in the Queen Maud Mountains. Discovered and mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Raymond L. Whitney, meteorologist who wintered-over at Pole Station in 1961.

Whitney Island. 69°40' S, 68°31' W. The easternmost and second largest of the Rhyolite Islands, closs offshore from the Rymill Coast, on the W coast of the Antarctic Peninsula, at George VI Sound. Named by US-ACAN in 1977, for Farrell W. Whitney (b. Oct. 11, 1929, Conway, Mass.), USN, senior chief aviation bosun's mate with VX-6 at McMurdo and Christchurch, NZ, for various OpDF deployments between 1958 and 1971. UK-APC accepted the name on May 21, 1979.

Whitney Peak. 76°26' S, 126°03' W. A conspicuous peak, rising to 3005 m, 5 km NW of Mount Hampton, from which it is separated by a distinctive ice-covered saddle, in the most northerly part of the Executive Committee Range of Marie Byrd Land. Lichens are found here. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Herb Whitney.

Whitney Point. 66°15' S, 110°31' E. A rocky point at the N side of the entrance to Powell Cove, on Clark Peninsula, on the E side of the Windmill Islands, on the Budd Coast. Mapped from air photos taken by OpHJ 1946-47, and at first thought to be a very small island. It was photographed again aerially by SovAE 1956. However, in 1957 it was surveyed from the ground by Carl Eklund, and found not to be an island after all. Named by US-ACAN in 1963, for photographer's mate I.A. Whitney, USN, a member of OpHJ 1946-47.

Cape Whitson. 60°46' S, 44°32' W. A point at the S end of the peninsula that separates Methuen Cove from Aitken Cove, on the S coast of Laurie Island, in the South Orkneys. Surveyed on Sept. 22, 1903 by ScotNAE 1902-04, charted by them, and named by Bruce for Thomas Burnby Whitson (b. March 10, 1869, Edinburgh. d. Oct. 1, 1948, Edinburgh), accountant, and secretary of the expedition, and son of Thomas Whitson, of Whitson & Methuen, the expedition's accountants. He was lord provost of Edinburgh, 1929-32, and was knighted. It appears on British charts of 1917 and 1934, and on an Argentine chart of 1930 as Punta Whitson. It was re-charted by the Discovery Investigations personnel in 1933. In 1947 it appears on an Argentine chart as Cabo Whitson. US-ACAN accepted the name Cape Whitson in 1952, and UK-APC followed suit on Sept. 28, 1953. As such, it appears in the British gazetteer of 1955. Today, the Argentines tend to call it Punta Whitson.

Punta Whitson *see* **Cape Whitson**

Whittaker, John. Cook on the *William Scoresby*, 1934-35, and steward on the same vessel, 1937-38.

Monte Whitten *see* **Whitten Peak**

Pico Whitten *see* **Whitten Peak**

Whitten, Robert Wakeham. b. 1908. Sealer from Newfoundland, who had Arctic experience (he had been on Italo Balbo's 1933 expedition to Labrador), when he was picked by Capt. Bobby Sheppard (he was a relative) to be 2nd mate on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Whitten Peak. 63°25' S, 57°04' W. A pyramidal peak, rising to 445 m, and forming the NE end of Blade Ridge, at the W side of the head of

Hope Bay, Trinity Peninsula, on the E coast of the extreme NE end of the Antarctic Peninsula. It is separated from Mount Flora (which stands to the E) by a glacier. Discovered during SwedAE 1901-04, and roughly mapped by them in Jan. 1902. In 1945 it was surveyed by FIDS, who named it for Robert Whitten. UK-APC accepted the name on Jan. 21, 1949, and it appears on a British chart of 1950, and in the British gazetteer of 1955. US-ACAN accepted the name in 1952. It was surveyed again by FIDS in Jan. 1955. It appears on an Argentine map of 1953, as Monte Whitten, and on a 1955 Chilean map as Pico Whitten. However, in the Chilean gazetteer of 1974, it appears as Monte Whitten.

Whittle, John Samuel. b. April 8, 1813, Norfolk, Va., son of Irish immigrant merchant Fortescue Whittle and his wife Mary Ann Davies. He graduated from the University of Pennsylvania in 1835, and was assistant surgeon on USEE 1838-42, during which he did a few tours on the *Vincennes*, transferred to the *Sea Gull*, later joined the *Peacock* at Honolulu, and took part in Johnson's voyage to Deception Island. He left a diary. On Dec. 12, 1843, in Lunenburg Co., Va., he married Jane Atkinson Patterson, who was only 17. He served in the Mexican War. His second wife, Anne Southgate, he married on May 3, 1848, in Norfolk, and by her he had a son. One of his many brothers was Bishop of Virginia. He died on April 5, 1850.

Whittle Glacier. 66°22' S, 114°13' E. A short channel glacier flowing NE into Colvocoresses Bay, and terminating in Whittle Glacier Tongue, 10 km NW of Williamson Glacier. Delineated from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1955, for J.S. Whittle.

Whittle Glacier Tongue. 66°20' S, 114°24' E. The rather small terminus of Whittle Glacier, extending seaward into Colvocoresses Bay. Delineated from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1956, in association with the glacier.

Whittle Peninsula. 63°49' S, 59°48' W. A peninsula, 8 km long, terminating in Cape Kater, and forming the W limit of Charcot Bay, on the Davis Coast, on the NW coast of Graham Land, just SE of Hoseason Island. Surveyed in Dec. 1902 by SwedAE 1901-04. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D, in 1959-60. In keeping with the trend of naming features in this area after aviation pioneers, this peninsula was named by UK-APC on Feb. 7, 1978, for Sir Frank Whittle (1907-1996), known to the British world as the inventor of the jet engine. It appears in the British gazetteer of 1980. US-ACAN accepted the name.

Whittock, Robert John "Bob." b. July 7, 1930, Abertillery, Monmouthshire, son of Jack Whittock and his wife Irene Nay. His father was an installation engineer with a firm dealing with large commercial electric furnaces, and traveled all over the world. Bob was raised in Birmingham and London primarily, and in 1941 was evacuated to Melton Mowbray, Leics. In 1944 he returned to Birmingham, and became an apprentice designer, a career interrupted by 2 years national service in the Navy, 1948-50, during which he served on the *Vanguard*. After his service, he saw an ad in the *Daily Telegraph* for FIDS, went to London for the interview with Johnny Green, and, just as he thought the interview was going against him, Green asked him, "Were you in the Scouts?" "Yes." "In Birmingham?" "Yes." Did you know so-and-so?" "Yes." "And so-and-so?" "Yes." Green, an old scout from Sutton Coldfield, was duly impressed, and as Bob reached the doorway, which seemed about 100 yards from the interviewing desk, he turned and saw Green and the other lads on the board nodding their heads. That was how he joined FIDS in 1954, as an ionosphere physicist, and on Oct. 4, 1954 he left Southampton on the *John Biscoe*, bound for Montevideo, then on to Port Stanley, and, still on the *Biscoe*, down to Port Lockroy Station, where he wintered-over in 1955. He left Lockroy on the *Shackleton* on Feb. 27, 1956, that ship taking him all the way home. He went back into designing, then started his own business, which he ran for 20 years. Then he became a hotel inspector for AA, then to the English Tourist Board, in London, as chief inspector. He retired to Wales with Carol, one of his inspectors.

Whitworth Ridge. 70°24' S, 66°08' E. A rock ridge, about 3 km long in an E-W direction, about 3.5 km NE of Mount Leckie, in the Porthos Range of the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956, and named by ANCA for Roy Whitworth, geophysicist who wintered-over at Wilkes Station in 1963 and 1964. US-ACAN accepted the name in 1967.

Whymper Spur. 80°25' S, 21°29' W. A rock spur, rising to about 1250 m, eastward of Blanchard Hill, in the central part of the Pioneers Escarpment, in the E part of the Shackleton Range. Named by UK-APC on Jan. 5, 1972, for Edward Whymper (1840-1911), British artist who made the first ascent of the Matterhorn (the one in the Alps, that is), on July 14, 1865. In 1861-62, Mr. Whymper designed what became the Whymper tent. The name appears in the British gazetteer of 1974. US-ACAN accepted the name.

Whyte, Fraser Alexander. They called him "Och" (rhymes with "notch," not "loch"). b. 1936, Dunoon, Argyllshire. FIDS radio operator who wintered-over at Base B in 1960, and at Base F in 1961.

Widden, Mark *see* **USEE 1838-42**

Point Widdows. 67°42' S, 45°25' E. A point on a low, dark, rock outcrop, at the W side of the entrance to Freeth Bay, on the coast of Enderby Land. Plotted from air photos taken by ANARE in 1956. First visited in 1960, by an airborne ANARE survey party led by Syd Kirkby. Named by ANCA for E. Ian Widdows, meteorologist who wintered-over at Mawson Station in 1959. He developed acute appendicitis while at the base. Graham Budd operated on him, and he recovered. US-ACAN accepted the name in 1965.

Widdows, Edward *see* **USEE 1838-42**

Widdows Point *see* **Point Widdows**

Glaciar Widdowson *see* **Widdowson Glacier**

Widdowson Glacier. 66°43' S, 65°46' W. Flows NW into the SE part of Darbel Bay, between Drummond Glacier and McCance Glacier, on the Loubet Coast, on the W coast of Graham Land. Partly surveyed by Fids from Base E in 1946-47. Photographed aerially by FIDASE 1956-57, and further surveyed from the ground by Fids from Base W that season. FIDS cartographers mapped this feature from all these efforts. In keeping with the practice of naming various features in this area after biochemists, this glacier was named by UK-APC on July 7, 1959, for Dr. Elsie May Widdowson (1906-2000), of the department of experimental medicine, at Cambridge, 1938-66, an authority on expedition food requirements. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Glaciar Widdowson.

Wideopen Islands. 63°00' S, 55°49' W. Three exposed, isolated, wide-open islands, each one having attendant rocks, with a maximum elevation of about 60 m above sea level, lying E of d'Urville Island, off the NE entrance to the Larsen Channel, 11 km to the N of Boreal Point (which is on Joinville Island), on the S side of Bransfield Strait. Roughly surveyed from a distance by Fids from Base D in 1953-54. That same season ArgAE charted them, and very definitely divided them up into groups — those in the NE, those in the W, and those in the SE, calling them respectively Islotes Furque (with Islote Furque being the largest not only in this sub-group, but also in the entire group), Islotes Libertad, and Islotes Morales (see all of those entries). FIDASE photographed them all in 1956-57, and, on Sept. 4, 1957, UK-APC named the whole group descriptively, as the Wideopen Islets. As such, they appear in the British gazetteer of 1958. On July 7, 1959, UK-APC renamed them Wideopen Islands, and as such they appear on a British chart of 1962. US-ACAN accepted the British naming in 1963.

Wideopen Islets *see* **Wideopen Islands**

Mount Widerøe. 72°08' S, 23°30' E. A large mountain, rising to 3180 m, between Mount Walnum and Mount Nils Larsen, or between Gunnestad Glacier and Hansenbreen, in the central part of the Sør Rondane Mountains. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Widerøefjellet, for Viggo Widerøe. US-ACAN accepted the name Mount Widerøe in 1947. Re-mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47.

Widerøe, Viggo. b. Aug. 13, 1904, Christiania (later Oslo), son of Theodor Widerøe, an agent for French wines, Martel cognac, and Dutch vegetable oils, and his wife Carla. Viggo's older brother, Rolf, would become a famous engineer. On Nov. 21, 1933 Viggo left Oslo on the *Stavangerfjord*, bound for New York, to buy a plane. He shipped it back to Norway, and with his

younger brother, Arild, and 3 friends, on Feb. 19, 1934, he founded Widerøe Airlines, which would eventually become the largest local regional airline in Scandinavia. Aerial photographers were the bulk of his clientele in the early days, but it was the first airline to fly scheduled domestic flights within Norway. He was contracted to be pilot on LCE 1936-37. In 1937 his brother Arild was killed when his plane crashed over Oslo Fjord. During World War II Viggo was in the Norwegian Resistance, and was captured, tried by the Nazis in Oslo, and sentenced to 10 years hard labor in a prison camp in Germany. He wasn't freed until the Americans broke into his camp near Darmstadt, in March 1945. The company was sold after the war, but the name was retained. His daughter, Turi, became Norway's first ever female airline pilot. Viggo died on Jan. 9, 2002.

Widerøefjellet *see* **Mount Widerøe**

Widgery, Ashley Bryan N. "Ash." They also called him "Widge." b. 1930, India. His father worked for Indian Railways, and his mother was Indian. The family came to Britain in 1948, and Ash joined FIDS in 1953, as a meteorologist, and left London later that year, bound for Montevideo, and from there to winter-over at Base F in 1954 and 1955. When he got back to the UK, he paid his way through college, and got into photography. In March 1991, in Reading, he married Valeria A. Cumbers, they lived in Ipswich, and then moved to Alicante, Spain.

Widich Nunatak. 85°20' S, 121°25' W. A nunatak, 5.5 km E of Spencer Nunatak, between the Wisconsin Range and the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for George Widich, traverse engineer who wintered-over at Byrd Station in 1960.

Hielos Widmark *see* **Widmark Ice Piedmont**

Widmark Ice Piedmont. 66°17' S, 65°30' W. An ice piedmont rising to about 600 m, and covering a large part of the peninsula between Holtedahl Bay (on the Graham Coast) and Darbel Bay (on the Loubet Coast), on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. In keeping with the practice of naming certain features in this area after pioneers in the prevention of snow-blindness, this ice piedmont was named by UK-APC on July 7, 1959, for Eric John Widmark (1850-1909), Swedish ophthalmologist. It appears on a British chart of 1961. US-ACAN accepted the name in 1971. The Argentines call it Hielos Widmark (which means roughly the same thing).

Widowmaker Pass. 74°55' S, 162°20' E. A dangerous, heavily-crevassed pass leading from Larsen Glacier to Reeves Glacier, between Mount Janetschek and Mount Gerlache, in Victoria Land. Aptly named by NZGSAE 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Wiedenmannglетscher. 78°09' S, 35°30' W. A glacier, due S of the Moltke Nunataks, on the Luitpold Coast. Named by the Germans.

Bahía Wiegand *see* **Fliess Bay**

Isla Wiegand *see* **Harry Island**

Wiegand, Alberto Kahn *see under* **K**

Île Wiencke *see* **Wiencke Island**

Isla Wiencke *see* **Wiencke Island**

Wiencke, Auguste-Karl "Carl." b. Aug. 22, 1877, Christiania (later Oslo), son of German parents Anton Wiencke and his wife Jeanette. Norwegian sailor drowned on Jan. 22, 1898, just S of the South Shetlands, during BelgAE 1897-99. Carl's immediately younger brother, Henry, also became a sailor.

Wiencke Island. 64°45' S, 63°30' W. A high, mountainous island, 26 km long, and between 3 and 8 km wide, in Gerlache Strait, between Anvers Island (from which it is separated by the Neumayer Channel) and the Danco Coast (from which it is separated by the Gerlache Strait), on the W coast of Graham Land, it is the southernmost of the larger islands in the Palmer Archipelago. Discovered on Feb. 8-9, 1898 by BelgAE 1897-99, who circumnaviagted it on those dates, and roughly charted it. De Gerlache named it Île Wiencke, for Carl Wiencke. It appears on a 1900 British chart as Wiencke Island. In March 1904 Charcot made a landing here, during FrAE 1903-05, and further surveyed the island. In 1944 Fids from Port Lockroy Station surveyed part of it. Over the years every nation of Antarctic note has translated it according to their fashion (for example, it is on an Argentine map of 1946, as Isla Wiencke), and, being an unusual name, it has posed problems in spelling occasionally. US-ACAN accepted Wiencke Island in 1947, and it appears as such on a British chart of 1948. UK-APC accepted the name on Sept. 8, 1953, and it appears in the British gazetteer of 1955, and on a British chart of 1959. In 1955 Fids from Base N, and also from the *Norsel*, further surveyed it, and FIDASE photographed it aerially in 1956. It appears in the Chilean gazetteer of 1974, as Isla Wiencke.

Wiener, Murray A. b. June 24, 1916, Broooklyn, son of garage manager Irving Wiener and his wife Nettie, of Russian and Polish ancestry repectively. After 2 years at the University of Missouri, studying journalism, he went to Hollywood, working as a reporter for Jimmy Valentine's "Hollywood Low-Down." He was studying photography at the same time, and from 1935 to 1937 was an assistant cameraman at Universal. He was with MacGregor in the Arctic, in 1937-38, as official photographer in charge of auroral observations and meteorological observer. He went to Columbus, O., got a job in a photographic studio that went bust, and then went to Antarctica as auroral observer at West Base during USAS 1939-41. He enlisted in the Army as a private at Fort Dix, NJ, on Oct. 7, 1941, and soon made lieutenant during World War II. He married in Etowah, Ala., on June 30, 1944. He was a captain and observer with Air Sea Rescue on the *Mount Olympus*, during OpHJ 1946-47, and was a major when he went as cold weather equipment tester on the *Atka* for the United States Navy Antarctic Expedition, 1954-55. He died on Dec. 24, 1988, in Green Valley, Ariz.

Wiener Peaks. 76°49' S, 144°30' W. A group of nunataks 8 km NE of Mount Passel, in the Ford Ranges of Marie Byrd Land. Discovered aerially by members of West Base during USAS 1939-41, and named for Murray Wiener. US-ACAN accepted the name in 1947. Originally plotted in 76°49' S, 144°26' W, it has since been replotted.

Wiens Peak. 83°59' S, 56°19' W. Rising to about 1250 m above sea level, at the E end of Elliott Ridge, on Washington Escarpment, in the S part of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1965, for Rudolph H. Wiens, aurora scientist who wintered-over at Ellsworth Station in 1962. They plotted it in 84°00' S, 56°01' W, which was later corrected. However, UK-APC, who accepted the name on Nov. 1, 1971, entered it in the British gazetteer of 1975, with the coordinates 83°59' S, 56°24' W.

Wiesnet Ice Stream. 73°24' S, 86°52' W. About 24 km long, it flows into the Venable Ice Shelf W of Allison Peninsula. Named by US-ACAN in 2003, for Donald R. Wiesnet, of the National Oceanographic and Atmospheric Administration, a pioneer, from the 1970s to the 1980s, in the use of remotely sensed data for mapping Antarctica, and the first to conceive of the use of polar orbiting satellite data to map the continent completely.

Wiest Bluff. 85°22' S, 176°22' W. A prominent bluff, 2160 m above sea level, just N of the confluence of Shackleton Glacier and Zaneveld Glacier, it marks the W extremity of the Cumulus Hills. Named by US-ACAN in 1966, for William G. "Chip" Wiest, USARP ionosphere physicist with the National Bureau of Standards, who wintered-over at Pole Station in 1964.

Wigg Islands. 67°32' S, 62°34' E. A group of 6 small islands, 10 km NW of the Flat Islands, in Holme Bay, Mac. Robertson Land, and about 15 km NW of Mawson Station. Photographed aerially by LCE 1936-37, mapped by Norwegian cartographers from these photos in 1946, and named by them as Mesteinene (i.e., "middle stones"). Re-named by ANCA for David R. "Dave" Wigg, medical officer who wintered-over at Mawson in 1962. One of the islands was included in a triangulation by surveyor Dave Carstens that year. US-ACAN accepted the name in 1965.

Wiggans Hills. 80°11' S, 27°03' W. A group of exposed rock hills, 3 km long, and rising to about 700 m, on the W side of the terminus of Gordon Glacier, they form the northernmost feature of the La Grange Nunataks, in the Shackleton Range. Photographed from the air by USN, 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Thomas Henry "Harry" Wiggans (b. 1941), BAS general assistant who wintered-over

at Halley Bay in 1968 and 1969. The name appears in the British gazetteer of 1974. US-ACAN accepted the name.

Wiggins Glacier. 65°14' S, 64°03' W. A glacier, 16 km long, flowing W from Bruce Plateau, into Penola Strait, between Moot Point and Edge Hill, just S of Blanchard Ridge, on the W coast of Graham Land. It was roughly mapped in its upper reaches in Sept.-Oct. 1909, by FrAE 1908-10, and named by Charcot as Glacier du Milieu (i.e., "middle glacier"). It first appears as Middle Glacier on a translation of Charcot's map of 1911. Photographed aerially by FIDASE 1956-57. Feeling (quite rightly so) that a more imaginative name was required, in keeping with the practice of naming certain features in the area after prominent mappers of the Directorate of Overseas Surveys (but only those involved with mapping the British Antarctic Territory), UK-APC renamed this glacier on July 7, 1959, as Wiggins Glacier, for William Denison Clare Wiggins (b. 1905, Kenya. d. Jan. 1971), surveyor and cartographer, assistant (later deputy) director of Colonial (later Overseas) Surveys, in the 30-year period after World War II. It appears on a British chart of 1960. They plotted it in 65°14' S, 63°54' W. US-ACAN accepted the name in 1971, but with quite different coordinates.

Wigglesworth, James Brian. Known as Brian. b. 1938, Barton, Lancs, son of James Wigglesworth and his wife Ada Cooper. He joined FIDS in 1959, as a meteorological forecaster, and wintered-over at Base F in 1960, and at Base E in 1961. In London, in 1967, he married Sheila E. Epton, and they lived in north London, then on to Hertford, and, in the mid 1970s, to Cambridge.

Wignall Nunataks. 70°10' S, 64°23' E. Two snow-covered nunataks, 3 km (the Australians say 6 km) NW of Mount Starlight, in the Athos Range of the Prince Charles Mountains. Mapped by Australian cartographers from ANARE ground photos taken by Rob Lacey in 1955, and from ANARE air photos taken in 1959 and 1965. Named by ANCA for R. Michael "Mike" Wignall, who wintered-over as weather observer at Davis Station in 1964. US-ACAN accepted the name in 1970. The Russians call them Nunataki Pustovalova.

Wignall Peak. 70°24' S, 66°24' E. A small peak just W of Mount McCarthy, in the E part of the Porthos Range, in the Prince Charles Mountains. Photographed aerially by ANARE in 1956 and 1960, and plotted from these photos by Australian cartographers, who named it for Mike Wignall (*see* **Wignall Nunataks**). US-ACAN accepted the name in 1967. The Russians call it Nunatak Bashnja Vetrov.

Wigzell, Harry. b. June 14, 1891, at 16 Ordinance Road, Greenwich, and baptized on the same day, at Christ Church, Greenwich, son of chemical works laborer Thomas Charles Wigzell and his wife Eliza Ann Palmer. The father died in Salisbury, in 1900, and the mother took Harry and his older sister Bessie back to her home town of Croydon, where she did needlework on shirts. Harry joined the Merchant Navy and trained as a sailmaker. On July 27, 1911, at Cardiff, he signed on to the *Aurora*, as an able seaman, for AAE 1911-14, at £5 per month, and complete with a scar on his right forearm, and an anchor heart cross tattoo'd on his left forearm, with the initials "H.F.C." On Oct. 2, 1911, at Hobart, he signed off for 2 months leave, but was back on Dec. 2, as promised, and went to Antarctica for the first voyage south during the expedition. In 1915, back in London, at 28 Guinness Buildings, Hammersmith to be precise, two rather monumental things happened to him at the same time. On July 10, he was drafted for the Army, as a gunner with the 182nd (Fulham) Brigade of the Royal Field Artillery, and on Aug. 29, four days after he had been promoted to bombardier, he married Charlotte Emily Victoria Bastin, in Hammersmith. On Nov. 1, 1915, he was transferred to the Royal Flying Corps, and on Dec. 16, 1916, while an acting corporal, was thrown in the guardhouse for neglect of duty, and reprimanded the following day by Major Allen. Earlier that year, on May 17, his daughter, Violet May, had been born. On April 1, 1917 he was promoted to corporal, and on April 26, 1918, was transferred to the 8th Border Regiment. He was taken prisoner of war (unwounded), and his wife was notified on July 18, 1918. He was released through the Red Cross, finally arrived in Hull on Jan. 6, 1919, and was demobbed on April 11, 1919. His service obligations ended on March 31, 1920. In 1921 and again in 1922, now at 188 Guinness Buildings, he applied to join the Reserves for 4 years, but, what with his rheumatism, his bad knee, and varicose veins, the Army had to reject him. But, after he appealed the decision, they took him on conditionally, at 8 shillings a week, beginning Feb. 8, 1924, and ending on Feb. 10, 1925. Harry died in 1940, in Hammersmith (only 5 years after his mother died in Croydon), and Charlotte died in Winchester in 1977. Violet married as late as 1964, in Hammersmith, to Leslie Robert Nippierd, and died in 1999, in Andover.

Wikitoria Bank. 77°00' S, 163°50' E. A submarine feature off the coast of Oates Land, in Victoria Land. Named by NZ (the name is Maori for Victoria).

Mount Wilbanks. 75°00' S, 112°53' W. A partly ice-covered, mound-shaped mountain, with a prominent bare rock E face, it forms the E extremity of the Kohler Range, in Marie Byrd Land. First roughly mapped by USGS from air photos obtained in Jan. 1947 by OpHJ 1946-47. Named by US-ACAN in 1967, for John R. Wilbanks, geologist here with the USARP Marie Byrd Land Survey Party in 1966-67.

Wilber, Jedediah *see* **USEE 1838-42**

Mount Wilbur. 86°58' S, 152°37' W. A flat-topped, irregular massif, rising to 2743 m above sea level, 3 km (the New Zealanders say 6 km) E of Mount Weaver, at the head of Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn, during ByrdAE 1933-35, and named by Byrd for Curtis Dwight Wilbur (1867-1954), secretary of the Navy, 1925-29. US-ACAN accepted the name in 1956.

Mount Wilbye. 69°30' S, 71°32' W. Rising to about 2050 m, it is the highest peak in the Lassus Mountains, in the NW part of Alexander Island. Mapped in 1959-60 by Searle of the FIDS, from air photos taken by RARE 1947-48, and plotted by him in 69°25' S, 71°40' W. In keeping with the practice of naming several features in this area after classical composers, this mountain was named by UK-APC on March 2, 1961, for John Wilbye (1574-1638), the English madrigal composer. US-ACAN accepted the name later in 1961. The feature appears with Searle's coordinates on a British chart of 1961, but U.S. Landsat imagery of Feb. 1975 corrected the coordinates to 69°30' S, 71°40' W, and it appears, newly plotted, in the 1977 British gazetteer. It appears in the British gazetteer of 1986 plotted in 69°30' S, 71°37' W.

Wilckens Gully. 64°22' S, 56°57' W. A water-cut ravine eroded into clay-rich rocks on the E side of Spath Peninsula, Snow Hill Island, off the NE coast of the Antarctic Peninsula. Named by UK-APC on Dec. 11, 1995, for Prof. Otto Wilckens (1876-1943), German paleontologist, and author of a paper documenting the results of SwedAE 1901-04. US-ACAN accepted the name in 1996.

Wilcock Bay. 69°27' S, 76°06' E. In the SW part of the Larsemann Hills. Plotted in 1947 by Norwegian cartographers from air photos taken by LCE 1936-37, and named by them as Stornesbukta (i.e., "big cape bay"). The Australians renamed it for Arthur Wilcock, secretary of ANCA from 1952 to 1957, and a member of the committee until 1975.

Mount Wilcox. 67°57' S, 66°56' W. A mountain rising to 1405 m, with a sharp, rocky, triangular peak, surmounting the SE corner of Square Bay, 13 km E of Camp Point, on the Fallières Coast, on the W coast of Graham Land. It seems to have been first seen in 1909, by FrAE 1908-10, and was roughly charted by them. Surveyed in 1936 by BGLE 1934-37, and photographed aerially in 1940 by USAS 1939-41. Col. Lawrence Martin (*see* **Martin Peninsula**) named it in 1940, for Phineas Wilcox, and it appears on a 1943 U.S. Hydrographic Office chart plotted in 67°58' S, 66°55' W, confused with Mount Metcalfe. Fids from Base E re-surveyed it in 1948, and UK-APC accepted the name (with corrected coordinates) on March 31, 1955, US-ACAN following suit in 1956. It appears on a British chart of 1961, and in the British gazetteer of 1974.

Wilcox, Adby. In the period 1834-36 he was in the South Shetlands, on and off, as replacement captain of the Stonington sealer *William Baker* (the previous skipper was Charles Howland). In 1852-53 he skippered the *Silas Richards* to Antarctic waters (see that vessel for details). He was captain of the *United States*, in the South Shetlands, 1853-54, and again, on and off, during the period 1854-56.

Wilcox, Phineas. b. Nov. 22, 1792, Stonington, Conn., son of Jesse Wilcox and his wife Ann Pendleton. He married Mercy Taylor on Dec. 19, 1814. He was 1st mate on the *Hero*, 1821-22,

during the first Fanning-Pendleton Sealing expedition, 2nd mate on the *Alabama Packet*, 1823-25 (in the South Seas, but not in Antarctic waters), and 1st mate on the *Penguin*, 1827-31 (being in Antarctic waters during the 1829-31 period). He died at sea, as a captain, on Sept. 14, 1839, and is buried in Stonington.

Cabo Wild *see* **Skep Point, Wild Point**

[1]**Cape Wild** *see* **Wild Point**

[2]**Cape Wild**. 68°20' S, 149°05' E. A prominent rock cliff on the E end of Organ Pipe Cliffs, in the area of Cape Freshfield, 57 km E of Ninnis Glacier, in George V Land. This is probably the Point Emmons that Wilkes discovered on Jan. 10, 1840, during USEE 1838-42, and which he named for George Emmons. During AAE 1911-14 Mawson, while with the Eastern Coastal Party, accurately positioned it, and renamed it for Frank Wild. US-ACAN accepted the name in 1947.

[1]**Mount Wild**. 64°12' S, 58°53' W. A sharply defined rock ridge with several summits, the highest being 945 m (the British say 925 m), at the N side of the terminus of Sjögren Glacier, at the Prince Gustav Channel, on the E coast of Trinity Peninsula. First charted by FIDS from Base D in Aug. 1945, and named by them for Frank Wild, in association with Cape Worsley (q.v.). UK-APC accepted the name on Jan. 28, 1953. The feature was further surveyed by Fids from Base D in 1960-61. US-ACAN accepted the name in 1966.

[2]**Mount Wild**. 84°48' S, 162°40' E. 4 km W of Mount Augusta, at the SW extremity of the Queen Alexandra Range. Discovered by BAE 1907-09, and thought by Shackleton to be a range. He named it Wild Range, for Frank Wild. The name Wild Mountains became attached to it too, until it was defined as a single mountain. US-ACAN accepted the name in 1953.

Point Wild. 61°06' S, 54°52' W. Also known as Wild Point. The point, a low tongue of sand about 90 m long by 30 wide, about 350 m E of Cape Belsham. Discovered by Frank Wild. On April 17, 1916, the Shackleton party relocated here from Cape Valentine, 11 km away, on the N coast of Elephant Island, in the South Shetlands, during the disastrous BITE 1914-17. Roughly mapped between April 17 and Aug. 30, 1916 (during the famous stay here of the 22 men under Frank Wild), Shackleton originally called this feature both Cape Wild and Point Wild, interchangeably, and it appears as Cape Wild on a British map of 1930. It appears in error as Cape Belsham, on a 1946 USAAF chart. US-ACAN accepted the name Cape Wild in 1953, and UK-APC followed suit on Sept. 20, 1955, with the coordinates 61°02' S, 54°59' W. It appears with those coordinates on a British chart of 1957. However, it appears as Point Wild on a 1956 U.S. Hydrographic Survey chart. UK-APC corrected the coordinates in time for the 1960 gazetteer, and it also appears with the new coordinates on a 1962 British map. It had also been clearly defined as a point now, partly because of its small size, and partly to avoid confusion with Cape Wild in George V Land. It appears on an Argentine map of 1953, as Cabo Wild, and that is what the Argentines still call it, as do the Chileans (it appearing as such in their 1974 gazetteer). The subtle difference between "cape" and "point" is largely a British semantic.

Wild, David Peter "Dai." b. May 31, 1941, St. Asaph, Denbighshire, Wales. He joined BAS in 1963, as a surveyor, and wintered-over at Halley Bay Station in 1964 and 1965. He was killed in a crevasse on Oct. 12, 1965 (*see* **Deaths**, 1965).

Wild, Harry Ernest. Known as Ernie, "Tubby" (to his mates in Antarctica; not because he was particulary fat, but he was short, and appeared tubby), and even (at home, only) as "Croddy." b. Aug. 10, 1879, Stickford, near Caistor, Lincs, brother of Frank Wild (*see below*). While living in Bedford, he went to sea at the age of 15, and spent 20 years in the Royal Navy, including 3 years in South African waters during that war, and a stint in Messina in 1908, helping the Italians after the earthquake. He sailed from Dover on Sept. 18, 1914, on the *Ionic*, as petty officer in charge of stores and dogs on BITE 1914-17. On the other side of the continent from his brother during this expedition, Harry was one of the depot layers from the *Aurora* at Ross Island, one of the 3 to survive the big push south under Mackintosh. He got frostbite, and on March 7, 1915, his foot was swollen like a steak. By March 14 he was in agony, and by March 21 his face was swollen out of all proportion. His nose was a black blister, his ear was pale green, and he could hardly walk. By March 25 they knew his big toe would have to be amputated. At Hut Point John Cope took off part of the toe and ear, and from that moment Wild was all right (or rather, as well as could be expected). After the expedition he was given 3 months leave, and in Oct. 1917 joined the *Biarritz* at Malta. In Feb. 1918 he went sick with typhoid, and died while minesweeping the Mediterranean in the *Biarritz* on March 10, 1918, the same day he got his acting rate as chief petty officer.

Wild, John James "J.J." b. 1824, Zurich, as Jean-Jacques Wild. Headmaster of a school of modern languages in Belfast, where he met his wife, Elizabeth Ellen Mullin. He was the official artist, and Wyville Thompson's secretary, on the *Challenger* expedition of 1872-76. He wrote some books, and moved to Melbourne in 1881.

Wild, John Robert Francis "Frank." b. April 10, 1873, Skelton, Yorks. Eldest of 8 sons of teacher Ben Wild by his wife Mary Cook (great granddaughter of Captain Cook), and brother of Harry Wild (*see above*). He was in the Merchant Navy at 16, and in 1900 in the RN as a gunner, serving on the *Vernon*. Although only 5 foot 4, and slim of build, Frankie Wild became the most experienced of the early Antarctic explorers, with 5 times in the South, a total of 10 years. His first outing was as an able seaman on the *Discovery*, along with Shackleton and Crean, during BNAE 1901-04, under Scott. He was with Shackleton on BAE 1907-09, and on that expedition was one of the 4 who got to within 97 miles of the Pole. He was, of course, intensely loyal to Shackleton, but in his diary of 1908 he said, "Following Shackleton to the Pole is like following an old woman." He was on AAE 1911-14, under Mawson, and led the Western Base Party of that expedition. He was 2nd in command of BITE 1914-17, sailing with Shackleton, this time on the *Endurance*. When Shackleton left for South Georgia in the longboat, Wild was in charge of the 22 men on Elephant Island. In 1917-18 he was, as was Shackleton, in Russia with the RNVR, as a transport officer, and here he met the widow of Borneo tea planter Granville Altman. He tried tobacco planting in Nyasaland with his Antarctic colleague, Dr J.A. McIlroy, but, failing that, jumped at Shackleton's offer to join him on the *Quest*, in 1921-22. When the "Boss" died, Wild took over the expedition and finished it. On Oct. 24, 1922, in Reading, he married Vera Altman, and in June 1923, after his book *Shackleton's Last Voyage* had come out, they went to Zululand, where Frankie tried cotton planting. Other business ventures failed, as did the marriage, and in 1928 he and Vera were divorced. Things went from bad to worse, as he worked at a string of jobs, battling a drinking problem, and in 1931, aged 57, he married again, to Beatrice Rowbottom, 20 years his junior. He died of pneumonia, at Klerksdorp, in the Transvaal, on Aug. 19, 1939. Leif Mills wrote his biography (see Bibliography).

Wild Canyon. 66°00' S, 67°00' E. A submarine feature just off the coast of Mac. Robertson Land.

The *Wild Flower*. Australian yacht, skippered by Anne-Lise Guy, which visited the South Shetlands and the Antarctic Peninsula in 1993-94. The vessel had to be abandoned on South Georgia, but was rescued and repaired by the Royal Engineers, and, in 1995, sailed to South Africa.

Wild Icefalls. 84°55' S, 162°25' E. At the head of the Beardmore Glacier, between Mount Wild and Mount Buckley, W of Buckley Island. Named by the Northern Party of NZGSAE 1961-62 in association with the nearby mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1966. First plotted in 84°50' S, 162°20' E, it has since been replotted.

Wild Mountains *see* [2]**Mount Wild**

Wild Point *see* **Point Wild**

Wild Range *see* [2]**Mount Wild**

Wild Spur. 64°42' S, 62°32' W. Rising to about 1000 m above sea level, on the E side of Errera Channel, it runs from Pulfrich Peak to the W side of Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Shown (but apparently not named) on a 1957 Argentine government chart. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground the same season by Fids from Base O. Named by UK-APC on Sept. 23, 1960 for Heinrich Wild (1833-1902), the Swiss instrument designer responsible for the autograph plotter, first used about 1924 for stereo-survey from ground stations, and later adapted for aerial survey. US-ACAN accepted the name in 1965.

Wilder, Fred C. b. Feb. 10, 1902, Hounsfield, but raised partly in nearby Watertown, NY, son of farmer Edwin Wilder and his Irish wife Mary.

By the age of 17 he was in the U.S. Navy, serving on the *Delaware* in Boston Harbor. He was a crew member on the *Bear of Oakland*, during ByrdAE 1933-35. On Aug. 25, 1942, in Utica, NY, he enlisted as a private in the U.S. Army. He later lived in Buffalo, and died there in March 1983.

Wildridge, Joseph Denis Jopson. Known as Denis. b. Nov. 15, 1922, Cockermouth, Cumberland, son of Joseph E. Wildridge and his wife May Jopson. For no other reason than that he really wanted to go to Antarctica, he joined FIDS in 1957, as a meteorologist. He left Southampton on the *Shackleton*, on Oct. 1, 1957. That was the year Asian flu broke out (*see* **The *Shackleton*** for details of this trip). He wintered-over at Base D in 1958 and 1959. In 1962, in Cockermouth, he married Olive Tipper. He was a woodwork master, and was the builder responsible for so much at Hope Bay — the dog pens, the jetty, and so on, yet, ironically, years later, when he took a tour to Hope Bay with his wife, the authorities wouldn't let him land. He bribed the bosun of the ship, and got to walk around his old home, but then they discovered him, and forced him back aboard. He died in Sept. 1998, at his home in Workington, Cumberland.

Wilds Nunatak. 73°01' S, 160°13' E. A lone nunatak, 3 km W of the S end of Frontier Mountain, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Ronald F. Wilds, aviation machinist's mate with VX-6, at McMurdo in 1966.

Wildskorvene. 74°36' S, 14°25' W. The easternmost of the three rows of ridges in Mannefallknausane, in Maudheimvidda, in the W sector of Queen Maud Land. Named by the Norwegians for surveyor David Peter Wild (b. 1931; of Rhyl, Flintshire) (*see* **Deaths**, 1965). *See also* **Baileyranten** and **Wilsonberga**.

Wildwind Glacier. 76°52' S, 161°10' E. A substantial mountain glacier, 5 km wide, flowing southward into Alatna Valley, draining the areas of both Staten Island Heights and Mount Razorback, in the Convoy Range of Victoria Land. So named by an NZARP field party because strong and persistent winds in this vicinity have cut major flutings through the ice-cliffed terminus of this glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Wiles, James Francis. b. July 27, 1914, Herkimer, NY, but raised in Norway, Me., son of Canadian steamfitter and plumber James Orey Wiles and his wife Louise Marie Schank, who worked as a saleslady in a department store. He moved to Seattle, and went to sea in 1937. He was a deckhand on the *North Star* during USAS 1939-41. During World War II he was 1st assistant engineer on the *Daylight*, and continued to sail after the war. On May 20, 1945, in Norway (Maine, that is), he married Ruth M. Howe. He died on March 19, 2000.

The *Wilfrid Fearnhead*. A 530-ton, 149.1-foot whale catcher, built in 1948 at Framnaes Mek., in Sandefjord, Norway, for the Union Whaling Company, of Durban, South Africa. Launched as the *W. Fearnhead*, she soon became the *Wilfrid Fearnhead*. She was in Antarctic waters in 1953-54, under the command of skipper Johannes Røsvik, and catching for the *Abraham Larsen*. In 1969 she was bought by Cheynes Beach Whaling Company of Albany, Western Australia, and became the *Cheynes IV*, hunting whales for that company until 1978, when she became a tourist museum.

Wilhelm Archipelago. 65°08' S, 64°20' W. All the scores of islands and rocks extending from Bismarck Strait SW to Lumus Rock, off the W coast of Graham Land, or, to put it another way, all those to the N and W of the Graham Coast, S of Bismarck Strait and N of Southwind Passage, lying between the Palmer Archipelago and the Biscoe Islands, and extending W to Lumus Rock. The W islands of the group were discovered by Biscoe in Feb. 1832. The archipelago was roughly charted by Dallmann in Jan. 1874, and named by him as Kaiser Wilhem Inseln (i.e., "Kaiser Wilhelm islands"), for the kaiser, Wilhelm I (1859-1941). In the next 20 years or so, they were seen on various maps as Emperor William Islands (UK, 1885), Kaiser Wilhelm Islands, King William Archipelago, King William Islands (Arctowski, 1901), Îles du Kaiser Wilhelm (Charcot's 1906 map), Archipel du Kaiser Wilhelm (Matha and Rey, 1911), Archipel des Îles Kaiser Wilhelm (Charcot's 1910 map), Keiser Wilhelm Öer, Kaiser Wilhelmgruppen, Kaiser Wilhelm II Islands (US, 1943). During BelgAE 1897-99 de Gerlache re-named them Îles Dannebrog, but Dallmann's original naming stuck (*see also* **Dannebrog Islands**). The N islands in the archipelago were photographed aerially by FIDASE in 1956-57. UK-APC named it the Wilhelm Archipelago, on July 7, 1959, and US-ACAN followed suit in 1971. Booth Island and Hovgaard Island are the largest in the group. Working from N to S, the main features of this group are Wauwermans Islands, Dannebrog Islands, Myriad Islands, Booth Island, Hovgaard Island, Vedel islands, Petermann Island, Roca Islands, Cruls Islands, Anagram Islands, Argentine Islands, Yalour Islands, Betbeder Islands. Other features include Stray Islands, Barbière Island, Bazzano Island, Boudet Island, Charlat Island, Detour Island, Indicator Island, Lisboa Island, Mazzeo Island, Miller Island, Pléneau Island, Quintana Island, Somerville Island, and Splitwind Island.

Wilhelm Barrier *see* **Filchner Ice Shelf**

Wilhelm Carlson Island *see* **Carlson Island**

Mount Wilhelm Christophersen. 85°33' S, 167°20' W. Also called Mount Christophersen. A mound-shaped, ice-covered knob, rising to about 3389 m above sea level from the edge of the Polar Plateau, 5 km W of Mount Engelstad, between that mountain and Mount Fridtjof Nansen, and overlooking the S side of the head of the Axel Heiberg Glacier, in the Queen Maud Mountains. Discovered in Nov. 1911 by Amundsen, as he was trekking to the Pole, and named by him for Wilhelm C.C. Christophersen, a Norwegian diplomat in Buenos Aires (*see* **Mount Christoffersen**). In Amundsen's book *Sydpolen*, the positions of this mountain and Mount Engelstad are confused and confusing, and this led, in certain subsequent documents which relied on Amundsen's book, to further confusion between the two features. US-ACAN made a detailed study of the book, and plotted them as they are today, accepting this name and situation in 1950.

Wilhelm Filchner Station *see* **Filchner Station**

Wilhelm Glacier. 72°46' S, 166°37' E. A glacier, 3 km N of Olson Glacier, draining the N part of the W slopes of the Malta Plateau, and flowing W into Seafarer Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Robert C. Wilhelm, a member of the USARP glaciological party to Roosevelt Island, 1967-68.

Wilhelm Ice Barrier *see* **Filchner Ice Shelf**

Wilhelm Shelf Ice *see* **Filchner Ice Shelf**

Wilhelm II Coast *see* **Wilhelm II Land**

Wilhelm II Land. 67°00' S, 90°00' E. That portion of the coast of East Antarctica between Cape Penck (87°43' E) and Cape Filchner (91°58' E). Discovered in 1901-02 by GermAE 1901-04, and named by von Drygalski as Kaiser Wilhelm II Land. This name became translated as King Wilhelm II Land, and finally shortened to Wilhelm II Land. It has also been seen as King Wilhelm II Coast, and (later, as the name accepted by US-ACAN in 1947) Wilhelm II Coast. The coast as far W as Gaussberg was explored by the Western Base Party of AAE 1911-14. Note: The coordinates given above are those as listed by ANCA.

Bahía Wilhelmina *see* **Wilhelmina Bay**

Wilhelmina Bay. 64°38' S, 62°10' W. A bay, 24 km wide, between Reclus Peninsula and Cape Anna; or to put it another way, between Reclus Peninsula and the Gaston Islands, off the N end of Reclus Peninsula, on the Danco Coast, along the W coast of Graham Land. Discovered on Jan. 29, 1898, by BelgAE 1897-99, charted by them in Feb. 1898, and named by de Gerlache as Baie Wilhelmina, for the queen of the Netherlands (lived 1880-1962; reigned 1890-1948). Her government had been very supportive of the expedition. De Gerlache alternately calls it Baie de la Reine Wilhelmina, and Baie de Wilhelmina. It appears on a British chart of 1901 as Wilhelmina Bay. Sobral, in 1904, calls it Bahía Guillermina, and that is what the Argentines tend to call it to this day. On a 1937 British chart the SW part of the feature only is called Wilhelmina Bay. US-ACAN accepted the name Wilhelmina Bay in 1950, and UK-APC followed suit on Sept. 8, 1953. Both naming bodies accepted the limits by which it is defined today, and as such it appears in the 1955 British gazetteer, and on a British chart of 1957. It was photographed aerially by FIDASE in 1956-57, and in 1957-58 was surveyed from the ground by Fids from Portal Point. It appears as Bahía Wilhelmina on a 1962 Chilean chart, and as such in the 1974 Chilean gazetteer. The Argentines translated it as Bahía Guillermina. Note: The spellings Wilhelmine

and Wilhelmina are, while not necessarily interchangeable, used widely as alternatives.

Baie Wilhelmine *see* **Wilhelmina Bay**

The *Wilhoite*. A U.S. radar picket destroyer escort, built by Brown Shipbuilding, in Houston, and launched on Oct, 5, 1943, serving in World War II. She was named for fallen U.S. aviator Thomas Mack Wilhoite (World War II). In 1954 she was re-classified DER-397, and became a picket ship. Based out of Dunedin, NZ, in the early 1960s, she joined Task Force 43 on Sept. 8, 1960, and maintained an ocean station in support of aircraft flights between NZ and Antarctica for OpDF 61. Her skipper that year was Lt. Cdr. Charles H. Willis, USN. On Feb. 8, 1961, she crossed the Antarctic Circle. She served in Vietnam, and was decommissioned on July 2, 1969. On July 19, 1972, she was sold to General Metals, of Seattle, and scrapped.

Wilhoite Nunataks. 81°39' S, 154°55' E. A group of dark rock nunataks near the Polar Plateau, about 20 km SW of the All-Blacks Nunataks. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for the *Wilhoite*.

Wilkes, Charles. Some say his middle name was Smith. b. April 3, 1798, NY, son of John de Ponthieu Wilkes and his wife Mary Seton, and great nephew of firebrand British politician John Wilkes. Raised by his aunt, Saint Elizabeth Ann Seton (the first American woman canonized by the Catholic church), he entered the U.S. Navy at 19 as midshipman on Jan. 1, 1818. He served in the Mediterranean, 1819-20, and in the Pacific, 1820-23. He was promoted to lieutenant on April 23, 1826, a week to the day after he had married Jane Jeffrey Renwick. In 1828 he was picked as astronomer for the U.S. Government Expedition to Antarctica, which never happened. Wilkes had bought expensive equipment for this expedition, and was not refunded by the new Andrew Jackson administration which canceled the expedition. Ten years later, still a lieutenant, he was given command of the United States Exploring Expedition (USEE 1838-42) (q.v.). After the expedition, and after his court-martial (charges were brought against him for his tryannical conduct aboard ship, and he was reprimanded), he built the first observatory in the USA. He made captain on Sept. 14, 1855, and during the Civil War was involved in the *Trent* affair and commanded the James River Fleet. His wife had died in 1848, and he married again, on Oct. 3, 1854, to Mary H. Lynch Bolton. He was made rear admiral on July 25, 1866, retired, and died on on Feb. 8, 1877, in Washington, DC. A harsh disciplinarian, he was the model for Melville's Captain Ahab. His grandson, Vice Admiral John Wilkes, died in 1957.

Wilkes Amphitheatre. 76°04' S, 161°55' E. A large amphitheatre on the E side of Mount Smith, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63, for Owen Wilkes, entomologist with the toboggan party that traveled with the Southern Party for 6 weeks. During the course of his work here, Wilkes climbed the N side of this feature.

Wilkes ANARE Station *see* **Casey Station**

Wilkes Coast *see* **Clarie Coast**

Wilkes Hilton. 66°15' S, 110°32' E. An ANARE field hut, built by the Australians on Stonehocker Point, Clark Peninsula, on the Budd Coast. It is the largest field hut at Casey.

Wilkes Land. 69°00' S, 120°00' E. That stretch of the coast of East Antarctica that fronts the Indian Ocean, between Queen Mary Land and George V Land, as well as the hinterland thereof. The Americans say that the coastal part extends from Cape Hordern (100°31' E) to Point Alden (142°02' E), but the Australians say it extends only from Cape Hordern to 136°E. Either way, it was named for Charles Wilkes. The coastline was surveyed by OpHJ 1946-47, OpW 1947-48, ANARE in 1956 and 1958-59, and SovAE 1956-59. US-ACAN accepted the name in 1947.

Wilkes Station. 66°15' S, 110°31' E. A scientific station at Stonehocker Point, on Clark Peninsula, Vincennes Bay, on the Budd Coast of Wilkes Land. First it was American, then it was Australian. **1955-56 summer**: The *Glacier* took Seabees to access the site, a few miles E of the Windmill Islands. The site for the station had originally been intended for the Knox Coast. **March 19, 1956**: A ground survey party of 4 set out to lay an access route — civil engineer Cdr. Lynn M. Cavendish (b. May 25, 1922. d. Sept. 24, 2001), and 3 enlisted men: C.D. "Bob" Hadley, Thomas W. Maines (b. Oct. 30, 1935. d. Nov. 20, 2005), and J.W. Herald (demolitionist), but they got caught in a storm. After much adventure they returned. There was no wintering-over in 1956 because there was no base. **Jan. 29, 1957**: The *Glacier* arrived at the W end of Clark Peninsula. **Jan. 31, 1957**: They blasted into being a ramp on which to offload provisions from the ship. Cdr. James Hiegel (*see* **Hiegel Passage**), construction engineer, led the Seabees, and they built on bedrock 19 Clements buildings, plus several Jamesway huts. There was no airstrip, no air support, just ships. **Feb. 16, 1957**: The station, named for Charles Wilkes, was commissioned as the most northerly of all the U.S. IGY stations, lying, as it did, outside the Antarctic Circle. It would have the most comprehensive scientific activity outside of Little America. **Feb. 17, 1957**: The *Glacier* and the 2 cargo shps left. **1957 winter**: Navy personnel: Lt. (jg) Donald R. Burnett (military leader), Fred E. Charlton (chief electronics technician and deputy leader), Lt. Sheldon W. Grinnell, USNR (medical officer), Ken. J. Hailstorm and Don L. Bradford (radiomen), James T. "Jim" Powell (chief aerographer), Carl T. "Beetle" Bailey and Billie R. Lilienthal (aerographers), Paul A. Wyche (aerographer's mate), Paul F. Noonan (photographer), Dave "Dan" Daniel (Texan cook), Duane J. Wonsey (assistant mechanic), Ed A. "Frenchy" Bousquet (plumber), Sydney E. "Syd" Green (construction driver 2nd class, i.e., heavy equipment operator), Robert "Bob" McIntyre (construction mechanic), Acy H. "Pat" Patterson (electrician), George E. Magee (carpenter). Scientific personnel: Carl Eklund (leader), Richard L. "Dick" Cameron, Olav H. Loken, and John R.H. Molholm (glaciologists), Rudolph A. "Rudi" Honkala (meteorologist), Gilbert "Gil" Dewart (seismologist), Richard "Dick" Berkley (geophysicist), Garth A. Stonehocker (chief ionosphere physicist), Bob. L. Long, Jr. (ionosphere physicist), and Ralph Glasgal (aurora physicist). Plus a team of 8 dogs (McMurdo was the only other station to have dogs). In July the temperature got to -27 F, as opposed to the summer months (say December) when it might reach 43° F. **Jan. 30, 1958**: Lt. Robert S. Sparkes relieved Don Burnett as officer-in-charge, and Dr. Willis L. Tressler relieved Eklund as scientific leader. **1958 winter**: Navy personnel: Sparkes (leader); Donald F. Bednarz (chief electronics technician); John W. Drew (chief construction electrician); Russell B. Griffith (chief fire patrolman); James R. Holt (photographer's mate); James E. Lynsky (chief builder); John R. Swan, Frederick W. Mackemer, William J. Connors, and Roger E. Smith (aerographer's mates); Clarence W. Mast and Franklin J. Benlein (constructionmen); Audon Ommundsen (transport specialist); Richard L. Schulz (construction mechanic); Gordon F. Tracy and Robert W. Churchill (radiomen); and Robert D. Wright. Scientific personnel: Tressler (leader); Rev. Henry F. Birkenhauer (seismologist); Sebastian R. Borrello (geomagnetician); Dean R. Denison (aurora scientist); Donald H. Edman (ionosphere physicist); John R. Zimmerman (meteorologist); Richard A. Robertson, John T. Hollin, and Caspar Cronk (glaciologists). **Feb. 4, 1959**: The USA transferred the station to the Australians. **1959 winter**: Bob Dingle (officer-in-charge), Herb Hansen (meteorologist; U.S. representative), Bob Underwood (geophysicist), John Denholm, George Prosper de la Harpe, and John Denholm (physicists), Dick Penney (USARP biologist), John Boda (medical officer), Ian Tod, Harry Alderdice, and Ken Hardy (weather observers), Harvey Nye (USARP meteorological electronics technician), Alan Mariner (radio supervisor), Alynn Flett and Ross Harvey (radio officers), Hartley Ricketts "Robbie" Robinson (senior diesel mechanic; he died in a tractor accident on July 7, 1959), Snow Williams (diesel mechanic), Henry Brandt (German diesel mechanic; he had a nervous breakdown and more. *See* **Insanity**), and Alby Giddings (cook). **1960 winter**: Harry Preston Black (officer-in-charge), Graeme Burkett, Don Butling, Mike Campbell, Tom Edwards, Neal Graham, Jim Harrop, Rudi Honkala, Keith Jones, Bill Lensink, Jan Lunde, Dick Penney, Jim Smith, Frank Soucek, Angelo Spano, Brian Wall, Dave Ward, Dave Yingling. **1961 winter**: Neville Robert "Nev" Smethurst (officer-in-charge), Frank Soucek (medical officer and 2nd-in-command), Max Berrigan, John Breckinridge, Bill Burch, Stan Church, Tom Cordwell, Steve Grimsley, Ed Harrigan, George Hemphill, Maurice Hickey, Bill Hogan, Fred Jewell, Ron Maines (cook), Jock McGhee (mechanic and driver), Noel Orton, Peter Paish, Bill Saunders, Sepp Stadler, Peter Stansfield, Arnold Thorp, Ray

Torckler, Jim White, Stan Wilson. **1962 winter**: Bob Thomson (officer-in-charge), Alastair Battye, Steve Bone, Jim Calman, Bill Cartledge, Eric Clague, Neville Collins, Tom Edwards, Desmond Evans, Jack Field, Keith Fletcher, Danny Foster, Burt Goldenberg, Chris Gorman, Marvin Haunn, Leon Jennings-Fox, John H. O'Shea, Ron Reu, Max Simon (radio officer), Don Seedsman [physicist (IPSO)], Bob Underwood, Don Walker, Kevin G. Walker. **1963 winter**: 23 men. Dick Saxton (officer-in-charge), Rod Mallory (meteorologist), Kevin Gleeson (weather observer), Peter Chapman (weather observer), Roy Whitworth (geophysicist), Russ Thompson (ozone physicist), John Gilbert Greenhill (cosmic ray physicist from the University of Tasmania, originally meant to be only part of the 1962-63 summer season, but, when the *Nella Dan* couldn't get in to Wilkes that season because of the ice, he was forced to winter-over), Robin Alfred Simon (glaciologist), Malcolm Kirton (seismologist), Steve Grimsley [technical officer (ionosphere)]; Kennneth Edmund "Ken" Hicks (medical officer), Graeme Currie (q.v.) [supervising technician (radio)], Ivan Thomas (radio operator-in-charge), Geoff Butterworth (radio officer), Eddie Davern (radio operator), Brian Ryder (radio operator), John McKenzie (radio technician), Charles Webster (electronics technician), Raymond David "Ray" Ash (electrical fitter), Peter Ormay (carpenter and plumber), Vic Morgan (senior diesel mechanic; q.v. and *see* **McLean Ridge**— sic), Geoff Wilkinson (assistant diesel mechanic), Frederick Alexander "Fred" Spence (mechanic/driver), and Dick Ritchie (cook). **1964 winter**: Raymond A. "Ray" O'Leary (officer-in-charge), Mick Bonnici, Mike Bowthorpe, Dennis Brophy, Keith Budnick, Fred Cross, Tom Ellis, Brian Fogarty, M. John Freeman, Ross Hall, Geoff Hulcombe, Leon Jennings-Fox, Mike Jones, Peter Morgan, Lyn Murray, John H. O'Shea, John Pollard, Dave Rogers, Neil Simmonds, Graeme Small, Gordon Smith, Roy Whitworth, Geoff Williams, Nev Woods. **1965 winter**: John H. "Jack" Lanyon (officer-in-charge), Gordon Allen, Mike Bayley, Ken Bennett, John Boyd, Peter Brown-Cooper, Wally Demech, Mark Forecast, Peter Gibson, Kevin Gleeson, Michael Glenny, Fred Hader, Sid Harvey, Ken Hicks, Bob Holmes, John F. McKenzie, Alan McLaren, Brian Ryder, Ken Shennan, Ted Simmons, John Tarbuck, Tony Warriner, Ron Wiggins. **1966 winter**: Alan J. Blyth (officer-in-charge), John Beck, Tony Blundell, Joe Bray, Hans Brinkies, Ted Elkinton, John Elliott, Ted Giddings, Tony Groom, Colin Huddy, Alan Humphreys, Steve Kaloczy, Dick Monks, Bruce Neilson, Robert T. Nicholson, Roger Peterson, Leigh Pfitzner, Bob Roff, Alan Sawert, John Sillick, Andrew Sparks, Jock Taylor, Stan Taylor, Ken White, Rodger, Williams, Dennis Willmet. **1967 winter**: John Richard Canham (officer-in-charge), Peter McGrath (2nd-in-command and radio officer), Peter Baggott, Dave Broad, David Bevan Carter, Vic Cleland, Graeme Currie, Eddie Davern, Mick Glenny, Ron Hann, Erik Hansen, Ralph Hodges, Reg Hopley, Peter Jackson, Ron Jelleff, Ian Kelly, Ray Langtip, Bob Liddell, Ray Mitchell, Trevor Olrog, Geoff Payne, Jeff Stickland, John Tarbuck, Charlie Weir, Colin E. Whitehead. **1968 winter**: Neil Leonard Brightwell (officer-in-charge), Bob Allan, Peter Anderson, John Bilson, Joe Bray, Clive Champion, Alan Daff, Neville Dippell, Ron Harris, Ken Hayfield, John Kaarsberg, Terry Kelly, Don Loades (*see* **Loades Peak**), Rod Mackenzie, Gil Maher, Col Marsh, Peter Maslen, Vin Morgan, Bruce Morton, John Neagle, Robert T. Nicholson, Winston Nickols, Brian Rieusset, Frank Scaysbrook, Mike Sproson, Reginald Sullivan, Wayne Wells, Bob Whiteside, Rodger Williams. **Feb. 1969**: Wilkes, being buried by snow, was replaced by Casey Station. Note: A good number of these men had features named after them.

Wilkes Subglacial Basin. 75°05' S, 145°00' E. A large subsurface feature, extending NNE-SSW, S of George V Land, and W of the Prince Albert Mountains, in East Antarctica, it is broken by the Southern Cross Glacial Highlands, partly underlying Talos Dome, and including the Webb Subglacial Trench. It was roughly delineated by seismological parties from the USA, in 1958-60, and named by US-ACAN in 1961, in association with Wilkes Land, near to which lies the W part of this basin. Originally plotted in 75°05' S, 130°00' E, it has since been replotted.

Cape Wilkins. 67°15' S, 59°18' E. A rocky cape at the NW tip of Fold Island, and forming the E side of the entrance to Stefansson Bay, off the coast of Kemp Land. Discovered on Feb. 18, 1931, by BANZARE. At first Mawson called it Cape Hearst, for newspaper magnate William Randolph Hearst (*see* **Hearst Island**), who had bought the rights to the BANZARE story. Mawson later changed it to honor Sir Hubert Wilkins. Mapped in Feb. 1936, by personnel on the *William Scoresby*. Later mapped in much more detail from air photos taken during LCE 1936-37. US-ACAN accepted the name in 1947.

Costa Wilkins *see* **Wilkins Coast**

Estrecho Wilkins *see* **Wilkins Sound**

Montes Wilkins *see* **Wilkins Mountains**

Wilkins, Hubert. International aviator and adventurer. b. Oct. 31, 1888, Mount Bryan East, near Hallett, South Australia, as just George Wilkins, son of farmer Henry "Harry" Wilkins and his wife Louisa Smith. Early in life he became a passionate and accomplished photographer, and worked for a year in a tent movie show in Sydney. In 1908 he either sailed for England to work for the Gaumont Film Company, or (his story) he stowed away on a ship that went as far as Algiers. Here he got involved with spies, drug dealers, kidnappers, and other sundry criminals, was captured by a gang of gun runners, and only freed by a young Muslim girl. The second story is more fun. Either way, he was hired by Gaumont, learned how to fly, and, for his employer, joined the Turkish side, shooting footage from balloons during the 1912 Turco-Bulgarian War. It may be that he was captured by the Bulgars and put in front of a firing squad. In 1913 he was 2nd-in-command of Stefansson's Arctic expedition, showed movies to the Eskimos, and in 1917 returned to Australia, where he joined the Flying Corps as a lieutenant, becoming highly decorated while photographing the Western Front under Capt. Frank Hurley (q.v.). He was described by General Monash as "the bravest man I have ever seen." He took part in the England to Australia Air Race of 1919, but, of course, his Blackburn Kangaroo crashed into a lunatic asylum in Crete. He was now also well-known as an ornithologist and naturalist. His first foray into Antarctica was as one of the four members of the British Imperial Antarctic Expedition of 1920-22, which failed to cross too-rugged Graham Land from west to east. Embarrassed, Wilkins quit that expedition, and joined Shackleton's last expedition, on the *Quest*, in 1921-22, as photographer and ornithologist. Then he was off photographing in the new Soviet Union for the Quakers. In 1923-24 he was in northern Australia collecting rare fauna and reporting on and photographing Aborigines for the British Museum of Natural History. In 1925 he proposed the Australasian Polar Pacific Expedition, to fly from the Ross Sea, across King Edward VII Land, to Graham Land. The expedition never happened, so Wilkins and his friend, bush pilot Ben Eielson, went on various Arctic expeditions. He was knighted in 1928 for services to science and exploration, and that year his book *Flying the Arctic* came out. In 1928-30 he led the Wilkins-Hearst Expedition to Antarctica (see below). Midway during this expedition, back in Cleveland, he married Australian actress Suzanne Bennett (really Suzanne Evans) on Aug. 30, 1929. In 1931 he bought an old World War I submarine, named her the *Nautilus*, and attempted to get to the North Pole. He failed, and was ridiculed. In the 1930s Wilkins was technical adviser and manager of Ellsworth's flights from the *Wyatt Earp*, providing ship-base support for the Antarctic flier (Lincoln Ellsworth) during all of the expeditions. In between all this, in 1937, he went looking for the missing Levanevsky in the Arctic. During World War II he worked for the U.S. government (he had moved to the USA) and in mid-Dec. 1957 went back to Antarctica as a guest on OpDF, during which he visited Hallett Station. He died of a heart attack on Dec. 1, 1958, in Framingham, Mass. Sir Hubert's ashes were carried to the North Pole in the submarine *Skate* and scattered there on March 17, 1959.

Wilkins Coast. 69°40' S, 63°00' W. That portion of the E coast of Graham Land between Cape Agassiz and Cape Boggs, or between the Bowman Coast and the Black Coast. It includes the W shore of Stefansson Sound, which lies midway along this coast. The whole coast was photographed aerially, and roughly surveyed from the ground, by USAS 1939-41, and in Nov. 1947 it was surveyed in more detail by Fids from Base E. Named by UK-APC on Jan. 28, 1953, for Sir Hubert Wilkins (q.v.), who flew over here on Dec. 20, 1928 (*see* **Wilkins-Hearst Expedition**, below), and photographed part of this fea-

ture. US-ACAN followed suit with the naming that year. It appears on a British chart of 1954, and in the British gazetteer of 1955. It appears on a 1957 Argentine chart as Costa Wilkins, and that is what the Argentines continue to call it, despite a 1962 chart which showed it as Costa de Wilkins. It appears in the Chilean gazetteer of 1974 as Costa Wilkins. The coast was again photographed aerially by USN between 1966 and 1969.

Wilkins-Hearst Expedition. 1928-30. This was the first Antarctic expedition actually led by Sir Hubert Wilkins, and it was financed by newspaper magnate William Randolph Hearst, and sponsored by the American Geographical Society. It coincided with ByrdAE 1928-30. **Aug. 7, 1928**: Ben Eielson, Wilkins's Arctic pilot and good friend, accepted Wilkins's offer to go to Antarctica as main pilot. **Sept. 22, 1928**: The expedition left Hoboken on the *Southern Cross*. On board were Wilkins and Eielson, relief pilot Joe Crosson, and mechanic Orval Porter. Also on board were 2 Lockheed Vega monoplanes — the *Los Angeles* and the *San Francisco*. Heintz & Kaufman had supplied a short wave radio for the aircraft. Wilkins's fiancée, Australian actress Suzanne Bennett, was there to wave him off. Orpha Boreen was there too, in similar circumstances, to wave goodbye to Orval Porter. **Sept. 24, 1928**: Miss Bennett sang to Sir Hubert over the radio. He liked it so much that he requested an encore. **Sept. 28, 1928**: Sir Hubert's mother died in Australia. **Oct. 9, 1928**: They arrived in Montevideo in the evening. **Oct. 10, 1928**: The two planes were unloaded and stored on the wharf. **Oct. 23, 1928**: The *Hektoria* (under the command of Captain Hansen), a Norwegian floating factory whaler placed at the assistance of the expedition free of charge by the owners, arrived in Montevideo. Viggo Holt joined the expedition as radio operator. **Oct. 24, 1928**: The expedition left Montevideo in the *Hektoria*, followed by the whaler's catchers. Wilkins was already talking about using submarines in the Antarctic. **Oct. 30, 1928**: They left the Falklands, heading south. **Nov. 4, 1928**: They arrived at Deception Island. **Nov. 6, 1928**: The *Hektoria* moored at the whaling station on Deception Island, in the South Shetlands, with six 7-inch hawsers. **Nov. 16, 1928**: Eielson and Wilkins made the first Antarctic flight in an airplane, a 20-minute flight in the *Los Angeles*. **Nov. 23, 1928**: Crosson flew the *Los Angeles* on a few short trips as the *San Francisco* was made ready for flying. **Dec. 1., 1928**: They transferred the planes from the ship to the ice. Both planes took off at 5.30 A.M., in an unsuccessful search for a better base. The *Los Angeles*, flown by Eielson, took off from the bay ice, and the *San Francisco*, flown by Crosson, from the beach. After the flight, the *Los Angeles* came in to land on the ice, landed perfectly, but struck a hole to the right of the machine, and started to go under. It took 18 hours to get it out again. The damage was a bent propeller and a hole in the wings. **Dec. 2, 1928**: They hauled the *Los Angeles* onto the beach. Given the warm weather it was impossible to find ice strong enough to take off from or to land on, so they built a landing strip on the beach, 2300 feet long and 400 feet wide. Wilkins nicknamed it Hoover Field. **Dec. 9, 1928**: Wilkins flew over Snow Island, looking for a suitable landing place. **Dec. 17, 1928**: The *San Francisco* went up on a scouting mission. **Dec. 19, 1928**: Just after 4 A.M. Eielson took the *San Francisco* up to test the radio. At 8.20 A.M., Eielson and Wilkins set off again in the *San Francisco*, on Antarctica's first air expedition, from Deception Island, flying at 6000 feet (and later at 9000 feet) SW over over Graham Land and back. They flew 1300 miles in 11 hours, and discovered Crane Channel, the Lockheed Mountains, and Stefansson Strait, and incorrectly charted much of Graham Land. Altogether, 1000 miles of previously unexplored territory. **Jan. 10, 1929**: Wilkins and Crosson flew 500 miles over Graham Land before storing the planes for the winter. This was the end of the first half of the Wilkins-Hearst Expedition, or the first Wilkins-Hearst Expedition, however one wants to look at it. **Jan. 13, 1929**: The *Hektoria* arrived at Deception Island. **Jan. 30, 1929**: After they had secured their two planes (with wings removed) in a huge iron shed for the Antarctic winter on Deception Island, they were picked up by the *Fleurus*, heading for the Falkland Islands. **Feb. 4, 1929**: They arrived at Port Stanley. **March 12, 1929**: Wilkins, Eielson, Crosson, and Porter arrived back in New York on the *Ebro*. Suzanne Bennett was there to greet Wilkins. Eielson would not be back. Wilkins was planning to go to the North Pole in a submarine, but postponed the attempt. **May 5, 1929**: Wilkins arrived in Plymouth, England. **July 19, 1929**: Wilkins, who had returned to the USA, left New York again, for Europe, on the *Olympic*. **July 26, 1929**: Wilkins arrived in England. **Aug. 30, 1929**: In Cleveland, Ohio, Wilkins married Suzanne Bennett. **Sept. 28, 1929**: Wilkins, Porter, and the two new pilots, Al Cheesman and Parker Cramer, all left New York on the *Northern Prince*. **Oct. 12, 1929**: They passed Santos. **Oct. 15, 1929**: They arrived at Montevideo, to await the arrival of the *Melville*, the Norwegian whaler that had been placed at their disposal. At Montevideo they picked up Viggo Holt again. **Nov. 1, 1929**: The *Melville* arrived at Montevideo. **Nov. 2, 1929**: They left Montevideo. **Nov. 7, 1929**: They arrived at the Falkland Islands. **Nov. 17, 1929**: Wilkins was back at Deception Island, transported on the *Melville*, for the second (half of the) Wilkins-Hearst Expedition. This time he had a boat with an outboard motor, a small 7 hp Austin motor car with 8 wheels and chains, and a Caterpillar tractor. He made a few local flights. **Dec. 12, 1929**: Wilkins left Deception Island on the *William Scoresby* (the Discovery Investigations ship in the area at that time, which had been placed at his disposal by the British government, who had also given him £10,000) aboard which he had one of his planes. He was heading south looking for a better landing strip. **Dec. 18, 1929**: The *William Scoresby* returned as far as Port Lockroy. **Dec. 19, 1929**: On a local flight Cheesman and Wilkins spotted Beascochea Bay, and the expedition sailed there. **Dec. 29, 1929**: It was -29°F as they lowered the *Los Angeles* over the side of the *William Scoresby*. Cheesman and Wilkins took off from the ice-strewn water and could only make an abortive flight over Charcot Land again, this time proving it to be an island (Charcot Island) and claiming it for Britain. **Jan. 3, 1930**: An earthquake on Deception Island. **Jan. 5, 1930**: The *William Scoresby* left Port Lockroy for Deception Island. Parker Cramer independently flew the *Los Angeles* to Deception Island, arriving earlier that day. **Jan. 7, 1930**: The *William Scoresby* left for the Falkland Islands to re-fuel. Wilkins's group boarded the *Melville*. **Jan. 25, 1930**: The *William Scoresby* arrived back at Deception Island. All this time Wilkins had been making local flights. **Jan. 27, 1930**: The last message the world received for some time from either the *William Scoresby* or Wilkins, who was aboard, headed for Peter I Island. The *Melville*, at Deception Island, had not heard from them either. Viggo Holt stayed on Deception Island. **Feb. 1, 1930**: Wilkins and Cheesman made their last flight, 460 miles round trip over Graham Land. **Feb. 8, 1930**: This rather bizarre message from Viggo Holt came over the radio: "All the whaling ships in this region equipped with wireless have dropped every other pursuit and are attempting to locate Sir Hubert Wilkins. The area he planned to explore has not been visited by a white man since 1874." **Feb. 11, 1930**: One of the whalers sent this message: "Scoresby heard from 14.00 GMT." **Feb. 13, 1930**: Message from Wilkins: Everyone safe. **Feb. 22, 1930**: The *Henrik Ibsen*, Norwegian whaler, arrived at Montevideo from Deception Island, with Porter, Cramer, and Holt aboard. Wilkins and Cheesman, grandstanding, had flown from the ship while 100 miles out of port, and had arrived earlier. **Feb. 28, 1930**: Porter left Montevideo on the *Eastern Prince*, bound for New York. **March 19, 1930**: Porter arived back in New York on the *Eastern Prince*. **March 30, 1930**: Wilkins, Cramer, Porter, and Cheesman arrived back in New York. The expedition mapped altogether 80,000 square miles of new territory. Wilkins was the first leader to discover a new territory from an airplane, and incorrectly believe the Antarctic Peninsula (as it later became known) to be cut off from the rest of the continent.

Wilkins Ice Front. 70°25' S, 74°30' W. There are three separate and distinct seaward faces of the Wilkins Ice Shelf, but they all go to form one big feature called the Wilkins Ice Front, between Alexander Island and Charcot Island, off the W coast of the Antarctic Peninsula. Their locations are as follows: 71°05' S, 73°30' W, between Latady Island and Alexander Island (plotted in 1973); 70°25' S, 74°30' W, between Charcot Island and Latady Island (plotted in 1973); 69°50' S, 72°50' W (plotted in 1974). Named by UK-APC on Dec. 8, 1977, and it appears in the British gazetteer of 1980.

Wilkins Ice Shelf. 70°25' S, 72°30' W. A rectangular ice shelf, about 130 km long and 100

km wide, it occupies the central part of Wilkins Sound (hence the name), and extends E into Haydn Inlet and Schubert Inlet, off the W coast of Alexander Island. Photographed aerially in Nov. 1947, by RARE 1947–48, and mapped from these photos in 1959–60 by Searle of the FIDS. It was already being referred to as the Wilkins Ice Shelf in the 1950s, or as Wilkins Shelfeis, when UK-APC accepted the name Wilkins Ice Shelf on Nov. 3, 1971. It appears as such in the 1974 British gazetteer, as a replacement for Wilkins Sound, and with the coordinates 70°15'S, 73°00' W. However, U.S. Landsat images of Jan. 1973 and Feb. 1975, showed that the coordinates are really 70°25' S, 72°30' W, and that this feature and Wilkins Sound are two separate features. This corrected impression was conveyed in the 1977 British gazetteer, and was the situation accepted by US-ACAN. The feature was further delineated by Landsat images of Feb. 1979. In 2008 the ice shelf became famous when two large chunks of it calved off into the sea. Pandering to the morbid fantasies of the global warming crowd, the press pushed this event as if Antarctic ice had never broken away before. Hysteria set in on April 5, 2009, when ["what scientists believe to be"] a 127-square-mile ice bridge connecting the shelf to the continent, shattered completely, thus exposing the ice shelf to an instability that could cause the whole thing to calve off.

Wilkins Island *see* **Hearst Island**

Wilkins Mountains. 75°32' S, 66°30' W. A group of low mountains, rising to about 1400 m, and about 30 km in extent, W of Matthews Glacier, and 40 km SE of the Sweeney Mountains, on the Orville Coast of eastern Ellsworth Land, at the very S of Palmer Land. Discovered aerially on Nov. 21, 1947, by RARE 1947–48, and named by Finn Ronne for Sir Hubert Wilkins. He plotted them in 75°54' S, 64°00' W. They appear, with those coordinates, on a U.S. Hydrographic Office chart of 1955, and on an American Geographical Society map of 1962. They appear on a 1952 Argentine chart as Montes Wilkins. Mapped by USGS from USN air photos taken between 1965 and 1969, their coordinates were corrected on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name and the new coordinates, on Dec. 20, 1974. US-ACAN accepted the name in 1975.

Wilkins Nunatak. 75°39' S, 139°55' W. The northeasternmost of 3 nunataks, 10 km SW of the Ickes Mountains, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Melvin L. Wilkins, USN, quartermaster aboard the *Glacier*, which explored this coast in 1961–62.

Wilkins Runway. 66°41' S, 111°32' E. At the upper Peterson Glacier, it was the new runway for Casey Station, 70 km from the station itself.

Wilkins Shelfeis *see* **Wilkins Ice Shelf**

Wilkins Sound. 70°30' S, 73°30' W. The sound, largely occupied by the Wilkins Ice Shelf, between the concave W coastline of Alexander Island to the E and S, the shores of Charcot Island and Latady Island farther to the W, and Rothschild Island to the N, off the W coast of Graham Land. The N entrance (which is sometimes sealed off by the Wilkins Ice Shelf, and sometimes not, depending on glaciological conditions) was discovered and roughly mapped in Jan. 1910 by FrAE 1908–10. The expedition described it as "a vast estuary encumbered by ice." On Dec. 29, 1929, Sir Hubert Wilkins proved the insularity of Charcot Island, thus indirectly discovering the sound. The configuration of the sound was largely determined in Nov.-Dec. 1940, by USAS 1939–41, who named it that year as Wilkins Strait, for Wilkins. They plotted it in 70°30' S, 72°00' W. It appears as such on a 1942 USAAF chart. On a 1946 Argentine chart it appears as Estrecho Wilkins, although there is a 1948 Argentine reference to it as Estrecho General Zenteno (named after General José Ignacio Zeneteno—*see* **Cape Church**), and on a 1953 Argentine chart as Estrecho de Wilkins. The existence of Latady Island at the SW end of the sound was determined by Searle of the FIDS, in 1959–60, while mapping the area from aerial photos taken by RARE 1947–48. US-ACAN accepted the name in 1947, with the coordinates 70°15' S, 73°00' W, and UK-APC followed suit on March 2, 1961, and it appears as such on a British chart of that year. It appears in the 1974 Chilean gazetteer, as both Estrecho Wilkins and Estrecho de Wilkins. In 1974 UK-APC prematurely did away with the name Wilkins Sound, replacing it with Wilkins Ice Shelf, a feature they thought had replaced and superseded the sound in toto, whereas, in fact, the two were found by U.S. Landsat images of Jan. 1973 and Feb. 1975 not to be identical. The correction was made by UK-APC in 1977. Further U.S. Landsat images, from Feb. 1979, re-confirmed this.

Wilkins Strait *see* **Wilkins Sound**

Glaciar Wilkinson *see* **Wilkinson Glacier**

Wilkinson, Gregory Mark "Greg." BAS diver and marine biologist who wintered-over at Signy Island Station in 1986 and 1987, and again in 1990 and 1991, the last year also being base commander. He later ran a dive center in Zanzibar.

Wilkinson, James *see* **USEE 1838–42**

Wilkinson, John Valentine. b. Feb. 14, 1914 (hence his name), son of the Rev. George Robert Wilkinson, who became vicar of Ingleton the year his son was born (and would be vicar of Bamburgh from 1925 to 1948), in Northumberland. He joined the Royal Navy, as a cadet, and on Sept. 1, 1933, as a midshipman, was transferrd to the *Malaya*. In Jan. 1935 he was promoted to acting sub lieutenant, to sub lieutenant in September of that year, and on Feb. 1, 1936, to lieutenant. In Oct. 1936 he was transferred to the *Havock*, and on July 26, 1939, to the *Selkirk*. In 1941 he married Edith Felicity Walker, and they moved to Ryton-on-Tyne. On May 26, 1942, during World War II, he was placed in command of the *Zetland*, and was promoted to lieutenant commander on Feb. 1, 1943, winning a DSC on March 16, 1943. He left the *Zetland* on Feb. 9, 1944, being awarded the George Medal on July 12, 1944, for his earlier extraordinary heroism on the *Zetland*, during a rescue mission. On Sept. 25, 1944, he took command of the *Carron*, until the end of the war. He and his growing family moved to Steyning, and he became a hydrographer, being promoted to commander on July 1, 1946. On July 14, 1955, by now a captain, he became skipper of the *Protector*, which plied the waters of the Antarctic Peninsula in the summers of 1955–56 and 1956–57. On Dec. 20, 1957, he took command of the *Gamecock*. He retired on May 31, 1961, to Walton, Boston Spa, Yorks, and died on Sept. 13, 1986, in Bury St Edmunds.

Wilkinson, R. Michael "Mike." b. Yorkshire. BAS general assistant and mountain climber, who wintered-over at Base D in 1962 and 1963, the latter season also as diesel electric mechanic. He was known as "Young Man," to distinguish him from Mike Cox. According to other Fids, he married an African girl, joined Outward Bound, and was climbing Mount Cameroun when a swarm of bees attacked the climbers, and they were all killed.

Wilkinson Glacier. 66°50' S, 66°20' W. On the S side of Protector Heights, flowing westward into Lallemand Fjord, to the SE of Holdfast Point, on the Loubet Coast of Graham Land. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground that season by Fids from Base W. Mapped by FIDS cartographers from these efforts, and named by UK-APC on July 7, 1959, for Capt. John V. Wilkinson. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Glaciar Wilkinson.

Wilkinson Peaks. 66°37' S, 54°15' E. A group of peaks in the Napier Mountains, 8 km SE of Mount Griffiths, in Enderby Land. Photographed by LCE 1936–37, and plotted from these photos in 1946 by Norwegian cartographers, who called the feature Langnabbane (i.e., "the long peaks"). Re-photographed aerially by ANARE in 1956, visited in 1961 by an ANARE sledge party, and renamed by ANCA for Brian Geoffrey "Geoff" Wilkinson, who wintered-over as assistant diesel mechanic at Mawson Station in 1961 and at Wilkes Station in 1963. US-ACAN accepted the name in 1965.

Wilkniss Mountains. 78°01' S, 161°07' E. A prominent group of conical peaks and mountains, running N-S for 16 km, 14 km ESE of Mount Feather, in the Quartermain Mountains of Victoria Land. They are 5 km wide in the N portion where Mount Blackwelder (2340 m) and Pivot Peak (2450 m) rise above the ice-free valleys. Except for an outlying SW peak, the S portion narrows to a series of mainly ice-covered smaller peaks. Named by US-ACAN in 1992, for chemist Peter E. Wilkniss, who, from 1975 has served in various positions in the NSF, including deputy assistant director of the Directorate for Scientific, Technological, and International Affairs; director of the Division of Polar Programs, 1984–93; and senior science associate to the assistant director for geosciences, from 1993.

Will Hays Mountains *see* **Hays Mountains**

Willan Nunatak. 62°39' S, 60°17' W. Rising to 449 m above sea level, on the W side of Huntress Glacier, about 3.5 km ENE of Johnsons Dock, Hurd Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on May 13, 1991, for Dr. Robert Charles Richard Willan (b. 1952), BAS geologist in charge of the work on Hurd Peninsula in 1985. In 1995, the Americans inadvertently named it Orpheus Nunatak, but, once they realized that the British had got in first, re-applied the name Orpheus to Orpheus Pass, and accepted the name Willan Nunatak in 1997. The Spanish call it Nunatak del Castillo, for its abruptness and isolated position.

Willan Saddle. 62°39' S, 60°16' W. A flat, crescent-shaped saddle, extending for 1 km in a NE-SW direction, at an average elevation of 410 m above sea level, between Burdick South Peak and Willan Nunatak, on Livingston Island, in the South Shetlands. Named by the Bulgarians on July 28, 1997, in association with the nunatak. UK-APC accepted the name on April 23, 1998.

Willcox, Hilton Leonard. b. Nov. 7, 1907, Invercargill, NZ, son of William Willcox and his wife Frances Reid. On March 11, 1930, while still a medical student at the University of New Zealand, he replaced Haldor Barnes as doctor on the *Eleanor Bolling* during ByrdAE 1928-30. Thus he never got to see Antarctica, at least not on that trip. He made up for it by spending a year in Labrador, with Grenfell, as a deck hand on a ship. In Dec. 1933, not long after he had actually got his degree in medicine, as the *Jacob Ruppert* sailed into Wellington, for ByrdAE 1933-35, Willcox became medical officer on the expedition, and finally got to Antarctica. He joined the RAF in Jan. 1937, as a medical officer, and was posted to Iraq, where he met Margaret Bella Weir, a Scottish nurse also serving in the RAF. They were married on Aug. 4, 1937. Dr. Willcox served in France and North Africa during the war, and retired from the RAF in 1967, to Cullen, in Scotland, where he died on March 8, 1987. He wrote a book called *Beneath a Wandering Star* (1986: Pentland Press, in Edinburgh).

[1]**The *Willem Barendsz***. Built in 1931, at the Götaverken Yard, in Göteborg, Sweden, as the oil tanker *Pan Gothia*. Vincke & Co., of Amsterdam, bought her on Feb. 21, 1946, and converted her at the Amsterdam Dry-Dock Company into a 10,409-ton, 504-foot Dutch whaling factory ship. On Oct. 27, 1946 she was re-named *Willem Barendsz* (after the explorer who gave his name to the Barents Sea) and that very day left Ijmuiden, with 244 men under the command of Capt. Klaus Visser, bound for Southampton, accompanied by 8 whale catchers. Adolf Melchior (1898-1962) was the ship's doctor. On Oct. 31, 1946 she left Southampton, bound for Cape Town, and then on to Antarctic waters for the 1946-47 whaling season which would begin on Dec. 8, 1946. There were 5 zoologists aboard. This was the first Dutch whaling expedition to anywhere since 1874. Actually, she may not have quite made it into Antarctic waters, not south of 60°S anyway, operating as she did between Bouvet Island and the South Sandwich Islands. She was back in 1947-48, again under Capt. Visser (again, it is unclear if she made it south of 60°S). In 1950 the Russians offered to buy her at a huge price, but the Dutch turned them down. She was in Antarctica every season until her last, 1954-55, and in 1955 was sold again, became the whaling transport *Bloemendael*, and in 1961 was sold to the Japanese, and became the *Nitto Maru*. In 1964 she was sold again, and became the *Nichiei Maru*. On June 29, 1966, she was broken up in Aioi, Japan.

[2]**The *Willem Barendsz***. Also known as the *Willem Barendsz II*. After the original *Willem Barendsz* was sold, and became the *Bloemendael*, a new *Willem Barendsz* was built by Wilton-Fijenoord, in Schiedam, in the Netherlands, in 1955, for the United Whaling Company. At 26,830 tons, and 623 feet long, she was the largest floating factory whaler in the world at that time. She had a crew of 506, and 18 whale catchers accompanied her that first year to Antarctica, 1955-56, and 14 accompanied her in 1961. She was in Antarctic waters every season between 1955-56 and her last season, 1965-66, and then, due to the quotas being imposed on the whaling industry, she was sold to South Africa in 1966, and converted into a pilchard-processing factory. In 1972 she was withdrawn, and laid up at Cape Town. In 1973 she was sold to the South Koreans, and became the *Yu-Sin*, and in 1988 wound up in Alaska, as the *Ocean Pioneer*.

Willemöes-Suhm *see under* **von Willemöes-Suhm**

Cabo Willems *see* **Cape Willems**

Cape Willems. 64°57' S, 63°16' W. Forms the NE side of the entrance to Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and named by de Gerlache as Cap Willems or Cap Pierre Willems (both names are seen on maps of the expedition), for Pierre Willems (1840-1898), Belgian philologist and classical scholar who, in 1874, founded the first philological society in Belgium, at Louvain. The name Cape Willems is seen on Dr. Frederick Cook's 1900 English language version of the expedition's map, and on British charts of 1908 and 1937. On Charcot's map of 1906, it appears as Cap P. Willems, but that was only Charcot abbreviating — it was not his name for the feature. US-ACAN, after having rejected Cape Pierre Willems as a name, accepted the name Cape Willems in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, with the coordinates 64°56' S, 63°13' W. The coordinates were corrected following aerial photography by FIDASE in 1956-57, and, as such, appear on a British chart of 1959, and also in the 1986 British gazetteer. It appears as Cabo Willems on an Argentine chart of 1947, and that is what the Argentines still call it. It appears as Cabo Willems in the 1974 Chilean gazetteer.

Willett Cove. 72°19' S, 170°14' E. A small cove, on the S side of Seabee Hook, on the W side of Cape Hallett, Moubray Bay, at the entrance to Edisto Inlet, Victoria Land. Surveyed in Jan. 1956 by the USN Reconnaissance Survey, on the *Edisto*. Named by US-ACAN in 1956, for James H. Willett, of the U.S. Navy Hydrographic Office, who directed the establishment of astronomical control stations on Ross Island and Seabee Hook in 1955-56.

Willett Range. 77°18' S, 160°25' E. Runs N for 30 km, as a high shelf along the edge of the continental ice shelf, from Mistake Point to Mackay Glacier, in Victoria Land. It is breached by several glaciers flowing E from the plateau. The NZ Northern Survey Party of BCTAE 1957-58 set up survey stations at its S end in Oct. 1957 and Jan. 1958, and they named the range for Richard W. "Dick" Willett, director of NZGS from 1955, who assisted the expedition in its planning stages and beyond. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Willey Glacier. 70°25' S, 67°50' W. Heavily crevassed, N of Creswick Peaks, it flows SW from Creswick Gap into George VI Sound, in Palmer Land. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for geologist Lawrence Edward Willey (b. Nov. 22, 1943), who worked for BAS from July 4, 1966 to Oct. 10, 1974, and who wintered-over at Base E in 1967 and 1968. He was on the SE coast of Alexander Island in 1972-73, working with Chris Edwards. He later worked for Shell. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Willey Point. 84°37' S, 165°45' E. A conspicuous rock point along the W side of the Beardmore Glacier, marking the S side of the mouth of Berwick Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Francis J. Willey III, meteorologist who wintered-over at Hallett Station in 1963.

Glaciar William *see* **William Glacier**

Monte William *see* **Mount Banck**, **Mount William**

Mount William. 64°47' S, 63°41' W. Prominent and snow-covered, it rises to 1515 m, 7 km NNE of Cape Lancaster (the S extremity of Anvers Island), and SW of Börgen Bay, in the Palmer Archipelago. Discovered by Biscoe on Feb. 21, 1832, and named by him for the new king of England, William IV. Biscoe roughly charted it as the highest mountain to be seen from Biscoe Bay, which is where he made his landing. For an extended history of this feature, *see* **Mount Banck**. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. The Chileans call it Monte William, and the Argentines call it Monte Capitán Mendióroz.

The *William and Nancy*. A 100-ton, 64-foot whaling brig, built in Bath, Conn., in 1810, but converted into a 2-masted sealing schooner. Owned by Thomas V. McClure, she was registered in Nantucket on March 14, 1815, and re-

registered on June 1, 1819, leaving the USA for the South Shetlands to take part in the 1820-21 sealing season there, in company with the *Harmony*. Commanded by Tristan Folger, she arrived late in the islands, and did not have much luck as far as seals go. The vessel was based at Harmony Cove, Nelson Island, for most of her stay in the South Shetlands. On April 1, 1821, back in the USA, Ferdinand Gardner took over as captain, and in 1823 Capt. Hardy was skipper.

The *William Baker*. Out of Warren, Rhode Island. She was in the South Shetlands in the period 1834-36, under the command of first Charles F. Howland, and then Adby Wilcox.

William Bay *see* **Börgen Bay**

Mount William Block *see* **Block Peak**

Cape William Bruce *see* **Bruce Point**

William Glacier. 64°43' S, 63°27' W. A glacier of appreciable size, flowing SW from the interior highlands of Anvers Island, to the head of Börgen Bay, on the SE coast of the island, in the Palmer Archipelago. Discovered by BelgAE 1897-99, and charted by them in Feb. 1898 simply as "un grand glacier." The Discovery Committee surveyed the area in 1927, and the name William Glacier first appears on a 1929 British government chart based on that survey. The glacier was further surveyed, but from a distance, by Operation Tabarin personnel from Port Lockroy Station in 1944. It appears on two 1947 Chilean charts, as Glaciar Guillermo and as Ventisquero Guillermo (both names meaning William Glacier). It appears on an Argentine chart of 1949 as Glaciar William. US-ACAN accepted the name William Glacier in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on an Argentine chart of 1953 as Glaciar Tolosa, named by ArgAE of that year, after a sailor of the Argentine Marine Infantry killed at the battle of Martín García in March 1814, and that is the name the Argentines use today. It was resurveyed by Fids from Base N in Nov. 1955. It appears in the British gazetteer of 1955, as William Glacier, and as such on a British chart of 1974. It appears in the 1974 Chilean gazetteer, as Glaciar William.

Cape William Henry May *see* **Cape May**

The *William Horlick*. NR12384. The Curtiss-Wright Condor twin-engine biplane, equipped with skis and floats, taken on ByrdAE 1933-35. It was damaged while loading onto a ship for the return to the USA, where it was scrapped.

The *William Scoresby*. British whale-catcher type vessel built to order for the Crown by Cook, Welton & Gemmell, of Beverley, Yorks, as a Royal research ship for deep sea and whaling studies (mostly for marking whales with identifying steel darts). This fast, small, steel, screw 324-ton vessel was launched on the last day of 1925 at Beverley, commissioned in 1926, and named after an old Whitby whaling captain William Scoresby (1760-1829). Actually belonging to the Falkland Islands government, she was 134 feet long, with a beam of 26 feet, and a depth of 13 feet 6 inches. She made several cruises (see the various entries below) in Antarctic waters from 1926 to 1939 for the Discovery Committee. **1926-27 cruise**. On June 26, 1926, the *William Scoresby* left Humber docks, bound for Brixham and Dartmouth, for minor adjustments, and then on to Cape Town, where she rendezvoused with the *Discovery* on Aug. 1, 1926. Scientists included: Dilwyn John and Francis Fraser. 21 ship's crew included: Lt. Cdr. G.M. Mercer, RNR; John Blanchard and Walter Baxter (both petty officers from Hull); William O. Clark and James Sutherland (firemen); William White (able seaman); and William R. Johnston (ordinary seaman). She returned to England after just over a year away. **1927-30 cruise**. The *William Scoresby*, after a re-fit, left Portsmouth on Dec. 24, 1927, bound for Antarctica. Scientific staff included: Dilwyn John (leader), George Deacon (senior hydrologist, 1927-28), Neil Mackintosh (zoologist), Alec Laurie (zoologist, 1929-30), Rolfe Günther, George Rayner (biologist, 1929-30). Ship's crew included: Harold de Gallye Lamotte (captain, 1927-28; succeeded by R.L.V. Shannon, 1928-30, and later by Jack Irving, 1930— he brought the ship home), David Roy (chief engineer), Gilbert Hunter (2nd engineer), James Sutherland (artificer and then 3rd engineer), Horace Sandford (fireman, 1929-30), William O. Clark and Leonard Marshall (firemen), William R. Johnston and William White (able seaman), D. Stegmann (able seaman, 1929-30), Leslie Taylor (ordinary seaman), William Hellyer and Charles Gobart (assistant stewards). It was during this cruise that the ship helped out Wilkins during the latter's expedition of 1928-30. The *Scoresby* arrived back in London in June 1930. **1930-32 cruise**. On Nov. 4, 1930, the *William Scoresby* left England. Scientific staff: Rolfe Günther (leader), Alec Laurie (zoologist, 1931), George Rayner (biologist, 1931-32). Ship's crew included: Jack Irving (captain, 1930-31; T.A. Jolliffe, 1931-32), Leonard Hill (3rd officer, 1930-31), David Roy (chief engineer), Gilbert Hunter (2nd engineer), Cecil Buchanan (engine room artificer), William Kebbell (chief cook, 1931-32), Albert Wyatt (assistant steward, 1931-32), William Mathieson (fireman), Walter Marshall (able seaman), Edwin Hum (ordinary seaman), Joseph Reid (orindary seaman, 1931-32). On Nov. 5, 1930, one night out of England, a Welsh stoker threatened another crew member with a knife, and had to be locked in the brig until they arrived in Portsmouth two days later. Another stoker deserted, and the cook went mad. 35 men applied for the job of cook, and were all rejected. The one they wanted turned them down. Then came an applicant who could cook all right, but had no teeth. He was rejected, possibly for that very reason. On Nov. 13, 1930, they left Portsmouth, bound for Plymouth, still with no cook. The newspapers had reported this culinary vacuum, and the expedition was literally bombarded with applications from all over the country, and from some of the finest restaurants and hotels. They thought they found a suitable man in Plymouth, but the standards of comfort aboard ship did not meet his requirements, and he wanted to quit. They wouldn't let him, and so he found a way to escape — by cooking inedible fare until they threw him off. On Nov. 18, 1930, they eventually left Plymouth, and headed down to the Bay of Biscay. They were delayed a week in the Canary Islands, trying to find a major leak in the ship. The cook (they had finally found one) scalded his hand bad, and the doctor ordered him to bed for 10 days. The assistant steward became the cook, until one day a drunken crew member attacked him. The assistant steward/cook had a pocket knife, and pulled it out. The very presence of this lethal weapon deterred the assailant, but, as the assistant steward was pocketing the blade, he accidentally stabbed himself in the thigh with it, and collapsed to the deck, losing pints of blood. En route to Pernambuco, they found 2 stowaways, and 5 days were lost in getting the two to be accepted legally in Brazil. On Dec. 30, 1930, the ship arrived in Montevideo, and on Jan. 12, 1931, they arrived at South Georgia, where a man had to be hospitalized at Grytviken, suffering from jaundice. There was another jaundice case aboard, but no one seems to know what happened to him. The chief engineer and 1st officer came to blows, and had to be separated by the skipper. There were a lot of other tensions between the personnel, and Captain Irving would often run to his cabin, in tears. Neil Mackintosh joined the expedition at Grytviken, as senior scientist. After biological and hydrological work in South Georgia, the ship left for the South Sandwich Islands, for the same sort of work. On Feb. 12, 1931, they were back at Grytviken, where the cook had to be hospitalized due to a septic arm, and the Norwegian whalers lent them a lad to do the cooking. In March 1931 the ship ventured into Antarctic waters proper, mostly whale-marking, and getting as far as 70°S. During this cruise the Norwegian cook fell overboard, and had to be rescued. Back at Grytviken, the *Scoresby* met up with the *Discovery II* for a while. On April 10, 1931, the *Scoresby* left Grytviken for the Falklands, minus Mackintosh, and from there on to the west coast of South America, to study the Humboldt Current and El Niño. Günther had been promoted from junior to senior zoologst. They then went back to the Falklands, where they researched the trawling grounds. On June 6, 1932, the ship arrived back in London. **1934-35 cruise**. The *William Scoresby* left London on Oct. 16, 1934. Scientific staff included: George Rayner (leader). Ships crew included: C.R.U. Boothby (captain), Ronald Freaker (1st officer), Gilbert Hunter (2nd engineer), Walter Marshall (leading seaman), James Jameson (able seaman), William Mathieson (fireman), John Whittaker (cook). They arrived back in London on May 14, 1935. **1935-36 cruise**. The *William Scoresby* left London on Oct. 25, 1935. Scientific staff included: George Rayner (leader). Ship's crew included: C.R.U. Boothby (skipper), Ronald Freaker (1st officer), Archibald Macfie (2nd officer), Bernard Dales (chief engineer), John Warnock (2nd engineer), Fram Farrington (radio officer), Walter Marshall (leading seaman), Ed-

win Hum (able seaman). They explored the waters of Enderby Land and Queen Mary Land, marked 700 whales, and made two landings — one at Mac. Robertson Land and one at Kemp Land. After 17,000 miles the ship arrived back in London on May 14, 1936. **1936-37 cruise**. The *William Scoresby* left London on Oct. 20, 1936. Scientific staff included: John Hart (leader), Rolfe Günther (in charge of the work at South Georgia). Ship's crew included: C.R.U. Boothby (captain), Lt. Ronald C. Freaker (chief officer), Lt. A.F. Macfie (senior 2nd officer), Sub Lt. A.S. Marshall (2nd officer), Bernard Dales (chief engineer), John Warnock (2nd engineer), Frank Swan (3rd engineer), Fram Farrington (radio officer), John Whittaker (cook). The rest of the crew were new. 900 whales were marked. **1937-38 cruise**. The *William Scoresby* left London on Sept. 16, 1937. Scientific staff included: George Rayner (leader). Ship's crew of 23 included: Ronald Freaker (captain), Thomas Oates (2nd officer), Bernard Dales (chief engineer), John Warnock (2nd engineer), Fram Farrington (radio officer), John Whittaker (steward). 800 whales were marked. After 25,000 miles the ship arrived back in London on April 13, 1938. The Ministry of War took over the ship in 1939, and by 1943 she was sweeping mines in the South Atlantic. From 1943 to 1945 she was used in Operation Tabarin, and in 1945-46 was a FIDS ship. Victor Marchesi was captain, 1943-46, and Andrew Taylor was scientific leader, 1945-46. Paddy Fleck was 1st mate during that time period, and Ian Graham was 2nd mate. The *Scoresby*'s last oceanographic and whaling mission was off the Australian coast in 1950 (she left London on Jan. 11, and returned on Nov. 18), under the command of Cdr. A.F. Macfie, and in 1954 she was sold for £1900 to British Iron & Steel, for scrap.

William Scoresby Archipelago. 67°20' S, 59°45' E. A group of islands extending northward from the coast for about 22 km, just E of William Scoresby Bay, East Antarctica. The main islands in the archipelago are the Klakkane Islands, the Warnock Islands, Couling Island, Sheehan Island, Islay (the largest one), Bertha Island, Hum Island, and Farrington Island. Most of the islands in this archipelago were discovered in Feb. 1936 by the personnel on the *William Scoresby*, and the archipelago itself was named by them for their vessel. They plotted it in 67°17' S, 59°50' E. US-ACAN accepted the name in 1947. The feature has since been re-plotted.

William Scoresby Bay. 67°24' S, 59°34' E. A bay, 8.5 km long and 6 km wide, with shores marked by steep rock headlands and snow-free hills rising to 210 m, just E of Fold Island, at the W side of William Scoresby Archipelago, on the coast of Kemp Land. The practical limits of the bay are extended 6 km northward from the coast by island groups along its E and W margins. Discovered in Feb. 1936, by personnel on the *William Scoresby*, who named it for their vessel. US-ACAN accepted the name in 1947. The Norwegians call it Innfjorden.

The *Williams*. British sealer under the command of William Smith which, while on a trading voyage from Valparaíso to Buenos Aires in 1819, discovered the South Shetlands. Joseph Herring was mate. Smith returned to Chile, informed the Royal Navy of his find, and had his ship taken over by the RN, who placed Bransfield in command to set out on another voyage in order to substantiate Smith's findings. Smith acted as pilot on this new trip. Also aboard, on this new trip, were midshipmen Thomas Bone and Patrick J. Blake, surgeon Adam Young, Henry Foster, Charles Poynter, and James Hoseason. On Jan. 18, 1820, they sighted Cape Shirreff, on Livingston Island, and on Jan. 30, 1820, sighted the actual continent of Antarctica. Smith captained the vessel again for another voyage to the South Shetlands, in 1820-21.

[1]**Cape Williams** *see* **Williams Point**

[2]**Cape Williams**. 70°30' S, 164°09' E. Also called Williams Head. An ice-covered headland, on the E side of the terminus of Lillie Glacier, at the E end of the Bowers Hills, in Oates Land. Discovered in Feb. 1911 by the *Terra Nova*, as that vessel explored the coast westward of Cape North, after dropping Scott off at Ross Island. Named for [1]William Williams. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. First plotted in 70°29' S, 164°05' E, it was later re-plotted.

Mount Williams. 66°48' S, 50°51' E. Between Mount Riiser-Larsen and Mount Soucek, in the NW part of the Tula Mountains of Enderby Land. Plotted from ANARE air photos taken in 1956, and named by ANCA for RAAF air frame fitter Corp. John Stanley Marsden "Snow" Williams (b. July 4, 1934; retired Jan. 25, 1974, as a warrant officer) who, at the last moment, wintered-over at Wilkes Station in 1959, as diesel mechanic and 3rd engineer (and who would become, later during that winter, senior engineer). He was assistant diesel mechanic at Mawson Station in 1962. He later became a farmer in NZ. US-ACAN accepted the name in 1965.

Point Williams. 67°49' S, 67°34' E. Name also seen as Williams Point. At the E side of Shallow Bay, on the Lars Christensen Coast of Mac. Robertson Land. Discovered on Feb. 12, 1931, by BANZARE, and named by Mawson for Arthur Williams. US-ACAN accepted the name in 1952.

Port Williams. Possibly a synonym for Yankee Harbor, or part of it, or a larger bay of which Yankee Harbor was a part. Palmer mentions it in his log of Nov. 24, 1820. Most probably it was an early name for Yankee Harbor itself, and, if so, shortly thereafter it became known as Yankee Harbor. Named for Ephraim Williams.

Punta Williams *see* **Point Williams**, [1]**Williams Point**

Roca Williams. 63°14' S, 63°03' W. A rock, thought to lie 22 km SSW of Cape James (the extreme SW point of Smith Island), in the South Shetlands. Named by the Chileans for the *Williams*. It has never been found, despite countless searches over the years, and almost certainly doesn't exist.

Williams, Arthur J. Chief petty officer, RN, and radio telegraphist on both halves of BANZARE 1929-31.

Williams, C. Known as Gus. On Aug. 29, 1912, he signed on to the *Aurora* as 2nd steward, at £6 10s per month. However, he was on the ship earlier, on a trip to Macquarie Island. He was promoted to chief steward (with a raise in pay to £9 per month) on Oct. 8, 1912, and was on the vessel for her 2nd run to Antarctica during AAE 1911-14. On March 20, 1913, he left the ship at Lyttelton, NZ, but was taken back as chief steward on Sept. 1, 1913, and made the 3rd and last voyage south. He left the expedition on March 19, 1914, with a bonus of £6 12s. Oddly, he had a feature named after him by ANCA in 2010.

Williams, Charles "Charlie." b. 1881, Lyttelton, NZ, son of Capt. H. Williams, of Christchurch. In 1897 he joined the Merchant Navy, on a NZ schooner. He was also a Naval Reserve man, and served for a while on HMS *Tauranga*. In 1909, he was discharged from the Navy, and at Lyttelton he signed on as an able seaman on the *Terra Nova*, during BAE 1910-13. When World War I broke out he volunteered as a stoker in the North Sea Fleet, serving aboard the *Viking* when that vessel got hit by a mine. He was on the *Broke* (under the command of his old Antarctic comrade Teddie Evans), and won the DSM for heroics off Dover when the *Broke* and the *Swift* took on six German warships. After the war, he wound up back in Lyttelton, and got a job on the 128-ton coastal steamer *Tainui*, a wooden fuel vessel shuttling petroleum up and down the coast of New Zealand. In the early hours of Sept. 16, 1919, the *Tainui* caught fire and exploded, about 4 miles off Gore Bay. They got a lifeboat into the rough seas, but it was soon swamped with men, and turned over. Charlie Williams struck out for shore, yelling, "Come on, boys, follow me!" They never made it. Only the cook survived.

Williams, Ellis "Taffy." b. Jan. 2, 1920, Newport, Mon. He joined the RAF in 1940, and was a Signals School instructor, with the rank of acting flight sergeant, when he was selected to be radio engineer and operator in the Advance Party of BCTAE 1955-58. He was part of the RAF back-up contingent during the actual crossing of the continent by Fuchs in 1957-58. After the expedition, he left Wellington on the *Rangitoto*, and arrived in Southampton on May 12, 1958, heading back to Newport, where he almost immediately married Audrey M. Brookes. He died in Feb. 1997, in Newport.

Williams, Ephraim. Co-owner of the *Hersilia*, and one of the principal organizers of the Fanning-Pendleton Sealing Expedition of 1820-21, on which he commanded the *Express*. He was one of the owners of the *Penguin*, 1829-31.

Williams, Francis *see* **USEE 1838-42**

Williams, Frederick Warren "Fred." b. Dec. 19, 1920, Huntingdon, Tenn., son of James Williams. He joined the Navy in 1940, fought extensively in the Pacific during World War II, and re-enlisted in July 1946. He was the aviation machinist's mate 1st class who died in the Martin

Mariner crash (*George I*) on Thurston Island, on Dec. 30, 1946, during OpHJ. Actually, he died 2 hours after the crash. *See* **The *Pine Island*** for more details.

Williams, George *see* **USEE 1838-42**

Williams, Henry C. *see* **USEE 1838-42**

Williams, Jack *see* **USEE 1838-42**

Williams, James *see* **USEE 1838-42**

Williams, John L. b. 1845, Montville, Conn. New London sealer. He was 1st mate on the *Emma Jane* in 1867, and in 1869, 1870, and 1871 was the very young skipper of the *Roman*, in the Kerguélen Islands and Heard Island. He took the *Nile* down to the South Shetlands in 1872-73, and the *Golden West* to the same place in 1873-74 (see that ship for crew list). He was again skipper of the *Golden West* in 1874-75, 1875-76, and 1876-77. In 1874 he moved to Niantic, Conn., and in 1878, apparently, he was at Bouvet Island (not in Antarctica).

Williams, John M. b. 1850. First harpooner (that was his title) on the *Polar Star* during DWE 1892-93.

Williams, Joseph. b. 1889. Carpenter on the *Discovery* during the 2nd half of BANZARE 1929-31.

Williams, Martyn. b. 1948, England. Went to Canada in 1969. Co-founder of Adventure Network International. Led several expeditions up Vinson Massif, and in 1988-89 led the Mountain Travel expedition to the South Pole.

Williams, Michael *see* **USEE 1838-42**

Williams, Pelham. Wintered-over at Davis Station in 1984, 1987, 1990, and 1994.

Williams, Peter "Billy." b. Oct. 17, 1794, Milford Haven, Pembrokeshire. He went to sea at the age of 14, on a merchantman, and was captain of the London sealer *Prince of Denmark*, in the South Shetlands for the 1822-23 season. In 1829 he started what may have been the first whaling station in NZ, at Cuttle Cove, near Blenheim. On Oct. 12, 1850, he married the widow Mary Coleman (née Carey), and died in Dunedin on June 26, 1868.

Williams, Philip *see* **USEE 1838-42**

Williams, Richard Thomas B. "Willy." b. Aug. 30, 1933, Oppenheim, NY. Construction driver 3rd class, and petty officer, USN, attached to the Seabees as a tractor driver. He was the first fatality of OpDF I, when his 28-ton Caterpillar D-8 tractor broke through the ice on Jan. 6, 1956, just after crossing a 7-foot crack, while he was en route to Cape Evans across the sea ice. The tractor plunged through a crack in the ice so quickly that Williams didn't stand a chance. He was last seen trying to get out of the open side door, but drowned in 100 fathoms of very cold water. Williams Field is named for him, and so was McMurdo Station itself at one time (*see* **McMurdo** for details). On Oct. 8, 1956, Father Condit erected a memorial to Williams at Arrival Heights, a stone grotto containing a large concrete statue of Our Lady of the Snows.

Williams, Samuel *see* **USEE 1838-42**

Williams, Thomas L. *see* **USEE 1838-42**

Williams, W. b. 1886. Ordinary seaman on the *Nimrod*, during BAE 1907-09.

[1]**Williams, William**. b. Nov. 18, 1875, Bristol. Chief engine room artificer on the *Indomitable*, when he transferred as such to the *Terra Nova* for BAE 1910-13. He left the Navy on Oct. 1, 1913.

[2]**Williams, William**. b. 1888, Tyn Parc Rhiw, son of a farmer. He left for London to work at his uncle's bakery, then went to sea. During World War I his ship was torpedoed. He eventually became superintendent for the Southern Whaling and Sealing Company, as captain of the *Southern King*, in Antarctic waters in the 1920s. He married a lady from Edern, and they lived in Morfa Nevin, Caernarvonshire. He took her down on the *Southern King* one season. On Nov. 2, 1942, during World War II, he was skipper of the *Empire Gilbert*, on his way to Russia, when he was torpedoed again, this time by U-586, north of Iceland, and died. He was 54.

Williams Air Operating Facility *see* **McMurdo**

Williams Bluff. 70°43' S, 160°12' E. An east-facing rock and ice bluff, 5 km long, rising between Pitzman Glacier and Lovejoy Glacier, 10 km E of the S part of the Pomerantz Tableland, and 11 km E of Keim Peak, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Harry N. Williams, USN, of VX-6, aerial photographer on P2V flights over Victoria Land and other parts of Antarctica, 1960-61, 1961-62, and 1962-63.

Williams Cliff. 77°35' S, 166°47' E. A prominent rock cliff, standing out from the ice-covered SW slopes of Mount Erebus, 10 km E of Cape Barne, on Ross Island. BAE 1901-13 mapped it as Bold Cliff. US-ACAN renamed it in 1964, for Richard T. Williams.

Williams Field. 77°51°S, 166°37' E. Also called Williams Air Operating Facility, or Williams AirOpFac. Willie Field, as it has long been known, later became only one of McMurdo's three airfields, but for decades it was the only one. It is also the most famous airport in Antarctica. Because it was made of snow, the landing strip could take only ski-equipped aircraft, and for this reason Pegasus Airfield was built out on the Ross Ice Shelf (*see also* **Sea Ice Runway**). **1954-55**: Frank Debenham selected the original site. **Dec. 1955**: Cdr. Gordon Ebbe, of VX-6, scouted out 6 possible alternative locations while flying in his Sikorsky helicopter piloted by Lt. Cdr. William E. Shockley and Lt. (jg) Leroy L. Barton. Herb Whitney, the Seabee chief, was also aboard. Ebbe picked this site. **Dec. 18, 1955**: In zero temperature and 30 mph winds, the world's most isolated runway was marked off, 9000 feet long and 300 feet wide, on 30 foot-thick sea ice, about 4 km south of what later became known as McMurdo Station. It would be built by 100 Seabees, an incredible achievement against overwhelming odds. It had an average of 23 inches of snow on it, which helped traction. The complex was called AirOpFac McMurdo (Air Operating Facility at McMurdo Sound), which gave its name to the whole base. **Dec. 20, 1955**: Two Neptunes and 2 Skymasters flew in from NZ, the first time such a landing had been attempted from another continent. At that point the runway had no buildings, no beacons, and no crash crews. **1956-57**: It was officially named Williams Field, for Richard T. Williams, who had died here during OpDF I (1955-56), and soon acquired the nicknames Willie Field or Willie. **1957-58**: The U.S. base at McMurdo was upgraded from an AirOpFac to an NAF (naval air facility), and Willie was expanded. **Oct. 1962**: By now cracks had appeared in the ice beneath the base, and Williams Field II was built on the sea ice, directly south of Ross Island. The original now became known, for history's sake, as Williams Field I. There have subsequently been many Williams Fields, a new and larger one being built whenever a crack appeared or snow covered the existing one, and also because the ice shelf is constantly moving toward the sea at the rate of 6 feet per week. **1963-64**: It was decided to create a much more livable atmosphere here, rather than just the temporary Jamesway huts. After all, more than 250 people were working here each summer. The new "comforts of home" can best be indicated by the cost of the toilet facility—$165,000. **1965-66**: Cracking ice led to the construction of Williams Field III, about 5 km SW of Pram Point. **1966-67**: Outer Williams Field was built about 11 km SE of McMurdo station, in order to extend operations. **1970-71**: Outer Willie was closed. **1976-77**: Williams Field IV was started, about 1.5 km to the east of Willie III. **1977-78**: Willie IV was finished. **1980**: The maintenance of the field became the responsibility of ITT/Antarctic Services, Inc. **1983-84**: Williams Field V was built 5 km from the site of Willie IV. By 2010 Williams Field, as an airfield, was a thing of the past.

Williams Glacier. 68°24' S, 149°36' E. A glacier, SW of Horn Bluff, at the W side of Deakin Bay, George V Land. Named by ANCA on Aug. 12, 2010, for Gus Williams.

[2]**Williams Glacier**. 78°06' S, 162°18' E. A glacier, 4.5 km long, flowing from Sladen Summit into Emmanuel Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Richard S. Williams, Jr., USGS research geologist, an authority on aerial and satellite investigations of geomorphic processes and the fluctuations of glaciers on a global basis, especially in Iceland and Antarctica. He and Jane G. Ferrigno edited *Satellite Image Atlas of Glaciers of the World*. *See also* **Williams Ice Stream**.

Williams Haven. 60°41' S, 45°38' W. A cove, 0.3 km SW of North Point, Signy Island, in the South Orkneys. The cliff on the N side of the cove has a large sea cave indenting it. UK-APC named it on May 13, 1991, for David Wynn-Williams. US-ACAN accepted the name.

Williams Head *see* **Cape Williams**

Williams Hills. 83°42' S, 58°55' W. A compact group of hills, 16 km long, S of Childs Glacier, and running N-S along the W side of Roderick Valley, in the Neptune Range of the Pensacola Mountains. Mount Hobbs rises to 1135

m within this group, and other features include Pillow Knob and Teeny Rock. Mapped by USGS from their own ground surveys, 1963-64, and also from air photos taken by USN between 1956 and 1966. Named by US-ACAN in 1965, for Paul Lincoln Williams (b. 1932), USGS geologist here in 1963-64, with the Neptune Range field party of that year. Originally plotted in 83°45' S, 58°33' W, the coordinates were corrected by 1969, and as such the feature and its name and new coordinates were accepted by UK-APC on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Williams Ice Stream. 73°15' S, 88°27' W. An ice stream, 24 km long, flowing into the Venable Ice Shelf just E of Fletcher Peninsula, on the coast of the Bellingshausen Sea. Named by US-ACAN in 2003, for Richard Williams (*see* **Williams Glacier**).

Williams Inlet. 71°57' S, 71°17' W. The NE arm of Bach Inlet, in the SW part of Alexander Island. Partially photographed from the air by RARE 1947-48, and roughly mapped from these photos in 1960, by Searle of the FIDS. Delineated from U.S. Landsat images of Jan. 1973. Named by UK-APC on June 11, 1980, for Ralph Vaughan Williams (1872-1958), the British composer, whose works include *Sinfonia Antarctica* (1953).

Williams Island. 71°54' S, 101°11' W. An ice-covered island, 1.5 km long, between Cape Petersen and Dyer Point, 3 km off the N coast of Thurston Island. Delineated from air photos taken by VX-6 in Jan. 1960, and plotted in 71°54' S, 101°26' W. Named by US-ACAN in 1960, for Frederick W. Williams.

Williams Lake. 68°29' S, 78°09' E. An oval-shaped saline lake, 1 km long and 250 meters wide, separated from Bulatnaya Bay in the N and Langnes Fjord in the S by low divides, near the W end of Langnes Peninsula, in the Vestfold Hills, on the W side of the Leopold and Astrid Coast of Princess Elizabeth Land. The surface of the lake is between 0.5 and 1 meter above the high water mark. Water has not been seen flowing into the lake from the ocean, but on Jan. 16, 1988 it was seen flowing from the lake into Langnes Fjord. Quite a large lake, there may well be deeper points in it than the deepest so far recorded, of 7 meters. Named by ANCA for Richard "Dick" Williams, a limnologist who wintered-over at Davis Station in 1974, and who has since made major studies in his field in the Vestfold Hills.

Williams Nunatak. 66°26' S, 110°43' E. A small rounded coastal nunatak-type hill protruding from the top of the ice cliff, at the SW side of the terminus of Peterson Glacier, where it faces on Penney Bay, on the Budd Coast, 3 km SE of Herring Island (one of the islands in the S part of the Windmill Islands). Photographed in Feb. 1947, during OpHJ 1946-47, and first mapped from these photos. Named by US-ACAN in 1956, for Calvin E. Williams, member of one of the two USN photographic units which obtained ground and aerial photographic coverage of this area during OpW 1947-48.

Williams Peak. 77°58' S, 163°57' E. A prominent peak, rising to over 1400 m, perhaps even as high as 1700 m, in a nodal position between the drainage of Hobbs Glacier, Salmon Glacier, and Garwood Glacier, in Victoria Land. Named by VUWAE 1960-61, for Dr. James Williams (1908-1976), vice chancellor of the university (i.e., Victoria University of Wellington, NZ), 1951-68. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

[1]**Williams Point**. 62°27' S, 60°08' W. Rising to a height of 34 m above sea level, and notably ice-free in summer, it forms the extreme NE point of Livingston Island, and also the NW entrance point of McFarlane Strait, in the South Shetlands. Believed to be the first part of the South Shetlands sighted by William Smith, on Feb. 19, 1819, it was roughly charted by him and named by him as Cape Williams, for his ship, the *Williams*. Over the next few years it was seen variously as Williams' Point, Williams's Point, and a combination of those names translated into various languages, not to mention corruptions of the name. The main idea is that it was very soon re-classified as a point, rather than a cape. The point was re-charted by the Discovery Investigations in 1934-35, and it appears as Williams Point on a British chart of 1937. It appears on an Argentine map of 1946 as Punta Williams, and that is the name the Argentines use to this day. Williams Point was the name US-ACAN accepted in 1947, UK-APC following suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1968. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. It appears in the 1974 Chilean gazetteer as Punta Williams. It was last plotted by the UK, in late 2008.

[2]**Williams Point** *see* **Point Williams**

Williams Pond. 77°32' S, 160°58' E. A pond, 0.6 km N of the E end of Hoffman Ledge, and 0.9 km E of Cleft Ledge, in the feature called Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for M.W. Max Williams, of Hamilton, NZ, a driller and supervisor with the NZ drilling team during the McMurdo Dry Valleys Drilling Project, 1973-76. NZ-APC accepted the name on Nov. 8, 2006.

Williams Ridge. 80°30' S, 29°20' W. A conspicuous rock ridge, rising to 1060 m, and running E-W between Blaiklock Glacier and Stratton Glacier, 1.5 km NW of Honnywill Peak, in the Haskard Highlands, in the W sector of the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE, and named by them for Sgt. Ellis "Taffy" Williams. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Williams Rocks. 67°26' S, 62°46' E. A group of rocks 14 km N of the Flat Islands and Holme Bay, and 19 km NNW of Mawson Station, off the coast of Mac. Robertson Land. Mapped in 1954 by Bob Dovers of ANARE, and named by ANCA for Snow Williams (*see* **Mount Williams**). This feature was named to honor his 2nd wintering-over, 1962, when he helped surveyor Dave Carstens in a triangulation of this feature, and the building of a beacon there. US-ACAN accepted the name in 1965.

Punta Williamson *see* **Choyce Point**

Williamson, Barry Charles. He joined FIDS in 1958, as a radio operator, and wintered-over at Base G in 1959, and at Port Lockroy Station in 1960.

Williamson, Harry Rittenhouse "Willie." b. Nov. 9, 1932, Mount Airy, NJ, son of farmer Grover C. Williamson and his wife Edna May Lambert. He joined the Navy in 1952, did boot camp in Bainbridge, Md, then on to Seabee school in Port Hueneme, Calif. Until the Navy he had always been called Duke (a name given him by his elder brother), but now he became known as Willie. He was stationed in Guam, then Kwajalein, then, while working in Public Works in Alaska he saw the notice asking for "volunteers for the South Pole." He trained in Davisville, RI, then shipped south on the *Wyandot* (q.v. for itinerary). As builder 1st class on Chief Bevilacqua's team, he helped construct McMurdo Station, then wintered over there. On Nov. 25-26, 1956 he was among the group of 10 Seabees who formed the 2nd party to be flown to the Pole, to build South Pole Station (q.v.). He was among the first party back out, on Dec. 24, 1956, flying to McMurdo. On Feb. 10, 1957 he left McMurdo on the *Curtiss* (q.v. for itinerary), and while en route to California, Dave Canham (q.v.) signed him up again for another 6 years in the Navy. First at Bainbridge, then he married Doris Jones in 1957, and then went to Port Hueneme, Okinawa, Taiwan, Scotia (in New York), then to Newport, RI, to "knife and fork school," to become a warrant officer. He signed on again, and was in Vietnam, 1966-68, Key West, Norfolk, Oceana, and finally back at Norfolk, from where he retired in 1978. He worked in civilian construction until 1990.

Williamson, John G. Gunner on the *Vincennes* during USEE 1838-42.

Williamson, Thomas Soulsby "Tom." b. Oct. 6, 1877, Sunderland, son of boilersmith James Williamson. He ran away to sea, joining the Royal Navy as a boy 2nd class, on July 30, 1893. He trained on the *Wellesley*, and was an able seaman on the *Pactolus* when he transferred to the *Discovery* for BNAE 1901-04, during which he was on Wilson's party to Cape Crozier in 1903. He married in Portsmouth, in 1907, to Amy Adela Hills, and was was back again with Scott on BAE 1910-13, this time as a petty officer. He was in the RN on destroyers during World War I, and almost died when a mine got his ship. He was working as a dockyard laborer in Portsmouth when he did, actually, die, on Jan. 20, 1940, at Portsmouth Hospital.

Williamson Bluff. 68°05' S, 65°42' W. A flat-topped bluff, with a snow-topped upper portion (although the sides are steep and rocky), rising to 1010 m, extending from the E side of Bills Gulch, 6 km NE of Mount Shelby, near the head of Trail Inlet, on the E coast of Graham Land. First photographed aerially, on Sept. 28, 1940,

by USAS 1939-41. Named by UK-APC on July 21, 1976, for the Rev. William Williamson (1804-1875), rector of Datchworth, Herts, 1848-75, a former lawyer, who, in Switzerland, in 1844, made one of the first mathematical measurements of the surface flow of a glacier. US-ACAN accepted the name later in 1976.

Williamson Glacier. 66°40' S, 114°06' E. Flows NE for about 57 km, from Law Dome into Colvocoresses Bay, terminating in the Williamson Glacier Tongue, on the Budd Coast. Delineated from air photos taken by OpHJ 1946-47, and plotted in 66°34' S, 114°12' E. Named by US-ACAN in 1955, for John G. Williamson. The upper valley of the glacier was traversed by an ANARE glaciological and geophysical party in 1970, and the glacier has since been re-plotted. The Russians call it Lednik Kuchina, for Aleksandr Kutchin.

Williamson Glacier Tongue. 66°29' S, 114°24' E. The prominent seaward extension of Williamson Glacier into Colvocoresses Bay, on the Budd Coast. Delineated from air photos taken by OpHJ 1946–47. Named by US-ACAN in 1956, in association with the glacier.

Williamson Head. 69°11' S, 157°57' E. Also called Williamson Point. A prominent headland, or cape, 10 km WNW of Drake Head, at Davies Bay, on the coast of Oates Land. Discovered from the *Terra Nova* in Feb. 1911, during BAE 1910-13, and named for Tom Williamson. US-ACAN accepted the name in 1947.

Williamson Peninsula. 72°27' S, 99°18' W. An ice-covered peninsula, midway along the S side of Thurston Island, extending SW into the Abbot Ice Shelf between Schwartz Cove and O'-Dowd Cove. Named by US-ACAN in 2003, for Lt. Cdr. H.E. Williamson, medical officer on the *Pine Island*, during OpHJ 1946-47.

Williamson Point *see* **Choyce Point**, **Williamson Head**

Williamson Ridge. 75°47' S, 116°45' W. A low, snow-covered ridge, 16 km long, and between 3 and 8 km wide, it is a western extension of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Paul R. Williamson, ionosphere physicist at Byrd Station in 1967-68 and 1969-70.

Williamson Rock. 77°27' S, 169°15' E. A little rock close off the NE coast of Ross Island, 6 km NW of Cape Crozier, and 11 km ESE of Cape Tennyson, and lying between the two capes. Charted by BAE 1910-13, and named by Scott in 1911 for Tom Williamson. US-ACAN accepted the name in 1952.

Williams's Point *see* **Williams Point**

Willie Field *see* **Williams Field**

Willie Field Automatic Weather Station. 77°51' S, 166°37' E. An American AWS, installed at an elevation of 14 m, in Jan. 1992, at Williams Field, McMurdo. It was visited in Oct. 2003, and again on Feb. 7, 2005, Jan. 20, 2006, Oct. 18, 2006 (at which point the tower was raised), and in Feb. 2009.

Mount Willing. 71°51' S, 66°55' E. Elongated in an E-W direction, it stands about 30 km SW of Fisher Massif, in the Prince Charles Mountains. Discovered, aerially, and photographed, by ANARE, in Nov. 1956. Named by ANCA for Richard Lyall "Dick" Willing (b. Aug. 27, 1930), who wintered-over as medical officer at Mawson Station in 1957. US-ACAN accepted the name in 1961. In the late 1990s Dr. Willing was practising gastroenterology in South Australia. The Russians call this feature Massif Skal'nyj Nos.

Mount Willis. 79°22' S, 159°27' E. A mountain, 3 km S of Mount Chalmers, in the S part of the Conway Range. Mapped by USGS from tellurometer surveys, and from USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Lt. Cdr. Charles H. Willis (b. 1925, East New Market, Md. d. July 11, 1981, Snug Harbor, Va.), USN, commander of the *Wilhoite*, during OpDF 1961 (i.e., 1960-61).

Willis, Donald Robert "Slim." b. July 5, 1928, Epsom, Surrey. He was in the Army with Bill Anderson in Korea, after which he joined FIDS in 1953, as a radio operator, leaving Dover in 1954, bound for the Falklands, and from there to winter-over at Base D in 1955. He arrived back in London on March 2, 1956, on the *Highland Princess*. He died in Feb. 1998, in Winchester.

Willis, Thomas. b. 1755, Holywell, North Wales. On Jan. 3, 1772 he joined the *Resolution* as a midshipman, for Cook's 2nd voyage. He kept a log, and was one of the wild boys on board, but, despite that, was promoted to lieutenant in 1778. Willis Island, off South Georgia, is name for him. On Dec. 15, 1781, at Canterbury, Kent, he married Mary Kirkham, and died in Pagham, near Bognor, in 1797.

Willis Glacier. 77°16' S, 162°05' E. A valley glacier, 8 km long, in the Saint Johns Range, it flows NE from Schist Peak along the W side of Mount Harker, and falls as a moraine-ringed ice-tongue at the junction of Debenham Glacier and Miller Glacier, in Victoria Land. Charted by VUWAE 1959-60, and named by them for Ian A.G. Willis, geophysicist with the expedition. He was back, leading VUWAE 1962-63. US-ACAN accepted the name in 1964.

Willis Ridge. 78°36' S, 85°00' W. A narrow-crested ridge extending W-E between Aster Glacier and Sowers Glacier, on the E side of the Craddock Massif, in the Sentinel Mountains. Named by US-ACAN in 2006, for Michael J. Willis, Ohio State University geologist in Antarctica for 7 field seasons between 1997 and 2006, including research at Siple Dome, and at the Whillans, MacAyeal, and Bindschadler ice streams.

The *Williwaw*. Belgian yacht, skippered by Willy de Roos, which visited the Antarctic Peninsula and the South Shetlands in 1978-79 and 1982-83 (only the South Shetlands in the latter year).

Williwaw Rocks. 63°20' S, 55°01' W. Two small rocks awash, about 3 km SE of Moody Point (the E extremity of Joinville Island). Surveyed by Fids from Base D in Nov. 1953, and named by UK-APC on Sept. 4, 1957, for the williwaws (violent katabatic winds) here. The feature appears on a British chart of 1962, and US-ACAN accepted the name in 1963.

Willon, Williams. b. March 16, 1814, Manchester. On Dec. 30, 1839, at Hobart, he embarked on the *Zélée* as a junior seaman for the 2nd trip of FrAE 1837-40 to Antarctica. On Feb. 19, 1840 he left at Hobart. This is an unlikely name. It may be a false name, but most likely Dumont d'Urville mis-transcribed it.

Willows Nunatak. 74°29' S, 165°17' E. A nunatak, 1.5 km inland from the S shore of Wood Bay, on the coast of Victoria Land, rising above the col between Cape Washington and Mount Melbourne. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for A.O. Dennis Willows, biologist at McMurdo, 1965-66.

Wilma Glacier. 67°12' S, 56°00' E. The western of 2 glaciers entering the S part of Edward VIII Bay, in Kemp Land. Seen by Bob Dovers' ANARE party in Nov. 1954, and plotted by them in 67°10' S, 56°04' E. Named by the Australians for Dovers' wife. US-ACAN accepted the name in 1965. It has since been replotted.

The *Wilmington*. A 95-ton, two-masted whaling/sealing schooner owned by Charles H. Mallory, out of Mystic, Conn., built at Baltimore in 1846. 84 feet 2 inches long, 22 feet 11 inches wide, with a draft of 8 feet, she had one deck and a square stern. In 1853-54, in company with the *Aeronaut* and the *Lion*, she was a tender in the South Shetlands under the command of Capt. George Gilderdale.

[1]**Bahía Wilson** *see* **Chiriguano Bay**

[2]**Bahía Wilson**. 65°05' S, 63°00' W. A bay to the N of Bahía Pelletan, and separated from that feature by Pelletan Point, on the E coast of Flandres Bay, on the W coast of the Antarctic Peninsula. The name appears on a Chilean map of 1962, and is still used by the Chileans (and only the Chileans appear to have named this feature).

Cape Wilson. 82°14' S, 163°47' E. A bold, rocky, snow-covered cape, forming the SE end of the Nash Range, and marking the N entrance point to Shackleton Inlet, along the W edge of the Ross Ice Shelf. Discovered by Scott in Dec. 1902, on his (unsuccessful, first) trek to the Pole during BNAE 1901-04, and named by him for Edward Wilson. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Lake Wilson. 79°49' S, 159°33' E. An ice-covered lake, 180 m above sea level, on the W edge of the Ross Ice Shelf, about 7.5 km NE of the summit of Diamond Hill, just N of the terminus of Darwin Glacier, in the Brown Hills. Charted by VUWAE 1962-63, who named it for Prof. Alexander Thomas Wilson (q.v.) of Victoria University of Wellington, an investigator of lakes in the ice-free valleys W of McMurdo Sound, in Victoria Land, with VUWAE 1961-62 and VUWAE 1962-63. NZ-APC accepted the name, and Us-ACAN followed suit in 1968.

Montaña Wilson *see* **Mount Wilson**

Mount Wilson. 68°27' S, 65°33' W. Rising to about 1300 m (once thought to be as high as

1675 m), 11 km W of Rock Pile Peaks, in the W part of Bermel Peninsula, between Solberg Inlet and Mobiloil Inlet, on the Bowman Coast, on the E coast of Graham Land. The mountain appears indistinctly on a photo taken by Wilkins as he flew over on Dec. 20, 1928. Re-photographed aerially by Ellsworth as he flew over on Nov. 23, 1935, and mapped from those latter photos by U.S. cartographer W.L.G. Joerg. It was re-photographed aerially in Dec. 1940, by USAS 1939-41, and in Dec. 1947, by RARE 1947-48. Charted by Fids from Base E between 1946 and 1948, and named by Finn Ronne in 1948 for Maj. Gen. Roscoe Charles "R.C." Wilson (1905-1986), chief of staff to Gen. Curt LeMay at the office of research & development, USAAF, who helped get Air Force equipment for RARE 1947-48. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955. Photographed aerially again between 1966 and 1969, by USN. The Argentines tend to call it Montaña Wilson. *See also* **Fricker Glacier**.

Wilson, Alexander Thomas. b. Feb. 8, 1930. Geochemist from Hamilton, NZ, professor of geology at Victoria University of Wellington, he took part in VUWAE 1961-62, studying Lake Vanda with Dr. Wellman. He was part of VUWAE 1963-64, in the Dry Valleys, and spent a week at the Pole. He was with VUWAE 1967-68, and was back in the Antarctic in 1969-70, 1971-72, 1973-74, 1974-75, and 1977-78. During this last season he and Dr. Hendy were the first two New Zealanders to work at Vostok Station. In the meantime, in 1971, he became director of the research unit at the University of Waikato, and in 1979 became director of research at the Duval Corp., Tucson.

Wilson, C. b. NZ. On Dec. 9, 1929, at Dunedin, he signed on as a seaman aboard the *City of New York*, leaving NZ on Jan. 5, 1930, bound for Antarctica, during ByrdAE 1928-30. A NZ newspaper has him as H.L. Wilson.

Wilson, Edward Adrian. In his young days he was known as Eddie, but in Antarctica he was known as Bill, or Uncle Bill. b. July 23, 1872, Westall, Cheltenham, Glos., son of Dr. Edwin Thomas Wilson and his wife Mary Agnes Whishaw. After Cheltenham College and Cambridge (graduated 1894, in natural sciences), he studied medicine at St George's Hospital, London, in his spare time doing Christian mission work in the Battersea slums, where he contracted tuberculosis in 1898. He went to Norway and Switzerland to recuperate and draw pictures, becoming a doctor in 1900, and interning in a Cheltenham hospital for a year, during which time, on July 16, 1901, at Hilton Parish Church, he married Oriana Fanny Souper, three weeks later going on BNAE 1901-04 as invertebrate zoologist, assistant surgeon, artist, and explorer. He became Scott's best friend on the expedition, and he, Scott, and Shackleton sledged to 82°16' 33" S, a new southing record, on Dec. 30, 1902, in an unsuccessful bid for the Pole. He also failed in his search for emperor penguins' eggs. He refused to go with Shackleton on BAE 1907-09, but was back with Scott on the *Terra Nova*, for BAE 1910-13, as 2nd-in-command, and chief of the scientific staff. He took part in what Cherry-Garrard called "the worst journey in the world," to Cape Crozier, to collect emperors' eggs in the winter of 1911, and barely made it back alive. This journey would have shortened his life considerably, even if he had survived his next venture, which he didn't. This was Scott's trip to the Pole in 1911-12. Like Scott, Bowers, Evans, and Oates, he died on the return journey, on or around March 29, 1912, after having been one of the first 10 men ever to stand at the South Pole. His statue, modeled by Scott's widow, and unveiled in Cheltenham in 1914 by Sir Clements Markham, with Lady Scott, and Wilson's widow, parents, and sisters looking on, has an inscription which reads, "He died as he lived, a brave and true man, the best of comrades and the staunchest of friends."

Wilson, James Innes *see* **Innes Wilson, James**

Wilson, James Murray "Jim." b. Oct. 15 (this date is correct; it is from a Fid's diary; but, the year is uncertain, probably 1928). Where he was born remains a matter of confusion. Some Fids say Newcastle, others say the Cheviots, and still some say the Lake District. He joined FIDS in 1958, as a diesel electric mechanic, and wintered-over at Base G in 1959 and 1960, at Base E in 1962 (FIDS was now BAS), and at Base B in 1964. They called him "The Seaborne Fid" because he spent a lot of time on ships, cruising the islands. He lives on his own now at Little Loch Broom, near Dundonnell, in the west of Scotland.

Wilson, Jeffrey Charles "Jeff." b. May 9, 1954. Australian glaciologist who wintered-over at Casey Station in 1977. In the mid-1990s he was a meteorologist, with the Bureau of Meteorology.

Wilson, John *see* **USEE 1838-42**

Wilson, John Kershaw. b. Oct. 5, 1936, Brocton, Staffs. After Queens College, Oxford, he became a doctor, and joined BAS in 1964, as a medical officer, wintering-over at Halley Bay Station in 1965. He was killed in a crevasse on Oct. 12, 1965 (*see* **Deaths**, 1965).

Wilson, Lythell Anthony "Tony." b. July 12, 1925, Petersfield, Hants, son of bespoke tailor Lythell John Wilson and his wife Eleanor M. Aldrich. In 1932 the family moved to Godalming, then to Ilford, and, when war threatened, to Devon House, in Ross-on-Wye. He studied meteorology at the local observatory, and taught himself Morse Code, then joined the RAF to fly as an air crew radio operator for war service. He moved into plastics technology, then into insurance, as a Prudential agent. In Feb. 1951, he was riding pillion on a motorcycle when a car hit him, and he suffered 5 broken bones, and a dislocated spine, and narrowly avoided having his leg amputated. In fact, he almost died. But, he made a miraculous recovery, and in the July was at home in Ross when his brother, who was reading *Wireless World*, saw an ad for FIDS radio operators. Tony applied, went on a motorcycle to London for the interview, and later that year (1951) left Southampton on the *John Biscoe*, heading for Rio, where he spent 3 days (Montevideo was closed due to a strike). Then on to Montevideo (which had re-opened), Punta Arenas (to pick up a scow), Port Stanley, and finally he arrived at Signy Island Station in Dec. 1951, wintering-over there in 1952 as radio operator. In 1953 the *John Biscoe* picked him up and took him to the Falklands, from where he returned to England on the *Fitzroy*. On to Rome (he was a Catholic) for a year, to study philosophy, then back to England, then to Rome again to study theology. He went to a Benedictine Abbey in Gloucestershire, with the intention of becoming a monk, but instead joined an electronics company in Cheltenham, working on a lot of hush hush projects (he was involved for 4 years on the Concord). He moved to EMI, and retired in 1989 to Llangadog, Carmarthenshire. He died in 2010.

Wilson, Paul Ove. Known as Ove. b. April 26, 1921, Berlin, son of Swedish-American engineer (and former world professional figure-skating champion) Paul Wilson. He was the Swedish medical officer on NBSAE 1949-52. He died on March 14, 1981, in Lund, Sweden.

Wilson, Robert. b. 1879, Glasgow, but raised in Kilmarnock, Ayrshire, son of iron turner John Wilson and his wife Mary Hamilton, who were both from Ayrshire. He trained as an engine fitter, and was fireman and blacksmith on the *Scotia*, during ScotNAE 1902-04.

Wilson, Thomas *see* **USEE 1838-42**

Wilson, William *see* **USEE 1838-42**

Wilson Bluff. 74°20' S, 66°47' E. A large, rather flat-topped rock outcrop in the form of a mountain, at the S end of the Lambert Glacier, 26 km WNW of Mount Borland. 5 sq miles in area, it has a tail of moraine extending NE for several kilometers. Plotted from air photos taken by ANARE in 1956, it was visited by an ANARE airborne field party under Graham Knuckey in Oct. 1958, who plotted it in 74°19' S, 66°45' W. Named by ANCA for Hugh Overend "Bill" Wilson (b. Nov. 23, 1924), RAAF flight lieutenant, pilot at Mawson Station in the winter of 1958 (*see also* **Wilson Glacier**). He was killed in an aircraft accident in 1959, shortly after his return to Australia. US-ACAN accepted the name in 1965. It has since been replotted. The Russian name for this feature may well be Gora Serebristaja (q.v.).

Wilson Canyon. 70°35' S, 176°15' E. An undersea canyon off the NW tip of Oates Land, in the Ross Sea. Named in 1988 by international agreement, in association with the Wilson Hills.

[1]**Wilson Glacier** *see* **Breitfuss Glacier**

[2]**Wilson Glacier**. 66°46' S, 56°25' E. A glacier, 14 km long, it is the southern of twin glaciers flowing NE into the Edward VIII Ice Shelf, just S of Seaton Glacier, and 27 km NW of Cape Dalton, in Kemp Land. Photographed aerially by ANARE in 1956, and named by ANCA for Flight Lt. Hugh Wilson (*see* **Wilson Bluff**). US-ACAN accepted the name in 1962.

Wilson Hill. 78°10' S, 163°42' E. At Ward

Lake, on the N side of Ward Stream, in the Porter Hills, on the NE side of Walcott Bay, in Victoria Land. Named by US-ACAN in 1994, for Terry J. Wilson, geologist with the Byrd Polar Research Center geological party in Victoria Land, 1989-90, and in the Royal Society Range in 1991-92.

Wilson Hills. 69°40' S, 158°30' E. A group of scattered hills, nunataks, and ridges, extending NW-SE for about 110 km, between Matusevich Glacier and Pryor Glacier, on the coast of Oates Land, in Victoria Land. Discovered by Harry Pennell in Feb. 1911, during BAE 1910-13, and named for Edward Wilson. US-ACAN accepted the name in 1947.

Wilson Island. 66°27' S, 110°34' E. Mainly ice-free, it is the largest of a group of small islands lying between Browning Peninsula and Bosner Island, 1 km WNW of the latter, in the S portion of the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for oceanographer William Stanley "Stan" Wilson (b. June 5, 1938, Alexander City, Alabama), marine biology collector for the Virginia Institute of Marine Science, who wintered-over as biologist at Wilkes Station in 1960.

[1]**Wilson Mountains**. 72°15' S, 61°40' W. A group of mountains, including the Hjort Massif, rising to about 1600 m to the E of the Du Toit Mountains and to the W of Merz Peninsula, on the Black Coast of Graham Land. They are bounded to the N by Beaumont Glacier and Hilton Inlet; to the E by Spiess Glacier; to the S by Violante Inlet and Defant Glacier. First photographed aerially in 1940 by USAS 1939-41. Mapped by USGS from USN air photos taken between 1966 and 1969. Named for geophysicist John Tuzo Wilson (1908-1993), a continental drift theorist, who visited Antarctica during OpDF III (1957-58). He was professor of geophysics at the University of Toronto, 1946-74, and director-general of the Ontario Science Centre, 1974-85. The mountains appear on the 1979 USGS sketch map of Palmer Land, and UK-APC accepted the name on May 21, 1979. US-ACAN also accepted the name.

[2]**Wilson Mountains**. 82°36' S, 52°22' W. In the Pensacola Mountains. These mountains used to be listed in gazetteers, but they are not any more. Oddly, there is scarcely a reference to them to be found anymore. These coordinates are occupied by what is today called Worcester Summit, on the Dufek Massif.

Wilson Nunataks. 80°01' S, 80°38' W. An irregular string of nunataks, 13 km long, between the Douglas Peaks and the head of Hercules Inlet, in the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party here in 1963-64, for CWO Kenneth Wilson, pilot with the 62nd Transportation detachment who helped the party in this area. US-ACAN accepted the name in 1966.

Wilson Pass. 68°26' S, 65°15' W. A glacier pass running in a NW-SE direction at an elevation of about 400 m above sea level, from the area between Solberg Inlet and Trail Inlet (on Joerg Peninsula), between Bowditch Crests and Rock Pile Peaks (on Bermel Peninsula), into Mobiloil Inlet, on the Bowman Coast, on the E side of the Antarctic Peninsula. Photographed aerially by Ellsworth on his flight of Nov. 23, 1935. Traversed and surveyed by Fids from Base E in 1946. Named by US-ACAN for Miss Alison Wilson of the Center for Polar Archives, at the National Archives, in Washington. Associated with Antarctic research from 1957, she was a member of US-ACAN from 1974 to 1994, and its chairman from 1986 to 1993. UK-APC accepted the name on May 21, 1979.

Wilson Peak. 78°52' S, 84°48' W. Rising to 2400 m, near the S end of the Sentinel Range, at the E side of Nimitz Glacier, 24 km SSE of Mount Craddock, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for J.H. Wilson, Navy radioman here on R4D recon flights in Jan. 1958.

Wilson Piedmont Glacier. 77°15' S, 163°10' E. Also called Great Piedmont Glacier. A large piedmont glacier fed by Wright Glacier and Debenham Glacier, and between 10 and 22 km wide, along the E coast of Victoria Land, bordering McMurdo Sound, it extends about 60 km from Granite Harbor to Marble Point. Discovered by BNAE 1901-04, and named by BAE 1910-13, for Edward Wilson. US-ACAN accepted the name in 1947.

Wilson Portal. 84°28' S, 178°54' W. A coastal peak rising to over 1000 m (the New Zealanders say about 1200 m), and snow-covered except for the steep N face, it surmounts a rock exposure facing N along the SW edge of the Ross Ice Shelf, 4 km SE of O'Leary Peak, and overlooks the W side of the terminus (or portal) of Kosko Glacier, where that glacier enters the Ross Ice Shelf. Spurs descend NE from this feature. Discovered and photographed aerially on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Albert Crary in 1957-58, and named by him for Charles R. Wilson, chief aurora scientist at Little America V in 1958-59, and chief glaciologist on the Victoria Land Traverse Party of that season. US-ACAN accepted the name in 1962.

Wilson Ridge. 72°48' S, 75°05' E. A prominent razorback ridge about 10.5 km N of Mount Harding, in the Grove Mountains, in Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA for R.R. Wilson, topographic draftsman with the Division of National Mapping, Australian Department of National Development, who contributed greatly to the compilation of Antarctic maps. US-ACAN accepted the name in 1967.

Wilson Saddle. 72°13' S, 3°15' W. A snow saddle between the Kjølrabbane Hills and Aurhø Peak, in the SW part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Wilsonflya, for Ove Wilson. US-ACAN accepted the translated name Wilson Saddle in 1966. *See also* **Ovenuten**.

Wilson Stream. 77°17' S, 166°26' E. A fairly large meltwater stream which flows from the ice-free lower W slopes of Mount Bird to the S of Alexander Hill and Cinder Hill, and then falling over steep sea cliffs into Wohlschlag Bay, at McMurdo Sound, on Ross Island. The stream drains an extensive flight of glaciated rock benches smeared with moraine. Explored by geologists on NZGSAE 1958-59, Named by NZ-APC for J. G. Wilson, mountain climbing assistant on that expedition. US-ACAN accepted the name in 1964.

Wilsonberga. 74°35' S, 14°32' W. A row of nunataks, the central of the 3 rows of ridges in Mannfallknausane, in Maudheimvidda, in the W sector of Queen Maud Land. Named by the Norwegians for Dr. John Kershaw Wilson (q.v. and *see* **Deaths**, 1965). *See also* **Baileyranten** and **Wildskorvene**.

Wilsonflya *see* **Wilson Saddle**

Bahía Wilton *see* **Wilton Bay**

Wilton, David Walter. b. 1872, Viska, Russia, son of English mining engineer Alfred Wilton and his wife Helen Candler. His father had been based in St. Petersburg since 1856, and the family moved around Russia, from Nijni Novgorod to Viska, to Norsk, before the children (but not the parents) returned to England, to Norfolk, in the late 1870s. David went to school in Cringleford, Norfolk, and then returned to spend some years living in northern Russia, where he became a skier and sledger, and a naturalist. In 1894-97 he was on the Jackson-Harmsworth Arctic Expedition, to Franz Josef Land. He then studied zoology and botany at Edinburgh, and then was off again on expeditions to Asia. His older brother Robert was on the staff of the New York *Herald* (and from 1903, with the London *Times*, from 1920 to 1924 again with the *Herald*, and from 1924 until he died in Jan. 1925, with the Paris *Times*). David was turned down by Scott for BNAE 1901-04, and instead went as zoologist on ScotNAE 1902-04. Immediately upon his return he became a king's foreign service messenger. His first wife is reputed to have been Ivy Maitland Edwards, and his second wife was (definitely) named Rose. He died of pneumonia on Jan. 10, 1940, at Hunter's Wynd, Holloway Hill, Lyne, near Chertsey. Rose sold the house immediately.

Wilton Bay. 60°46' S, 44°45' W. On the W side of Mossman Peninsula, between Cape Davidson and Cape Hartree, on the SW side of Laurie Island, in the South Orkneys. Surveyed and charted in May 1903 by ScotNAE 1902-04, and named by Bruce for David Wilton. Re-surveyed in 1933 by the Discovery Investigations, it appears on their chart of 1935. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Bahía Wilton, and again in their 1970 gazetteer.

Wiltshire Rocks. 67°30' S, 63°07' E. A group of rocks in the sea, about 4 km ENE of

Smith Rocks, off the coast of Mac. Robertson Land. First photographed (aerially) by LCE 1936–37, and mapped by Norwegians from these photos in 1946; they named it as Spjotøyskjera. Renamed by ANCA in 1971, for Alan C.W. "Blue" Wiltshire, cook who wintered-over at Mawson Station in 1968. US-ACAN accepted the Australian naming in 1973. *See also* **Kitney Island**.

Cape Wiman. 64°13' S, 56°38' W. A low rocky cape marking the NE extremity of Seymour Island, in the James Ross Island group. Surveyed (but not named) in 1902–03 by SwedAE 1901–04. Re-surveyed by Fids from Base D in 1946. Named by UK-APC on Sept. 4, 1957, for Swedish paleontologist Carl Johan Josef Wiman (1867–1944), the first professor of paleontology at Uppsala University, who worked on the Seymour Island fossils collected by Nordenskjöld's expedition. US-ACAN accepted the name in 1963. It appears on Argentine maps of 1956 and 1958 as Cabo Gorrochátegui, named after José Gorrochátegui (q.v.), and that is the name also in their 1970 gazetteer. Interestingly, it appears on a 1963 U.S. Hydrographic Office chart as Cape Gorrochátegui.

Wimple Dome. 63°38' S, 58°51' W. An ice-covered hill, rising to 725 m, 3 km S of Hanson Hill, and 3 km E of Bone Bay, on the N side of Trinity Peninsula. Surveyed in July 1948 by Fids from Base D, and aptly named by them for the nuns' headdress. They plotted it in 63°37' S, 58°49' W, and those were the coordinates accepted by UK-APC on Jan. 28, 1953, and also by US-ACAN later that year, and which appear in the British gazetteer of 1955. It was re-surveyed by Fids from Base D in 1959–60, and with new coordinates, it appears on a British chart of 1962, and in the 1974 British gazetteer. US-ACAN also amended the coordinates.

Córrego Wind *see* **Saunders Valley**

Wind chill. How cold it actually feels. In other words, the ordinary temperature is not the only factor which determines how cold people feel. The speed of the wind is an important factor too, and must be added to the temperature to get a true idea of what the human skin is experiencing by way of cold. Paul Siple developed a wind chill index as a measure of cold in different wind and temperature conditions.

Wind farms. The first wind turbines in Antarctica began operating at Mawson Station in 2003, after a cost of $6.5 million. A giant wind farm (3 turbines, each 37 m tall) was built in 2010, on Crater Hill, between Scott Base and McMurdo Station.

Windbach. 62°13' S, 58°58' W. A small stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Windle. 77°54' S, 162°18' E. An ice-covered peak rising to 1970 m, on the S side of Ferrar Glacier, it surmounts the most westerly massif of the Cathedral Rocks, in the N part of the Royal Society Range, in Victoria Land. In association with Chaplains Tableland, it was named by US-ACAN in 1992, for Lt. (later Lt. Cdr) David L. Windle (b. Oct. 1931), USN, who wintered-over as chaplain at McMurdo in 1963. From 1986 to 1992 he was pastor of Concordia Evangelical Lutheran Church, in Watertown, NY, which is where he retired.

Windless Bay *see* **Windless Bight**

Windless Bight. 77°42' S, 167°40' E. A prominent Ross Ice Shelf indentation into the S side of Ross Island, it is the bight between Castle Rock and Terror Point, eastward of Hut Point Peninsula. So named by Wilson on his journey to Cape Crozier in 1911, during BAE 1910–13, because there is little or no wind here. US-ACAN accepted the name in 1964. For what it's worth, the Russians call it Windless Bay (or rather, presumably, Bukhta Windless). Originally plotted in 77°42' S, 167°45' E, it has since been replotted.

Windless Bight Automatic Weather Station. 77°48' S, 167°42' E. There have been two American AWSs at Windless Bight, Ross Island, at an elevation of 40 m. The first was installed on Feb. 9, 1983, and operated until 1985. The second was installed in Dec. 1998. It was visited on Feb. 5, 2005, and again on Jan. 23, 2006, and Nov. 5, 2006 (when the tower was raised).

Windmill Islands. 66°20' S, 110°28' E. A strip of rocky islands and rocks, about 10.5 km wide, extending N from Vanderford Glacier, and running for about 27.5 km parallel to the Budd Coast, along the E side of Vincennes Bay. They include (alphabetically): Ardery Island, Austral Island, the Allison Islands, Bailey Rocks, Beall Island, Birkenhauer Island, Boffa Island, Borrello Island, Bosner Island, Bousquet Island, Bøving Island, Cloyd Island, the Cronk Islands, Denison Island, Fitzpatrick Rock, Ford Island, Gibney Reef, Griffith Island, Hemphill Island, Herring Island, Holl Island, Hollin Island, Kilby Island, McIntyre Island, Midgely Island, O'Connor Island, Odbert Island, Peterson Island, Phelps Island, Pidgeon Island, Ridge Island, Sack Island, Shirley Island, the Smith Islands, Spano Island, Teigan Island, Warrington Island, Werlein Island, Wilson Island, and Zimmerman Island. Mapped from aerial photos taken by OpHJ 1946–47. They were so named by US-ACAN in 1955, because personnel of Operation Windmill 1947–48 landed on Holl Island at the SW end of the group to establish ground control for the photos taken by OpHJ. Wilkes Station and Casey Station were both established here.

Windmills. Scott had one on the *Discovery* during BNAE 1901–04, to supply the ship with electric light. It was damaged irreparably during a storm.

Île Window *see* **Window Island**

Isla Window *see* **Window Island**

Window Buttress. 67°42' S, 68°45' W. A cliff rising to about 800 m, 5 km WNW of the summit of Mount Ditte, near the SE end of Fuchs Ice Piedmont, on Alexander Island. Surveyed by Fids from Base T in 1961–62. Geological work was done here by BAS personnel in 1980–81. Named by UK-APC on April 3, 1984, for the window-like structure near the top of the cliff, which is visible only from the SW. US-ACAN accepted the name.

Window Island. 62°34' S, 61°07' W. At the W side of the entrance to Barclay Bay, ENE of Essex Point, off the N coast of Livingston Island, in the South Shetlands. Roughly charted and descriptively named by Powell (it appears on his 1822 chart). It appears as Île Hungry on an 1823 chart, and on Weddell's chart of 1825 it appears as Richards Island, after Capt. John Richards (q.v.). It appears on a Spanish chart of 1861 as Isla Window, and on one of Charcot's 1912 maps as Île Window. It appears as Window Island on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by UK-APC on July 7, 1959, and by US-ACAN in 1960. It was photographed aerially by FIDASE 1956–57. It appears on British charts of 1962 and 1968. On a 1953 Argentine chart it appears with the translated name of Isla Ventana, and again appears as such in the 1970 Argentine gazetteer.

Winds. Moist maritime air from the oceans mixing with the cold polar air makes Antarctica one of the stormiest continents, if not the stormiest. Great cyclonic west-wind storms circle Antarctica in a clockwise fashion in an endless west to east procession, dragging westerly ocean currents along beneath them. Katabatic winds are caused by cold, dense air flowing down the steep slopes of interior highlands, and cause a great wind chill factor (*see also* **Blizzards**, and **Wind chill**). Winds on the Polar Plateau are normally light, the Plateau being so high up and not subject to the katabatics, with a mean of between 9 and 17 mph. In 1912–13 AAE 1911–14 experienced wind velocities of 40 mph for 60 percent of their time in Adélie Land, and in Commonwealth Bay, the windiest place in the world, winds can reach 200 mph. Planes as big as DC3s have been ripped from their moorings and blown away, and in some storms, ships have accumulated as much as 1000 tons of ice in layers up to 10 feet thick (*see also* **Barrier Wind Phenomenon**).

Bay of Winds. 66°30' S, 97°35' E. An embayment in the coast of Queen Mary Land, between Cape Dovers on the one side and Avalanche Rocks and Jones Rocks on the other. Discovered by the Western Base Party of AAE 1911–14, and named by Mawson for the almost constant outflow of cold dense air from the plateau into the bay. US-ACAN accepted the name in 1947.

Windscoop Bluff. 78°32' S, 164°28' E. A rock bluff, rising to about 1000 m, and marked at the base by a large windscoop, ENE of Birthday Bluffs, on the S side of Mason Spur, on the Scott Coast of Victoria Land. Named by Anne C. Wright of the department of science, at the New Mexico Institute of Mining and Technology, who examined the bluff in 1983–84. US-ACAN accepted the name in 1999, and NZ-APC followed suit on Nov. 4, 1999.

Windscoop Nunataks. 64°25' S, 59°07' W. A cluster of 4 gable-shaped nunataks rising to about 400 m between Porphyry Bluff and Tower Peak, on the Nordenskjöld Coast of Graham Land. Everett Merritt (q.v.) was an American observer with ArgAE 1958–59, and while on the expedition named this feature as Three Children

and a Baby, for his four sons, Blythe, Brett, Barry, and Bruce. However, after geological work done here by BAS personnel in 1978-79, it was named by UK-APC on April 3, 1984, as Windscoop Nunataks, for the windscoops associated with each of the nunataks. US-ACAN followed suit.

Windvane Hill. 77°38' S, 166°24' E. Also called Vane Hill. A small hill, 0.4 km NE of the extremity of Cape Evans, on Ross Island. Scott, during BAE 1910-13, established an anemometer station here (hence the name). US-ACAN accepted the name in 1953.

Windwhistle Peak. 76°42' S, 159°46' E. A square, sandstone peak, S of Punchbowl Cirque, in the Allan Hills. Discovered by the NZARP Allan Hills Expedition of 1964, and named by them for the peculiar way the wind whistles here. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Cape Windy *see* **Windy Valley**

Valle Windy *see* **Windy Valley**

Windy Crater. Unofficial, but apt, name for a crater near Wright Valley, in Victoria Land.

Windy Gap. 63°34' S, 58°09' W. A pass, running in a N-S direction, about 975 m above sea level, at the NE end of the Louis Philippe Plateau, it marks the meeting place of 3 valleys on Trinity Peninsula, namely Broad Valley (leading westward toward Duse Bay), a valley leading northward to Lafond Bay, and another one leading southward to the Prince Gustav Channel. Discovered, surveyed, and named by Fids from Base D in April 1946. They experienced very windy weather here. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955. It was futher surveyed by FIDS in 1959-60.

Windy Glacier. 62°09' S, 58°28' W. An outlet of Warszawa Icefield, between Bastion and Red Hill, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Windy Gully. 77°52' S, 161°12' E. An ice-filled valley where Ferrar Glacier meets Taylor Glacier (it is on the S side of these two glaciers), between New Mountain and Terra Cotta Mountain, in southern Victoria Land. Named by Grif Taylor while he was leading the Western Journey Party during BAE 1910-13, for the high winds here. US-ACAN accepted the name in 1964.

[1]**Windy Nunatak**. 62°05' S, 58°13' W. A small nunatak S of Rose Peak, in the Arctowski Mountains, on King George Island, in the South Shetlands. In Feb. 1980, this proved to be a windy campsite for a geological party of PolAE 1979-80. Named by the Poles in 1981.

[2]**Windy Nunatak** *see* **Mount Bumstead**

Windy Peak. 79°13' S, 86°04' W. A prominent peak, rising to 1910 m, 3 km SW of the S end of the Reuther Nunataks, in the Founders Peaks of the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for the high winds here. US-ACAN accepted the name in 1966.

Windy Valley. 68°37' S, 66°50' W. A glacier-filled valley running W into the Dee Ice Piedmont, and opening onto the N part of Mikkelsen Bay, in the area of The Traffic Circle and Lammers Glacier, on the Fallières Coast, on the W coast of Graham Land, and providing access, via its head, to the plateau. Roughly surveyed in Sept. 1936, by BGLE 1934-37, who aptly named it for the strong katabatic winds which descend from the high plateau and blow out of this valley with great force. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It was surveyed, in its lower part, by Fids from Base E in 1948-49. ChilAE 1947 translated it as Valle Borrascoso, and it appears as such on their chart of that year. However, in 1962, the Chileans changed their name for it to Valle del Viento (i.e., "valley of the wind"), and that is the name that appears in their 1974 gazetteer. It appears on a 1949 Argentine chart as Valle Windy, but on a 1953 chart of theirs with the more translated name of Valle Ventoso, and that is the name that appears in their 1970 gazetteer. In Dec. 1958, Fids from Base E surveyed the valley's upper part. On a 1961 British chart appears the name Cape Windy, referring to a point on the coast W of the valley.

The "Winfly." Nickname for the first spring plane in at McMurdo every year. Later renamed Springfly.

Wing, Michael Roger. b. May 7, 1946, Auckland, NZ. Drilling assistant at Scott Base for the winters of 1974 and 1975, also being responsible for the dogs.

Winham, John "Manky." FIDS meteorologist who wintered-over at Base D in 1960 and 1961. He died in 1996.

Mount Winifred Cumming *see* **Mount Cumming**

Winkel, Max Robert. b. 1881, Hamburg. In 1900 he was an assistant pantryman on the *Darmstadt*, on the Bremen to Sydney run. He went to work for the Union Steamship Company and was naturalized in NZ on April 9, 1910. He plied the seas between Wellington and Vancouver, progressing to cook. He was chief cook on the *Jacob Ruppert*, 1934-35, during the second half of ByrdAE 1933-35. After the expedition he joined the *Reliance*. The name Winkle appears in error at the end of the entry Byrd's 1933-35 Expedition.

Isla Winkle *see* **Winkle Island**

Winkle Island. 65°31' S, 65°39' W. Between Tula Point and Pickwick Island, it is the southernmost of the Pitt Islands, in the Biscoe Islands. Roughly charted by ArgAE 1954-55, it appears on a 1957 Argentine government map, but not named. Photographed aerially by FIDASE in 1956, it was named by UK-APC on July 7, 1959, for the Dickens character, Nathaniel Winkle, in *The Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Isla Winkle.

Winklergletscher. 70°37' S, 162°56' E. A glacier, just SW of Mount Dergach, in the Bowers Mountains. Named by the Germans.

Punta Winship *see* **Winship Point**

Winship, Jonathan III. b. 1780. Captain of the *O'Cain*, out of Boston, who was in the South Shetlands in the 1820-21 summer, based out of Potter Cove, and who may have been the first to collect fossils in Antarctica. He was one of the founders of the Massachusetts Horticultural Society. He died in 1847.

Winship Point. 62°15' S, 58°44' W. On Barton Peninsula, it forms the W entrance to Potter Cove, Fildes Bay, on King George Island, in the South Shetlands. It was known to the sealers in the 19th century. Charted by the Discovery Investigations in 1934-35. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS, 1957-59. Named by UK-APC on Sept. 23, 1960 for Jonathan Winship. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Chileans and Argentines call it Punta Winship.

Islotes Winslow *see* **Winslow Rock**

Winslow Rock. 66°17' S, 66°44' W. Close off the SE coast of Lavoisier Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958-59. Named by UK-APC on Sept. 23, 1960, for Charles Edward Amory Winslow (1877-1957), American physiologist specializing in the cold, and professor of Public Health at Yale Medical School, 1915-45. There is a small penguin rookery on this rock, which provides the only known landing place for humans on the E side of Lavoisier Island. US-ACAN accepted the name in 1965. The Argentines tend to pluralize the feature, as Islotes Winslow.

Winsnesfjellet. 72°06' S, 25°42' E. A mountain on the W side of Mount Bergersen, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Thore Schanke Winsnes (b. Aug. 4, 1922), geologist and paleontologist with the Norsk Polarinstitutt, many times in Antarctica. Name means "the Winsnes mountain." The Russians call it Gora Gogolya, presumably after their great writer Nikolay Gogol (1809-1852).

Winstone, John Howard "Taffy." b. 1930, Abergavenny, Wales, son of Vincent Bowcott Winstone and his wife Mary Ware. He went to work at the Met Office, and in 1954 joined FIDS, as a meteorologist, wintering-over as senior met man at Base F in 1955. On his return to the UK in 1956, he went with the Met Office to the Shetlands, and from there to Stornoway, in the Isle of Lewis. He married a local girl, by whom he'd had a child. He was posted to Bahrein, and died there of liver cancer, or "cirrhosis of the liver," as his death certificate is reputed to say.

Winter *see* **Seasons**

Cabo Winter *see* **Cape Neumayer**

Isla Winter *see* **Winter Island**

Winter, Friedrich Wilhelm "Fritz." b. June 21, 1878, Frankfurt-am-Main, son of Georg Wilhelm Winter and his wife Elisabeth Lucae. Scientific draftsman and photographer who was on the *Valdivia*, during the German Navy Oceanographic Expedition, led by Carl Chun, in 1898-99. After the expedition, he studied natural sciences for a while under Dr. Chun, in Leipzig.

In June 1904, he married Gertrud Adelheid von Mollendorf, and died fighting in the German Army on June 8, 1917, at Perthes-le-Châtelet, France.

Winter Bay. 68°49' S, 77°53' E. A small bay near the SW corner of Filla Island, in the Rauer Group, where the *Dick Smith Explorer* wintered-over between Feb. 1983 and Jan. 26, 1984, during the Froze Sea Expedition. Originally called Winterover Bay, but the name was shortened by ANCA.

Winter Harbor. A term no longer used, for a little harbor off Cape Royds, Ross Island. Used and named by Scott.

Winter Island. 65°15' S, 64°16' W. An island, 0.8 km long, separated from Galíndez Island by Stella Creek, and about 180 m N of Skua Island, from which it is separated by Skua Creek, in the Argentine Islands of the Wilhelm Archipelago, off the W coast of Graham Land. Surveyed in 1935 by BGLE 1934-37, and so named by Rymill because the SE point of the island was the site of their winter hut, occupied between Feb. 14, 1935 and Feb. 17, 1936. It appears on the expedition's charts and maps, and also on a 1947 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 28, 1953. It appears in the 1955 British gazetteer. It appears as Isla Winter on the Chileans' translated maps of the Rymill expedition, and that is the name accepted by the 1974 Chilean gazetteer. It appears on a 1947 Argentine map with the fully translated name Isla Invierno, and that was the name accepted by the Argentine gazetteer of 1970. The BGLE hut on Winter Island was destroyed during the winter of 1946; Ted Bingham wrote in 1947 that it may have been by a tidal wave. This site was later the site of Wordie House.

Winter Quarters Bay. 77°51' S, 166°37' E. Also spelled Winterquarters Bay. A small bay, 0.8 km in width, immediately E of Hut Point, it is the bay that fronts McMurdo Station, on Hut Point Peninsula, at the S end of Ross Island. Discovered in 1902 by Scott, during BNAE 1901-04, and named by him. It was here that he quartered the *Discovery* for the winter. US-ACAN accepted the name in 1952.

Winter Quarters Peninsula *see* **Hut Point Peninsula**

Wintering-over. This is when a party or person spends a winter in Antarctica, intentionally or otherwise. One can spell this many ways: winter over, winter-over, over winter, and overwinter. In this book it is seen as winter-over, and wintering-over. Below are listed some of the more notable winterings. **1821**: Capt. Clark and crew aboard the *Lord Melville*, in the South Shetlands. **1872**: James King and his gang of sealers were dropped off at Window Island, in the South Shetlands, and the ship failed to come back for them. They all died, except King, who was rescued by the *Nile*. **1898**: de Gerlache and crew trapped in the ice aboard the *Belgica*, during BelgAE 1897-99. **1899**: Borchgrevink and party, at Cape Adare, during BAE 1898-1900-the first expedition to winter-over intentionally. **1902**: Nordenskjöld and party — deliberately, on Snow Hill Island, during SwedAE 1901-04. **1902**: Scott and party — deliberately, on Ross Island, during BNAE 1901-04. **1902**: von Drygalski forced to winter-over in the *Gauss*, during GermAE 1901-03. **1903**: SwedAE 1901-04 forced to winter-over again when their ship was crushed. **1903**: Bruce and party — deliberately, at Laurie Island, in the South Orkneys, during ScotNAE. **1903**: Scott, forced to winter-over again when the *Discovery* was trapped. **1904**: Charcot — deliberately, at Booth Island, during FrAE 1903-05. **1904**: Órcadas Station; and every winter from then on, deliberately, as part of Argentina's monumental meteorological effort in Antarctica. **1908**: Shackleton and party — deliberately, during BAE 1907-09. **1909**: Charcot — deliberately, at Petermann Island, during FrAE 1908-10. After that, pretty much all expeditions wintered-over, to take advantage of the complete summers either side of the winter. **1910**: the first women to winter-over were probably whalers' wives on Deception Island, in or around this time. **1911**: Campbell's Northern Party wintered-over — deliberately, at Cape Adare, during BAE 1910-13. **1912**: Campbell's Northern Party were forced to winter-over again, in horrifying circumstances, in an ice cave. **1915**: The amazing wintering-over of the Ross Sea party during BITE 1914-17. **1916**: The 22 men on Elephant Island sheltered beneath upturned boats, during BITE 1914-17, and never knew if they were going to be rescued, until they were. **1921**: Bagshawe and Lester, two young members of the British Imperial Antarctic Expedition (not to be confused with Shackleton's similiar sounding — and earlier — British Imperial Transantarctic Expedition, or BITE) wintered-over on Waterboat Point, in a makeshift hut built on an old boat. **1934**: Byrd wintered-over alone at Bolling Advance Weather Station, during ByrdAE 1933-35. **1945**: The first FIDS wintering-over at Deception Island (although, *see* **Operation Tabarin**). **1948**: Jackie Ronne and Jenny Darlington wintered-over during RARE 1947-48. **1949**: The desperate forced winter at Base E, the third winter in a row for some of the FIDS. **1957**: The first beings ever to winter-over at the South Pole —18 men and a dog (*see* **South Pole**). **1979**: Dr. Michele Raney was the first woman to winter-over at the South Pole. This book contains many stories of winterings in Antarctica, some death-defying, some not. They will usually be found under the name of the expedition.

Winterover Bay *see* **Winter Bay**

Wirdnam Glacier. 78°25' S, 162°02' E. Flows W from the W slopes of the Royal Society Range between Mount Moxley (to the E), Mount Lisicky (to the W), and Potter Glacier (to the N), into the Skelton Glacier. Mapped by USGS from ground surveys and USN air photos. Named for Squadron Leader Kenneth A.C. Wirdnam (b. 1928, Swindon, Wilts), with the Americans at McMurdo in 1960, as an observer. He also flew missions for VX-6. He had graduated from the RAF College, Cranwell, on Aug. 1, 1951, and retired as air commodore. US-ACAN accepted the name in 1963, and NZ-APC also accepted the name.

Wirth Peninsula. 73°27' S, 80°40' W. A broad, ice-covered peninsula, about 30 km long, between Eltanin Bay and Fladerer Bay, in Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Capt. Lawrence G. "Larry" Wirth, commander of the *Eltanin* in Antarctic waters during the 1965-66 and 1966-67 seasons.

Wisconsin Islands. 63°17' S, 57°53' W. A group of a dozen or more small, rocky islands, 1.5 km NE of Largo Island, they form the most northeasterly group in the Duroch Islands, N of Cape Legoupil, Trinity Peninsula. Named by Martin Halperin, leader of the University of Wisconsin's geological party here which mapped these islands in 1961-62, for the university at Madison. US-ACAN accepted the name in 1964, and UK-APC followed suit on Dec. 15, 1982. They appear in the 1986 British gazetteer.

Wisconsin Plateau. 85°48' S, 125°24' W. A large, ice-capped plateau with general elevations above 2800 m, comprising most of the upland surface area of the Wisconsin Range (hence the name), in the Horlick Mountains. To the E and SE the plateau descends gradually, and with only minor ice escarpments, to merge with the interior ice plateau. To the N and W the plateau displays abrupt escarpments and cliffs of over 1000 m. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967.

Wisconsin Range. 86°00' S, 125°00' W. A major mountain range, in the S part of the Horlick Mountains, it comprises the Wisconsin Plateau and numerous glaciers, ridges, and peaks bounded by the Reedy Glacier, the Shimizu Ice Stream, the Horlick Ice Stream, and the interior ice plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1962, for the University of Wisconsin, which has sent many researchers to Antarctica.

Wisdom Hills. 71°33' S, 163°33' E. A cluster of summit rising to about 2000 m, and forming the NE segment of the Molar Massif, in the Bowers Mountains. Named by NZ geologist Malcolm Laird, in association with the name "molar." NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Mount Wise. 78°08' S, 165°23' E. A bare rock summit, rising to 815 m, it is the highest point on Brown Peninsula. A survey beacon was placed here by NZ surveyors during the 1962-63 summer season. Named by A.J. Heine of the McMurdo Ice Shelf Project, 1962-63, for Keith Charles Wise (b. Dunedin, NZ), who explored the peninsula while a member of NZGSAE 1958-59. He wintered-over at Scott Base in 1959, and, during the 1969-60 summer season played a prominent part in the rescue of NZ personnel injured in a Sno-cat accident. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Wise, Edward. b. 1875, Sussex. In 1909 he left London for Sydney, and there was taken on

as cook on the *Aurora*, 1914-16. A notorious ladies man, it is rumored that he got married in Sydney before they sailed for Antarctica, but this is not borne out by the NSW marriage index. The meals he prepared on the *Aurora* were unpredictable, depending on how much alcohol he used, the quantity of that particular ingredient in turn depending on how much saw its way into the food rather than into Wise's person direct from the bottle. This little problem led to erratic behavior, such as going sick. John Cope would examine him, find nothing wrong, but indulge him anyway with a day off here and there. On those occasions D'Anglade would become the cook and Alex Stevens would take over as steward. Aside from that, Wise was generally a good man to have in an emergency, and an emergency is what it was when the *Aurora* broke from her moorings in 1915 and drifted for 10 months. On his return to the Antipodes, he served with the NZ Expeditionary Force in World War I.

Wise Bay. 83°02' S, 167°35' E. A small ice-filled Ross Ice Shelf indentation into the Holland Range, at the terminus of Ekblad Glacier, just W of Driscoll Point, about 20 km E of Mount Reid, and 16 km NE of Cape Maude. Named by NZGSAE 1959-60, for Keith Wise (*see* **Mount Wise**). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Wise Peak. 78°35' S, 158°18' E. A small peak rising to 1580 m, on the W side of Deception Glacier, it marks the S end of the Warren Range, in Victoria Land. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Christchurch (NZ) entomologist Keith A.J. Wise, at McMurdo as a usarp every summer between 1960-61 and 1964-65, usually on expeditions sponsored by the Bernice P. Bishop Museum of Honolulu. He discovered mites only 309 miles from the South Pole. ANCA accepted the name.

Wise Ridge. 77°16' S, 162°00' E. A sharp-crested ridge, 6 km long, extending SW-NE between Dahe Glacier and Willis Glacier, in the Saint Johns Range of Victoria Land. Peaks on the ridge rise to between 1200 and 1525 m above sea level. Named by US-ACAN in 2005, for Sherwood W. Wise, Jr., of the Antarctic Marine Geology Research Facility, at Florida State University, at Tallahassee, who had a major part in the planning, coring, analyzing and storage of Southern Ocean geological specimens, between 1973 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Mount Wishart. 70°19' S, 65°16' E. A snow-covered mountain, rising to 1642 m at the W end, 8 km N of Mount Kirkby, on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Edward Robert "Ted" Wishart (b. Sept. 7, 1932. d. Aug. 3, 1993), technical officer (glaciology) at Mawson Station in 1963. US-ACAN accepted the name in 1967.

Wishbone Ridge. 84°56' S, 166°56' W. A Y-shaped ridge trending NE from the main ridge in the Duncan Mountains, 3 km E of Morris Peak. It is unique among the series of ridges in the Duncans in that it bifurcates, thus looking from the air like a giant wishbone. Named by Ed Stump, who mapped the ridge on Dec. 21, 1974, with Charles Corbató and Philip Colbert, all on the USARP Ohio State University field party that year, although Colbert waa actually of Arizona State. US-ACAN accepted the name.

Mount Wisneski. 77°58' S, 159 °33' E. A ridge-like mountain, rising to 2334 m, that forms the S end of the Lashly Mountains, in Victoria Land, near the Polar Plateau. There is much exposed rock on the S cliff and E spur of this mountain. Named by US-ACAN in 2006, for Stanley P. "Stan" Wisneksi III, senior manager for ITT Antarctic Services and then ASA, working in several planning and implementation divisions in support of logistics, operations, and engineering, at McMurdo and Pole Station, between 1985 and 1999, including 2 winters and 11 summer seasons.

Wisniewski Cove. 62°04' S, 58°47' W. Between Sygit Point and Musialski Point, on the Joannes Paulus II Coast, on the NW side of King George Island, in the South Shetlands. Named by the Poles in 1984, for Lech Wisniewski, technician on PolAE 1980-81.

Wister, Horace *see* **USEE 1838-42**

Mount Wisting. 86°27' S, 165°26' W. Also called Mount Oscar Wisting. One of a group of low-lying rocky peaks barely projecting through the ice-cap covering the Polar Plateau, it rises to 2580 m (the New Zealanders say 3260 m) above sea level, and is the most northwesterly summit of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. A mountain in this general vicinity was discovered in 1911 by Amundsen's party as they were racing for the Pole, and named by Amundsen as Mount O. Wisting, for Oscar Wisting, one of his companions. This may or may not be the one Amundsen had in mind, but it was the one chosen by US-ACAN in 1950, to perpetuate Wisting's name here. The name accepted was Mount Wisting. The feature was mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. NZ-APC accepted the name.

Wisting, Oscar Adolf. b. June 6, 1871, Larvik, Norway, son of Ole Martin Wisting and his wife Abigael Helene Andersdatter. Whaler who joined the Norwegian Navy as a gunner. In the 1890s he married Elise Marie. He was Amundsen's closest friend, and one of the first 5 men to stand at the South Pole, on Dec. 14, 1911, as part of NorAE 1910-12. He was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. After 1913 he was mostly in the Arctic with Amundsen, leaving his family in Horten for years at a stretch. On Dec. 5, 1936, he was found dead of a heart attack in his old cabin aboard the *Fram*, which was then in Bygoe Museum, in Oslo. He wrote a book, with a title translated as *16 Years with Roald Amundsen* (*see* the Bibliography).

Wistingfjell *see* **Mount Wisting**

Wiström, Alfred *see* **Órcadas Station**, 1911

Wiström, Harald *see* **Órcadas Station**, 1911, 1913

Wit Stwosz Icefall *see* **Stwosz Icefall**

Witalis Peak. 85°33' S, 160°18' W. A rock peak rising to 760 m, in the NE part of Collins Ridge, at the confluence of Bowman Glacier and Amundsen Glacier, in the Queen Maud Mountains. Discovered and mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Ronald E. "Ron" Witalis (b. Jan. 1938), meteorologist who wintered-over at Pole Station in 1961.

Witches Cauldron. 69°58' S, 69°44' W. An ice-filled basin immediately W of Mount Egbert, on the W side of the Douglas Range, in the N part of Alexander Island. Discovered and roughly mapped aerially on Feb. 1, 1937, by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Re-mapped in 69°56' S, 69°49' W, by Searle of the FIDS, in 1959-60, working from aerial photos taken in Nov. 1947 by RARE 1947-48. Named by UK-APC on March 2, 1961, for its kettle shape. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1974, and, with those new coordinates, the feature appears in the 1977 British gazetteer.

Witcombe, John "Taff." b. Nov. 26, 1932, Bedwelty, Monmouthshire, son of Herbert G. Witcombe and his wife Margaret Evans. A professional met man, with the Met Office in Leeds, he joined FIDS in 1956, as a senior meteorologist who wintered-over at Base B in 1957 and 1958. During the 1957-58 summer, he worked all over Deception Island as geologist Don Hawkes' assistant (Dr. Hawkes was there to do the definitive geologic study of the island, and his map would be published in 1961). On his return to the UK in 1959, he went back to the Met Office, married Mabel E. Fleetwood, and they continued to live in Leeds.

Witham, Nicholas. Baptized Aug. 20, 1786, Marblehead, Mass., son of John Witham and his wife Susanna. He went to sea as a teenager, as a seaman on the schooner *Success*, out of Salem, Mass., and was commander of the *Governor Brooks* from 1818, and during the Salem Expedition of 1820-21, in Antarctic waters.

Withem Island. 62°14' S, 59°08' W. Off the NW side of Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, as Withen Island, for Nicholas Withen (except that his name was Witham —*see* above). It appears as such on a British chart of 1962. US-ACAN accepted that name in 1965. In 1990 the name was amended to Withem Island (except that it was amended wrongly). Last plotted by the UK, in late 2008.

Withen Island *see* **Withem Island**

Withrow Glacier. 77°24' S, 156°25' W. On Edward VII Peninsula, flowing NW into Bartlett Inlet, just E of Cape Colbeck. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Cdr. William Harrill Withrow (b. April 22, 1917, Hollis, NC. d. Feb. 17, 2006, Hollis), who joined the U.S. Navy in Feb. 1941 out of the Naval Academy, served as an aviator

in World War II and Korea, and was officer-in-charge of Detachment One (Advance Headquarters Group), at Christchurch, NZ, 1965-66. He retired from the U.S. Navy in 1967, at which point he became professor of political science and geography at Gardner-Webb University, in Boiling Springs, NC.

Witt, Alfredo C. *see* **Órcadas Station**, 1924, 1926

Witt Bluff. 71°16' S, 68°27' W. A rock bluff rising to about 500 m on the SW side of Eros Glacier, at the E end of a spur projecting from Planet Heights, in the E part of Alexander Island. Roughly mapped by FIDS/BAS personnel from Fossil Bluff Station between 1961 and 1963. It appears on their 1966 chart. Further mapped by the (British) Directorate of Overseas Survey (DOS), from U.S. Landsat images taken in Jan. 1973. In association with Eros Glacier, it was named by UK-APC on Dec. 20, 1974, for Carl Gustav Witt (1866-1946), German astronomer who discovered Eros (Minor Planet 433) in 1898. US-ACAN accepted the name in 1975.

Witte, Dietrich. Motor mechanic on GermAE 1938-39.

Witte Nunataks. 75°29' S, 69°22' W. Isolated nunataks, rising to about 1300 m, about midway between the Sweeney Mountains and the Hauberg Mountains, on the Orville Coast of Ellsworth Land, at the very S of Palmer Land. Surveyed by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1966, for Paul Frank Witte, construction mechanic who wintered-over at Eights Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Witte Peaks. 71°32' S, 2°04' W. A line of about 4 nunataks trending SW-NE, 24 km W of Stein Nunataks, on the N part of Ahlmann Ridge, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Witte Spitzen, for Dietrich Witte. Surveyed by NBSAE 1949-52. US-ACAN accepted the translated name in 1966.

Witte Spitzen *see* **Witte Peaks**

Wittespitzen *see* **Witte Peaks**

Wittman Island *see* **Wittmann Island**

Isla Wittmann *see* **Wittmann Island**

Wittmann Island. 65°44' S, 65°49' W. An island, 3 km WSW of Nusser Island, off Zubov Bay, on the E side of Renaud Island, in the Biscoe Islands. It was photographed aerially by ArgAE 1956-47, and is first accurately shown (but not named) on their 1957 chart. Also photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Walter I. Wittmann (1918-1992), American oceanographer who specialized in sea-ice studies. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. It appears (misspelled) in the 1974 British gazetteer, as Wittman Island. Today, the Argentines call it Isla Wittmann.

Wlodek Cove. 62°10' S, 58°18' W. In front of Nature Conservation Glacier, W of Puchalski Peak, and N of Cape Vauréal, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Wlodzimierz "Wlodek" Puchalski (*see* **Puchalski Peak**).

Mount Wodzicki. 71°21' S, 163°10' E. Rising to 2380 m, it is the highest peak on the ridge between Mount Jamroga and Helix Pass, in the central portion of the Bowers Mountains. Named by NZ-APC in 1982, for Jontek Wodzicki, NZARP geologist who climbed this peak and studied its geology in 1974-75. US-ACAN accepted the name.

Wohlschlag Bay. 77°22' S, 166°25' E. A large bay indenting the W coast of Ross Island between Harrison Bluff and Cape Royds, and overlooked by Mount Bird. Charted by Scott during BNAE 1901-04. Named by US-ACAN in 1964, for Donald E. Wohlschlag, professor of biology at the Natural History Museum at Stanford University, who outfitted the biology labs on the *Eltanin* and at McMurdo, where he worked 5 summer seasons between 1958 and 1964. NZ-APC accepted the name.

Wohlthat Massif *see* **Wohlthat Mountains**

Wohlthat Mountains. 71°35' S, 12°20' E. A large group of associated mountain features consisting of the Humboldt Mountains, the Petermann Ranges, and the Gruber Mountains, immediately E of the Orvin Mountains, between the Princess Astrid Coast and the Princess Ragnhild Coast, in the E part of Fimbulheimen, in central Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Wohlthatmassiv, for Helmuth Christian Heinrich Wohlthat (1893-1982), Hermann Goering's chief economist, who really initiated and planned the expedition. The name has been translated as Wohlthat Massif, but US-ACAN accepted the name Wohlthat Mountains in 1966. The Norwegians call it Wohlthatmassivet.

Wohlthatmassiv *see* **Wohlthat Mountains**

Wohlthatmassivet *see* **Wohlthat Mountains**

Mount Woinarski. 71°14' S, 66°30' E. A triple-peaked mountain, about 28 km (the Australians say about 38 km) SW of Taylor Platform, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Brian Woinarski (*see under* **Zichy-Woinarski**). US-ACAN accepted the name in 1967.

Wojciech Panorama. 66°17' S, 100°44' E. Hills on the S coast of Algae Lake (52 m above sea level), affording beautiful panoramic views over the Bunger Hills. Named by the Poles in 1985, for Wojciech Krzeminski (*see* **Krzeminski Hills**).

Wolak Peak. 77°39' S, 161°08' E. A peak in the Inland Forts, 1.5 km NW of Saint Paula Mountain, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Richard J. Wolak, administrative assistant at McMurdo in 1972-73 and 1973-74, and station manager at Pole Station in the winter of 1975.

Wold Nunatak. 74°47' S, 98°38' W. About 16 km E of Mount Manthe, in the SE sector of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Richard J. Wold, USARP geologist at Byrd Station in 1960-61.

Wolkenkamm. 73°21' S, 167°46' E. A crest between Nascent Glacier and Index Point, in the E part of the Mountaineer Range, on the coast of Victoria Land. Named by the Germans.

Isla Wollan *see* **Wollan Island**

Wollan Island. 66°25' S, 66°38' W. A dome-shaped, ice-capped island with conspicuous rock exposures on its NW side, 1.5 km N of Davidson Island, and SW of the Bernal Islands, in Crystal Sound, off the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed by Fids from Base W in 1958-59, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Ernest Omar Wollan (1902-1984), U.S. physicist who used neutron diffraction to study the structure of ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Isla Wollan.

Cabo Wollaston *see* **Cape Neumayer, Cape Wollaston**

Cape Wollaston. 63°40' S, 60°47' W. The NW extremity of Trinity Island, in the Palmer Archipelago. This may be the feature roughly charted by Capt. Davis in 1820-21, and which appears in his log of Feb. 8, 1821, as Bluff Point. It was further charted by Hoseason in 1824, and appears on Powell's chart of 1828. However, later, there was a Bluff Point on the SW side of the island, so it may not be one and the same. The point on the NW of the island was recharted by Foster in 1829, during the *Chanticleer* Expedition of 1928-31, and named by him as Cape Wollaston, for William Hyde Wollaston (1766-1828), commissioner of the Royal Society on the Board of Longitude, 1818-28. On a British chart of 1901 it appears as Cape Walleston, and it appears as such (Cabo Walleston) on a 1908 Argentine map, and as Cap Walleston on Charcot's 1912 map. From about the time of World War I, it was confused with (what later became known as) Cape Neumayer (q.v. for more on this), the NE point of Trinity Island, and in 1947 US-ACAN accepted the name Cape Wollaston for the NE point (rather than the NW point), and UK-APC followed suit on Sept. 8, 1953. It appears that way in the 1955 British gazetteer. However, the correct feature appears on a 1943 U.S. Hydrographic Office chart, but with the incorrect spelling Cape Wallaston. ChilAE 1946-47 re-surveyed it, and on Jan. 22, 1947, named it Punta Cóndor, for the great bird of the Andes. That was the name accepted by the 1974 Chilean gazetteer. ArgAE 1952-53 re-surveyed it, and named it Punta Martillo (i.e., "hammer point"), for its shape. It appears that way on a 1960 Argentine chart, and it was the name accepted by the 1970 Argentine gazetteer. However, today, it seems as if the Argentine call it Cabo Wallaston (sic). The feature was photographed aerially by FIDASE in 1956, and, consequently, on Sept.

23, 1960, UK-APC changed the name of the NE cape from Cape Wollaston to Cape Neumayer, and re-applied the name Cape Wollaston to the original NW point. US-ACAN followed suit with that later in 1960. It appears in the present form on a 1961 British chart.

Wollesen Islands. 67°31' S, 62°41' E. A group of small islands in the entrance to Holme Bay, about 1.5 km W of the Azimuth Islands, about 3 km S of the MacDonald Islands, and about 12 km NW of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Remapped by Australian cartographers from ANARE air photos. Named by ANCA on May 18, 1971, for Christian Wollesen Petersen (known as Wollesen), radio officer on the *Thala Dan* and the *Nella Dan* on nine ANARE relief voyages. US-ACAN accepted the name in 1973.

Wolseley Buttress. 64°12' S, 59°48' W. A high bluff, or buttress, rising to about 1700 m on the S edge of the Detroit Plateau, in Graham Land, it forms the W side of Albone Glacier, located between that glacier and Edgeworth Glacier. Mapped by FIDS cartographers from ground surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Wolseley Tool and Motor Car Co., which designed the motor sledge for BAE 1910-13. US-ACAN accepted the name later in 1964.

Womack, Lyle. b. Feb. 24, 1902, Bradford, Pa. In Panama since he was 5, his father being owner of the Womack Whisky Company there, he was an All-American football player, and made the mistake of marrying beautiful aviatrix and movie star Ruth Elder. When the *City of New York* was passing through Panama during ByrdAE 1928-30 and was short in their black gang, Lyle was going through a heavy divorce and was delivering baggage for passengers at Balboa. To try to lighten his mood, he volunteered for the expedition, thus reducing his annual salary from $2200 to 12 cents. "I thought I needed a change of climate." On Dec. 12, 1928, while he was struggling through the Antarctic pack-ice, his divorce came through. "I still love him," the lady claimed. While laying over in NZ in between phases of the expedition, Lyle and 11 others decided to leave on the *Tahiti* for San Francisco, where they arrived on April 12, 1929. He tried lion taming and profesional boxing before settling down in Prineville, Oregon, as a real estate developer. On Sept. 12, 1972, in Prineville, he died as the result of a kick from his pet burro.

Wombat Island. 67°35' S, 47°57' S. A small island just off the E end of Mackinnon Island, in the W part of Casey Bay, just off the Hannan Ice Shelf, off the coast of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for their animal. US-ACAN accepted the name in 1965.

Women in Antarctica. Until the 1960s, even the 1970s, it could safely be said that Antarctica was no place for women. In fact, Harry Darlington, in 1947, said, "There are some things women don't do. They don't become Pope or President — or go down to the Antarctic." That was a quote from a man who thought he knew, and was made during his time with RARE 1947-48, an expedition on which his wife not only visited Antarctica, but wintered-over. Indeed, Jennie Darlington said, in her 1956 book, "Taking everything into consideration, I don't think women belong in Antarctica." She wasn't the only woman on that expedition, either (*see* below). In the 60 years since then, things have changed, but are going to change a lot more. A portent of that change came in 1961, when Mikhil Somov made comments such as Antarctica being "entirely male," and that ladies would only distract from the work needed to be done. Then Vivian Fuchs, on Dec. 5, 1961, on board the *Kista Dan*, weighed in with "scientific work in the Antarctic is a man's job," and he cited the same old misogynistic reasons. However, the more enlightened and realistic John Grierson went on record in the London *Times*, saying that comments like Fuchs's were sure to lead women to Antarctica. By 2008 still only a small proportion of Antarcticans were women, but that proportion was growing (25 percent of all U.S. support personnel, for example, are women). There has been a darker side, sexual harassment and even rape, but that unpleasantness died down the less unusual the female presence became. Below are landmark dates concerning the arrival of women on the Great White Continent. **Sept. 1819**: The *San Telmo* foundered in the South Shetlands. On board had to be some women, given the number of passengers. This supposition has been strengthened by the late-1980s finds of bones belonging to a Yamana woman (*see* **Punta El Hallazgo** — under **E** — for details of this). **1822-23**: The *Jenny* almost certainly made it into Antarctic waters that season, and the captain's wife was aboard. That is, if the story of the *Jenny* is true. **May 1859**: Perhaps the first woman to go south of 60°S was the wife of the captain of the *Fleetwood*. **1906**: Adolf Amandus Andresen's wife went with him to Deception Island. She even went out on the whale catcher *Almirante Uribe*. **1908**: Olava, the wife of Capt. Julius Paulsen (q.v.), was in the South Shetlands. **1910**: Charcot medically treated Mrs. Andresen who, with her entire family, was living at the station at Whalers Bay (*see* **Andresen, Adolf Amandus**). **1914**: Some women applied to go on Shackleton's Transantarctic expedition. Shackleton didn't take them — at least, not to Antarctica. **1920s**: Sometime in the 1920s, it is reported that William Williams, master of the whaler *Southern King*, took his wife down to the ice on at least one occasion. **1927**: As Byrd was preparing his ByrdAE 1928-30, he seriously proposed taking 6 Eskimos (q.v.), including 2 women. They never went. **1928**: Hundreds of women applied to go on ByrdAE 1928-30. **Feb. 20, 1935**: Caroline Mikkelsen was the first woman to set foot on the mainland of Antarctica. She went ashore from the *Thorshavn*, and was there for 6 hours. **1936-37**: Lars Christensen took his wife Ingrid, his daughter, Fie, and 2 female friends Lill Rachlew and Solveig Widerøe, to Antarctica as tourists (Four Ladies Bank is named after them) on the *Thorshavn*. They landed on the Lars Christensen Coast. These were the first Norwegian tourists. **Jan. 27, 1937**: Ingrid Christensen flew over the Ingrid Christensen Coast, as a passenger, and dropped a flag. **Jan. 30, 1937**: Ingrid Christensen became the second woman to set foot on the Antarctic continent itself. **1937-38**: There were three stewardesses on the whaler *Terje Viken* this season; 25-year old Maj Britt Olsson, from Sweden; Louisa Nilsen, aged 36, from Norway, and skipper Fred Gjertsen's 20-year-old daughter Mimi (whose real name was Mary May). This was a first (and a last) for all three ladies. They had all signed on at Rotterdam on April 29, 1937. **Feb. 15, 1944**: The *Fitzroy* pulled into Port Lockroy Station, during the highly-secret Operation Tabarin. The radio operator on board was Tim Hooley, a Falkland Islander. His wife Gladys and their 14-year-old daughter Dawn were also aboard, headed to South Georgia. The two ladies volunteered to help Fram Farrington erect the radio aerial mast at Lockroy. They didn't actually get to help, but they did go ashore, and Dawn did an impromptu maypole dance around the mast. **1947-48**: Mrs. Jackie Ronne and Mrs. Jennie Darlington were the first women to winter-over in Antarctica, at Stonington Island, during RARE 1947-48. Their husbands were part of the expedition. In fact, Finn Ronne was the leader. Jackie had been expected to leave the ship at Valparaíso, Chile, on the way down, having come to report part of the trip for the North American Newspaper Alliance. At the last moment her husband had decided to bring her along for the complete tour, and had taken Harry Darlington's wife too. In Nov. 1947 they set up house with the men, and became "mothers" to the crew, washing laundry, settling fights, etc. Indeed, Messrs Darlington and Ronne did have a fight, and after that the two wives ceased being friends. Jennie became pregnant (it was an Antarctic honeymoon for her) and almost had her child in Antarctica. **Jan. 6, 1948**: Aleksandra Akimovna Leonova, a waitress on the *Slava*, gave birth (*see* **Births in Antarctica**). **Early 1948**: Rosa Markmann, the wife of Chile's president González Videla (*see under* **G**), became the first First Lady to Antarctica. **1952-53**: Edna Petersen, wife of Hans Christian Petersen (skipper of the *Kista Dan*), acted as a stand-in during the filming of *Hell Below Zero*. **1955-56**: Marie V. Klenova became the first woman scientist to work in Antarctica, when she worked on the *Ob',* at Mirnyy Station. That season there were 7 women on the *Lena* alone. From that season onwards, the Soviet ships would regularly have stewardesses on board. **Nov. 1955**: Byrd stated, apparently straight-faced, that "no woman has ever stepped on Little America, and we have found it to be the most silent and peaceful place in the world." After thinking it over, probably as a result of protests at his remark ("Little America needs the Litle Woman" placards), he recanted somewhat, "Little America is the loneliest place on Earth because there are no women." He told demonstrators that he was considering taking women to

the Pole, and already had 1500 applications. **Dec. 31, 1956**: Miss A. Stevenson and Miss Ione Eadie (q.v.), two lady clerks aboard the royal yacht *Britannia*, became the first British women to cross the Antarctic Circle. **1956-57**: Two women scientists were working on the Russian ship *Ob'*— Vera S. Korotkevich and Lydia M. Nikolaeva. However, Gordon Cartwright, a U.S. exchange scientist there, said there were three. **Jan. 4, 1957**: Miss Stevenson and Miss Eadie caused a considerable stir as they set foot on Antarctica at Base G. **Oct. 15, 1957**: At 8.14 P.M., at McMurdo, Ruth Kelly and Pat Hepinstall, two stewardesses on the first ever commercial flight to Antarctica, became the first women ever to visit an American Antarctic base (*see* **Kelly, Ruth**, for details). Their stepping out of the Pan-Am Stratocruiser clipper *American* was directly contrary to Admiral Dufek's express orders. In fact, Dufek (at that time the head American in Antarctica) had been dead against women even flying to Antarctica. Women reporters, writers, and even pilots had been urging him for permission to go, but he said, "I try to say no as gently as I can, but I don't think we're quite ready for that yet." Dufek even went as far as to say, "Women will not be allowed in the Antarctic until we can provide one woman for every man," whatever that meant. What he atually said in private was, "Women? Women on the ice? There will be no goddamned women on the ice while I'm COMNAVSUPPFOR." He cited bathroom facilities as the main problem. When the Pan-Am flight to McMurdo became inevitable, Dufek said, "If there are any hostesses, they're going to be men." Whatever that meant. But, Dufek was out-lobbied. As it happens, Dufek had much more fun than he expected (nothing sinister implied here — he just had a jolly time at the occasion). **1959**. Serious attempts were made by Colin Bull and others at Victoria University of Wellington, in NZ, to have a woman student (Dawn Rodley) go on the third VUWAE, 1959-60, but they were thwarted by the U.S. government (the Americans would have to do some of the transporting). The NZ prime minister didn't want to touch the issue, and neither did the U.S. Ambassador to NZ. **Dec. 21, 1959**: The first women officially to summer at Macquarie Island. Though Macquarie is only a sub-Antarctic island, this was a major breakthrough. The women were Isobel Bennett, Mary Gillham, Susan Ingham, and Hope MacPherson. **Feb. 8, 1961**: Nel Law (Phil Law's wife) visited Antarctica on the *Magga Dan*, as a guest of the Lauritzen Line. This was very definitely not official Australian policy, to allow a woman in Antarctica. **Feb. 18, 1960**: Admiral Tyree, head of Operation Deep Freeze, was quoted as saying that Antarctica was a man's world, and, as far as he was concerned, it was going to stay that way. This blast was prompted by rumors that a nurse was going to be at McMurdo that season, and possibly a few women scientists and reporters. "I have no intention of arranging for any women to go there, unless I am ordered to do so by the highest authority [one presumes he meant the President, rather than, say, God], and then I would recommend strongly against it." **1961-62**: Although not in the Antarctic, the Kerguélen Islands welcomed French geophysicist Jeanne Baguette and engineer Geneviève Pillet for the summer. It was step forward to the next season. **1962-63**: Christiane Gillet, an engineer at Dumont d'Urville Station, for the summer, and several subsequent summers. Also that season, the first 2 female American biologists went south, on the *Eltanin*, both from DePaul University — Mary Alice McWhinnie and her assistant, Phyllis L. Marciniak. That was the first cruise of the *Eltanin* to Antarctica (known as Cruise 6), and lasted from Nov. 24, 1962 to Jan. 23, 1963. Cruise 7 began on Feb. 4, 1963 and ran until March 19, 1963. The two ladies were on that one too, but this time were joined by two lady scientists from the University of Chile — E. Figetti, and F.D. Frelen. They carried out shipboard research, being unable to land on the continent due to the U.S. Navy's ban on American women, which wasn't lifted until 1969. In addition, Miss Korotkevich was back in the *Ob.'* **1963-64**: Charles Swinthinbank tells us that there were 30 women employed on the *Estoniya*. **1964-65**: Svetlana, the Russian movie star, visited Signy Island Station (*see* **Svetlana Passage**). **1967**: Inger Knudsen became radio operator on the *Thala Dan*. **1967-68**: Dorothy Braxton, of NZ, on the *Magga Dan*, was the first female professional reporter in Antarctica, and Canterbury Museum zoologist Marie Darby (on the same ship) was the first NZ woman scientist. **1968-69**: Four Argentine scientists left Buenos Aires in Nov. 1968, on the *Bahía Aguirre*, bound for Melchior Station, to do research on the Antarctic Peninsula — Professors Irene Bernasconi (then in her 70s), Maria Adela Caria, Elena Martínez Fontes, and Carmen Pujals. **1968**: Marlyn Shaw Farwell, wife of Capt. Fred Farwell, USN, was the first U.S. Navy wife to visit McMurdo. **Oct. 1969**: Christine Müller-Schwarze was the first American woman to work on the ice of Antarctica, studying penguins. She spent 3 summers there with her husband. **Nov. 11, 1969**: With the U.S. ban on women in Antarctica lifted, a team of women scientists led by Dr. Lois Jones went to Antarctica for the 1969-70 summer season. The others were Terry Lee Tickhill, Eileen McSaveney, and Kay Lindsay. Jean Pearson (a reporter) and Pam Young went along with them in a plane to the South Pole, and the 6 women stepped out together, the first women ever at 90°S. Actually Jean Pearson, as a member of the press, was first out. They spent a few hours at the Pole, and then flew back to McMurdo Station. It was a big news story. Jack Paulus flew the plane. **1970**: Irene C. Peden was ionosphere physicist at Byrd Station, the first woman to work at an inland station. Pam Young was also the first official female resident at Scott Base. **1971 winter**: Dolores Sánchez was the first woman to winter over at Órcadas Station (Argentina). **Nov. 24, 1971**: Ann Chapman became the first woman to lead an expedition in Antarctica (*see* **Lake Chapman**). **Dec. 1971**: Louise Hutchinson was the first woman ever to sleep over at the South Pole (*see* **South Pole**). **1972**: Yuan Lin DeVries became the first woman to work at McMurdo Station. **1973**: Ella Woodfield became the first woman to visit Halley Bay Station, when she was traveling on the *Bransfield*. **1973**: Lt. Ann Coyer (*see* **Coyer Point**) became the first U.S. Navy woman to participate in OpDF (OpDF 74). **Nov. 1973**: Nan Scott and Donna Muchmore were the first women to work at the South Pole. **Jan. 2, 1974**: Patricia Nicely of the National Science Foundation, and Lt. Ann Coyer, USN, were the first U.S. women at Vostok Station. **Jan. 10, 1974**: Mary Alice McWhinnie and Sister Mary Odile Cahoon (a nun) arrived at McMurdo. Dr. McWhinnie was there to become the first woman to head a scientific station in Antarctica, when she took over at McMurdo Station for the 1974-75 summer season. She shared the station with Sister Mary Odile, and 100 men. **1974-75**: Elena Marty and Jan Boyd were not only at McMurdo, but at the Pole. **Jan. 9, 1975**: Ruth Siple (*see* **Mount Siple** and **Siple Ridge**) was a guest at the opening of the new Pole Station. **Jan. 9, 1976**: It was announced in Canberra that the Australian government had appointed the first woman doctor (a Briton, incidentally) to be the first to winter-over in Antarctica. The doctor refused to divulge her name or address. **Jan. 19, 1976**: The first Australian women arrived on the continent, officially, at Casey Station: Jutta Hösel (photographer), Shelagh Noreen Robinson (liaison; she died in 2010), and Elizabeth Chipman (information and scientific administration). They had all previously been to Macquarie Island, but this time it was Antarctica. Summer only, no wintering-over. Partly what broke down official Australian resolve never to have women in Antarctica was the lack of male doctor volunteers. The bases had to have doctors, and no one wanted to go, no Australian doctors anyway, not males. **1976**: Zoe Gardner wintered-over on Macquarie Island, the first Australian woman to do so. Even though this was not Antarctica, as such, it was a step in the right direction. **Jan. 1977**. Janet Thomson (q.v.), working for the Americans on the *Hero*, became the first British female scientist to set foot on Antarctica. **1977**: Rod Ledingham (officer-in-charge) and his wife Jean (medical officer) wintered-over at Macquarie Island. This was an Australian first. **1977-78**: Dorothy Smith accompanied 7 men on the *Solo* expedition. She was 59. **1979**: Dr. Michele Raney was the first woman to winter-over at the Pole. Thelma Rodgers was the first NZ woman to winter-over (at Scott Base). **1980**: Martha Kane, a climatologist, replaced Dr. Raney as the only female wintering-over at the Pole. **1978-79**: Female construction workers were introduced to USAP. **Jan. 1981**: Lynn Williams wintered-over at Macquarie Island as a doctor, with her husband, electrical engineer Warwick Williams. More important (for this book), however, Dr. Louise Holliday arrived at Davis Station, the first Australian woman to winter-over at an Antarctic base (winter of 1981). **1982**: Julie Campbell wintered-over

as a doctor at Mawson Station. **Feb. 1983**: Maria Kazanowska was the first woman to visit a Japanese Antarctic base. **1983**: Robyn McDermott wintered-over as doctor at Mawson Station. The first non-medical ANARE woman to winter-over at Macquarie Island was geophysicist Peta Kelsey. **1983-84**: The first BAS woman in Antarctica, Janet Thomson. India sent its first women to the ice — geologist Sudipta Sengupta and microbiologist Aditi Pant. **1984**: Lynn Williams wintered-over as doctor at Mawson Station, again with her husband Warwick Williams (*see* **1981**). Anna Kolakowska wintered over at Arctowski Station with her husband Edward Kolakowski. **1985**: Peta Kelsey and Gina Price wintered-over at Mawson Station. This was the first wintering-over at an ANARE Antarctic station by non-medical scientists. **Dec. 24, 1985**: Two Indian women scientists arrived at Dakshin Gangotri Station, for the summer. **1986**: 13 women wintered-over in 4 U.S. bases in Antarctica. At Mawson Station that winter, a (male) weather observer was unable to winter-over, so Denise Allen of the Bureau of Meteorology, was helicoptered off the *Icebird* at Easter time, just in time to be his replacement. Gillian Deakin wintered-over that year at Davis Station. Anna Kolakowska wintered-over again at Arctowski Station, again with her husband. **1986-87**: Pene Greet, of Australia, was accepted for a summer position in Antarctica, but at the last minute was rejected, because of prior behavior which the Australian government had found unacceptable. Because she had lost money making her arrangements, she sued, and was awarded $9000 in compensation. **1987**: One woman and 3 men wintered-over at Greenpeace Base (*see* **Greenpeace**). **1988**: Denise Allen wintered-over at Davis Station. **1988-89**: Painter Kay Grist was the first ANARE woman tradesman in Antarctica. Josefina Castellvi led the Spanish Antarctic expedition of that season. **Jan. 17, 1989**: Victoria E. Murden and Shirley Metz were the first 2 women to reach the South Pole after a land traverse. **1989**: Two Australian women led scientific stations for the winter — Alison Clifton at Macquarie Island, and (much more important, as far as this book is concerned), Diana Patterson, at Davis Station. Also that winter Sandy Cave was at Casey Station with her partner, diesel mechanic John Freeman. Miss Cave became the second ANARE woman to become pregnant while on the continent. She returned to Australia, 7 months pregnant. Their daughter was named Casey. In 1991 Miss Cave applied to go south again, but had a car crash, was in a coma for 4 months, and in hospital for a year. She was confined to a wheelchair. **1990**: Joan Russell was the first woman leader at Casey Station, and Peta Read was deputy leader. Adele Post was biologist. That year also saw the first all-female wintering team at the West German station. It also saw the German, Barbara Massing, become the first officer of the *Icebird*. **1990-91**: Kay Grist was back at Mawson Station (*see* **1988-89**). **1991**: Louise Crossley was station leader at Mawson that winter, and Alison Clifton was station leader at Davis Station (she was there with her partner). **1992**: Denise Allen wintered-over at Casey Station. **1992-93**: American Women's Trans-Antarctic Expedition (q.v.), led by Ann Bancroft. **1993-94**: Catherine White was the Asset Services plumber at Mawson Station. **1994**: Two Australian Aborigines, Lin Onus and Miriam-Rose Ungunmeer, at Mawson Station for the summer. Wing Cdr. Angie Rhodes, Australia's highest-ranking woman Air Force officer, was leader of the wintering-over party at Casey Station. Brigitte Muir climbed Vinson Massif. On Sept. 3, 1994 Denise Jones married Colin Blobel at Davis Station. This was a first. The marriage was not accepted legally, so they did it again in Australia. Liv Arnesen skied alone and unassisted to the Pole. **1995-96 summer**: Vanessa Noble was an ANARE helicopter engineer at Davis Station. **1997**: Dr. Aithne Rowse became the first woman to winter over with a Sanae team. **1998**: Rachel Duncan, BAS field assistant, wintered-over at Rothera Station. **1999**: Dr. Jerry Nielsen performed a biopsy on herself while wintering-over at Pole Station. Dr. Carol Crossland wintered-over at Palmer Station. She had first wintered-over at McMurdo in 1991, then at Pole Station in 1998, thus making her the first woman (and probably the first doctor of either gender, to winter-over at all 3 major U.S. stations in Antarctica). **Feb. 2001**: Ann Bancroft and Liv Arnesen were the first women to sail and ski across Antarctica. **2003**: An Australian woman mechanic worked in Antarctica for the winter of 2003 and the summer of 2003-04. **Oct. 2003**: The first all-female aircraft flight crew (American) installed a couple of automatic weather stations on the iceberg B-15J. **2004 winter**: Australian observer Julienne "Jules" Harnett wintered-over at Pole Station. **Dec. 27, 2005**: Cecilie Skog and Rolf Bae arrived at the South Pole, after skiing from the ice shelf.

Womochel Peaks. 72°40' S, 161°04' E. Low rock peaks about 3 km S of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Daniel R. Womochel, biologist at McMurdo in 1967-68.

Won Rock. 60°29' S, 46°16' W. A submerged rock, WNW of the Melsom Rocks, and NW of Coronation Island, in the South Orkneys. Discovered by the Korean trawler *In Sung Ho* when she grounded on this rock in 2003. Named by UK-APC on Nov. 9, 2005, after the 1st mate, Won Jong-Bu, later the trawler's skipper. What is rather peculiar is that this rock had never before been discovered, being the second most northerly feature in Antarctica (*see* **Northernmost features in Antarctica**).

Wong Peak. 77°15' S, 166°50' E. Rising to over 1600 m, 2.5 km NE of the summit of Mount Bird, in the NW part of Ross Island. Named by NZ-APC on Feb. 20, 2001, for Frank Wong (1950-1992), who led the NZ initiative to establish a comprehensive and international legally-binding regime to protect the Antarctic environment, 1989-91. He was in Antarctica on an official visit in 1983. US-ACAN accepted the name later in 2001.

Wonsey Rock. 66°13' S, 110°36' E. A small rock N of Cameron Island, in the Swain Islands, in the Windmill Islands, off the Budd Coast. The area was photographed aerially by OpHJ 1946-47, by ANARE in 1956, and by SovAE 1956. This specific rock was included by Carl Eklund in a 1957 ground survey of the islands N of Wilkes Station, and named by Eklund for Duane J. Wonsey (b. Sept. 12, 1936), USN, construction mechanic at Wilkes Station in 1957. It was photographed aerially again by ANARE in 1960. US-ACAN accepted the name in 1960, and ANCA followed suit.

Wood. Larsen discovered petrified wood on Seymour Island in 1892-93. Since then wood has been discovered many times, indicating beyond doubt that there were trees in Antarctica at one time.

Cape Wood. 71°24' S, 169°20' E. The SE extremity of Flat Island, at the W entrance to Robertson Bay, in northern Victoria Land. Discovered by Ross in Jan. 1841, and named by him for Charles Wood (1800-1885), First Secretary to the Admiralty, 1835-39. He succeeded his father as 2nd Baronet Wood in 1846, was Chancellor of the Exchequer in Lord John Russell's government, 1846-52, and First Lord of the Admiralty under Palmerston, 1855-58. In 1866 he was raised to the peerage as 1st Viscount Halifax. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Isla Wood *see* **Wood Island**

Monte Wood *see* **[2]Mount Wood**

[1]Mount Wood. 74°49' S, 158°24' E. An isolated nunatak, rising to 1731 m, high on the Polar Plateau at the head of (i.e., N of) David Glacier, and 21.5 km NE of Mount Kring, in Victoria Land. This peak and Mount Kring were used as a reference for establishing a USARP field party. Named by D.B. McC. Rainey, NZ cartographer, for Arthur F. Wood (1903-1978) and his wife Marie B. Leitch (1904-1994), of Springfield, Ohio (both formerly of Paint, Ohio), the foster parents of Staff Sgt. Arthur L. Kring (*see* **Mount Kring** for further details). For a living, Mr. Wood assembled drills for farm equipment. On July 15, 1960, in a Los Angeles court, Sgt. Wood changed his name to Sgt. Kring. NZ-APC accepted the name (of the feature), and US-ACAN followed suit in 1968.

[2]Mount Wood. 74°51' S, 64°07' W. Also called Mount Sandell. Rising to 1230 m (the Chileans say about 120 m; they were misinformed), W of Gardner Inlet, and 24 km W of Mount Austin, in the Latady Mountains, on the Orville Coast, on the E coast of Palmer Land. Probably seen from the air on Dec. 30, 1940, by USAS 1939-41. Discovered properly by RARE 1947-48, and named by Finn Ronne for Ernest A. Wood. US-ACAN accepted the name in 1949, and UK-APC followed suit on Jan. 28, 1953. Both the Argentines and Chileans call it Monte Wood.

Port Wood *see* **Blythe Bay**

Wood, Ernest Albert, Jr. Known as Woody.

b. June 26, 1924, New Haven, Conn., son of Birmingham (England)-born Ernest Albert Wood (who had lived in the USA since he was 3 months old). On Aug. 5, 1943, during World War II, he joined the Merchant Marine, as an engineer cadet on the *Joel R. Poinsett*. He was 1st engineer on the *Port of Beaumont, Texas*, during RARE 1947-48. Apparently, he looked like a movie star. After the expedition, he lived in Oklahoma, then moved to Forth Worth, Tex., dying in Dallas on June 1, 1999.

Wood, Gareth. Mountain climbing instructor from Sidney, BC. He was in his 30s when he was one of the party that replicated what Cherry-Garrard called "the worst journey in the world," i.e., manhauling sledges from McMurdo Sound to Cape Crozier and back, in the winter. He also became one of the 3 men to reach the South Pole on the In the Footsteps of Scott Expedition, 1985-86.

Wood, James Frederick Lewis. b. Feb. 1, 1820. Lieutenant on the *Erebus* with Ross, 1839-43. He was promoted to commander on Oct. 4, 1843, and retired as a captain, on Aug. 1, 1860. He died in London on Sept. 3, 1864.

Wood Bay. 74°13' S, 165°30' E. A large Ross Sea indentation into the coast of Victoria Land, it is bounded on the N by Cape Johnson and the Aviator Glacier Tongue, and on the S by Cape Washington. Discovered in 1841 by Ross, and named by him for James F.L. Wood. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Wood Glacier. 72°29' S, 166°42' E. A tributary glacier flowing SE into Trafalgar Glacier, just E of Mount McDonald, in the Victory Mountains of Victoria Land. It shares a common saddle with Lensen Glacier, which flows northward. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for New Zealand geologist B.L. Wood, a member of NZGSAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Wood Harbo(u)r *see* **Blythe Bay**

Wood Island. 62°29' S, 60°18' W. An island, SE of Desolation Island, in Hero Bay, in the N part of Livingston Island, in the South Shetlands. First roughly charted in 1820-21 by Robert Fildes, who, apparently, did not name it. However, the nearby harbor on Desolation Island he did name, as Wood Harbour (or Port Wood), later that season changing the name to Blythe Bay, thus leaving the name Wood with no place to go. The island was charted again by the Discovery Investigations in 1935, and it appears on a British chart of 1948 (still unnamed). Photographed aerially by FIDASE in 1956-57. In order to resurrect the name Wood in the area, UK-APC named this island on July 7, 1959, as Wood Island, and US-ACAN followed suit in 1960. It appears on a British chart of 1962. The Argentines call it Isla Wood. It was last plotted by the UK, in late 2008. The name comes from Fildes' mother, Alice Wood, who married John Fildes on Sept. 4, 1790, at the church of Saint Nicholas, in Liverpool.

Wood Point. 77°25' S, 168°57' E. About 15 km ESE of Cape Tennyson, on the N coast of Ross Island. Named by US-ACAN in 1964, for Robert C. Wood, USARP biologist working at Cape Crozier in 1961-62, 1962-63, and 1963-64. NZ-APC accepted the name.

Wood Ridge. 74°00' S, 163°45' E. A flat-topped, ice-covered ridge, running in a N-S direction for 11 km between Styx Glacier and Campbell Glacier, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Vernon P. Wood, USN, who wintered-over as a yeoman at McMurdo in 1963 and 1967.

Woodall, Paul Leonard. b. 1933, Hackney, London, son of Leonard Francis Woodall and his wife Winifred Ida Parfree. He joined FIDS in 1957, as a meteorologist, and wintered-over at Base D in 1958, and Base B in 1959. In the first year he was elected "Minister of Food." He later lived at the Plough Inn, Vicarage Lane, Rottingdean, near Brighton.

Woodall, Vance N. b. Jan. 28, 1930, Pulaski Co., Ky., son of farmer Julian Woodall and his wife Madie. He joined the U.S. Navy, as a seaman, and was killed on Jan. 21, 1947, during an unloading accident while engaged in OpHJ 1946-47.

Woodall Peak. 84°17' S, 178°38' E. A small peak with a rock expore on the NE side, rising to 720 m (the New Zealanders say about 762 m), about midway between the mouths of Good Glacier and Ramsey Glacier, close to, and overlooking, the S edge of the Ross Ice Shelf, to the NE of the Hughes Range. Discovered and photographed aerially on Flight C of Feb. 29-March 1, 1940, during USAS 1939-41, Named by US-ACAN in 1962, for Vance Woodall. NZ-APC accepted the name.

Woodberry Glacier. 75°06' S, 161°38' E. A small tributary glacier flowing S between Evans Heights and Mount Fearon, on the N side of David Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1962. Named by US-ACAN in 1968, for Barry D. Woodberry, USARP ionosphere physicist with the U.S. National Bureau of Standards, who was the first Australian to winter-over at Pole Station, in 1966 (*see also* **Woodberry Nunataks**).

Woodberry Nunataks. 67°47' S, 62°11' E. A group of small nunataks, 1.5 km N of Lucas Nunatak, and about 6 km S of the main massif of the Casey Range, in the Framnes Mountains. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Visited by an ANARE party in 1962, led by Ian Landon-Smith, and named by them for Barry Woodberry (*see also* **Woodberry Glacier**), who was in this region with that 1962 party from Mawson Station (indeed, he wintered-over at Mawson that year). US-ACAN accepted the name in 1965.

The *Woodburn*. London sealer in the South Shetlands in the 1820-21 season, under the command of Capt. Robert Mitchell.

Woodbury Glacier. 64°47' S, 62°20' W. Just W of Montgolfier Glacier, flowing N into Piccard Cove, in Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS from air photos taken by FIDASE 1956-57. Named by UK-APC on Sept. 23, 1960 for Walter Bentley Woodbury (1834-1885), British pioneer of photomechanical printing (1865), and of serial film cameras for use in balloons and kites (1877). US-ACAN accepted the name in 1965.

Wooden, Frederick Edward "Fred." b. 1923, Portsmouth, son of Frederick Alfred Wooden and his wife Daisy Alice V. Warrener (she had been married before to Frank Day, but Frank had been killed in France during the Great War). He joined FIDS in 1955, as a surveyor, and wintered-over at Base O in 1956 and at Base J in 1957. He was also attached to the RN Hydrographic Survey unit, which worked in the area of the Antarctic Peninsula in 1957-58. In 1960, in Peterborough, he married Margaret G. Hempsall, and they raised a family in Kingston, Surrey, and, in the late 1960s, moved to Fareham, Hants.

Wooden Peak. 66°08' S, 65°35' W. Rising to about 900 m, 3 km SE of Black Head, at Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. At first it was, along with (what would become) Waldeck Peak, thought by Charcot (during FrAE 1908-10) to be an island, and named by him as Île Waldeck-Rousseau. The area was surveyed from the ground and from the air in 1935, by BGLE 1934-37, and charted by them. Île Waldeck-Rousseau was actually found to be two peaks, the higher one being named Waldeck Peak, and the other being left unnamed until July 7, 1959, when UK-APC named it for Fred Wooden. US-ACAN accepted the name in 1971.

Canal Woodfield *see* **Woodfield Channel**

Woodfield, Thomas. b. Jan. 10, 1933, Hampstead, London. In 1950 he went to sea, as an apprentice merchant seaman with the Port Line. On July 8, 1952, still an apprentice, he sailed out of Liverpool on the *Port Vindex*, bound for New York. He was 3rd officer on the *Shackleton* in 1955, 2nd officer in 1957 (same ship), and 1st officer in 1958. He became 1st officer on the *John Biscoe*, 1959-63, and from Oct. 1965 (when Capt. Bill Johnston retired) to 1969 was her skipper, and in 1969 became first captain of the new *Bransfield*. He took the *Bransfield* on her first 4 summer cruises to Antarctica (1970-71, 1971-72, 1972-73, and 1973-74), and then Stuart Lawrence took command.

Woodfield Channel. 67°49' S, 68°44' W. A deep water channel running E-W between the offlying islands in the Dion Islands on one side, and the Henkes Islands and Rocca Islands on the other, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for Thomas Woodfield (q.v.), here with the RN Hydrographic Survey unit (which charted this channel), as 1st officer on the *John Biscoe*, in early 1963. US-ACAN accepted the name later in 1964. The Argentinians call it Canal Woodfield.

Woodgate Crest. 81°29' S, 155°59' E. Rising

to 2040 m, in the All-Blacks Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Paul Woodgate, Antarctica New Zealand employee from 1981 on. In later years he was movement controller, handling all cargo and passenger movements to Antarctica. US-ACAN accepted the name later in 2003.

Woodgyer Peak. 81°13' S, 156°20' E. Rising to over 2000 m in the Wallabies Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Malcolm Garth Woodgyer, who wintered-over at Hallett Station in 1962 as a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

Woodhouse, Thomas. b. Hull, Yorks. On Dec. 1, 1771, he joined the *Adventure* as a midshipman, for Cook's 2nd voyage, 1772-75. On Jan. 1, 1773, he was promoted to able seaman. On Dec. 17, 1773, at Grass Cove, the Maoris ate him. All they left was his shoes. His will was proved in England in 1774. However, there is a rumor that he survived, and that he arrived home in England in 1777, in one piece, apparently.

Woodke, Frank August. b. 1916, Sunnyside, Minn., but raised in Schaller, Ia., from the time he was an infant, son of John Harrison "Frank" Woodke and his wife Adelaide Hase. He was a 2nd class quartermaster during World War II, and was commmissioned, being a lieutenant commander when he became navigator on the *Burton Island* during OpHJ 1946-47, and on the United States Navy Antarctic Expedition, on the *Atka*, 1954-55.

Mount Woods. 84°40' S, 64°30' W. A bare, ridge-like mountain rising to 1170 m, 7.5 km NE of O'Connell Nunatak, in the Anderson Hills, in the central part of the Patuxent Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Clifford R. Woods, Jr., hospital corpsman who wintered-over at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Woodward. 77°18' S, 145°47' W. A mountain with broad twin summits, to the immediate E of Boyd Glacier, between that glacier and Hammond Glacier (it marks the N entrance to that glacier), and 10 km WNW of Mount Douglass, in the Ford Ranges of Marie Byrd Land. Discovered during ByrdAE 1928-30, and named by Byrd as the Donald Woodward Mountains, for a patron, aviator Donald Woodward (1893-1958), of Genesee, NY, son of the Jell-O king. When it was found to be one mountain with two summits, rather than 2 separate mountains, it was renamed Mount Donald Woodward. US-ACAN accepted the name in 1947. In 1966, US-ACAN shortened the name to Mount Woodward.

Woody, Floyd Anderson. b. Aug. 13, 1926, Cottonwood, Texas, son of metalsmith James Anderson Woody and his wife Robert (sic) "Bobbie" Yarbrough. He joined the U.S. Navy in 1943, served with astonishing heroism in the Pacific during World War II (something he never talked about), married Mari Jennings in 1949, and was a hospital corpsman 1st class (HM1) in San Diego when he saw the notice for "volunteers to go the South Pole." He trained at Davisville, RI, then shipped out from Norfolk, Va., to Christchurch, NZ, then to McMurdo Sound, where he wintered-over in 1956. On Nov. 20, 1956 he was among the first group to fly out to the Pole with Dick Bowers. Attached to the Seabees, he not only helped build South Pole Station in Nov. and Dec. 1956, but was the only medic at the site. It was Floyd who pulled Ed Hubel's tooth after getting him drunk. He was among the 2nd party to fly out of the Pole after the job was done, on Dec. 29, 1956. He retired in 1965, lived in several different places, and died in Taft, Texas, of a heart attack on Jan. 24, 1997.

Woogie Island. 64°49' S, 63°30' W. A small, low-lying island in the entrance to Port Lockroy, about 330 m NW of Goudier Island, off Wiencke Island, in the Palmer Archipelago. Roughly charted (but not named) in 1904 by FrAE 1903-05. Surveyed by personnel at Port Lockroy Station in 1944, during Operation Tabarin, and named by them. UK-APC finally accepted the name on May 10, 2006, and US-ACAN followed suit on July 17, 2007. For a short history of the naming of this island, *see* **Boogie Island**.

Woolam Peak. 76°41' S, 125°49' W. A small peak on the S part of the crater rim of Mount Cumming, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Alvis Edward Woolam, Sr. (b. Feb. 3, 1933, La Mesa, Tex. d. Feb. 3, 2008, Amarillo, Tex.), ionosphere physicist at Byrd Station in 1959.

Woolhouse, Maurice E. "Newt." Also known as "Jack." b. 1904, NZ. He went to sea in 1919, and, on Jan. 18, 1924, he signed on to the *Lottie Bennett*, at Wellington, as an able seaman, bound for the Pacific Northwest coast of America, arriving at Port Townsend, Wash., on April 16, 1924. On Nov. 23, 1926, at Astoria, Oreg., he signed on to the *Dorothy H. Sterling*, as a seaman, on a round trip voyage to Callao, Peru, the ship pulling back into Astoria on July 23, 1927. On Dec. 9, 1929, at Dunedin, he was taken on as a seaman on the *City of New York* during ByrdAE 1928-30, and on Jan. 5, 1930 left Dunedin bound for Antarctica. After the expedition, he and Robinson hung around New York for a while, trying to find jobs, eventually returned to NZ, where they signed on to the *Tusitala*, and on Nov. 29, 1930, on that ship, pulled into Honolulu. In Dec. 1933, by inviation of Admiral Byrd, he boarded the *Jacob Ruppert* to take part in ByrdAE 1933-35.

Mount Woollard. 80°33' S, 96°43' W. An isolated mountain, rising to 2675 m, 13 km S of Mount Moore (the only other feature within miles), and 240 km W of the Heritage Range of the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, and named by US-ACAN in 1960, for George Prior Woollard (b. Dec. 20, 1908, Savannah, Ga. d. April 8, 1979), a member of the U.S. IGY committee's technical panel on seismology and gravity, who trained many Antarctic geophysicists.

Woolley, William Stanley Lawrence "Stan." b. 1935, Liverpool. After school he joined the Army in 1953, doing 5 years in the Royal Corps of Signals. From 1958 he was at the London School of Economics, earning a great reputation as an oarsman, and in 1961 joined FIDS, as a meteorologist. When he went south FIDS had become BAS, and he wintered-over at Base T in 1962 and 1963. In 1965 he became a teacher of economics at Westminster, and while there, continued to row, but also began taking school expeditions to Iceland and Greenland. In 1980 he went to Stowe, and retired from there in 1990, to Brittany, with his wife Angela (Angela L. Nicholas, whom he had married in 1969, in Westminster). His book, *Greenland Ventures*, came out in 2004. He died in Jan. 2007.

Mount Woolnough. 76°57' S, 161°20' E. Rising to 1432 m, about 5 km N of Mackay Glacier, about midway between Mount Morrison and Mount Gran, in Victoria Land. Charted by BAE 1910-13, and named for Walter George Woolnough (1886-1958), British geologist who helped write the scientific reports for BAE 1907-09. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Isla Woolpack *see* **Woolpack Island**

Woolpack Island. 65°37' S, 65°00' W. A narrow island, 2.5 km (the Chileans say 1.5 km) long, about 7 km E of the N side of Vieugué Island, and about 14 km NW of Cape García, on the W side of Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in Aug. 1935, by BGLE 1934-37, who named it. The British gazetteer says it was named "probably descriptively," and that may be, although one feels that there is another reason behind it. It appears on Rymill's 1938 map of the expedition, and on a 1948 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was surveyed by Fids from Base J in 1957-58. It appears on a Chilean chart of 1966 as Isla Wollpack (sic), but the name accepted by the 1974 Chilean gazetteer (and also by the 1970 Argentine gazetteer) was Isla Woolpack.

Woozle Hill. 65°15' S, 64°16' W. Rising to about 50 m above sea level near the center of Galíndez Island, in the Argentine Islands, in the Wilhelm Archipelago. First surveyed and charted in 1935 by BGLE 1934-37, and named by UK-APC on July 7, 1959, for the *Winnie the Pooh* animal which leaves tracks in the snow, in reality made by the tracker who is unaware that he is walking in circles. The hill was extensisvely used for ice observations from nearby Faraday Station, and, as it can be approached from any direction, encircling tracks were often seen from the summit. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Worcester Range. 78°50' S, 161°00' E. A high coastal range, about 50 km long, with steep,

sharp peaks, S of Skelton Glacier, between that glacier and Mulock Glacier, W of Moore Bay, along the W side of the Ross Ice Shelf. Among the peaks in this range are Mount Harmsworth (at 2939 m, the highest), Mount Speyer, and Mount Dawson-Lambton. Discovered by BNAE 1901-04, and named probably for HMS *Worcester*, the British naval training ship on the Thames. The name seems to have been first applied on charts compiled by BAE 1907-09. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Worcester Summit. 82°36' S, 52°22' W. The crest of a ridge rising to about 2030 m, at the E end of the Jaeger Table, on the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Robin D. Worcester, who, with David W. Bennett, comprised the first of the annual USGS satellite surveying teams at Pole Station (winter party of 1973). UK-APC accepted the name on May 21, 1979. It appears in the 1980 British gazetteer, but plotted in 82°36' S, 50°55' W. These coordinates were corrected by the time of the 1982 British gazetteer. *See also* **Gora Druzhnaja**.

Barrera de Hielos Wordie *see* **Wordie Ice Shelf**

Wordie, James Mann "Jock." b. April 26, 1889, Glasgow, the youngest son of contractor John Wordie and his wife Jane. After Glasgow Academy, Glasgow University, and Cambridge, he was doing post-grad work at the Sidgwick Museum, in Cambridge, with geologists who had been on BAE 1910-13, and was inspired to apply as geologist and chief of the scientific staff for Shackleton's expedition, BITE 1914-17. He was badly wounded at Armentières, during World War I, as an Artillery lieutenant. He was much in the Arctic from 1919 to 1937, and married Gertrude Henderson on March 21, 1923. He was on the advisory board of Operation Tabarin, 1943-45. In 1946-47 he went down with FIDS to assess the progress of their bases in Antarctica (for example, he arrived at Base F on Jan. 31, 1947, and at Port Lockroy on Feb. 10, 1947). It was his first time back south since 1916. He was president of the Royal Geographical Society, a member of the Discovery Committee, master of St. John's, Cambridge, 1952-59, and chairman of the Scott Polar Research Institute. He was also heavily involved in IGY (1957-58). He was knighted in 1957, and died on Jan. 16, 1962, at his home in Cambridge.

Wordie Bay. 69°07' S, 67°45' W. In Feb. 1989, U.S. Landsat images of the Wordie Ice Shelf (on the Fallières Coast, on the W coast of the Antarctic Peninsula), showed that the shelf had receded eastward, presenting in a new light what had once been below the surface of that (now non-existent) part of the ice shelf. New features were thus revealed, and had to be named, including this bay, which lies between Cape Berteaux and Mount Guernsey. Named by UK-APC on June 15, 1999, in association with the ice shelf. US-ACAN followed suit with the naming on July 17, 2007.

Wordie Caldera. 61°48' S, 55°27' E. The crater of Wordie Seamount (q.v.). The name was accepted by international agreement on April 1, 2001.

Wordie House. This was the hut at Base F, built on Jan. 7, 1947, and named for James Wordie. It was closed on May 30, 1954, when Base F was moved from Winter Island to Galíndez Island. However, it was used in 1957-58, by John Wynne Edwards's RN Hydrographic Survey unit. Wordie House was re-occupied for the winter of 1960 by Ted Clapp (radioman and leader), Alan Crouch (meteorologist), Arthur Fraser (geologist), Frank Preston and Jeff Stokes (surveyors), and Gordon McCallum (general assistant and mountain climber), while Base T was in preparation. It was designated Historic Site #62, on May 19, 1995.

Wordie Ice Front. 69°12' S, 67°30' W. The former seaward face of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of the Antarctic Peninsula. Name given by UK-APC on Sept. 20, 1955, to the front of the Wordie Ice Shelf. It is not a name recognized by US-ACAN, partly because they don't recognize ice fronts as features, as the British do, and also because, as the Wordie Ice Shelf retreated, so did its front, and, by Dec. 2004, all fragments of shelf ice were found to have disappeared.

Wordie Ice Shelf. 69°12' S, 67°20' W. This ice shelf has now gone. The area once covered by it is now known as Wordie Bay. The Wordie Ice Shelf was a confluent glacier projecting NW as a small ice shelf to the ice front between Deschanel Peak and Mount Guernsey, and incorporating several ice rises, in the SE part of Marguerite Bay between Cape Berteaux and Mount Edgell, and was fed by Fleming Glacier, along the Fallières Coast, on the W coast of the Antarctic Peninsula. Its front was called (by the British, anyway) the Wordie Ice Front. The ice shelf was discovered and roughly mapped in Sept. 1936, by BGLE 1934-37, and named by Rymill as Wordie Shelf Ice, for James M. Wordie. It appears as such on Rymill's 1938 map of the expedition, and also on Stephenson's 1940 map of the same expedition. On a 1946 Argentine chart it appears as Hielo Fijo Wordie (this term, not heard much today, means "fixed ice"). Fids from Base E further surveyed it between 1948 and 1950, and, at that time, it extended W as far as the Bugge Islands. It appears on a 1949 Argentine chart with the more familiar name Barrera de Hielos Wordie, a name also accepted by the 1974 Chilean gazetteer, although on a 1966 Chilean chart it appears as Planicie Hielos Wordie (again, a relatively little-used term). The term "ice shelf" now having replaced the old "shelf ice" and "ice barrier," UK-APC accepted the name Wordie Ice Shelf on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. In those days it was plotted in 69°15' S, 67°45' W. The coordinates were corrected from U.S. Landsat images taken in Jan. 1974, and, with the new coordinates, the feature appears in the 1977 British gazetteer. However, things were happening with the Wordie Ice Shelf. Extensive calving took place along the ice front between Feb. 1972 and Jan. 1974 (the Landsat images revealed this). U.S. Landsat images taken in Feb. 1979 revealed more calving, and showed that now the ice shelf extended W only as far as the Napier Ice Rise. Massive breakup of the ice shelf resulted in its gradual disappearance, with several ice rises either disappearing (i.e., Linchpin and Miller) or becoming islands (i.e., Napier and Reynolds). U.S. Landsat images of Dec. 2004 showed that the ice shelf is now gone totally, leaving a floating glacier which appeared to be undergoing extensive calving. For a more complete understanding of what happened to the Wordie Ice Shelf, *see* **Wordie Bay** and **Wordie Ice Front**.

Wordie Nunatak. 66°16' S, 51°31' E. A rock outcrop 6 km (the Australians say about 9 km) SE of Mount Biscoe, 6 km ENE of Mount Hurley, and 8 km ESE of Cape Ann, in Enderby Land. Discovered on Jan. 13 or 14, 1930, by BANZARE, and named by Mawson for James M. Wordie. US-ACAN accepted the name in 1947, and ANCA followed suit.

Wordie Seamount. 61°48' S, 55°27' W. An undersea feature in the Bransfield Strait, between the South Shetlands and the N tip of the Antarctic Peninsula. Named by US-ACAN in Aug. 2003, in association with Wordie Caldera.

Wordie Shelf Ice *see* **Wordie Ice Shelf**

Rocas Workman *see* **Workman Rocks**

Workman Rocks. 66°23' S, 65°42' W. A group of rocks rising to about 15 m above sea level, NNW of Phantom Point, in the NE part of Darbel Bay, just westward of Panther Cliff, off the Loubet Coast, on the W coast of Graham Land. In 1956-57 these rocks were photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. Named by UK-APC on Sept. 23, 1960, for Everly John "Jack" Workman, U.S. physicist (1899-1983), president of the New Mexico Institute of Mining and Technology, which has sent so many researchers to Antarctica. He investigated the electrical properties of ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Rocas Workman.

Mount Works. 71°14' S, 164°50' E. Rising to 1780 m, just W of Horne Glacier, 3 km SW of Pilon Peak, and 10 km E of Mount Dockery, in the Everett Range of the Concord Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. (later Lt. Cdr.) William Wesley Works, USN, pilot of P2V aircraft on photographic missions in Victoria Land and other parts of Antarctica, in 1961-62 and 1962-63.

Worland, Michael Roger. Known as Roger. b. Feb. 19, 1950, Cambridge. A BAS biologist, he worked as a technician at Signy Island Station and Rothera Station, as well as in South Georgia. He lived at Hardwick, Cambridge, with his wife Barbara.

The *World*. Tourist vessel, registered in the Bahamas, that could take 651 passengers. She was in Antarctic waters in 2003-04.

[1]**The *World Discoverer***. A 3153-ton luxury tourist ship commissioned in 1974, and owned by Discoverer Rederei, Heiko Klein's West German shipping company. It was called the *Discoverer* back then. 285 feet 4 inches long, with a speed of 12.5 knots, she had an ice-hardened hull, a shallow draft, a bow-thruster, and had the highest ice-rating of any passenger ship. She had sophisticated equipment and safety features, including Zodiac landing boats. She carried 136 passengers, and had 5 decks — Discoverer, Voyager, Odyssey, Boat, and Bridge. Registered in the Bahamas, she was bought in 1976, by Adventure Cruises, and renamed *World Discoverer*. Adventure leased her out to Society Expeditions Cruises. **1976-77**: She made her first passenger cruise to Antarctica. **1977-78**: She was back between Dec. 1977 and Jan. 1978. **1978-79**: She and the *Lindblad Explorer* were together on a cruise to the South Shetlands and the Antarctic Peninsula. Skippers were Raimund Kruger and Heinz Aye. **1979-80**: She was back, under Capt. Aye, to the South Shetlands and the Antarcic Peninsula. **1980-81**: Under the command of Heinz Aye, she made 4 cruises to the South Shetlands, the Antarctic Peninsula, the South Orkneys, the Ross Sea, the Balleny Islands, and Commonwealth Bay. She circumnavigated Antarctica. **1981-82**: She made 4 cruises from South America, to the South Orkneys, the South Shetlands, the Antarctic Peninsula, and Peter I Island (on Jan. 29, 1982). On the 3rd cruise she was chartered by a Chilean company and took 3 tourist groups who were flown into Teniente Rodolfo Marsh Station on local excursions. She again circumnavigated Antarctica. **1982-83**: Again under skipper Heinz Aye, she was in the South Shetlands, the South Orkneys, and the Ross Sea, and made her 3rd circumnavigation of the continent. **1983-84**: She made 3 cruises from South America, under the command of Capt. Aye, and 4 cruises to the Ross Sea and the Balleny Islands. She landed tourists on Peter I Island. Subsequently, Heiko Klein bought Society Expeditions, and in 1985 the tour company added another ship to their fleet, the *Society Explorer*. **1985-86**: She was in the South Orkneys, the South Shetlands, and the Antarctic Peninsula, again under Capt. Aye. She was also at Peter I Island, and the Ross Sea. **1986-87**: Under the command of Capt. Heinz Aye, she visited the South Orkneys, the South Shetlands and the Antarctic Peninsula. In Jan. 1987 she landed tourists on Peter I Island. She circumnavigated Antarctica for the 4th time. **1987-88**: She made 9 cruises, with Rüdiger Hannemann as skipper. They visited the South Shetlands, the South Orkneys, and the Antarctic Peninsula. **1988-89**: Heinz Aye (skipper). She did 9 cruises in the South Shetlands, the South Orkneys, and to the Antarctic Peninsula. **1989-90**: The two skippers were Capt. Aye and Karl-Ulrich Lampe. She was back in the South Shetlands, the South Orkneys, and the region of the Antarctic Peninsula. **1990-91**: Captains Lampe and Olaf Hartmann. The same destinations as the previous season. **1991-92**: Capt. Lampe (skipper). **1992-93**: Captains Lampe and Ralf Zander (skippers). Same destinations as the previous year. **1993-94**: Same skippers, same places. **1994-95**: Same skippers, same places. **1995-96**: Same places, but Capt. Lampe was the only skipper. **1996-97**: Same skipper, same places. **1997-98**: Same skipper, same places. **1998-99**: Same skipper, same places. **1999-2000**: Same skipper, same places. She was lost in a shipwreck in the Solomon Islands in 2000, and was replaced by another ship of the same name (see below).

[2]**The *World Discoverer***. A 6075-ton, 354-foot ship, built in Finland in 1989 as the *Delfin Clipper*, she later served as a cruise ship, gambling ship, and corporate yacht, under various names — *Sally Clipper*, *Baltic Clipper*, *Delfin Star*, and *Dream 21.* before being purchased in 2001 by Society Expeditions, to replace their old *World Discoverer*, which had been lost the year before. After a major refit, she was in Antarctic waters in 2002-03. Society Expeditions was going through a difficult time about then, and in 2003 the *World Discoverer* was repossessed by Sembawang, of Singapore, who held the mortgage. She was laid up in Singapore, unable to find a buyer, until 2007, when she was acquired by Silversea Cruises.

World Park Base. 77°38' S, 166°24' E. Greenpeace's Antarctic base on Home Beach, at Cape Evans, Ross Island, established in 1986-87. **1987 winter**: Kevin Conaglen (leader), Justin Farrelly, Gudrun Gaudian, Cornelius Van Dorp. **1988 winter**: Keith Swenson (leader), Sjoerd Jongens, Wojtek Moskal, Sabine Schmidt. **1989 winter**: Bruno Klausbrückner, Liz Carr, Phil Doherty, Lilian Hansen. **1990 winter**: Marc Defourneaux, Lilian Hansen, Marcus Riederer, Ricardo Roura. **1991 winter**: Keith Swenson (leader), Oz Ertok, Wojtek Moskal, Sabine Schmidt. It was continuously occupied until the end of 1991, and was dismantled and removed during 1991-92.

World wars *see* **Wars**

World's End. 61°50' S, 58°02' W. Large offshore stacks, rising to over 100 m above sea level, at the northernmost end of Ridley Island, facing the Drake Passage, off King George Island, in the South Shetlands. Named by the Poles in 1984.

Worley Point. 74°24' S, 132°47' W. A rock point which has an Adélie penguin rookery on it, and which forms the NW corner of Shepard Island, in Marie Byrd Land. Like Grant Island, 8 km to the eastward, this point is surrounded by the Getz Ice Shelf except on the N side. Charted from the *Glacier*, on Feb. 4, 1962. Named by US-ACAN in 1974, for Lt. Richard J. Worley, USN, medical officer at Pole Station in 1969.

Wormald, Steven "Steve." b. Dec. 7, 1946, Staincross, Yorks. BAS meteorological observer who wintered-over at Base T in 1969, and as a general assistant at Base E in 1970, and again at Base E, in 1973, this time as base leader.

Wormald Ice Piedmont. 67°29' S, 68°05' W. An ice piedmont covering the E part of Wright Peninsula, between Rothera Point and Sighing Peak, on the NW coast of Adelaide Island. Surveyed by Fids from Base T in 1961-62, and by BAS personnel from Rothera Station from 1976. Named by UK-APC on Dec. 8, 1977, for Steve Wormald. US-ACAN accepted the name. It appears in the British gazetteer of 1980, and on a British chart of that year.

Worms. The annelid worm Polychaeta lives on the sea bed, near the coasts of Antarctica (*see* **Fauna**).

Worms, Zoïle. b. June 10, 1810, Metz. Medical attendant on the *Zéée* during FrAE 1837-40. He left the scurvy ship on May 1, 1838, at Talcahuano, Chile.

Wörner Gap. 62°38' S, 60°13' W. A flat saddle, at an elevation of about 550 m above sea level, at the divide between the catchment area of Perunika Glacier to the W and Huron Glacier to the E, and extending for about 3 km in a S-N direction between Mount Friesland and Mount Bowles, 2.8 km to the NE of Pliska Ridge, on Livingston Island, in the South Shetlands. The midpoint is 1.3 km W of Kuzman Knoll. Named by the Bulgarians on Feb. 23, 1995, for Bulgarian Manfred Wörner (1934-1994), late secretary-general of NATO, whose support facilitated the Bulgarian Antarctic expeditions. US-ACAN accepted the name in 1996, but, on Dec. 11, 1995, UK-APC named it (for themselves only) as Aurora Gap, after the sealing brig *Aurora* (*see* [1]**The *Aurora***). These coordinates were fixed in late 2008, by the British.

Worsfold, Richard John "Dick." b. March 22, 1940, Newton Abbot, Devon. He joined BAS as a geologist on July 2, 1962, and wintered-over at Halley Bay Station in 1963 and 1964. In the latter year he and Lew Juckes explored the Heimefront Range. From 1965 he was writing up his report at Birmingham University, and left FIDS on April 27, 1968.

Worsfoldfjellet. 75°06' S, 12°15' W. A mostly ice-covered mountain, in the SW part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Dick Worsfold. Name means "the Worsfold mountain."

Cabo Worsley *see* **Cape Worsley**

Cape Worsley. 64°39' S, 60°24' W. A cape with a dome-shaped summit rising to 213 m above sea level, it has snow-free cliffs on the S and E sides, 16 km E of the S end of the Detroit Plateau, SW of Fothergill Point, on the Nordenskjöld Coast, on the E coast of Graham Land. Surveyed and charted by Fids from Base D in Nov. 1947, and, in association with Mount Wild, named by them for Frank Worsley. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as Worsley Cape on a British chart of 1954, but it should have said Cape Worsley, which was the name listed in the 1955 and 1961 British gazetteers. It appears on an Argentine chart of 1957 as Cabo Worsley, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974

Chilean gazetteer (Chile having rejected the proposed name Cabo Ruth). Further surveyed by Fids from Base D in 1961.

Worsley, Frank Arthur. b. Feb. 22, 1872, Akaroa, NZ, son of laborer Henry Theophilus Worsley and his wife Georgina Priscilla Fulton. Apprenticed in sail in 1887 with the New Zealand Shipping Company, he worked his way up through the business, and, owing to his experience of navigation in Newfoundland waters, was selected to be captain of the *Endurance* during BITE 1914-17. On Jan. 5, 1915, while playing soccer on an ice floe, he fell through the ice, but was rescued. More to the point, he was skipper of the *James Caird* as they rode almost blind through 850 miles of sea with basically only Worsley's incomparable navigational instincts to get them there. One of the truly great navigators, he rivaled Bligh in that respect. Then he, Shackleton, and Crean did another "impossible"—they crossed South Georgia. Worsley commanded Q ships during World War I, and won the DSO. He was with Shackleton again, as hydrographer on the *Quest* expedition of 1920-21, the one where Shackleton died at South Georgia. After that expedition he made his way to Canada, and left Montreal on the *Montcalm*, arriving back in Liverpool on July 7, 1923, and returning to London, where he and his wife, Theodora Cayley, were divorced later that year. In 1925 he led an expedition to the Arctic, and in 1926 he married Margaret Jane Cumming. He continued to have adventures all over the world, including looking for pirate treasure in the Cocos Islands, and in 1938 was president of the Antarctic Club. He died on Feb. 1, 1943, in Claygate, Surrey.

Worsley Cape *see* **Cape Worsley**

Worsley Icefalls. 82°57' S, 155°00' E. Icefalls in the upper part (i.e., near the head) of the Nimrod Glacier, S of the Geologists Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for Frank Worsley. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on May 18, 1971.

Pico Worswick *see* **Worswick Hill**

Worswick, Ronald Francis "Ron." Known sometimes as "Lofty" (he was 6 foot 7; the tallest Fid ever). b. May 26, 1928, Oldham, Lancs, son of Wilfrid Michael Worswick and his wife Annie Pinnington. He was living in Manchester, and working at Ringways Airport, when he saw an ad for FIDS in 1949, and became the meteorologist who wintered-over at Signy Island Station in 1950 and 1951. In April 1952 he left Signy Island on the *John Biscoe*, bound for Port Stanley, and from there to Montevideo, where he and Johnny Green caught the *Andes*, for Southampton, arriving on June 1, 1952. He was leader and meteorologist at Base G for the winter of 1953, and in 1954, after a mad dash across the Atlantic on the *Highland Monarch*, he arrived in London in August of that year, turned around and went back out, arriving back in Antarctica to be (just) a meteorologist at Base D in 1955; and again at Base D for the winter of 1956, again as met man and leader. In 1957 he returned to Manchester. On Dec. 30, 1961, in Whitby, he married Ann Bevan, and in 1963 they bought a guest house, Green Gables, in Glaisdale, near Middlesbrough. In 1965 he moved to Singapore, attached to the Army Education Corps, and taught geography at the Bourne School, and did Duke of Edinburgh Award courses in the jungle. In 1971 the family returned to Glaisdale. Ron taught school in Middlesbrough for a while, then they bought and ran the Derwent Hotel, in Scarborough. In 1982 he and Ann divorced, and their eldest daughter, Lynne, moved to Corfu in 1984. On March 10, 1993, while wating for a ferry at Ancona to take him to Corfu, with a car that his youngest daughter, Jo, had bought for him, Ron Worswick died.

Worswick Hill. 60°34' S, 45°44' W. A rounded summit, rising to 575 m, at the W end of Brisbane Heights, on Coronation Island, in the South Orkneys. It appears on some early charts of the South Orkneys, but is not accurately located. Roughly surveyed by the Discovery Investigations in 1933, it appears on their chart of 1934. Re-surveyed by Fids from Signy Island Station in 1948-49. Named by UK-APC on March 31, 1955, for Ron Worswick (q.v.), who reached this hill during a sledge journey from Signy in Sept. 1950. US-ACAN accepted the name in 1956. Further surveyed by FIDS between 1956 and 1958. The Argentines call it Pico Worswick.

Worth, Captain. Skipper of the *Lady Francis*, a London sealer in the South Shetlands for the 1820-21 season.

Worth Reef. 67°48' S, 68°56' W. An arc of rocks rising to about 2 m above sea level, and forming the northeasternmost part of the Henkes Islands, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for acting corporal David Arthur Worth (b. Oct. 12, 1936, Totnes, Devon. d. Nov. 1995, Torbay, Devon), Royal Marines, of the RN Hydrographic Survey unit here on the *Protector* in 1963, which charted this reef. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964.

Worthley Peak. 82°43' S, 164°46' E. Rising to 840 m, at the N end of Benson Ridge, overlooking the lower Robb Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Elmer G. Worthley, Jr. (b. Feb. 15, 1921, Amesbury, Mass. d. June 19, 1991) bryologist at McMurdo, 1958-59.

Wotkyns Glacier. 86°04' S, 131°25' W. Flows N from Michigan Plateau, along the W side of the Caloplaca Hills, and enters Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Grosvenor Ervin Scott Wotkyns (b. Aug. 27, 1935, Los Angeles), hospital corpsman at Byrd Station in 1962.

Mount Wrather. 85°23' S, 87°14' W. A rock peak rising to 2095 m, 4 km SSE of Mount Walcott, along the E margin of the Thiel Mountains. Geologists Peter Bermel and Art Ford, here in 1960-61, named it for petroleum geologist William Embry Wrather (1883-1963), 6th director of USGS, 1943-56. US-ACAN accepted the name in 1962.

Wratt Peak. 78°12' S, 163°13' E. Rising to over 1000 m, at the SE end of Chancellor Ridge, about 3 km WNW of Walcott Glacier, between that glacier and Howchin Glacier, overlooking Walcott Bay, in Victoria Land. Named by NZ-APC on June 19, 2002.

Wray, Geoffrey Branford. b. Jan. 28, 1912, Greymouth, NZ, but raised partly in Remuera, son of W.G. Wray. After leaving Auckland Grammar School, Geoff went to work on the Auckland staff of Wright, Stephenson, & Co., then transferred to the company's Hamilton branch for 9 months. He was a member of the RNVR, at Auckland, and a keen yachtsman. He was even part-owner of the *Oringi*. But, the excitement of corporate life was just too great, so he and two buddies, Martin Pilcher, and Bob Christian went digging for gold at Coromandel in May 1933. Then they decided to travel from Auckland to Wellington and hop on the *Jacob Ruppert* as ByrdAE 1933-35 left harbor bound for Antarctica. It was his idea to stow away, apparently, but, to be fair, they had tried to enlist legitimately, but had been turned down. Finn Ronne found them in a lifeboat during drill and, as they were too far out of harbor for the ship to turn back, they were put to work as deck hands, Antarctica and all. They were shipped back at the end of the season, in other words they did not winter over in 1934, but came back to NZ on the *Bear of Oakland*. Immediately after they got back, the three went gold prospecting at Coromandel. "Geoffrey was always looking for adventure," said his father, who then added the classic line, "But we had not the faintest idea that he would try to go to the South Pole." But Geoff had been inspired by his trip to the ice, and in 1942 joined the merchant marine as an able seaman. He was still an able seaman, plying the world for the Union Steamship Company of NZ, well into the 1950s, but his marriage to Elizabeth Elford did not survive his career. They were divorced in 1946. On July 16, 1952, he signed on in Wellington, on the *Waitemata*, bound for British Columbia, and was paid off in Vancouver on Sept. 23, 1952. On July 1, 1954, he signed on at Auckland, again on the *Waitemata*, bound for British Columbia and Seattle.

Wreath Valley. 77°22' S, 160°49' E. An ice-free valley between Lazzara Ledge and Conway Peak, it is the westernmost in a group of 4 aligned hanging valleys in the Apocalypse Peaks of Victoria Land. So named by US-ACAN in 2005, from an ice and rock formation on the valley headwall, which is wreath-like in appearance and visible from a great distance. NZ-APC accepted the name on Sept. 12, 2005.

Wreathed tern *see* **Antarctic tern**

Wrenn Peak. 77°28' S, 161°59' E. Rising to 1750 m on the ridge at the head of Sandy Glacier and Enyo Glacier, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for John H. Wrenn, of the department of geology at Northern Illinois University, at DeKalb, who took part in the

McMurdo Dry Valleys Drilling Project in 1973-74. NZ-APC accepted the name on Nov. 30, 2004.

Ensenada Wright *see* **Wright Inlet**

Hielos Wright *see* **Wright Ice Piedmont**

Mount Wright. 71°33' S, 169°09' E. Rising to over 1800 m (the New Zealanders say 1146 m), NE of Mount Adam, in the N part of the Admiralty Mountains, between Shipley Glacier and Crume Glacier, 13 km SW of Birthday Point, in Victoria Land. This area was discovered by Ross in Jan. 1841, and surveyed in 1911, by Campbell's Northern Party, during BAE 1910-13, who named the mountain for Charles S. Wright. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Península Wright *see* **Wright Peninsula**

Seno Wright *see* **Wright Inlet**

Wright, Alan Frederic. b. Aug. 12, 1934, Newton Abbot, Devon. He joined FIDS in 1960, as a surveyor, and wintered-over at Base T in 1961 and 1962. In 1962-63 he joined the RN Hydrographic Survey Unit, and became a surveyor.

Wright, Charles Seymour "Silas." b. 1887, Toronto. After Upper Canada College, he graduated from Cambridge in 1910. He and fellow Cantab, Grif Taylor, heard about the expedition Scott was putting together, and Wright became physicist on BAE 1910-13. He was sometimes known as "Toronto," and in May 1911, Scott described him thus in his diary, "He is certainly wanting in powers of verbal expression." A little later he predicted of Wright's future in life, "Wright may go some length because he is a worker, but has little inspiration." In Nov. 1912 he was a member of the party that went out looking for Scott on the Ross Ice Shelf, and was the first to spot Scott's tent. On his return to civilization he got his master's degree in 1913, in 1914 married Raymond Priestley's sister, Edith Mary, and was a Royal Engineers officer during World War I. In 1919 he joined the Admiralty Research Department, and was knighted in 1946. He finally retired to Canada, dying in Victoria, BC, on Nov. 1, 1975.

Wright, Daniel *see* **USEE 1838-42**

Wright, Edward John. b. Dec. 13, 1952. BAS general assistant who wintered-over in Antarctica in 1977. In 1977-78 he worked in the Shackleton Mountains, and wintered-over at an Argentine base in 1979, under difficult circumstances. He joined the Army, and spent much time in Greenland, retiring as a major.

Wright, Hedley Gordon. b. March 7, 1931, Cambridge, son of whiskey distillery owner Gordon Mitchell Wright, of Campbelltown and Rockdale, Bridge Of Allan, Scotland, and his wife Georgina Briggs Constable (daughter of the Senator of the College of Justice, in Scotland). After graduating in mineralogy at Cambridge, he joined FIDS in 1955, as a geologist, wintering-over at Base W in 1956. He and John Thorne were cut off on Roux Island during their dangerous 47-day trip, and the news was full of their disappearance for a while (*see also* **Thorne, John**). He was due to do a second winter, but, just as the Duke of Edinburgh was arriving (*see* **Philip, Prince**), he quit and was hurried out and back to Port Stanley. When his father died, the son inherited the distillery, and lived in Edinburgh. He very pleasantly (and quite understandably) refused to be interviewed for this book. However, he did say his relationship with FIDS was not very good, which is an understatement. This entry was basically compiled from Poulsom & Myres' book on Polar Medal winners, the birth registration index of England and Wales, from immigration records, the London *Times*, Sir Vivien Fuchs' book, and from the recollections of other FIDS.

Wright, John. Skipper of the *Dove*, in the South Shetlands, 1820-21 and again in 1821-22. Part of the way through the latter expedition, George Powell, the commander of the expedition, transferred from the *Eliza* (which he had been skippering) to the *Dove*, and Wright switched to the *Eliza*.

Wright, R. Derek. NZ photographer who went to the Pole with Hillary in 1957-58, during BCTAE. He was the cameraman on a 1964 NZ Film Unit documentary called *The Glacier Climbers*, about mountain climbing in NZ.

Wright, Richard Gordon "Dick." He joined FIDS in 1959, as a meteorologist, and wintered-over at Base G in 1960, and at Base D in 1961.

Wright Bay. 66°36' S, 93°35' E. A small bay formed between the W side of Helen Glacier Tongue and the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Charles S. Wright. US-ACAN accepted the name in 1967, and ANCA followed suit.

Wright Glacier *see* **Wright Lower Glacier**

Wright Hill. 79°42' S, 158°46' E. A large, flat-topped hill at the E side of Bowling Green Plateau, on the N side of the lower reaches of Darwin Glacier, in the Cook Mountains. Discovered and mapped by the Darwin Glacier Party of BCTAE, 1957-58, and named by the NZ party of BCTAE 1957-58, for Derek Wright. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Wright Ice Piedmont. 64°00' S, 60°20' W. Extends ESE-WSW from Lanchester Bay to Curtiss Bay, along the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, for the Wright Brothers, Wilbur (1867-1912) and Orville (1871-1948), the most famous of all the airplane pioneers. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. Further photographed aerially by USN in 1968-69.

Wright Inlet. 73°59' S, 61°20' W. An ice-filled Weddell Sea indentation into the Lassiter Coast, it recedes westward between Cape Little and Cape Wheeler, at the foot of Mount Tricorn, along the Lassiter Coast, 56 km S of New Bedford Inlet, on the E coast of the Antarctic Peninsula. Photographed aerially on Dec. 30, 1940, by USAS 1939-41, named by them as Tricorn Bay, in association with Mount Tricorn, but, owing to an error in navigation on this flight, it was wrongly positioned in 74°40' S, 60°30' W, and, as such, Tricorn Bay appears on a 1943 U.S. Hydrographic Office chart. It was photographed aerially again on Nov. 21, 1947, by RARE 1947-48, surveyed from the ground in Dec. 1947, by a joint sledging team consisting of RARE personnel and Fids from Base E, and found to lie about 90 km NW of its previously reported position. It appears (with the new coordinates) as Mount Tricorn Inlet on an American Geographical Society map of 1948, and Ronne refers to it as Tricorn Inlet in 1949. Later in 1949, Ronne renamed it Wright Inlet, for John Kirtland Wright (1891-1969), director of the American Geographical Society which supported RARE 1947-48. US-ACAN accepted that name in 1950. It appears as such on a British chart of 1954, and also in the 1955 British gazetteer, but plotted in 73°57' S, 61°26' W. It was re-photographed aerially by USN between 1965 and 1967, and mapped by USGS from these photos, the new coordinates appearing on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1977 British gazetteer. It appears on a 1952 Argentine chart as Seno Wright, but on one of their 1957 charts as Ensenada Wright. They finally picked Ensenada Wright, a name that also appears in the 1974 Chilean gazetteer.

Wright Island. 74°03' S, 116°45' W. An ice-covered island, about 56 km long, between Carney Island and Martin Peninsula, at the N edge of the Getz Ice Shelf, off the Bakutis Coast of Marie Byrd Land. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Adm. Jerauld Wright (b. June 4, 1898, Amherst, Mass. d. April 27, 1995), USN. In 1917 he became the youngest person ever to graduate from the U.S. Naval Academy. He was a veteran of World War I and World War II, was with the CIA, and was commander-in-chief of the Atlantic Fleet, 1954-60 (i.e., during IGY), and NATO supremo in the Atlantic for the same period. Admiral Wright left Norfolk, Va., on Feb. 12, 1957, bound for Antarctica. He arrived on Feb. 16, on an inspection tour of the bases (Deep Freeze coming under his overall command). He was the highest-ranking oficer ever to visit Antarctica to that point. He tried to fly over the Pole on that day, but was forced to postpone until the following day, when he flew a Globemaster over the Pole, dropped 10 tons of supplies to the men below (not one egg was broken), including a box of cigars. Ed Hillary was on this flight too. From 1963 to 1965 Adm. Wright was ambassador to Taiwan.

Wright Lake *see* **Lake Brownworth**

Wright Lower Glacier. 77°24' S, 163°00' E. Also called Lower Wright Glacier. A stagnant glacier occupying the mouth of Wright Valley, behind (and coalescing at its E side with) Wilson Piedmont Glacier, in southern Victoria Land. The Onyx River runs from its terminus. Named by BAE 1910-13, as Wright Glacier, for Charles S. Wright. The name was modified by VUWAE 1958-59, to distinguish it from Wright Upper Glacier. NZ-APC accepted this name, and US-ACAN followed suit in 1962.

Wright Pass. 74°45' S, 110°35' W. A snow pass to the W of Jones Bluffs, running N-S for 5 km between the terminus of Holt Glacier and the vicinity of Mayo Peak, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from 1966 USN air photos. Named by US-ACAN in 1977, for Petty Officer William L. Wright, USN, who took part in 6 OpDF deployments up until 1977. As leading petty officer of transportation operations, he conducted cargo traverses across the ice of McMurdo Sound to the McMurdo Dry Valleys.

Wright Peak. 73°40' S, 94°32' W. A small rock peak rising to 1510 m, 0.8 km S of Sutley Peak, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, which named it for Herbert E. Wright, Jr., glacial geologist and adviser to the party, who was in Antarctica in 1961-62. US-ACAN accepted the name in 1963.

Wright Peninsula. 67°28' S, 68°10' W. Between Ryder Bay and Stonehouse Bay, on the SE coast of Adelaide Island. Surveyed by Fids from Base T in 1961-62. Named by UK-APC on Nov. 3, 1971, for Alan Wright. It appears in the 1974 British gazetteer, but plotted in 67°28' S, 68°20' W. The coordinates were corrected by the time of the 1977 British gazetteer. US-ACAN accepted the name in 1975. The Argentines call it Península Wright.

Wright Point. 66°24' S, 110°30' E. The most northerly point on Ford Island, in the Windmill Islands. First mapped from air photos taken in 1947, during OpHJ 1946-47, and in 1948, during OpW 1947-48. Named by US-ACAN in 1963, for Robert D. Wright, USN, commissaryman who wintered-over at Wilkes Station in 1958.

Wright Spires. 69°30' S, 68°30' W. Three distinctive spires (aiguilles), rising to about 750 m at the E side of Chinook Pass, SE of Cape Jeremy, on the Rymill Coast of Palmer Land, at George VI Sound. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel. Named by UK-APC on Dec. 8, 1977, for Graham Keith "Genghis" Wright (b. 1942), who wintered-over as a general assistant at Halley Bay Station in 1969 and 1970, and again at Base E in 1972 and 1974, the last time as station leader. US-ACAN accepted the name.

Wright Upper Glacier. 77°32' S, 160°40' E. Also called Upper Wright Glacier. An ice apron at the upper W end of Wright Valley, formed by a glacier flowing E from the inland ice plateau. Named by VUWAE 1958-59 to distinguish it from Wright Lower Glacier (q.v.), which, until then, had been called simply Wright Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Wright Valley. 77°33' S, 161°30' E. A large, spectacular dry valley trending E-W, formerly occupied by a glacier, but now ice-free except for Wright Upper Glacier at its head and Wright Lower Glacier is at its mouth, near McMurdo Sound, in southern Victoria Land. First explored in 1957 by Troy L. Péwé, and named by VUWAE 1958-59, for Charles S. Wright (actually in association with Wright Lower Glacier, which, until then, had been called simply Wright Glacier). NZ-APC accepted the name, and US-ACAN followed suit in 1960.

Wrighthamaren. 74°36' S, 11°01' W. The most northerly mountain in Sivorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Carl August Petersen Wright (1893-1961), a Resistance leader during World War II.

Wrigley Bluffs. 84°33' S, 63°45' W. Rock bluffs, 6 km long in a NE-SW direction, and rising to about 860 m, 5 km N of Mount Cross, on the E side of the Anderson Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Mapped by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Richard J. Wrigley, equipment operator who wintered-over at Palmer Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Wrigley Gulf. 74°00' S, 129°00' W. An indentation, about 184 km wide, into the Getz Ice Shelf, between Shepard Island and Cape Dart, on the coast of Marie Byrd Land. Nearly a right-angle in plan, its limits are described by Grant Island, Dean Island, and Siple Island, all of which are partially or wholly embedded in the ice shelf. Discovered in Dec. 1940 by USAS 1939-41, and named for Chicago chewing gum manufacaturer Philip Knight "P.K." Wrigley (1894-1977), a sponsor of the expedition. He was also owner of the Chicago Cubs baseball team. US-ACAN accepted the name in 1947.

Wróbel Glacier *see* **Wróbel Valley**

Wróbel Valley. 62°10' S, 58°30' W. This small valley at Ezcurra Inlet, Admiralty Bay, on King George Island, at an altitude of 150 m above sea level, in the South Shetlands, used to be a glacier. Krzysztof Birkenmajer mapped it in 1979, and described it as a "glacier, [an] outlet of Warszawa Icefield, in the upper part of Italia Valley." The Poles accepted the name Wróbel Glacier in 1984. However, since then the glacier disappeared, leaving this valley covered by dead ice drained by a creek. On April 1, 2003, the name was changed to Wróbel Valley. Commodore Franciszek Wróbel was chief of marine operations during PolAE 1976-77.

Wrona Buttress. 62°00' S, 57°39' W. A prominent buttress about 100 m high, above Gadzicki Sound, NE of Melville Peak, in the E part of King George Island, in the South Shetlands. Named by the Poles in 1984, for Ryszard Wrona, paleontologist with PolAE 1980-81.

Wu Nunatak. 72°29' S, 161°08' E. About 13 km NNE of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for civil engineer Tien Hsing Wu (b. March 2, 1923, Shanghai), glaciologist at McMurdo, 1966-67.

Wubbold Glacier. 69°19' S, 71°36' W. A steeply inclined glacier, 13 km long, flowing S from the Havre Mountains into Lazarev Bay N of Mount Holt, on the NW coast of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48. He plotted it in 69°20' S, 71°41' W. It was replotted from U.S. Landsat images taken in Feb. 1975. Named by US-ACAN in 1980, for Cdr. Joseph Henry "Joe" Wubbold, Jr. (b. Nov. 8, 1934, Va.), U.S. Coast Guard, skipper of the *Northwind* during OpDF 77 (i.e., 1976-77). UK-APC accepted the name on June 11, 1980.

Wuce Shandi. 69°24' S, 76°08' E. A hillock in the Larsemann Hills. Named by the Chinese.

Wufeng Shan. 69°23' S, 76°23' E. A hill in the Larsemann Hills. Named by the Chinese.

Wujek Ridge. 82°28' S, 50°55' W. A rock ridge trending N-S, rising to about 1050 m, and marking the E extent of Davis Valley, E of Forlidas Ridge, in the Dufek Massif, in the N part of the Pensacola Mountains. Named by US-ACAN in 1979, for Chief Warrant Office Stanley J. Wujek, helicopter pilot of the U.S. Army Aviation Detachment which supported the USGS Pensacola Mountains Project, which surveyed this feature from the ground in 1965-66. That survey, along with USN air photos taken in 1964, enabled USGS to map this feature. UK-APC accepted the name on May 21, 1979.

Wulfila Glacier. 62°33' S, 59°45' W. A glacier, 3 km long in a NW-SE direction, and 2 km long in a SW-NE direction, flowing southwestward into MacFarlane Strait, and bounded by Oborishte Ridge to the NW, Terter Peak and Razgrad Peak to the NE, and Ephraim Bluff to the SE, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for Bishop Wulfila (311-383), of Nicopolis ad Istrum (the present-day settlement of Nikyup, near Veliko Tarnovo), who created the Gothic alphabet, thus laying the foundation for German literature.

Bahía Wunderlich *see* **Patagonia Bay**

Wunderlichgletscher. 72°55' S, 168°00' E. A glacier, due W of Hand Glacier and Behr Glacier, in the Victory Mountains of Victoria Land. Named by the Germans.

Wunneburger Rock. 74°42' S, 113°02' W. An isolated rock in the Maumee Ice Piedmont, in the lower Kohler Glacier, near the point where that glacier flows into the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Henry E. Wunneburger, Jr. (b. May 25, 1933, Austin, Tex. d. Dec. 16, 2002, Altair, Tex.), USN, who wintered-over as cook at Byrd Station in 1966.

Wuolong Tan. 69°22' S, 76°23' E. A beach in the Larsemann Hills. Named by the Chinese.

Bahía Wüst *see* **Wüst Inlet**

Ensenada Wüst *see* **Wüst Inlet**

Wüst, Georg Adolf Otto. b. 1890, Posen. He studied oceanography at Berlin University, under Alfred Merz, and, at 22, went to Bergen, Norway, for further study at Bjørn Helland-Hansen's world-renowned school. He married Merz's wife's sister. After World War I he became an assistant at the Institut für Meereskunde, in

Berlin. Although he was not originally scheduled to go on his relative's expedition, the German Atlantic Expedition, on the *Meteor*, in 1925-27, he did, as hydrographer, and from Aug. 16, 1925, after Merz died near Buenos Aires, Würz really took over the expedition (although Fritz Spiess was in nominal command). In 1945, as a professor, he left the Institut in Berlin where he had worked for years, and, after a brief internment (aboard the *Gauss*), he was director at the Institut's branch in Kiel, from which post he retired in 1958, to become visiting professor at Columbia University for 5 years. He returned to Germany in 1965, lectured for a couple of years at Bonn University, and died in 1977.

Wüst Inlet. 72°20' S, 60°50' W. An ice-filled indentation, between 3 and 8 km wide, into the E side of Merz Peninsula, between Cape Christmas and Old Mans Head, along the Black Coast, on the E coast of Palmer Land. Photographed aerially on Dec. 30, 1940, by USAS 1939-41. In Nov. 1947 it was photographed aerially by RARE 1947-48, and surveyed from the ground by a combined sledging team of RARE personnel and Fids from Base E. Named by FIDS for Georg Wüst. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on a 1956 U.S. Hydrographic Office chart. It appears on a 1966 Chilean chart as Ensenada Wüst. The Argentines call it Bahía Wüst. It was mapped by USGS from USN air photos taken between 1966 and 1969, and appears on the 1979 USGS sketch map of the N part of Palmer Land, as Wüst Inlet.

Wuyan Gang. 69°22' S, 76°22' E. A harbor in the Larsemann Hills. Named by the Chinese.

Wuyue Bandao *see* **Tonagh Promontory**

The *Wyandot*. U.S. Navy attack cargo ship of the Andromeda class, 459 feet long, laid down on May 6, 1944, by Moore Dry Dock Co., at Oakland, Calif., launched June 28, 1944, and named after the Ohio county. She was commissioned on Sept. 30, 1944, seeing action in the Pacific theatre. She could move at 16.5 knots, and had a compliment of 380 men. In 1947 and 1948, and again in 1951 and 1952 she was in the Arctic. In the spring of 1955 she was assigned to OpDF I (1955-56). She left Norfolk on Nov. 14, 1955, under the command of Capt. Lindsay Williamson, and in company with the *Arneb* (Admiral Dufek's flagship). Also aboard the *Wyandot* (aside from the men and other equipment) was 2500 pounds of mail, to be canceled for collectors. She headed through the Panama Canal, arriving at Christchurch, NZ, on Dec. 12, 1955, leaving there on Dec. 17 for McMurdo Sound, where she arrived on Dec. 27, 1955. While there she served as Byrd's flagship. She and the *Staten Island* formed Task Force 43.7, which established Ellsworth Station in the summer of 1956-57, during OpDF II. Capt. Francis M. Gambacorta was skipper that season. She was back for OpDF III (1957-58; Captain F.M. Smith), and OpDF IV (1958-59; Captain Ronald K. Irving). She was decommissioned on July 10, 1959, but re-commissioned in Nov. 1961. She was back in Antarctica in 1963-64 and 1964-65 (both years under Captain Arne Ekblad), in 1965-66 (Captain Clifford D. Henry), 1966-67 (Captain C. Henegy), 1967-68, 1968-69, 1969-70, 1970-71, and 1971-72 (the last 5 years under Capt. Henry). On Oct. 31, 1975 she was placed in the reserve fleet.

Wyandot Point. 77°23' S, 168°04' E. A rock point, 5 km WSW of Cape Tennyson, on the N side of Ross Island. Named by US-ACAN in 2000, for the *Wyandot*. NZ-APC had already accepted the name on Nov. 12, 1999.

Wyandot Ridge. 76°36' S, 160°30' E. A rocky ridge at the W side of Chattahoochee Glacier, extending northward from the NW end of the Convoy Range, in Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for the the *Wyandot*.

Isla Wyatt *see* **Wyatt Island**

Mount Wyatt. 86°46' S, 154°00' W. A prominent, flat-topped mountain, rising to 2930 m (the New Zealanders say 2743 m), 5 km W of Mount Verlautz, at the SE end of the Rawson Mountains, at the top of Scott Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd as Mount Jane Wyatt, for the movie actress Jane Wyatt (1910-2006), a friend of expeditionary Richard S. Russell, Jr. Born Jane Waddington Wyatt, she was well-known to three generations — as the girl in *Lost Horizon* (1937), as Margaret Anderson in the TV series *Father Knows Best* (1954-60), and as Spock's mother in the TV series *Star Trek*. In real life she was for 65 years the wife of investment broker Edgar Bethune Wardon. The name Mount Jane Wyatt was, of course, unacceptable, and was shortened, being accepted by US-ACAN in 1956, and also by NZ-APC.

Wyatt, Albert Edward. b. April 1902, West Ham, London. Assistant steward on the *Discovery II*, 1929-31. He left Callao on the *Corcoma*, bound for Liverpool, arriving there on Oct. 5, 1931, and immediately set sail again, on the *William Scoresby*, for that vessel's 1931-32 tour in Antarctic waters. He died in Ashford, Kent, in 1973.

Wyatt, Henry Turner. b. March 25, 1932, Hull, Yorks, son of inorganic chemist Wilfred Wyatt and his wife Winifred Turner. During World War II he lived partly in Anston, near Sheffield, where his mother's family were big farmers. He went to university in London, and became a mountain climber. He was studying to be a doctor when, in lieu of national service, he joined FIDS in 1956, as a medical officer, and sailed from Southampton later that year on the maiden voyage of the new *John Biscoe*, bound for Montevideo, then on to Port Stanley, and finally, to Antarctica, where he wintered-over at Base W in 1957 and at Base E in 1958. He specialized in dog physiology and dog-feeding trials, continuing Julian Taylor's programs. In 1959, when the time came to go back to Port Stanley, the ship couldn't get in to Stonington Island because of the pack-ice, so the lads sledged out and were picked up by helicopter, and taken to the ship. On his return to the UK he got his medical degree based on his thesis on the physiology of men on sledging expeditions. He worked as a doctor at Pinewood Studios, being involved on movies such as *The Savage Innocents* (1960), with Peter O'Toole and Anthony Quayle. He married biochemist Barbara Stevens, and in the early 1960s spent 3 months as a locum tenens in the Falkland Islands, and 3 months at South Georgia. He began to specialize in opthalmology, and went over to work twice in Labrador, and from there, in 1970, was offered a position teaching at the University in Edmonton, Alberta. His family have been there ever since. He worked much in the Arctic, and as soon as he began living in Canada got involved in flying, got his pilot's license, became an instructor, then into aerobatics, and taught that as well. Later he was into gliding and soaring. He retired in 2000, but not from the air.

The *Wyatt Earp*. Lincoln Ellsworth's ship (literally; he owned it) during his 1930s expeditions to Antarctica. A 400-ton American sealer, 135 feet long, with a draft of 15 feet, she was formerly a wooden Norwegian herring vessel, the *Fanefjord*, built in Molde, Norway, in 1919, of Norwegian pine and oak. Re-fitted and ice-strenthened by Sir Hubert Wilkins, and renamed by Ellsworth for the legendary marshal of the old west (who, incidentally, had been dead only a few years at that time), the *Wyatt Earp* had a cruising range of 11,000 miles. She carried Ellsworth to Antarctica for his expeditions of 1933-34, 1934-35, 1935-36, and 1938-39, and was managed by Wilkins. She was berthed in Norway between the first set of expeditions and the last one (i.e., between 1936 and 1938). For crews, *see* **Ellsworth**. In Feb. 1939 Ellsworth sold the *Wyatt Earp* to Australia, for £4400. The Australians considered the name *Boomerang*, but that name was already taken, so, on Oct. 25, 1939, they renamed her *Wongala*, which means "boomerang." She became a Royal Australian Fleet Auxiliary vessel, making one round trip from Sydney to Darwin between 1939 and 1940, and then, for 3 years, she was with the Examination Service, in Port Adelaide. She then did a year as a guard ship for the town of Whyalla, and from 1944 to 1945 was headquarters for the South Australia Sea Scouts. Still at Port Adelaide as the *Wongala*, in 1947 she was acquired by ANARE, re-comissioned on Nov. 17, 1947, under her old name, and the *Wyatt Earp* rode again. ANARE used her on their first exploratory trip into sub-Antarctic waters, led by Stuart Campbell. Karl Oom was skipper of the ship that season. In 1951 she was sold to a commercial operator and renamed *Wongala*. She was sold again, became the *Natone*, and plied the eastern Australian waters until she was wrecked in a storm near Double Island Point, in the early morning of Jan. 24, 1959.

Mount Wyatt Earp. 77°34' S, 86°25' W. Mostly snow-covered, it rises to 2370 m, 5 km WNW of Mount Ulmer, in the N part of the Sentinel Range, in the N part of the Ellsworth Mountains. Discovered aerially by Ellsworth on

Nov. 23, 1935. Named by US-ACAN in 1964, for Ellsworth's ship, the *Wyatt Earp*. The name has also been seen on some maps as Mount Earp.

Wyatt Earp Islands. 68°22' S, 78°32' E. Also called Northern Islands. A small group of islands and rocks off the N extremity of the Vestfold Hills, about 0.8 km N of Walkabout Rocks. Photographed by LCE 1936-37, and mapped from these photos. Later named by Norwegian cartographers as Nørsteholmen (i.e., "the northern islands"). On Jan. 9, 1939 Hubert Wilkins, in the *Wyatt Earp,* landed at nearby Walkabout Rocks, and later ANCA renamed these islands. US-ACAN accepted the name in 1965.

Wyatt Glacier. 68°18' S, 66°10' W. A steep, narrow glacier, 10 km long, flowing S from the central plateau near Beehive Hill, into the upper part of Gibbs Glacier, on the Bowman Coast, in the SE part of the Antarctic Peninsula. Photographed from the air on Nov. 27, 1947, by RARE 1947-48, and surveyed from the ground in May 1958 by Fids from Base E, who named it for Dr. Henry Wyatt of FIDS. UK-APC accepted the name on on Aug. 31, 1962, and US-ACAN followed suit that year.

Wyatt Hill. 74°32' S, 110°27' W. Small and ice-covered, rising to about 500 m, at the W side of Hamilton Ice Piedmont, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from USN air photos taken in 1966. Named by US-ACAN for Joseph T. Wyatt, electrical engineer with the Lockheed-Georgia Company, who was in the area of Dome Charlie in 1975-76 and again in 1976-77, as part of the team there to repair and recover the three Hercules aircraft which had gone down in separate incidents in 1975 (*see* **Disasters**, 1975).

Wyatt Island. 67°20' S, 67°40' W. An island, 8 km long and 3 km wide, 3 km S of Day Island, and 13 km NE of Webb Island, near the center of Laubeuf Fjord, off the Loubet Coast, on the W coast of Graham Land. The pointed summit of the island is a bare rock oasis in an otherwise ice-covered island. Discovered aerially on Feb. 25, 1936, during BGLE 1934-37, and surveyed in July 1936 by the same expedition. It appears on Rymill's expedition map of 1938, named by them (provisionally) as South Island. It appears on a 1947 Chilean chart as Isla Huinca ("huinca" is a Mapuche name, or rather a corruption of "wigka," signifying a person who is not a Mapuche). Fids from Base E re-surveyed it in Sept. 1948, and renamed it for Vice Admiral Sir Arthur Guy Norris "Gus" Wyatt (1893-1981), hydrographer to the Royal Navy, 1945-50. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. It appears on a 1962 U.S. Hydrographic Office chart as "South (Wyatt) Island." The Chilean gazetteer of 1974, after rejecting the name Isla South, accepted Isla Wyatt. The Argentines call it that too.

Wyborneberg. 70°53' S, 166°42' E. A peak N by NW of O'Hara Glacier, in Victoria Land. Named by the Germans.

Wyche Island. 66°14' S, 110°35' E. A small island just S of the W end of Burnett Island, in the Swain Islands, about 5 km NE of Wilkes Station. The area was photographed aerially by OpHj 1946-47, and again in 1956 by ANARE and SovAE. This island was included in Carl Eklund's 1957 survey of islands N of Wilkes Station, and he named it for Paul A. Wyche, USN, aerographer's mate at Wilkes Station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Île Wyck *see* **Wyck Island**

Isla Wyck *see* **Wyck Island**

Wyck Island. 64°39' S, 62°06' W. A small island, about 1.5 km long, about 1.5 km to the S of the W side of Brooklyn Island, in the E part of Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 7, 1898, by BelgAE 1897-99, and named by Dr. Frederick Cook as Île Wyck, for Robert Anderson Van Wyck (1847-1918), 91st mayor of New York City (and the first mayor of greater New York City), 1898-1901. It appears as such on Lecointe's expedition maps of 1899 and 1900, and as both Wyck Island and Van Wyck Island on Cook's 1900 map. US-ACAN accepted the name Wyck Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1957. In those days it was plotted in 64°36' S, 61°54' W, but, after FIDASE air photos taken in 1956-57, and ground surveys conducted by Fids from Portal Point in 1957-58, the coordinates were corrected by 1959, and, as such, the feature appears in the 1977 British gazetteer. It appears on an Argentine chart of 1949 as Isla Van Wyck, and that was the name accepted by the Argentine gazetteer of 1970.

Wyckoff, George Edward. b. July 2, 1911, Marlboro, NJ, son of farmer George Wyckoff and his wife Sarah. He joined the U.S. Navy, and was a machinist's mate 1st class on the *Bear*, during both halves of USAS 1939-41. He served in Korea, and married Olga. He died on April 9, 1989, in Medford, Oreg.

Wyckoff Glacier. 84°13' S, 164°40' E. A glacier, 10 km long, just to the W of Beardmore Glacier, it flows W from the Grindley Plateau, just N of Lamping Peak, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Kent A. Wyckoff, meteorologist at Hallett Station in 1963.

Wyers Ice Shelf. 67°11' S, 49°43' E. A small ice shelf in Enderby Land, on the E side of Dingle Dome, at the E side of the base of Sakellari Peninsula. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA for Robert W.L. "Bob" Wyers, glaciologist at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Wyers Nunataks. 67°13' S, 49°43' E. A group of nunataks on the E side of Dingle Dome, at the base of Sakellari Peninsula, just W of Wyers Ice Shelf, about 13 km NW of Mount Cronus, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA on Nov. 24, 1961, for Bob Wyers (*see* **Wyers Ice Shelf**). US-ACAN accepted the name in 1965.

Wyeth Heights. 80°45' S, 29°33' W. Rock heights rising to 1335 m, at the head of Blaiklock Glacier, and forming the SE extremity of the Otter Highlands, in the W part of the Shackleton Range. Surveyed in 1957 by BCTAE, photographed aerially by USN in 1967, further surveyed by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Robert Beals "Bob" Wyeth (b. 1947), BAS geologist from July 6, 1970 to Sept. 30, 1976. During this time he worked in the Shackleton Range in the summer of 1970-71, wintered-over at Base E in 1971, worked on the Wordie Ice Shelf in the summer of 1971-72, and again wintered-over at Base E in 1972. In the summer of 1972-73 he was working at Cape Berteaux. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Wylde Glacier. 73°32' S, 166°45' E. East of Mount Murchison, in the Mountaineer Range, flowing S between Dessent Ridge and Cape King, into Lady Newnes Bay, in Victoria Land. Named by NZ-APC in 1966 for Leonard J. Wylde, scientific officer at Hallett Station in 1962-63. US-ACAN accepted the name later in 1966.

Bahía Wylie *see* **Wylie Bay**

Wylie, John Peter "Pete." b. Jan. 27, 1928, West Ham, London, son of John Wylie and his wife Edith Ellen Colquhoun. He joined FIDS in 1955, as a surveyor, and wintered-over at Base N in 1956 and 1957. After his tour, he and George Larmour made their way to Callao, in Chile, where they caught the *Reina del Mar* back to Liverpool, arriving there on July 28, 1958. He died in 2008, in Niagara-on-the-Lake, Canada.

Wylie Bay. 64°44' S, 64°10' W. A bay, 6 km wide, it is the bay immediately to the W of Norsel Point, between that point and Cape Monaco, and immediately to the N of that peninsula whose extremity is Bonaparte Point, on the SW coast of Anvers Island, in the Palmer Archipelago. First charted by FrAE 1903-05. Surveyed by Fids from Base N between 1955 and 1957, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Pete Wylie of the FIDS. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Bahía Wylie. It appears on a 1962 Chilean chart as Bahía Arthur, and that is what the Chilean call it today.

Wylie Ridge. 71°51' S, 168°27' E. A ridge extending westward from Meier Peak, in the Admiralty Mountains, it parallels the N side of Massey Glacier for 10 km, and terminates at Man-o-War Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Ronald Perry Wylie (b. Jan. 26, 1934, Petersburg, Va.), who joined the U.S. Navy in July 1955, and who was a VX-6 pilot during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1978-68). He retired from the Navy in July 1977.

Mount Wyman. 83°54' S, 158°57' E. Rising to 2667 m at the end of the rock spur running W from Sandford Cliffs, in the Queen Elizabeth

Range. Mapped by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for ex-Marine Carl O. Wyman, of Philadelphia, ionosphere physicist and ham radio operator at Little America in 1957. ANCA accepted the name.

Wynn Knolls. 60°42' S, 45°38' W. A series of small knolls W of Jane Col, on Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed aerially by the Royal Navy in 1968. Named by UK-APC on Sept. 29, 2004, for David Wynn-Williams (see below), a contributor to work at the site.

Wynn-Williams, David Donaldson. Known as "Wynn." b. July 16, 1946, West Kirby, Cheshire. After a couple of years teaching in London, and in Tonbridge, Kent, he joined BAS in 1974 as a soil microbiologist, and wintered-over at Signy Island Station in 1975 and 1976. It was he who tracked down Petter Sørlle's wife, Signy, still alive and living in Norway. In 1979 he married Elizabeth Davies. He went to work for BAS permanently, and made another 10 summer visits to Antarctica, being there several times in the 1980s, including 1982-83 at Scott Base and the McMurdo Dry Valleys. In 1992-93 he was at Mars Glacier, on Alexander Island, leading a team to determine whether life could have evolved on the planet Mars; in 1997-98 and 1999-2000 he led the development of a desert research site at Mars Oasis, Alexander Island; and in 2002 was appointed head of BAS's Astrobiology Project. On March 24, 2002 he was jogging near his home in Comberton, Cambridge, when a car hit him, and killed him.

Wynne-Edwards, John *see under* **Edwards Island**

Wynne-Edwards Island *see* **[2]Edwards Island**

Wyspianski Icefall. 62°09' S, 58°09' W. A large icefall between Chopin Ridge and Dunikowski Ridge, NE of Legru Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Stanislaw Wyspianski (1869-1907), the painter and poet. *See also* **Wesele Cove**.

Mount Wyss. 82°47' S, 162°42' E. A peak rising to 1930 m, 5 km E of Mount Rotoiti, in the Frigate Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Orville Wyss (b. Sept. 10, 1912, Medford, Wisc. d. Nov. 11, 1993, Brush, Colo.), professor of bacteriology at the University of Texas, 1945-83, and USARP biologist at McMurdo in 1962-63.

Rocher X *see* **Rock X**

Rock X. 66°20' S, 136°42' E. A prominent offshore rock, 0.6 km long, lying close inside the E side of the entrance to Victor Bay, 1.5 km NW of Gravenoire Rock, in the region of Commandant Charcot Glacier, and to the E of Commandant Charcot Glacier Tongue, near the W limit of Adélie Land, off the coast of East Antarctica. This area was photographed aerially by OpHJ 1946-47, but this particular rock was charted by FrAE 1952-53, under Marret. They established an astronomical control station here, identifying the place by an X marked on the OpHJ photos, and named it (in 1952) as Rocher X. US-ACAN accepted the translated name in 1955.

Xanadu Hills. 78°11' S, 163°32' E. A ridge of hills lying between Ward Valley and the Alph River. Named by NZ-APC in 1994 in a Samuel Taylor Coleridge connection with the Alph River. US-ACAN accepted the name in 1995.

Xanthus Spur. 64°33' S, 63°30' W. Rising to about 1250 m, and mainly ice-covered, it extends NW from Mount Priam (the British say from Mount Hector, but that is more a slight difference of opinion, not one of geography) for 5 km toward Iliad Glacier, in the Trojan Range of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in Aug.-Sept. 1955, and named by UK-APC on Sept. 4, 1957, for the son of Zeus in Greek mythology. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Xi Hu. 62°13' S, 58°58' W. A lagoon at the S end of Fildes Peninsula, King George Island, in the South Shetlands. The name means "west lake" in Chinese.

Xi Pingtai. 69°23' S, 76°21' E. A plateau in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xi Shanbao. 62°13' S, 58°58' W. A hill in the S part of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xianfeng Ling. 69°24' S, 76°16' E. A peak in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiang Xi. 62°14' S, 58°57' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

The *Xiang Yang Hong 10*. Chinese ship used on ChinARE I (the first Chinese Antarctic expedition; 1984-85). Her skipper that year was Zhang Zhiting.

Xiangjiao Shan. 62°14' S, 58°59' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xiangmi Hu. 69°25' S, 76°07' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiangsi Dao. 69°26' S, 75°59' E. An island in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xianju Ling. 69°24' S, 76°07' E. A peak in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xianniu He. 62°10' S, 58°57' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xiannu Feng. 69°22' S, 76°22' E. A peak in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiantao Ling. 69°24' S, 76°05' E. A peak in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xianweng He. 62°10' S, 58°56' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xianxia Ling. 69°23' S, 76°24' E. A peak in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiao Hu. 69°22' S, 76°22' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaochang Hu. 69°23' S, 76°21' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaodaba Shan. 69°23' S, 76°19' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaodabie Shan. 69°25' S, 76°11' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaogui Shan. 69°22' S, 76°21' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaoqinghai Hu. 69°23' S, 76°11' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaosanmen Xia. 62°14' S, 59°00' W. A channel off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xiaoshanghai Tan. 69°40' S, 76°50' E. A beach in the area of Prydz Bay. Named by the Chinese.

Xiaotai Hu. 69°24' S, 76°07' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaotian Chi. 69°22' S, 76°22' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaotian Shan. 69°24' S, 76°20' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaowu Xia. 69°24' S, 76°18' E. A channel in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaowudang Shan. 69°24' S, 76°16' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiaowuyi Shan *see* **Besso Peak**

Xiaowuzhi Shan *see* **Castor and Pollux**

Xiaoxianggang Dao *see* **McLeod Island**

Xiaoxitian Jiao. 62°14' S, 59°01' W. A beach on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xiaozijin Shan. 69°22' S, 76°23' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xibei Pingtai. 62°10' S, 58°58' W. A plateau in the area of Bothy Bay, in the NW part of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xibei Zhanqiao. 62°10' S, 58°58' W. A Chinese automatic weather station at Bothy Bay, in the NW part of Fildes Peninsula, King George Island, in the South Shetlands.

Xichangbai Shan. 69°25' S, 76°05' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xili Hu. 69°26' S, 76°02' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Isla Ximena. 64°10' S, 61°02' W. An island, 3 km E of Bofill Island, between that island and Tisné Point, it is the largest of the Moss Islands, on the Danco Coast, on the W coast of the Antarctic Peninsula. Ice-free in summer, it is

covered with abundant vegetation, mainly moss and lichens, which give the island a reddish, coffee-colored appearance. The name first appears on a 1957 Chilean map, and was probably given by one of the members of one of the Chilean Antarctic Expeditions for one of his lady friends.

Xinan Gaodi. 69°22' S, 76°22' E. A plateau in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xinan Gaopo. 69°22' S, 76°21' E. A plateau in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xing Hu. 69°25' S, 76°07' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xingfu Wan. 62°10' S, 58°58' W. A small cove within Bothy Bay, at the NW end of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xinghu Taidi. 69°24' S, 76°12' E. A plateau in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiongdi Shan. 69°25' S, 76°12' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiongmao Dao *see* **[1]Fisher Island**

Xiping Hu. 69°26' S, 76°02' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xishi He. 62°09' S, 58°56' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Xishi Jiao. 69°24' S, 76°17' E. A promontory in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xitaiping Shan. 69°22' S, 76°08' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Xiwang Wan. 69°23' S, 76°22' E. A cove in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

XU-fjella. 74°34' S, 10°02' W. A group of small mountains, in the N part of the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for XU, the largest of the anti-Nazi organizations during World War II, established in July 1940 by Arvis Storsveen, and which conducted the most dangerous and important missions. It was not until 1988 that details of XU's work become public knowledge.

Xue Chi. 69°25' S, 76°16' E. A lagoon in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

The *Xue Long*. A red-hulled 21,250-ton, 167-meter icebreaker, built in 1993 at the Kherson Shipyard, in the Ukraine, as a grain-carrying container ship, the sister ship of the *Vasiliy Golovnin*. She was bought by the Chinese government for Antarctic work, refitted, and renamed *Xue Long* (*Snow Dragon*), replacing the *Ji Di* in 1994 as the main Chinese supply ship to the Antarctic stations. Capable of 17.9 knots, but with a normal cruising speed of 13 knots, she had a crew of 34, and could carry up to 128 scientific personnel. After an Antarctic cruise of 1998-99, she caused a stir in 1999, when she showed up quite unexpectedly at a small Canadian village in the Arctic, thus (accidentally) demonstrating Canada's lack of preparedness in case of war. Based out of Shanghai, she supplied the Chinese Antarctic station Zhongshan every season, and Great Wall Station every other season. She was in Antarctica in 1994-95, 1995-96, and 1996-97, those three voyages under the command of Capt. Shen Akan. Capt. Yuan Shaohong skippered her to Antarctica in 1997-98, 1998-99, and 1999-2000. From 2000-01 onwards the stations were relieved by means other than a Chinese ship. In 2003 the *Xue Long* was in the Arctic, and in 2005 she began an extensive upgrade. She was back in Antarctica in 2006-07 and 2007-08, under the command of Capt. Shen Kwan. After a 3rd tour in the Arctic, in 2008, she left Shanghai on Oct. 20, 2008, bound for Antarctica, made two separate trips from Australia to Zhongshan Station, and returned to Shanghai on April 10, 2009. She was the largest icebreaker operating in Antarctic waters in her time. During the 2009-10 season, she was under the command of Capt. Wang Jianzhong, who had been with the ship since he joined as her 3rd officer in 1993.

Xuezhen Shan. 69°23' S, 76°19' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Yablanitsa Glacier. 62°57' S, 62°31' W. A glacier on Smith Island, in the South Shetlands, flowing for 1.8 km from the NW slopes of Imeon Ridge, N of Drinov Peak, into Cabut Cove. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Yablanitsa, in northern Bulgaria.

Punta Yaglou *see* **Yaglou Point**

Yaglou Point. 66°23' S, 67°12' W. The northernmost point of Belding Island, in the Biscoe Islands. Mapped from air photos taken by FIDASE in 1956-57, and named by UK-APC on Sept. 23, 1960, for Constantin Prodromus Yaglou (1897-1960), American polar physiologist, who specialized in the reaction of cold on humans. US-ACAN accepted the name in 1965. The Argentines call it Punta Yaglou.

Yagodina Knoll. 63°17' S, 57°09' W. An ice-covered hill rising to 530 m, 8.21 km SSE of Siffrey Point, 2.81 km WSW of Mount Bransfield, 3.85 km NW of Koerner Rock, and 22.4 km ENE of Fidase Peak, it surmounts Mott Snowfield to the SW, in the NE extremity of Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Yagodina, in southern Bulgaria.

Massiv Yakkova Gakkelya *see* **Jøkulkyrkja Mountain**

Lednik Yakoruda *see* **Yakoruda Glacier**

Yakoruda Glacier. 62°28' S, 59°57' W. A glacier, 5 km wide and 2.5 km long, S of Greaves Peak and Crutch Peaks, and W of Lloyd Hill, it flows in a SSE-NNW direction into McFarlane Strait, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Yakoruda, in SW Bulgaria.

Mount Yakovlev. 71°59' S, 16°38' E. A somewhat isolated mountain about 18 km N of Sarkofagen Mountain, in the Russkiye Mountains of Queen Maud Land. Mapped by the Norsk Polarinstitutt from 1958-59 air photos taken during the long NorAE 1956-60. Also observed in 1959 by SovAE and named by them as Gora Yakovleva, for geologist and paleontologist Nikolai Nikolaevich Yakovlev (1870-1966). US-ACAN accepted the name Mount Yakovlev in 1971.

Gora Yakovleva *see* **Mount Yakovlev**

Yale Tarn. 77°34' S, 163°09' E. A tarn, 1.3 km NE of Mount Falconer, it is the most easterly of 4 tarns in Tarn Valley, Victoria Land, which were named by VUWAE 1965-66 after American universities. NZ-APC accepted the name, and US-ACAN followed suit in 1997.

Estrecho Yalour *see* **Yalour Sound**

Îles Yalour *see* **Yalour Islands**

Isla Yalour *see* **Yalour Islands**

Islote(s) Yalour *see* **Yalour Islands**

Yalour, Jorge. b. Oct. 25, 1874, Buenos Aires. He entered the Naval Academy in 1892, and in 1901-02 was serving on the *Sarmiento*, in Asia, Africa, and Europe. He was still an ensign (and acting lieutenant), navigator, and leader of the Argentine naval detachment on the *Uruguay*, under Irízar, 1903-05, including the period during which the ship rescued Nordenskjöld during SwedAE 1901-04. From Jan. 1, 1908 to Dec. 2, 1908 he was commander of the *Uruguay*. In 1911 he was back on the *Sarmiento*, as 2nd-in-command, and by 1916 was her skipper. That year he became chief of the hydrographic division of the Navy Department, and retired as a captain in 1919, dying on Aug. 13, 1928.

Yalour Islands. 65°14' S, 64°10' W. A group of islands and rocks, 2.5 km in extent, in the eastern-middle part of Penola Strait (which separates the Argentine Islands), in the S part of the Wilhelm Archipelago, 1.5 km NW of Cape Tuxen, on the Graham Coast, on the W coast of Graham Land. Snow-free in summer, they present a reddish appearance. Discovered and roughly surveyed by FrAE 1903-05, and named by Charcot as Îles Jallour, for Jorge Yalour. He spelled it thus because that was how he heard it. The largest of the islands is seen on one of the expedition maps as Île Jalour. The group appears on a 1916 British chart as Jallour Islets, and the name was seen variously as Jallous Islets (sic), Îlots Jallour, Îlots Jalour, and a 1943 U.S. Hydrographic Office chart variously shows it as Jallour Islands and Jallour Isles. A 1946 Argentine chart shows the largest island as Isla Yalour, but a 1949 Argentine chart shows the group as Islotes Yalour, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Jalour Islets in 1953, and UK-APC followed suit on Sept. 22, 1954. However, it appears as Yalour Islets in the 1956 U.S. gazetteer. The group was photographed aerially by FIDASE in 1956-57, and surveyed by an RN Hydrographic Survey unit, assisted by FIDS, on the *John Biscoe* in 1958. On July 7, 1959, UK-APC accepted the name Jalour Islands, and that is how it appears on a 1960 British chart. However, on Sept. 23, 1960, UK-APC accepted the new name Yalour

Islands, and US-ACAN followed suit in 1964. It appears as such in the U.S. gazetteer of that year. The main island appears in the 1974 Chilean gazetteer as Islote Yalour, but today the Chileans tend to call the group Islotes Yalour.

Yalour Sound. 63°34' S, 56°39' W. Also called Jalour Sound. A passage, 1.5 km wide and 6 km long, usually ice-bound, linking Fridtjof Sound and Antarctic Sound, between Jonassen Island and Andersson Island, opposite Tabarin Peninsula, off Trinity Peninsula, at the S part of the extreme NE of the Antarctic Peninsula. Named by the Argentines as Estrecho Yalour, for Jorge Yalour. UK-APC accepted the translated name Yalour Sound on Feb. 12, 1964, and US-ACAN followed suit that year. The Chileans call it Estrecho Barrera, for Prof. Humberto Barrera Valdebenito, geologist and glaciologist (and mountain climber) from the University of Chile, who studied this area while on board the *Rancagua*, during ChilAE 1956-57. He was also on ChilAE 1946-47, during which he was the first Chilean to ski in Antarctica, and also possibly the first Chilean to become snowblind south of 60°S (for 48 hours, while out on a sledging trip).

Yamabe, Yasunosuke. Name also seen as Yamabe Yasunosuke, or Yamanobe. b. 1867, Karafuto, Sakhalin Island, Japan. In 1876 he was deported to Tsuishikara, in Hokkaido, but returned to Sakhalin in 1888, and joined the Japanese army. He and Shinkichi Hanamori were activists for Ainu independence, and they both used the Japanese South Polar Expedition, 1910-12, under Shirase, to bring attention to their cause. They also brought 60 Karafuto sledge dogs for the expedition, and they both took part in the Dash Patrol (q.v.). With the help of Kindaichi Kyosuke, he wrote his memoirs, *Ainu Monogatari* (in Japanese) in 1913, and died in 1923.

Yamagata Ridge. 79°05' S, 157°02' E. A narrow linear nunatak, 5 km long and rising to 1690 m, 8 km W of Seay Peak, in the north-central part of the Finger Ridges, in the Cook Mountains, in the Transantarctic Mountains. Named by US-ACAN in 2001, for Noboru Yamagata, Japanese Institute of Health geochemist in the McMurdo Dry Valleys for 4 summer field seasons between 1963-64 and 1968-69.

The *Yamana*. An 835-ton, 143-foot U.S. rescue tug (AT-146) built at the Gulfport Boiler and Welding Works, at Port Arthur, Texas, in 1942, and launched on Oct. 23, 1942, sister ship of what would become the *Chiriguano*. Commissioned in 1943 as ATR-90, she was transferred to the UK under Lend Lease, as the *Maricopa*. Decommissioned on July 10, 1946, and transferred to the Argentine Navy in 1947, renamed ARA *Yamana* (A-6), and used by them in hydrological work, and as a tug. She took part in some of the Antarctic expeditions conducted by that country: 1952-53 (Capt. Efraín C. Ledesma); 1953-54 (Captain Raúl G. Kolbe); and 1954-55 (Capt. Antonio Revuelto). During that last expedition, she left Buenos Aires on Oct. 27, 1954, bound for Antarctic waters. She went out of service in 1969, and in 1985 was used as a target practice for an Exocet missile. Modified to survive such an attack, she did, but then a torpedo got her.

Nunatak Yamana *see* **Florence Nunatak**

Playa Yamana. 62°28' S, 60°48' W. A beach between Punta El Hallazgo to the N and Punta Mazzei to the S, on the W coast of Cape Shirreff, on Livingston Island, in the South Shetlands. So named by scientific personnel on ChilAE 1985, because Punta El Hallazgo was where they found a native Yamana cranium that year. *See* **Punta El Hallazgo** (under **E**) for more details.

Rocas Yamana. 62°28' S, 60°48' W. A group of rocks immediately off Playa Yamana, and about 180 m NW of Punta El Hallazgo, off the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by scientific personnel on ChilAE 1985, in association with Playa Yamana.

Yamanobe, Yasunosuke *see* **Yamabe, Yasunosuke**

Glacier Yamato *see* **Yamato Glacier**

Yamato Glacier. 71°25' S, 35°35' E. About 9 km wide, it flows from E to W, between Mount Fukushima and Mount Eyskens, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by BelgAE 1959-61 led by Guido Derom, and named by him as Glacier Yamato, after the old name for the Honshu Peninsula, in Japan. Yamato is the symbol of political unity and national conscience of the Japanese people. In Nov.-Dec. 1960, a Japanese field party reached here, and conducted geodetic and other scientific work. US-ACAN accepted the name Yamato Glacier in 1966.

Yamato Mountains *see* **Queen Fabiola Mountains**

Yamato Sanmyaku *see* **Queen Fabiola Mountains**

Yambol Peak. 62°44' S, 60°14' W. Rising to 300 m, on Friesland Ridge, 1.4 km SE of Shumen Peak, 4.75 km NE of Botev Point, 4.6 km WSW of Samuel Point, and overlooking Tarnovo Glacier to the W and Prespa Glacier to the NE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, for the Bulgarian town of Yambol.

Yana Point. 62°37' S, 60°01' W. Forms the W side of the entrance to Bruix Cove, 3.7 km NNE of Helmet Peak, and 1.9 km W of Rila Point, on the E side of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and mapped by them in 2009. They named it on Nov. 23, 2009, for the settlement of Yana, in western Bulgaria.

The *Yancey*. American attack cargo ship (AKA-93), built by the Moore Dry Dock Company of Oakland, Calif., launched on July 8, 1944, and commissioned on Oct. 11, 1944. Named for the North Carolina county, she was 459 feet 3 inches long, weighed 13,910 tons fully loaded, and was capable of 16.5 knots. She could take a complement of 368 men. She served at Iwo Jima, Saipan, and Okinawa during the last year of World War II, and was in Tokyo on the day of the Japanese surrender. **Nov. 9, 1946**: She was assigned tentatively to OpHJ 1946-47, as part of Task Force 68. Capt. James E. Cohn. She left Davisville, RI, and went via the Panama Canal to San Pedro, Calif. **Nov. 12, 1946**: She arrived at Port Hueneme, where she began loading cargo for OpHJ. **Dec. 2, 1946**: She left Port Hueneme, bound for Antarctica. **Dec. 27, 1946**: She saw her first icebergs. **Dec. 28, 1946**: She saw the northern limit of the pack ice. **Dec. 30, 1946**: She rendezvoused with the Central Group and, 10 miles S of Scott Island, refueled from the *Canisteo*, the first time an underway refueling had been done south of the Antarctic Circle. **Dec. 31, 1946**: She began moving through the pack ice. **Jan. 14, 1947**: She broke into the open waters of the Ross Sea. **Jan. 15, 1947**: She arrived at the Bay of Whales. **Jan. 18, 1947**: She moored at the Bay of Whales, and began off-loading supplies for Little America. **Feb. 6, 1947**: She left the Bay of Whales with the Central Group. **Feb. 9, 1947**: She again entered the pack ice, heading north. **Feb. 13, 1947**: She left Scott Island for NZ. **Feb. 22, 1947**: She reached Port Chalmers, NZ. **March 5, 1947**: She left NZ, bound for Samoa. **May 2, 1947**: She arrived back at Port Hueneme. The ship later served in the Korean War, and was decommissioned in March 1958. She was recommissioned on Nov. 17, 1961, based out of Norfolk, Va. In 1970 she crashed into the Chesapeake Bay Bridge-Tunnel, and in 1976 was struck from the Navy Register. In 1990 she was sunk off Morehead City, NC, as an artificial reef.

Yancey Glacier. 80°14' S, 158°30' E. A very steep glacier in the Britannia Range, flowing E from the vicinity of Mount McClintock and then southeastward into Byrd Glacier, just W of Sennett Glacier. Mapped by aerial photographs taken by USN. In association with Byrd Glacier, it was named by US-ACAN in 1965, for the *Yancey*.

Yandang Shan. 69°24' S, 76°15' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Yaner Dao *see* **Breadloaf Island**

Glaciar Yáñez *see* **Flint Glacier**

Yáñez Andrade, Parmenio. b. 1902. Chile's first marine biologist, he was also a medical surgeon. After studying in Germany in 1938 and 1939, on Aug. 28, 1941 he became the first director of the the marine biology station at Montemar, at the University of Chile, at Reñaca, near Viña del Mar, the first institution of its type in South America. He took part in ChilAE 1946-47. He was later with the zoology department of the Universidad de Concepción, and died in 1977.

Yanhuang Dapo. 69°45' S, 76°45' E. An area of land in the vicinity of the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Yanjing Hu. 62°13' S, 59°00' W. A lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Puerto Yankee *see* **Yankee Harbor**

Base Yankee Bay *see* **Yankee Bay Station**

Yankee Bay Station. 62°32' S, 59°48' W.

Base Yankee Bay (as it is known in Spanish) was a Chilean IGY station on the S side of Yankee Bay, on Greenwich Island, in the South Shetlands. It began as a refuge hut built in Jan. 1953. Name also seen as Bahía Yankee, and Puerto Yankee.

[1]**Yankee Harbor** *see* **Port Foster**

[2]**Yankee Harbor**. 62°32' S, 59°46' W. A small harbor entered between Glacier Bluff and Spit Point, and which forms the inner part of the bay (the Chileans call this bay Puerto Yankee; see below) E of Triangle Point, in the SW side of Greenwich Island, in the South Shetlands. Nat Palmer was probably the first to enter this harbor, on Nov. 19, 1820, and he roughly charted it as Port Williams, probably named after the *Williams*. At least, it is probable that Port Williams was a short-lived synonym for Yankee Harbor, although it may just have been the name given by Palmer to the whole bay (i.e., what the Chileans today call Puerto Yankee; see below). It became the main sealing base and anchorage in the islands for the 1820-21 sealing season, and Capt. Burdick's map of 1820-21 calls it Yanky Harbor, after the Yankee fleet there that summer. 1821-22 maps by Fildes and Powell show it as Hospital Cove, and that was the name used by the *Chanticleer* Expedition of 1828-31, but in 1821 Capt. Davis charted it as Yankee Harbour (sic). In 1825 Fanning referred to it as Fannings Harbour, after Edmund Fanning. There is a 1911 reference to it as Kraterhafen (i.e., "crater harbor"), for its circular appearance. It was still being referred to as Hospital Cove by 1921 (e.g. David Ferguson's chart of that year), but the name Yankee Harbor (or Harbour) has been the main name since 1821. It was re-charted in 1934-35, by the Discovery Investigations. It appears as Yankee Harbor on a 1943 U.S. Hydrographic Office chart, and as Yankee Harbour on a 1945 British chart, as well as on one from 1948 (it also appears on a 1949 British chart as Yankie Harbour). US-ACAN accepted the name Yankee Harbor in 1947 (they rejected Fannings Harbor), and UK-APC followed suit on on Sept. 8, 1953 (with the "u" in Harbor, of course). It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947, as Bahía Yankee, and that was the name accepted by the 1974 Chilean gazetteer. It appears as Puerto Yankee on a 1949 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. However, the Chileans also use the term Puerto Yankee, but for the broader concept of the whole bay E of Triangle Point. In Jan. 1953 it was charted again, by ChilAE 1952-53, and they established a refugio on the S side of the harbor (*see* **Yankee Bay Station**). Last plotted by the UK, in late 2008.

Yankee Sound *see* **McFarlane Strait**

Yankov Gap. 62°36' S, 60°10' W. The flat, ice-covered saddle running for 1 km in a N-S direction, at an elevation of about 550 m above sea level, between Melnik Ridge and Bowles Ridge, in the E part of Livingston Island, in the South Shetlands. It is part of the divide between the glacial catchments of the head of Kaliakra Glacier to the W and Struma Glacier to the E. The midpoint of the gap is 2 km ENE of Mount Bowles. Named by the Bulgarians on Feb. 17, 2004, as Sedlovina Yankova, for Yordan Yankov (name also seen as Iankov), radio engineer at St. Kliment Ohridski Station every season from 1995-96 to 2006-2007. In 2000-2001 he was also base commander. The British and the Americans call it Yankov Gap.

Sedlovina Yankova *see* **Yankov Gap**

Yankuai Shan. 62°13' S, 58°59' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Yanou Hu *see* **Yanou Lake**

Yanou Lake. 62°13' S, 58°57' W. A permanent lake, SE of Great Wall Station, and directly E of Gaoshan Lake, on Fildes Peninsula, King George Island, in the South Shetlands. Named Yanou Hu (i.e., "tern lake"), by the Chinese, in 1986. UK-APC accepted the name Yanou Lake, on June 6, 2007, and the British have also been the latest to plot this feature, in late 2008.

Yanovskiy Rocks. 71°56' S, 11°40' E. Two small isolated mountain rock outcrops, 8 km S of Mount Khmyznikov, they are the most southeasterly rocks in the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. First mapped from ground surveys and air photos made by SovAE 1960-61, and named by the Russians in 1966 as Skaly Janovskogo, for hydrographer S.S. Yanovskiy. US-ACAN accepted the name Yanovskiy Rocks in 1970. The Norwegians call them Janovskijnuddane.

Yanshi Wan. 62°12' S, 58°55' W. A cove on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Yantra Cove. 62°39' S, 59°55' W. A cove, 750 m wide, indenting for 400 m the S coast of Burgas Peninsula, E of Asen Peak, and SE of Delchev Peak, on Livingston Island, in the South Shetlands. Named by the Bulgarians on April 11, 2005, for the Yantra River, in northern Bulgaria.

The *Yapeyú*. Argentine ship belonging to the Flota Argentina de Navegación de Ultramar, which carried 262 tourists to the South Shetlands in Jan. 1959. Captain Juan A. Carrera.

Yapeyú Refugio. 68°05' S, 66°41' W. Argentine refuge hut built at 350 m above sea level, at the head of Northeast Glacier on Nov. 4, 1955, by Army personnel from nearby San Martín Station. It was abandoned at the end of the 1955-56 season. The name signifies the birthplace of Gen. San Martín (whose name is much commemorated in Antarctica).

Mount Yarbrough. 84°24' S, 66°00' W. A ridge-like mountain, rising to 865 m, 3 km SW of Nance Ridge, near the SW end of the Thomas Hills, in the northern Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Leonard S. "Len" Yarbrough, industrial engineer at Plateau Station in 1965-66, and later with NASA. UK-APC accepted the name on Nov. 3, 1971.

Yarlovo Nunatak. 63°33' S, 57°58' W. A rocky hill rising to 744 m in the N foothills of the chain the Chileans call Cordón Lobell, 4.53 km WNW of Marten Crag, 6.72 km S of Prilep Knoll, and 11.48 km SW of Kanitz Nunatak, it surmounts Broad Valley to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Yarlovo, in western Bulgaria.

Yaroslav Island *see* **Deception Island**

The *Yarra*. A 30-foot fiberglass Swiss yacht in the waters of the South Shetlands and the Antarctic Peninsula, during the 1995-96 season, under the command of Eric Bretscher (b. 1970). On Feb. 22, 2001, Mr. Bretscher fell asleep at the wheel while the *Yarra* was in Algoa Bay, South Africa, and the yacht ran aground, a total wreck.

Yasen Point. 62°39' S, 60°36' W. A sharp, rocky point on the E side of the small, ice-free promontory ending in Hannah Point to the W, it lies 870 m ENE of the latter, and forms the W side of the entrance to Mateev Cove, 7.3 km WSW of Ereby Point, on the S coast of Livingston Island, in the South Shetlands. Mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Sept. 14, 2010, for the settlements of Yasen in northwestern and northern Bulgaria.

Yasuda, Isaburo. b. 1880, Shizuoka, Japan. Carpenter on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12.

Yasunosuke, Yamabe *see* **Yamabe, Yasunosuke**

Cabo Yatasto. 66°31' S, 65°45' W. A cape in Darbel Bay, on the W coast of Graham Land, just N of Adelaide Island. Named by the Argentines.

Yates Glacier. 70°49' S, 62°12' W. A glacier, 5 km S of Matheson Glacier, it flows ENE into the W side of Lehrke Inlet on the Black Coast, on the E coast of Palmer Land. Roughly surveyed by the joint FIDS-RARE sledging team of 1947-48. Photographed aerially by USN in 1966, and re-surveyed from the ground by BAS personnel from Base E in 1972-73. Named by UK-APC on July 21, 1976, for John Yates (b. 1946), BAS surveyor who wintered-over at Base E in 1972 and 1973, and who worked in this general area. BAS plotted it in 70°52' S, 62°19' W. US-ACAN accepted the name later in 1976, and the feature has since been re-plotted.

Yates Spur. 68°41' S, 64°57' W. A prominent rock spur, on the S side of Mobiloil Inlet, on the Bowman Coast, at the W side of the terminus of Earnshaw Glacier, on the E side of the Antarctic Peninsula. It was photographed from the air by Lincoln Ellsworth in 1935, by USAS 1939-41, and by RARE 1947-48, and surveyed by FIDS in 1958. US-ACAN named it in 1977, for David Kent Yates (known as Kent Yates; born Jan. 26, 1953, Howard Co., Texas) of the Applied Research Laboratories, at the University of Texas (from which he graduated, class of '73), a member of the USGS satellite surveying team at Palmer Station for the winter of 1973. UK-APC accepted the name on May 21, 1979.

Yatrus Promontory. 63°37' S, 57°41' W. A predominantly ice-free promontory projecting eastward for 8 km from Trinity Peninsula into Prince Gustav Channel S of Eyrie Bay, it terminates in Jade Point to the E and Bald Head to the SE. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Roman town of Yatrus, in northern Bulgaria.

Yatude-zawa. 69°15' S, 39°46' E. A narrow, linear valley running in a SE-NW direction, in the S part of the Langhovde Hills, on the E shore of Lützow-Holm Bay. Mapped by the Japanese from ground surveys and air photos taken by JARE 1957-62, and named by them on June 22, 1972. The name, meaning "fatsia valley," derives from summer snow patches which look like *Fatsia japonica*, a Japanese plant like ginseng, that the Japanese call "yatude."

Yavorov Peak. 62°38' S, 59°55' W. Rising to about 640 m on Delchev Ridge, next NE of Kiten Gap, 1.65 km NE by E of Delchev Peak, 700 m WSW of Elena Peak, and surmounting Sopot Ice Piedmont to the N and Strandzha Glacier to the SE, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, as Vrah Yavorov, after their famous poet Peyo Yavorov (1878-1914). The British and Americans call it Yavorov Peak.

Vrah Yavorov *see* **Yavorov Peak**

Yearby, Keith Howard. b. April 21, 1957, London, son of John Osborne Yearby and his wife Joyce Irene Howard. He joined BAS in 1980, as a physicist, got his PhD in physics at Sheffield in 1982, and wintered-over at Halley Bay Station in 1983 and 1984, operating the VLF experiments. He went to work at Sheffield University, in space instrumentation and automatic control and systems engineering.

Yeasts. There are many species of yeasts in Antarctica (*see also* **Flora**).

Yeates Bluff. 83°23' S, 169°10' E. A steep, prominent, mainly ice-covered bluff, made of granite, between Lennox-King Glacier and Beaver Glacier, 6 km NE of Mount Nickerson, and S of Richards Inlet, in the Queen Alexandra Range, it has a peak rising to 1190 m at its N end. Named by NZGSAE 1959-60, for Peter Alexander Yeates (b. Wellington, NZ), radio operator at Scott Base in that year, and also previously in 1958. US-ACAN accepted the name in 1966.

Yeats Glacier. 85°01' S, 175°00' W. A prominent tributary glacier about 13 km long, it flows W from the N side of Mount Finley, draining the general area between that mountain and Mount Wade, and enters Shackleton Glacier just N of Lockhart Ridge and McGregor Glacier, in the Queen Maud Mountains. Named by Al Wade for Vestal L. Yeats (b. Feb. 6, 1919, Polytechnic City, Texas), a member of Wade's 1962-63 and 1964-65 expeditions (*see* **Wade, Alton**), and a member of the faculty of Texas Tech. US-ACAN accepted the name in 1964.

Punta Yeco. 62°28' S, 60°47' W. A point opposite Rocas Yeco, which separates Playa Paulina to the N from Playa Schiappacasse to the S, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel on ChilAE 1990-91, for the yeco, the common name given to the Antarctic cormorant which nests here.

Rocas Yeco. 62°28' W, 60°48' W. A group of 3 rocks immediately W of Punta Yeco and of Playa Schiappacasse, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel of ChilAE 1990-91, for the same reason Punta Yeco (q.v.) was named.

Yee Nunataks. 74°22' S, 72°30' W. A group of scattered nunataks, about 39 km long and 20 km wide, and rising to between 1300 m and 1700 m above sea level, centered 55 km NE of the Lyon Nunataks, in Ellsworth Land. They include Staack Nunatak, Olander Nunatak, Metzgar Nunatak, and Triassic Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968, and from U.S. Landsat imagery, 1973-74. Named by US-ACAN in 1994, for Virginia J. Yee (b. 1932), cartographer and airbrush specialist in the Shaded Relief and Special Maps Unit, USGS, who, for many years, prepared shaded relief maps of Antarctica. UK-APC followed suit with the naming on Oct. 5, 1994.

[1]**The *Yelcho***. A 467-ton, 120-foot long Chilean steam tug out of Punta Arenas, built by Brown Shipbuilders of Greenock in 1906, and acquired by the Yelcho & Palena Company in 1908. Yelcho is a district of Chile. Her 350 hp gave her a speed of 11 knots. She was armed with a Hotchkiss 37 mm cannon, but had no radio, and no electric lighting, and only a single, unreinforced hull. But she did have luck. She is famous for rescuing Shackleton's men from Point Wild, Elephant Island, on Aug. 30, 1916, but before that she had gone as far south as 60°S with the *Emma*, in the previous (unsuccessful) rescue attempt. On that occasion the subsequently famous Piloto Pardo had been on board, as had pilot 2nd class Onofre García. For the *Yelcho*'s famous (successful) attempt, her captain, Francisco Miranda B., was sick, and couldn't go on the rescue mission. Chile called for volunteers. The crew were: Piloto 2nd class Luis Pardo Villalón (captain), Piloto 2nd class León Aguirre Romero (2nd-in-command), Jorge L. Valenzuela Mesa (maestre de víveres mayor — chief supply officer), José Beltrán Gamarra (maquinista mayor — chief engineer). Naval personnel: Nicolás Muñoz Molina and Manuel Blackwood (mecánicos de primera clase), Manuel Ojeda (guardián de primera clase), José del Carmen Galindo and Pedro Pairo (marineros de primera clase — able seamen 1st class). Territorial personnel: José Munõz Téllez (contramaestre de primera clase — bosun 1st class), Froilán Cabañas Rodríguez (herrero de primera clase — blacksmith 1st class), Clorindo Leniz Gallejo (chief stoker), Pedro Soto Nuñez, Heriberto Caris Cárcamo, Juan Vera Jara, Hipólito Aris C., Pedro Chaura, Luis Contreras Castro (cabos de primera clase fogoneros — firemen), Pedro Becar Torres and Cirilo Téllez Almonacid (stokers), José Leiva Chacón, Ladislao Gallego Trujillo, Antonio Colin Paredes, Rudecindo Velásquez Almonacid, and Florentino González Estay (guardianes de primera clase), Clodomiro Agüero Soto (cocinero de primera clase — cook 1st class), Bautista Ibarra Carvajal (mozo — messboy). Also on board was José del C. Galindo. Other guardianes de primera clase whose names are associated with this trip are Ladislao Gallegos (stoker), Andrés Melian Ulloa, and José N. Guerrero Villaroel. The ship was retired in 1945.

[2]**The *Yelcho***. A 205-foot, 1640-ton Chilean Navy tender and research ship. Named for the more famous cutter of an earlier time (see above). Originally an American ship, the *Tekesta*, built in 1943, she was bought by Chile in 1960. She took part in the following expeditions to Antarctica: ChilAE 1960-61 (Captain Mario Alfaro Cabrera); ChilAE 1961-62 (Captain Ronald McIntyre Mendoza; that season she also took part in a joint Chilean and American hydrographic expedition to the South Shetlands, with the *Vema*— see that entry for further details); ChilAE 1962-63 (Captain Tulio Rojas Cellier); ChilAE 1963-64 (Captain Carlos Barra von Kretschmann); ChilAE 1965-66 (Captain Víctor Henríquez Garat); ChilAE 1967-68 (Captain César Vásquez); ChilAE 1968-69 (the first captain that season was Mauricio Lagos Barrios, but he was replaced by Franklin González Rodríguez); ChilAE 1969-70 (Captain Lagos, as from the previous year, but he was replaced by Capt. Fernando Navajas Irigoyen); ChilAE 1970-71 (Captain Carlos Aguirre Vidaurre-Leal); ChilAE 1971-72 (Captain Carlos Pinto Cáceres); ChilAE 1972-73 (Captain Adolfo Carrasco Lagos); ChilAE 1973-74 (Captain Eduardo Barison Roberts); ChilAE 1974-75 (Captain Juan Mackay Barriga); ChilAE 1975-76 (Captain Gastón Droguett Valdivia); ChilAE 1976-77 (Captain Droguett); ChilAE 1977-78 (Captain Guillermo Concha Boisier); ChilAE 1978-79 (Captain Hernán Couyoumdjian Bergamali). That was the year she saved the crew of the tourist ship *Lindblad Explorer*; ChilAE 1979-80 (Captain Eduardo Berardi Gaete); ChilAE 1980-81 (Captain Juan Wichmann Goldmann); ChilAE 1981-82 (Captain Marcel Chassin Trubert); ChilAE 1982-83 (Captain Tomás Schlack Casacuberta); ChilAE 1984-85 (Captain Eduardo García Domínguez); ChilAE 1985-86 (Captain Jorge Gaete Winckelmann); ChilAE 1986-87 (Captain Gaete); ChilAE 1987-88 (Captain Alfredo Adonaeguí Alvárez); ChilAE 1988-89 (Captain Jorge Chacón Poblete); ChilAE 1989-90 (Captain José Valdivia Soto); ChilAE 1990-91 (Captain Miguel Silva Cunich; that year she also took the Ecuadorian expedition to Antarctica); ChilAE 1991-92 (Captain Fernando Mingrám López); ChilAE 1992-93 (Captain Mingrám); ChilAE 1993-94 (Captain Miguel Alarcón O.). In 1996 she was taken out of service, in 1998 was de-commissioned, and in 1999 she was sunk.

Cabo Yelcho *see* **Cape Yelcho**

Cape Yelcho. 61°03' S, 55°22' W. The NW extremity of Elephant Island, on Sealers Passage,

in the South Shetlands. Named by the British Joint Services Expedition of 1970-71, for the Chilean steam tug *Yelcho*, which rescued Shackleton's men in 1916. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. The Argentines call it Cabo Yelcho.

Isla Yelcho *see* **Anvers Island**

Paso Yelcho *see* **Graham Passage**

Yelcho Canyon. 66°40' S, 48°00' W. An undersea feature off the NE tip of the Antarctic Peninsula. Named by international agreement for the original *Yelcho*.

Yelcho Hill. 62°55' S, 60°41' W. Named by the Poles in Sept. 1999, not so much as a new feature, but as a reconstructed feature. This was the 3-year-old Yelcho Island (produced in the wake of the 1967 volcanic explosion on Deception Island), which, subsequent to the 1970 eruption, became part of the coast, thus losing its insular status.

Yelcho Island. The 1967 volcanic eruption on Deception Island, in the South Shetlands, produced a certain disfigurement of Deception Island, and a certain re-arrangement of geographical features. One of the results of the explosion was the creation in Telefon Bay of a roughly oval-shaped volcanic islet, about 3000 feet long and 660 feet wide, and composed of 3 principal craters and a satellite crater. It was named unofficially — by the Argentines as Islote Marinero Suárez; by the Chileans as Isla Yelcho; and in English as Yelcho Island. After the 1970 eruption the 3-year-old island became joined to the mainland, and was finally renamed in 1999 by the Poles as Yelcho Hill (q.v.).

Yelcho Station. 64°54' S, 63°43' W. Chilean scientific sub-station, actually called Sub-base Yelcho, at South Bay, Doumer Island, between Wiencke Island and Anvers Island, 3 km from Palmer Station, in the Palmer Archipelago, built originally as a a refugio on Feb. 18, 1962, 10 m above sea level, and 10 m from the coast. It was officially opened in the 1962-63 summer, and later, after it had been expanded into a sub-station, it could accommodate a maximum of 9 persons in 4 buildings.

Ostrov Yelena *see* **Bridgeman Island**

Yelena Kamen' *see* **Bridgeman Island**

Yeliseyev Rocks. 72°05' S, 14°30' E. A group forming the S part of the Linnormen Hills, in the Payer Mountains of Queen Maud Land. Discovered in 1939 by GermAE 1938-39, photographed aerially by them, and plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. The rocks were re-mapped again by SovAE 1960-61, who named them for geologist N.A. Yeliseyev. US-ACAN accepted the name in 1970.

Yellow Point. 62°04' S, 58°24' W. A cape on the E coast of Keller Peninsula, in Visca Anchorage, Martel Inlet, in Admiralty Bay, King George Island, in the South Shetlands. So named by the Poles in 1980 because it is composed of yellow-weathered ore vein.

Cape Yemel'yanov. 67°16' S, 46°54' E. A rocky cape on the N part of Tange Promontory, in Casey Bay, about 5 km WNW of Felton Head, in Enderby Land. Photographed by ANARE in 1956, and by SovAE 1957, and named by the latter expedition as Mys Ëmel'yanova, for A.M. Yemel'yanov, Soviet hydrographer. ANCA translated the name as Cape Yemel'yanov.

Mys Yemel'yanova *see* **Cape Yemel'yanov**

Cabo Yerbal. 66°06' S, 66°35' W. A cape on Lavoisier Island, in the Biscoe Islands. Named by the Argentines.

Punta Yerbas Buena *see* **Cape Alexandra**

Yermak Point. 70°06' S, 160°41' E. A coastal point, in the W part of Rennick Bay, 26 km SE of Belousov Point, and 40 km WNW of Znamenskiy Island. Named by the USSR in 1958 as Mys Ërmak (pronounced "Yermak"), for the *Yermak*, built in 1898, scrapped in 1964, and often claimed to be the world's first icebreaker (she was not in Antarctica). US-ACAN accepted the translated name in 1964, and NZ-APC followed suit. *See also* **Bukhta Ermak**.

Mount Yesenin. 72°03' S, 14°26' E. Rising to 2520 m, 3 km NW of Yeliseyev Rocks, in the Payer Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966 as Gora Yesenina, for drunken poet Sergei Aleksandrovich Yesenin (1895-1925), husband of American dancer Isadora Duncan, and who hanged himself from the ceiling of his hotel room. US-ACAN accepted the name Mount Yesenin in 1970.

Gora Yesenina *see* **Mount Yesenin**

Cape Yevgenov. 69°03' S, 156°32' E. An ice-covered cape lying halfway along the NE side of Krylov Peninsula, and forming the W entrance to Lauritzen Bay, in Oates Land. Photographed by OpHJ 1946-47, and by SovAE 1957-58, being named by the latter expedition as Mys Evgenova (or Mys Yevgenova), for hydrographer Nikolay I. Yevgenov (1888-1964). ANARE photographed it again in 1959. US-ACAN accepted the name Cape Yevgenov in 1967.

Mys Yevgenova *see* **Cape Yevgenov**

Yingbing Dao. 62°14' S, 59°03' W. An island off the NW coast of Nelson Island, in the South Shetlands. Named by the Chinese.

Yingling Nunatak. 66°30' S, 110°37' E. A rocky nunatak, just southward of the Windmill Islands, 1.3 km SE of Goldenberg Ridge, in the E part of Browning Peninsula. First mapped from photos taken by OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for David Lee "Dave" Yingling (b. 1937), meteorological technician who wintered-over at Wilkes Station in 1960.

Yingwu Dao *see* **Harley Island**

Yngvar Nielsen Glacier *see* **Nielsen Glacier**

Yochelson Ridge. 79°36' S, 84°25' W. A rugged, partly snow-covered ridge, 5.5 km long, extending NNW from Eley Peak in the Soholt Peaks, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN for Ellis Leon Yochelson (b. Nov. 14, 1928. d. Aug. 30, 2006), USGS geologist at the National Museum of Natural History, in Washington, DC, and a paleontologist with the USARP Ellsworth Mountains Expedition of 1979-80.

Yoder Glacier. 75°07' S, 114°24' W. A glacier, 5 km long, with abrupt valley walls, it is a western tributary of Kohler Glacier, just SW of Morrison Bluff, in the central part of the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Robert Dunathan Yoder (b. April 17, 1923, Mount Carmel, Pa. d. May 21, 2005, Springfield, Vt.), with the U.S. Department of State, chairman of the Interagency Committee on Antarctica, 1970-73. After his retirement in 1974, he visited Antarctica to see if the rules of the Antarctic Treaty were being adhered to.

The *YOG-34*. A thin-skinned, 440-ton, 174-foot-long gasoline barge (Yard Oiler Gasoline of the YOG-5 class), laid down on Dec. 1, 1942, and launched on April 1, 1943. She already had a history of being overturned in Greenland, when she was chosen to be towed out of Norfolk, Va., in 1955, by the *Glacier*, to Christchurch, NZ, for use in Antarctica, for OpDF I. She was manned by *Glacier* personnel and by Seabees. There were 25 men aboard, but no radio. Lt. Jehu "Dusty" Blades was captain. Others aboard included Seabees Colon Roberts, Don Scott, Ray Spiers, and Michael Clay. The tow from the Panama Canal to NZ, with the *YOG* 1200 feet behind the *Glacier*, lasted 26 days without seeing land, which is still a record. She was towed at 14 knots, but on her own was capable of only 8 knots. From Christchurch to McMurdo (where she arrived in Dec. 1955) she was accompanied (not towed) by the *Eastwind*, and frozen in at Hut Point, in order to supply oil (she was carrying more than 200,000 gallons) for the party at McMurdo. Her radio call sign was Father Time 34. She remained there until March 13, 1961, when a storm blew her free of her moorings and she drifted out to sea, a ghost ship with 200,000 gallons of fuel-oil on board. VX-6 pilots used to fly out of McMurdo in the 1961 winter, looking for her, but she finally disappeared.

The *YOG-70*. A thin-skinned gasoline barge vessel (Yard Oiler Gasoline), which took part in OpDF I (1955-56). She was towed from Seattle to Panama with a skeleton staff of 10, and from there towed south by the *Edisto*, arriving at McMurdo Sound on Dec. 19, 1955.

Yoglav Crag. 63°51' S, 58°36' W. A rocky peak rising to 865 m in the S extremity of Kondofrey Heights, 2.3 km SSE of Vinogradi Peak, 3.7 km SW of Mount Reece, 8.48 km WNW of Kiten Peak, 3.5 km NNE of Mount Bradley, and 5.17 km SE of Darzalas Peak, it surmounts Znepole Ice Piedmont to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Yoglav, in northern Bulgaria.

Islote Yoke *see* **Yoke Island**

Yoke Island. 63°58' S, 61°56' W. An island with some attendant rocks, W of Moureaux Point (the N end of Liège Island), in the Palmer Archipelago. Roughly charted in Feb. 1905, by FrAE 1903-05. ChilAE 1946-47 named it Islotes Los Provincianos, it appears as such on their chart of 1947, and was the name accepted by the 1974 Chilean gazetteer. In plan and elevation it looks like a yoke, and, after aerial photography by FIDASE in 1956-57, UK-APC named it Yoke Island on Sept. 23, 1960 (i.e., they ignored the rocks). It appears as such on a British chart of 1961. US-ACAN followed suit with the naming in 1965. The Argentines call it Islote Yoke.

Yomogiri-zima. 69°43' S, 38°58' E. A small island, 7 km W of Sudare Rock, and 20 km N of Rundvågs Head, in Lützow-Holm Bay. Mapped from surveys and air photos conducted by JARE between 1962 and 1982, and named by the Japanese on March 12, 1977 (name means "island surrounded by fog").

York, William *see* **USEE 1838-42**

Yoshida Bluff. 79°20' S, 158°12' E. A flat-topped bluff rising to 2000 m, and ice-covered except for rock cliffs on its S and W sides, it is situated midway between Mill Mountain and Kanak Peak, at the N side of the head of Carlyon Glacier, in the Cook Mountains, in the Transantarctic Mountains. Named by US-ACAN in 2001, for Yoshio Yoshida, of the Japanese National Institute of Polar Research, geochemist with JARE in 4 field seasons in the area of the McMurdo Dry Valleys, between 1963-64 and 1973-74.

Yoshino, Yoshitada. b. 1888, Hokkaido. He was in charge of clothing during the Japanese South Polar Expedition, 1910-12, led by Shirase. He died in 1958.

Yotsume Rocks. 69°44' S, 38°07' E. Also spellled Yotume Rocks. Four distinct rock exposures (almost small nunataks) on the ice-covered NE side of Djupvikneset Peninsula, on the SW shore of Lützow-Holm Bay, on the Prince Harald Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and first mapped from these photos by Norwegian cartographers in 1946. Between 1957 and 1962, JARE surveyed the feature, and, in Oct. 1962, the Japanese named it Yotume-iwa (name also seen as Yotsume-iwa), a name meaning "the rock with four eyes." US-ACAN accepted the name Yotsume Rocks in 1968. The Norwegians call this feature Firaugnutane (which means the same thing).

Yotuike-dani. 69°16' S, 39°46' E. A shallow, linear valley running in a SE-NW direction, at the S of Yatude-zawa, in the S part of the Langhovde Hills, on the E shore of Lützow-Holm Bay. Mapped by the Japanese from surveys and air photos taken by JARE 1957-62, and named by them on Nov. 22, 1975 (name means "four-ponds valley").

Yotume-iwa *see* **Yotsume Rocks**

Yotume Rocks *see* **Yotsume Rocks**

Mount Young. 84°27' S, 179°48' E. A small peak, rising to 790 m, at the NE end of a spur on the E side of Ramsey Glacier, just S of the Ross Ice Shelf. Discovered and photographed aerially on Feb. 16, 1947, during OpHJ 1946-47, and named by US-ACAN in 1962, for Bob Young.

Punta Young *see* **Young Point**

Young, Adam G. British surgeon. His seniority as an assistant surgeon was dated May 26, 1810, and he served on the *Undaunted* until Nov. 14, 1815, mostly in the Mediterranean, and then transferred to the *Slaney* on Sept. 11, 1818. He was on the *Slaney*, when he volunteered to be surgeon on the *Williams*, during the expedition led by Bransfield in 1819-20. He landed on King George Island, in the South Shetlands, and made a list of seals and birds that he found there. He also noted that the only vegetation was a stunted grass and a species of moss. On June 12, 1822 he was paid off, and left the *Slaney*, going on half pay, and in Nov. 1825 was granted 6 months sick leave.

Young, Harry Richard "Bob." b. Aug. 10, 1892, Stoke Newington, London, son of butcher Charles John Young and his wife Matilda Stratton. He joined the RN in 1908 as an ordinary rating, became a diver, fought during World War I in the great naval battle of Jutland, and retired in 1919 as a petty officer. After a few years farming, he moved to Australia in 1924, and NZ in 1925. There he was working as a gardener at Waikato Hospital in 1929, when he volunteered to go as a seaman to Antarctica on the *City of New York* during the 2nd half of ByrdAE 1928-30. He wintered-over at Little America in 1929. In late 1933 he was working as a diver and rigger in a hydro-electric scheme in NZ, when he again went south on the *Jacob Ruppert*, for the 2nd half of ByrdAE 1933-35, signing on in Wellington. Again he wintered-over, in 1934. He farmed on his return to NZ, and died of a coronary thrombosis at Greenhithe, near Auckland, on Jan. 21, 1966.

Young, Henry *see* **USEE 1838-42**

Young, James Walton "Jim." b. Sept. 11, 1933. After the London School of Economics, he joined FIDS on Oct. 21, 1957, and on that very day sailed south as meteorological assistant who wintered-over at Base W in 1958. In late May and early June of that winter, he and three other FIDS from Base W formed a search party to look for Stride, Statham, and Black, who had disappeared from Base Y. He wintered-over a second year at Signy Island Station in 1959, returned to England in April 1960, and left FIDS that year. He later moved to Canada, got his master's degree in 1966 from British Columbia, and his doctorate in 1975 from McGill.

Young, John Mayson. b. Feb. 12, 1813, Worcester, Mass., son of Oliver Young and his wife Grace Kelley. He went to sea, and was captain of the New Bedford sealer *Sophia Thornton*, in South Shetlands waters in the period between 1851-52 and March 18, 1855. He retired immediately after the cruise, well set-up for life, married Rhoda, and they lived in Harwich, Mass., had a family, and then moved back to Westborough, near Worcester, where he became a gentleman farmer.

Young, Neal Warwick. b. July 29, 1947. Glaciologist at Casey Station in 1971. He was in Enderby Land in 1974-75, and again in Antarctica in 1977-78. In 2001 he and Massimo Frezzotti conceived the idea of a joint Australian-Italian initiative to measure the amount of ice flowing from the ice sheet of East Antarctica into the sea between the Amery ice Shelf and Dumont d'Urville Station.

Young, Nigel St. John. b. July 29, 1949, Holywell, Flintshire, Wales. He joined BAS in 1977, as a field assistant, and wintered-over at Rothera Station, 1978 and 1979, and again in 1982. He was back for the summer of 1984-85.

Young, Pamela "Pam." NZ biologist, from Canterbury University, one of the first women to reach the South Pole, in 1969 (*see* **Women in Antarctica**).

Young, S.S. b. 1895, South Africa. At Rio, he joined Shackleton's *Quest* expedition, 1921-22, as a fireman on board. After the expedition, he returned to England, in 1922, and then took ship back to South Africa.

Young, Victor "Vic." b. Feb. 15, 1917, Homestead, near North Bergen, NJ, son of Liverpool immigrant grocer John Lawrence Young and his Scottish wife Helen Miller (they had married in Liverpool in 1903). Vic joined the U.S. Navy, and was a CWO (chief warrant officer) when he volunteered in 1955, to be with the Mobile Construction Battalion (Seabees) party at Little America V during the winter of 1956. He had served with Herb Whitney (q.v.) in the Philippines and Alaska, and had joined the Seabees reserves after World War II. He called Whitney to volunteer for Antarctica, and went to Davisville, RI, to organize the Little America and Byrd Station crews. He trained at Davisville, and at the Caterpillar Tractor Company, in Peoria, and arrived at McMurdo in late 1955, went to Little America, where he became operations officer, in charge of offloading the cargo from the ships, and of building the base. He led the Byrd tractor train. He retired as a lieutenant commander.

Young Glacier. 78°04' S, 84°49' W. A glacier, 13 km long, it terminates at the N end of Barnes Ridge, on the E side of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for 1st Lt. Dale L. Young, USAF, who helped build Pole Station in 1956-57 (he was not on the ground, but was part of the Air Force crew that supplied the original Seabees).

Young Head. 81°29' S, 161°24' E. A prominent rock headland, rising to 350 m above sea level, marking the N side of the entrance to Beaumont Bay, on the W side of the Ross Ice Shelf. Named by US-ACAN in 1965, for Vic Young.

Young Hill. 77°38' S, 163°26' E. An ice-free summit rising to 1000 m above sea level, NE of Hallam Peak, in the Kukri Hills of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Euan Cameron Young (b. 1935, Christchurch, NZ), NZ entomologist at the University of Auckland, first in Antarctica in 1959-60, at Cape Royds (studying skua-penguin relationships

[sic]) and then, for 5 summers between 1965 to 1970, at Cape Bird. US-ACAN accepted the name later in 1998.

The *Young Huron* *see* **The *Cecilia***

Young Island. 66°25' S, 162°24' E. The most northwesterly of the Balleny Islands, it is long and narrow, being 31 km long, 6.5 km (the New Zealanders say about 8 km) wide, entirely snow- and ice-covered, and rises gently to 1340 m (the New Zealanders say about 1200 m) above sea level. There is no definite summit on the island, which is in the form of a plateau. Discovered on Feb. 9, 1839 by Balleny, and named by him for shipowner George Frederick Young (1791-1870), one of the 7 London merchants who joined Charles Enderby in sending out the expedition. Young was a member of the committee of Lloyd's, 1835-67, MP for Tynemouth, and one of the founding members of the merchant seamen's hospital in London. US-ACAN accepted the name in 1947. Originally plotted in 66°25' S, 162°30' E, it has since been re-plotted. The Americans installed an automatic weather station here, at an elevation of 30 m, in Jan. 1991. It stopped transmitting data on Dec. 20, 1997.

Young Nunataks. 66°44' S, 54°08' E. A group of nunataks, 3 km S of Mount Elkins, in the Napier Mountains of Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Photographed aerially again by ANARE in 1956, re-mapped from these photos by Australian cartographers, and named by ANCA for William Francis "Bill" Young (b. Feb. 25, 1930; of Black Rock, Vic.), electrical fitter who wintered-over at Mawson Station in 1961, and who was officer-in-charge at Davis Station in 1963. US-ACAN accepted the name in 1965. Mr. Young led, or was deputy on, several ANARE voyages (*see* **ANARE**).

Young Peak. 69°45' S, 74°32' E. A low peak just S of Holder Peak, and 3.5 km E of Mount Caroline Mikkelsen, on the Ingrid Christensen Coast of Princess Elizabeth Land. Photographed aerially by LCE 1936-37, and, with Holder Peak, named in 1946 by the Norwegian cartographers as Tvillingfjell (i.e., "twin mountain"). Renamed by ANCA for Bill Young (*see* **Young Nunataks**), who led an ANARE survey party here in 1963, and fixed this feature by triangulation from an astrofixed baseline. US-ACAN accepted the name in 1970. Last re-plotted by the Australians.

Young Peaks. 81°14' S, 158°42' E. A group of peaks, 5 km long, with summits rising above 1200 m, along a ridge running W-E, starting 5 km E of Mount Coley, in the Churchill Mountains. They are flanked by Lee Glacier to the N and by Jorda Glacier to the S. Named by NZ-APC on Feb. 27, 2002, for Pam Young. US-ACAN accepted the name in 2003.

Young Point. 63°36' S, 58°55' W. A rocky point, 5 km S of Cape Roquemaurel, it forms the NE side of the entrance to Bone Bay, on the NW coast of Trinity Peninsula. Surveyed and charted by Fids from Hope Bay in Sept. 1946, and again in July 1948, and named by UK-APC on Jan. 28, 1953, for Adam Young. US-ACAN accepted the name later in 1953. It appears in the 1955 British gazetteer. Re-surveyed by Fids from Base D in 1959-60. It appears on a Chilean chart of 1961, as Punta Young, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines also call it Punta Young.

Mount Youngman. 77°15' S, 154°21' W. A snow-covered coastal mountain rising to 620 m, at the head of Cumbie Glacier, and overlooking the Swinburne Ice Shelf and Sulzberger Bay (which are just northward), 6 km SE of Scott's Nunataks, in the Alexandra Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1964 and 1966. Named by US-ACAN in 1971, for Capt. Samuel A. Youngman, USN, medical officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 1969 and OpDF 1970.

[1]**Youyi Feng**. 62°12' S, 58°58' W. A peak on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese. As there is another feature with this name in the Larsemann Hills, one of the two will have to be changed.

[2]**Youyi Feng**. 69°23' S, 76°24' E. A peak in the Larsemann Hills. Named by the Chinese.

Youyi Shan. 69°22' S, 76°22' E. A hill in the Larsemann Hills. Named by the Chinese.

Yovkov Point. 62°30' S, 59°54' W. A point, 2.1 km WNW of Hebrizelm Hill, 2.2 km SSW of Lloyd Hill, 2.9 km SW of Tile Ridge, and 3.6 km SE of Kerseblept Nunatak, on the SW coast of Greenwich Island, in the South Shetlands. Its shape has been enhanced by a recent glacier retreat E of the point. Surveyed by the Bulgarians during their Tangra Topographic Survey of 2004-05, and named by them on Dec. 15, 2006, for Bulgarian writer Jordan Yovkov (1880-1937).

Yozola Glacier. 69°26' S, 71°24' W. A tributary glacier on Alexander Island, 5 km long and 1.7 km wide, and flowing NNW between Mount Brown and Balan Ridge, in the Sofia University Mountains, to enter Palestrina Glacier. Named by the Bulgarians on Nov. 23, 2009, after Yozola Lake, in Rila Mountain, in Bulgaria.

Île Yseult *see* **Yseult Island**

Yseult Island. 66°44' S, 140°56' E. A small, rocky island, 1.1 km due E of Tristan Island, and 0.6 km N of the E point on Cape Jules, 5 km W of the Zélée Glacier Tongue, at the W side of Port-Martin, in East Antarctica. Photographed aerially by OpHJ 1946-47, and charted by the French under Barré, 1951-52. Named by the French in 1952, as Île Yseult, in association with Tristan Island (being named at the same time), Tristan et Yseult being the couple of myth, legend, and opera. US-ACAN accepted the name Yseult Island in 1956.

Ystekleppane *see* **Ystekleppane Rocks**

Ystekleppane Rocks. 69°59' S, 38°47' E. A group of bare rocks protruding through the ice on the E shore of Havsbotn, off Insteodden Point, 1.5 km S of Strandnebba, at the extreme SE side of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Ystekleppane (i.e., "the outermost lumps"). US-ACAN accepted the name Ystekleppane Rocks in 1968.

Ystøy *see* **Bosun Island**

Ytre Brenabben *see* **Mae-hyoga Rock**

Ytrehovedeholmen *see* **Ytrehovdeholmen Island**

Ytrehovdeholmen Island. 69°13' S, 39°28' E. The largest of a cluster of 4 islands, 6 km W of the Langhovde Hills, in the E part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Ytrehovdeholmen (i.e., "the outer knoll island"), because of its position among the islands adjacent to the Langovde Hills. US-ACAN accepted the name Ytrehovdeholmen Island in 1968.

Ytstekleppane *see* **Ystekleppane Rocks**

Ytstenut *see* **Ytstenut Peak**

Ytstenut Peak. 72°30' S, 2°50' W. In the Regula Range, it is the most northeasterly of the peaks in the Borg Massif, in Maudheimvidda, in Queen Maud Land. NBSAE 1949-52 surveyed it from the ground and photographed it aerially. These efforts, and aerial photos taken in 1958-59 during the long NorAE 1956-60, led to it being mapped by Norwegian cartographers, who named it Ytstenut (i.e., "the outermost peak"). US-ACAN accepted the name Ytstenut Peak in 1968.

Ytterskjera. A scattered group of islands, 5 km NW of the Flat Islands, in Holme Bay, defined by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37. They included what are now the Van Hulssen Islands. Name means "the outer islands." It is a term no longer used.

Yuanyang Qundao. 69°22' S, 76°22' E. An island in the Larsemann Hills. Named by the Chinese.

Yuboku-dani. 72°05' S, 23°48' E. A gently-sloped valley in the N side of Svindlandfjellet, the NW part of Mount Walnum, in the central part of the Sør Rondane Mountains. JARE took air photos in 1981-82, and again in 1986. Named by the Japanese on Feb. 26, 1988 (name means "nomadic valley"; it was named thus because of its atmosphere). The Norwegians call it Nomadedalen (which means the same thing).

Yudi Shan. 69°25' S, 76°05' E. A hill in the Larsemann Hills. Named by the Chinese.

Yuelang Shan. 69°25' S, 76°06' E. A hill in the Larsemann Hills. Named by the Chinese.

Yueliang Hu. 62°11' S, 58°56' W. A lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Yueya Hu *see* **Ardley Lake**

Yuki-sima. 69°37' S, 37°42' E. A completely snow-covered island, 3 km N of Botnneset Peninsula. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946, but they thought it was the N extremity of Botnneset. U.S. Landsat images taken in 1974 showed that it might be a group of islands, but 1983 JARE air photos proved it to be one island, which the Japanese named on Jan. 29, 1996 ("snow island").

Lake Yukidori. A little lake in the middle reaches of Yukidori Valley, in the southern central part of the Langhovde Hills. Mapped from JARE ground surveys and air photos, 1957-62, and named by the Japanese on Nov. 22, 1973, as Yukidori-ike (i.e., "snow petrel lake"). US-ACAN has not yet accepted the name Lake Yukidori (which is what everyone but the Japanese call it), but they will.

Yukidori-ike *see* **Lake Yukidori**

Yukidori-toride-yama. 72°06' S, 22°42' E. A tabular mountain, rising to 1749.2 m, at the NE extremity of Mount Borchgrevink, in the E part of the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos of 1981-82 and 1986, and ground surveys conducted between 1986 and 1990, and the feature was named by the Japanese on Feb. 26, 1988 (name means "snow petrel fortress mountain"). The Norwegians (who describe it as small nunatak) call it Snøfuglborga (which means the same thing).

Yukidori Valley. 69°14' S, 39°46' E. A narrow and deep valley, running for a length of 3 km in an E-W direction, and about 0.8 km wide, in the southern central part of the Langhovde Hills, on the E coast of Lützow-Holm Bay. It contains Lake Yukidori and Lake Higashi Yukidori. A meltwater stream runs from the ice-cap at the head of the valley down to Lake Yukidori and from there to the coast. Showa Station is 28 km to the N. Accurately mapped from JARE ground surveys and air photos, 1957-62, and named by the Japanese on June 22, 1972, as Yukidori-zawa (i.e., "snow petrel valley"). There is much of biological interest here, and it was designated SSSI #22. US-ACAN has not yet accepted the name Yukidori Valley, but they will. The Norwegians call it Snøfugldalen (which means the same thing).

Yukidori-zawa *see* **Yukidori Valley**

Yukikakure-zima. 69°14' S, 39°23' E. A low, small island 10 km W of the Langhovde Hills. Discovered and photographed aerially by JARE in 1991 (color photos), and named by the Japanese on Jan. 29, 1996 (name means "snow-covered island").

The *Yukon*. A 7814-ton, 614 foot 6-inch USNS tanker, sister ship to the *Maumee*, built in 1955 by Ingalls Shipbuilding, in Pascagoula, Miss., and launched on March 16, 1956. It was the largest ship ever built on the Gulf of Mexico to that date. She replaced the *Maumee* after the latter's accident. In 1981-82, under the command of A. Shields, she was in at McMurdo Station, delivering fuel, arriving at McMurdo Sound on Jan. 28, 1982, and leaving on Feb. 1, 1982. While she was being escorted out by the *Polar Sea*, the two vessels collided near Beaufort Island. The *Yukon* was damaged and went to Sydney carrying 3 passengers. The ship's cook died of a heart attack on this trip. In 1985 she was transferred to the Maritime Administration, as part of the Ready Reserve Fleet.

Yule, Henry Braddick. b. May 5, 1810, Branscombe, Devon, son of John Yule and his wife Elizabeth. He joined the Navy on April 18, 1837, and was 2nd master on the *Erebus* during RossAE 1839-41. He became a lieutenant and a ship's master on Oct. 11, 1843. On Feb. 8, 1844, in London, he married Frances Rebecca Byrne, and they lived in Lambeth for a few years before moving to East Stonehouse, in Devon. On June 11, 1863, he became a staff commander. He died at his home in Shipton on Cherwell, Oxfordshire, on, of all things, Dec. 25, 1877. Frances died in Aylesbury, Bucks, in 1899.

Yule Bay. 70°44' S, 166°40' E. About 11 km wide, it indents the coast of northern Victoria Land between Cape Hooker and Cape Dayman, about 29 km ESE of Cape North. An inner (western) portion of the bay is circumscribed by Bates Point and Ackroyd Point. Ross discovered it in 1841, and named it for Henry Yule. US-ACAN accepted the name in 1947. *See also* **Hansabucht**.

Yule Peak. 68°31' S, 65°37' W. A small but conspicuous triangular rock peak, rising to 750 m at the W end of Bermel Peninsula, on the N side of Mercator Ice Piedmont, on the Bowman Coast, on the E part of Graham Land. Photographed aerially by Ellsworth on Nov. 21 and Nov. 23, 1935, and mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936. Surveyed by a FIDS sledging party from Base E, in Dec. 1958; they celebrated Christmas (Yuletide) near here that year. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Yundola Cove. 62°20' S, 59°35' W. 1.34 km wide, it indents the N coast of Robert Island for 670 m, W of Lavrenov Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the Yundola Saddle that runs between Rila Mountain and the Rhodope Mountains, in southern Bulgaria.

Punta Yungay *see* **Bongrain Point**

The *Yunony*. A 2323-ton Russian research trawler which, in company with the *Admiral Vladimirsky*, paid a surprise call on McMurdo, on Feb. 14, 1983.

Roca Yunque *see* **Anvil Rock**

Yuntai Shan. 69°23' S, 76°25' E. A hill in the Larsemann Hills. Named by the Chinese.

Yunwu Shan. 72°45' S, 76°10' E. An isolated mountain in the Grove Mountains. Named by the Chinese.

Lednik Yupiter *see* **Jupiter Glacier**

Yuquan He. 62°13' S, 58°58' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

The *Yuriy Dolguruki*. A 25,377-ton Soviet whaler, built in 1926, in Antarctic waters every season between 1960-61 and 1973-74. She was scrapped in 1975.

Yuriy Gagarin Mountains *see* **Gagarin Mountains**

Punta Yuseff. 62°28' S, 60°46' W. The point separating Playa Larga (to the N) from Half Moon Beach (to the S), on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Capitán de navío Sergio Yuseff Sotomayor, skipper of the *Capitán Luis Alcázar* for ChilAE 1989-90, ChilAE 1990-91, and ChilAE 1991-92.

The *Yushin Maru*. Japanese whaler, in Antarctic waters in 1998-99, the only ship of any nation whaling there that season.

Yutu Hu. 62°10' S, 58°56' W. A lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Vrah Yuzhen Burdick *see* **Burdick South Peak**

Yuzhen Hu. 69°23' S, 76°23' E. A lake in the Larsemann Hills. Named by the Chinese.

The *Yuzhmorgeologiya*. Nicknamed the *Yuzhmo*. A 5626-ton, 104.5-meter red and white Russian ice-strengthened cargo and supply vessel, built in 1985. She was heading to Antarctica for the 1994-95 season, to do oceanographic work in the Weddell Sea and in the Bransfield Strait, and was chartered by the South Koreans to relieve their King Sejong Station. Skipper of the ship that season was Oleg Pivovarchuk. This exercise was repeated in 1995-96 (same skipper), and in 1996-97 (Captain Mikhail Marchenko). She was back in Antarctic waters in 1997-98, with a skipper who would remain for years, season after season — Capt. Igor Zhelyabovskiy (known affectionately as Cap'n Igor). That season she was chartered by the Americans for their CCAMLR program (q.v.), and she was back in 1998-99, chartered by the South Koreans again. For the 1999-2000 season she was chartered by the Americans to supply the Copacabana field camp and other U.S. projects in the Antarctic Peninsula. She was back in Antarctic waters in 2005-06, 2006-07, and 2007-08. Between Jan. 10 and March 16, 2008, she was in the South Shetlands, as part of CCAMLR, conducting oceanographic studies and marine census. She was back the following season, 2008-09, at about the same time of year. In Aug. 2009 she was in the Gulf of Finland.

Mount Yuzhnaya. 67°49' S, 48°52' E. A mountain on the E side of the Condon Hills, due E of Mount Norvegia, in Enderby Land. The Russians explored the geology of this mountain, and named it Gora Juzhnaja (i.e., "southern mountain"). ANCA translated the name to Mount Yuzhnaya. *See also* **Gora Junaya**.

Punta Z *see* **Garnerin Point**

Za Za Bluff. 81°20' S, 153°09' E. Rising to over 1600 m in the Lonewolf Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for a dog operating from the 3-dog teams out of Scott Base, during NZARP 1959-60.

Nunataki Zabolotnogo. 72°12' S, 27°43' E. A group of nunataks in the southernmost part of Berrheia, at Balchen Mountain, in the Sør Rondane Mountains. Named by the Russians.

Gora Zabor *see* **Trollslottet Mountain**

The *Zabrze*. Polish vessel in Antarctic waters in 1976-77, part of the Polish expedition of that year. Marion Lis was skipper (*see* **Lis Point**).

Zabrze Cove. 62°08' S, 58°31' W. A small cove below Urbanek Crag, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shet-

lands. Named by the Poles in 1980, for the *Zabrze*.

Ostrov Zabytyj *see* **Zabytyj Island**

Zabytyj Island. 66°03' S, 101°14' E. An island, about 2.5 km by 1 km, about 2 km N of Miles Island, in a large group of islands to the E of Edisto Channel, and about 2 km SW of Remenchus Glacier, in the Bunger Hills. The apex of the island is to the E, and there are 3 short peninsulas pointing to the W. Charted by SovAE 1956, and named by them as Ostrov Zabytyj. ANCA translated the name on March 12, 1992.

The *Zacharevo*. Soviet sealer in Antarctic waters in 1986-87 (*see* **The *Zubarevo*** for itinerary).

Ozero Zagadochnoe. 71°46' S, 67°41' E. A meltwater lake in the SW portion of the Nilsson Rocks, 14 km S of the Fisher Massif, in the Prince Charles Mountains. Named by the Russians.

Massif Zagadochnyj. 73°05' S, 61°00' E. A massif in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians. There are 3 nunataks on this massif, which, running from W to E are Gora Krutaja, Gora Central'naja, and Gora Bazal'tovaja.

Zagore Beach. 62°43' S, 60°19' W. A beach, snow-free in summer, it faces False Bay and extends for 4 km on Rozhen Peninsula, between Charity Glacier and Ruen Icefall, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Zagorski Bryag, for the historic region of Zagore, S of the Balkans.

Zagorski Bryag *see* **Zagore Beach**

Ostrov Zagoskina. 75°38' S, 144°45' W. An island due W of Newman Island, in the Nickerson Ice Shelf, off the coast of Marie Byrd Land. Named by the Russians.

Zahari Point. 62°27' S, 59°32' W. An ice-free point on the SW coast of Robert Island, 6.8 km SE of Negra Point, 1.8 km ESE of Beron Point, and 2 km NW of Edwards Point, it forms the NW side of the entrance to Micalvi Cove, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the writer and historiographer Zahari Styoanov (1850-1889).

Holmy Zajac. 65°58' S, 101°06' E. A group of hills, due N of Kot Island, in the Bunger Hills. Named by the Russians.

Mys Zajceva. 65°53' S, 113°42' E. A cape, SE of Cape Poinsett, on the Budd Coast of Wilkes Land. Named by the Russians.

Zakharoff Ridge. 72°55' S, 75°07' E. A ridge with several peaks, mostly snow-covered, about 3 km SE of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Plotted by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for for Oleg Zakharoff, radio officer at Mawson Station in 1960. US-ACAN accepted the name in 1967.

Bukhta Zakrytaja *see* **Zakrytaja Bay**

Gora Zakrytaja. 71°16' S, 66°17' E. A nunatak, immediately W of Schmitter Peak, in the Prince Charles Mountains. Named by the Russians.

Zakrytaja Bay. 66°15' S, 100°57' E. A bay in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Bukhta Zakrytaja. ANCA translated the name on Jan. 19, 1989.

Zakuro-ike. 69°11' S, 39°38' E. A small lake in the northernmost part of the Langhovde Hills, on the E shore of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on June 22, 1972 (name means "pomegranate lake").

Zakuroisi Kyuryo. 69°01' S, 39°32' E. A ridge, less than 47.5 m high, ranging in a N-S direction through Ongul Island. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by the Japanese on March 22, 1994 (name means "garnet hill").

Zaldapa Ridge. 63°36' S, 57°42' W. A predominantly ice-free ridge, 1.7 km wide, extending 4.6 km in an E-W direction on Yatrus Peninsula, on Trinity Peninsula. The ridge's twin rocky summits rise to 383 and 359 m respectively, with the higher (western) one situated 4.55 km ENE of McCalman Peak, 7.06 km S of Abel Nunatak, and 4.75 km W by S of Jade Point. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Thracian and Roman town of Zaldapa, in northeastern Bulgaria.

Zalewski Glacier. 62°11' S, 58°38' W. An outlet of the Warszawa Icefield, between Belweder and Platt Cliffs, at Goulden Cove (inner Ezcurra Inlet), in the area of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for engineer Dr. Seweryn Maciej Zalewski, leader of PolAE 1977-78.

Zambrano Ridge. 67°49' S, 65°02' W. A rocky ridge extending in a rough N-S direction, it forms the E extremity of Tonkin Island, on the Bowman Coast, on the E coast of the Antarctic Peninsula. A 1947 Chilean chart (reflecting a survey done by ChilAE 1946-47), showed Tonkin Island as two islands, one in the N and one in the S. The N one they called Isla Mateo de Toro Zambrano, and the S one they called Isla Riquelme. In fact, it was only one island, and this ridge is a crucial part of it. UK-APC accepted the name Zambrano Ridge on Dec. 16, 2003. *See also* **Tonkin Island**.

Zamek *see* **Anvil Crag**

[1]**Gora Zametnaja**. 72°56' S, 61°02' E. One of the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians. Its coordinates are so similar to those of Skinner Nunatak that, despite the SCAR Gazetteer's listing it as a separate feature, one wonders if the two are not one and the same.

[2]**Gora Zametnaja**. 78°48' S, 24°17' W. A nunatak, inland from the Filchner Ice Shelf. Named by the Russians.

Skaly Zametnye. 67°37' S, 46°24' E. A group of rocks in the SW part of Assender Glacier, in Enderby Land. Named by the Russians.

Gora Zamok. 72°02' S, 4°07' E. A nunatak in the flow of the glacier the Norwegians call Tunet, in the W portion of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Zaneveld Glacier. 85°26' S, 176°25' W. A broad tributary glacier flowing NW from the Polar Pleateau between Roberts Massif and the Cumulus Hills, into the upper part of Shackleton Glacier. Named by US-ACAN in 1966, for University of Virginia biologist Jacques Simon Zaneveld (b. Dec. 9, 1909, Lilliput, Holland. d. Sept. 15, 2001, The Hague), who, as a usarp, studied algae from McMurdo Station in 1963-64 and 1964-65, and who was on the *Glacier* cruise of Jan.-March 1965. He was back in Antarctica for the summer of 1967-68, and was first director of the Institute of Oceanography (1965-68), as well as leader of the Boy Scouts in Indonesia and Holland.

Cabo Zanni. 72°26' S, 60°44' W. A cape, due S of Cape Fanning, on the Black Coast, on the E coast of Palmer Land. Named by the Argentines.

Zanoge Hill. 63°35' S, 58°46' W. An ice-covered hill rising to 710 m and forming the NW extremity of Srednogorie Heights, 6.53 km NW of Mount Ignatiev, 2.6 km N of Greben Hill, 2.96 km ENE of Hanson Hill, 4.78 km SW of Eremiya Hill, and 4.41 km W of Corner Peak, it surmounts Malorad Glacier to the E and N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Zanoge, in western Bulgaria.

Mount Zanuck. 85°58' S, 151°10' W. A large mountain massif, about 6 km wide, and between 8 and 10 km long, surmounted by 3 sharp peaks in an E-W line [the E one is Zanuck East Peak, the W one is Grizzly Peak, and the central one is Mount Zanuck itself, which rises to 2525 m (the New Zealanders say about 2700 m)], at the S side of Albanus Glacier, where that glacier joins the E side of Scott Glacier, between the La Gorce Mountains and the Watson Escarpment, in the Queen Maud Mountains. Discovered by Byrd on his flight to the Pole in 1929, during ByrdAE 1928-30, and first visited by Quin Blackburn's geological party in Dec. 1934, during ByrdAE 1933-35. Named by Byrd as Darryl Zanuck Mountain, for Darryl F. Zanuck (1902-1979), the movie mogul who helped Byrd with his film records. The name was later shortened.

Zanuck East Peak. 85°57' S, 150°53' W. The easternmost of the 3 high peaks that rise from the Mount Zanuck massif, in the Queen Maud Mountains. Discovered and mapped by Quin Blackburn and his geological party of 1934 during ByrdAE 1933-35, and named by NZGSAE who climbed it in 1969-70. NZ-APC accepted the name in 1970, and US-ACAN followed suit that year.

Vrah Zapaden Burdick *see* **Burdick West Peak**

Gora Zapadnadja. 72°50' S, 68°35' E. A somewhat isolated nunatak, NE of the Hay Hills, at the N end of the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Treshchiny Zapadnja. 79°41' S, 23°30' W. A fissure in the ground, inland from the Filchner Ice Shelf. Named by the Russians.

Ozero Zapadnoe *see* **Zapadnoye Lake**

Zapadnoye Lake. 70°44' S, 11°28' E. A small lake about 0.7 km long, in Krokevassfjellet, near the W end of the Schirmacher Hills, on the Princess Astrid Coast of Queen Maud Land. Mapped by SovAE 1961, and named by the Russians as Ozero Zapadnoe (i.e., "western lake"). US-ACAN accepted the name Zapadnoye Lake in 1970. The Norwegians translated the name as Vestvatnet.

Skaly Zapadnye. 73°09' S, 68°03' E. A group of rocks, immediately W of Harbour Bluff, in the Mawson Escarpment of Mac. Robertson Land. Named by the Russians.

Astronomicheskij Punkt Zapadnyj. 69°53' S, 64°21' E. Not a feature as such, rather an astro point, fixed by the Russians in the Riddell Nunataks, in Mac Robertson Land.

Punta Zapato *see* **Zapato Point**

Zapato Point. 64°36' S, 61°58' W. The NE entrance point of Plata Passage, 5 km SW of Cañón Point, on the Danco Coast, on the W coast of Graham Land. First seen and roughly charted on Feb. 7, 1898, by BelgAE 1897–99, when they sailed between it and Brooklyn Island. The name first appears on Argentine government chart 1954, as Punta Zapato (i.e., "shoe point," the name being descriptive of its shape), and appears on another Argentine chart of 1957. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, as Daedalus Point, for the ancient Greek flyer, and it appears as such on a British chart of 1961. US-ACAN accepted the name Zapato Point in 1965.

The *Zapiola*. A 1235-ton, 205 feet long ship, with a complement of 85 persons. Built in 1941 in Charleston, SC, and commissioned on June 22, 1942 as USS *Arapaho* (AT-68), she first saw action in the Pacific in World War II, became a fleet ocean tug in 1944, and was decommissioned in 1947. In 1961 she was struck from the register, and transferred to Argentina on July 10, 1961, and re-named the *Comandante General Zapiola*, for José Matías Zapiola (*see* **Azure Cove**), or *Zapiola*, for short. She was part of ArgAE 1963–64 (Captain Luis A. Morandi); ArgAE 1970–71 (Captain Juan C. Dupuy); ArgAE 1974–75 (Captain Emilio Bianchetti); and ArgAE 1975–76 (Captain Carlos Mon Ferrar). On Jan. 11, 1976 she hit a rock in Moreton Strait, and sank. The crew was rescued by the *Piloto Pardo*.

Bahía Zapiola *see* **Azure Cove**

Islotes Zapiola *see* **Flyspot Rocks**

Zapiola Refugio *see* **Comandante Zapiola Refugio**

Zapol Glacier. 78°35' S, 85°51' W. A steep valley glacier flowing down from the W slope of the Vinson Massif, between Tulaczyk Glacier and Donnellan Glacier, and which continues to flow W into Nimitz Glacier, in the Sentinel Range. Named by US-ACAN in 2006, for Warren Myron Zapol (b. March 16, 1942, NYC), of the department of anesthesia at Massachusetts General Hospital, whose long-term research near McMurdo into the diving physiology of Weddell seals, which he began in the mid 1970s, was part of a larger effort to understand how gas is handled in mammals as part of a search to understand SIDS (sudden infant death syndrome).

Zappert Point. 68°30' S, 78°05' E. On the SW part of Langnes Peninsula, next to the large Adélie penguin rookeries, in the Vestfold Hills. It was the site of an ANARE boat landing and food depot in 1972. Named by ANCA on Nov. 27, 1973, for Michael D. "Mike" Zappert, radio supervisor who wintered-over at Davis Station in 1970.

Ozero Zaprudnoe. 70°49' S, 68°23' E. A lake, named by the Russians, which, if its coordinates are correct as stated in the SCAR Gazetteer, would place it immediately E of Beaver Lake, ESE of the Aramis Range, in the Prince Charles Mountains. However, given the proximity of the two features, and given the Russian tendency toward rather "individualistic" coordinates, the two features may well be one and the same.

Bukhta Zarja *see* **Zarya Bay**

Zarya Bay. 67°40' S, 45°54' E. In the Thala Hills of Enderby Land, about 2 km E of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and also by SovAE 1957. The Russian expedition named it Bukhta Zarja (i.e., "dawn bay"). ANCA translated the name to Zarya Bay on July 31, 1972.

Cabo Zarzuela. 63°21' S, 55°34' W. A point on the rocky headland called Tay Head, 10 km E of Mount Alexander, on the S coast of Joinville Island. Named by the Argentines for Lt. Raúl Juan Zarzuela, first co-pilot of the Avro Lincoln B019 that, on March 22, 1950, after completing an Antarctic flight, crashed at Tierra del Fuego. All aboard were killed.

Dolina Zashchischënnaja. 70°28' S, 65°03' E. A valley on the N side of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians.

Ostrova Zashchitnye *see* **Zashchitnyye Islands**

Zashchitnyye Islands. 68°26' S, 78°15' E. A group of small islands off the N coast of Langnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936–37, and again during OpHJ 1946–47, by SovAE 1956, and by ANARE in 1957 and 1958. It was the Russians who charted this feature, and named it Ostrova Zashchitnye. ANCA translated the name on Nov. 27, 1973.

Gora Zasnezhennaja. 73°51' S, 63°32' E. A nunatak, SE of Keyser Ridge, in the southern Prince Charles Mountains. Named by the Russians.

Poluostrov Zasnezhennyj *see* **Zasnezhennyj Island**

Zasnezhennyj Island. 66°00' S, 100°47' E. A tiny island off the coast of Dieglman Island, in the Highjump Archipelago. Charted by SovAE 1957 as a peninsula, and named by them as Poluostrov Zasnezhennyj. The Australians later found it to be separated from Dieglman Island, and ANCA renamed it Zasnezhennyj Island, on Jan. 19, 1989.

Nunatak Zaterjavshijsja. 74°33' S, 65°11' E. An isolated nunatak, about 40 km SW of Mount Newton, and about 18 km NW of Burke Ridge, in the Prince Charles Mountains. Named by the Russians.

Rajska Zatoka *see* **Sentry Cove**

Zavadovskijbreen. 68°55' S, 90°38' W. A glacier, about 9 km long, at the SW corner of Peter I Island. Named by the Norwegians (name means "Zavadovskiy glacier") after Ivan Zavadovskiy. The name is also seen (erroneously) as Zavodovskijbreen.

Zavadovskiy, Ivan I. b. 1780, Russia. A naval officer and hydrographer, he served under von Bellingshausen for seven years, in the Black Sea, on the *Minerva* and *Flora*. He was captain of the *Vostok* during von Bellingshausen's expedition of 1819–21. He died in 1821.

Zavadovskiy Island. 66°43' S, 86°24' E. An ice-covered, cupola-shaped elevation in the surface of the West Ice Shelf, rising to 197 m above sea level, 20 km E of Mikhaylov Island. Discovered by SovAE 1956, and named Ostrov Zavadogskogo (later re-named Kupol Zavadogskogo) by the Russians, for Ivan Zavadovskiy. US-ACAN (in 1965) and ANCA both accepted the translated (but outdated; outdated because it is an ice dome, rather than an island) name of Zavadovskiy Island.

Kupol Zavadovskogo *see* **Zavadovskiy Island**

Ostrov Zavadogskogo *see* **Zavadovskiy Island**

Zavadovsky Canyon. 64°00' S, 87°22' E. A submarine feature off the coast of East Antarctica. It actually extends from 63°30' S to 64°30' S, and from 86°45' E to 88°00' E. Named by international agreement for Ivan Zavadovskiy.

Zavala Island. 62°28' S, 60°10' W. An island, 700 m by 250 m, lying 350 m to the W of Organpipe Point, 600 m SW of Aspis Island, 800 m N of Slab Point, and 1.3 km ENE of Balsha Island, in the Dunbar Islands, SW of Williams Point, off the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement and mountain of Zavala, in western Bulgaria.

Hrebet Zavarickogo *see* **Östliche Petermann Range**

Gora Zavarzina. 81°59' S, 162°07' E. A nunatak in the Nash Range, on the Shackleton Coast, along the W side of the Ross Ice Shelf. Named by the Russians.

Zavet Saddle. 63°00' S, 62°34' W. Running at an elevation of 1410 m, bounded by Slaveykov Point to the SW and the summit of Mount Foster to the NE, it overlooks Dragoman Glacier to the SE, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Zavet, in northeastern Bulgaria.

Zavis Peak. 79°23' S, 86°08' W. A sharp peak

rising to 2195 m, 6 km W of Navigator Peak, at the S end of the Founders Escarpment, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64 for Alfred Zavis (b. 1926, Pa.), USGS topographic engineer with the party in these mountains. US-ACAN accepted the name in 1966.

Zavodovskijbreen *see* **Zavadovskijbreen**

Gora Zavrajskogo. 80°38' S, 29°05' W. A nunatak, SW of Honnywill Peak, in the Shackleton Range. Named by the Russians.

Zawadzki Stacks. 62°05' S, 58°50' W. Three offshore stacks between Sygit Point and Teliga Island, off the Joannes Paulus II Coast. Named by the Poles in 1980, for engineer Maciej Zawadzki, a member of PolAE 1977-78 and PolAE 1978-79, and deputy leader of PolAE 1980-81.

Zawels, Jorge. Argentinian meteorologist, head of the Cipoletti Meterological Station at Río Negro, in Argentina, from 1941 to 1942. He wintered-over at Órcadas Station in 1946.

The *Zawichost*. Polish vessel, in Antarctic waters in 1978-79 (skipper Wojciech Kozlowski) and 1982-83 (skipper Tadeusz Maslyk).

Zbyszek Glacier. 62°04' S, 57°56' W. A small glacier flowing from an inland ice dome, between Polonia Glacier and Hector Icefall, to enter the head of Three Kings Cove, at the Bransfield Strait, King George Island, in the South Shetlands. Named by the Poles in 1980, for Zbigniew "Zbyszek" Rubinowski, a member of the geological party during PolAE 1979-80.

Monte Zdarsky *see* **Mount Zdarsky**

Mount Zdarsky. 66°05' S, 64°58' W. Rising to about 1200 m, on the E side of Simler Snowfield, between Barilari Bay and Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. First roughly charted by FrAE 1908-10, and named by Charcot as Mont Garcia, presumably in association with the feature he called Cap Garcia (*see* **Loqui Point**). It appears as such on the expedition's 1912 and 1914 maps. There are 1916 and 1948 British references to Mount Garcia. Photographed aerially in 1956-57, by FIDASE. In order to avoid confusion with Cape García on the other side of Barilari Bay, this mountain was re-named by UK-APC on July 7, 1959, for Mathias Zdarsky (1856-1940), Austrian ski pioneer. US-ACAN accepted that name in 1971. The Argentines call it Monte Zdarsky.

Zebra Peak. 69°41' S, 64°56' E. About 2.75 km NE of Summers Peak, in the Stinear Nunataks, Mac. Robertson Land. Visited in Feb. 1970, by D.G. Grainger, ANARE geologist with the Prince Charles Mountains Survey Party, and named by ANCA on May 18, 1971, for the irregular bands and lenses of light and dark colored rocks which give it the appearance of a zebra. US-ACAN accepted the name in 1973.

Zebra Ridge. 70°02' S, 69°14' W. A prominent rock ridge, 3 km long, running N-S, and rising to 760 m, 5 km S of the mouth of Tumble Glacier, and overlooking the coastal ice piedmont of eastern Alexander Island. First seen aerially by Ellsworth on Nov. 23, 1935, as he photographed (what became known as) the Douglas Range. Surveyed by Fids from Base E in 1948-49, and named by UK-APC on March 31, 1955, for the striped appearance of the rock strata. US-ACAN accepted the name in 1956.

Zed Island *see* **Zed Islands**

Zed Islands. 62°26' S, 60°10' W. A small group of islands, about 2 km NW of Williams Point, in the extreme NE of Livingston Island, in the South Shetlands. The largest and most northwesterly one, Esperanto Island, rises to 290 m. Lesidren Island is the second largest, and southernmost, of the islands, and Phanagoria Island is the third largest. The most easterly one, Koshava Island, is characterized by its conical form. On Jan. 17, 1820, Bransfield charted these islands as one large island, Smith's Island, named by Bransfield in the belief that William Smith had discovered it in 1819. These islands, along with what later became known as the Meade Islands, were grouped together by the early sealers in the area, and called The Dunbars, for Capt. Thomas Dunbar (q.v.). They appear as such in Palmer's log of Nov. 21, 1820. The Zed Islands were still appearing as, variously, Smith Island (on an 1822 British chart) and Smith Islands or Smith's Islands (on Fildes' map of 1829, among others). The Dunbars were charted by the Discovery Investigations team in 1934-35, and, as it were, separated. They named both the Meade Islands and the Zed Islands, the latter for the shape of their configuration. The name Zed Islands appears on their expedition chart of 1935, and, subsequently, on British charts of 1942 and 1948. US-ACAN accepted the name Zed Islands, although it appears on a 1952 USAF chart as Zed Island. UK-APC accepted the name on Sept. 8, 1953, and it appears in the 1955 British gazetteer, and also on a 1962 British chart. The feature appears on a 1948 Argentine chart as Islas Zed. It appears on a 1953 Argentine chart, translated as Islas Zeta, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The islands were photographed aerially by FIDASE in 1956-57. On a 1962 Chilean chart, the westernmost of these islands (i.e., Esperanto Island) was called Isla Zeta. This island has also sometimes been translated into English, as Zed Island. *See also* **Meade Islands**, for more history on these islands.

Zegers, John E. b. April 13, 1934, David City, Nebr. Radioman 2nd class, USN. He was one of the 4 men flown out from McMurdo Sound to establish Beardmore Glacier Camp (q.v. for more details), on Oct. 27, 1956. He died on April 29, 1994, in David City.

Zeiger, Otto. b. 1872, Germany. Cook at Órcadas Station for the winter of 1923.

Mount Zeigler. 77°13' S, 143°03' W. Rising to 1120 m, 5 km NNE of Mount Swartley, in the Allegheny Mountains of Marie Byrd Land. Mapped by USAS 1939-41, and again by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN for Lt. Cdr. Luther L. Zeigler (b. Feb. 6, 1922, Bucyrus, Kans. d. Aug. 17, 2006, Shawnee, Kans.), USN, LC-130F Hercules aircraft pilot during OpDF 1968 (i.e., 1967-68). He was 28 years in the Navy.

Zeiou Wan. 62°10' S, 58°58' W. A cove on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Zeiss Needle *see* **Mount Dedo**

The *Zélée*. A small, old (built in France in 1811), 3-masted, 380-ton French corvette, commanded by Jacquinot during FrAE 1837-40. The cadet ship to the *Astrolabe*, she had 81 officers and men, but was not equipped for the ice. However, she did go down in history as one of the famous ships of Antarctica.

Glacier de la Zélée *see* **Zélée Glacier**

Îles de la Zélée *see* **Zélée Rocks**

Langue Glaciaire de la Zélée *see* **Zélée Glacier Tongue**

Récifs de la Zélée *see* **Zélée Rocks**

Roca de la Zélée *see* **Zélée Rocks**

Rocas Zélée *see* **Zélée Rocks**

Rocher(s) de la Zélée *see* **Zélée Rocks**

Zélée Glacier. 66°52' S, 141°10' E. Also called Glacier Penola. A glacier, 10 km long and 5 km wide, it flows NNW from the continental ice along the W side of Lacroix Nunatak and terminates in the Zélée Glacier Tongue, thus feeding Commonwealth Bay from Adélie Land. Probably first seen by FrAE 1837-40, although no glaciers were noted by Dumont d'Urville on his chart of this coast. Photographed aerially by OpHJ 1946-47. Charted by Liotard in 1949-51, and named by him as Glacier de la Zélée, for the *Zélée*. US-ACAN accepted the name Zélée Glacier in 1955.

Zélée Glacier Tongue. 66°47' S, 141°10' E. A prominent glacier tongue, about 11 km long and 3 km wide, forming the seaward end of Zélée Glacier, at the W side of Port-Martin, between Cape Jules and Cape Découverte, in East Antarctica. Delineated from air photos taken during OpHJ 1946-47. Named by the French as Langue Glaciaire de la Zélée, in association with the glacier. US-ACAN accepted the translated name in 1956. The French seem to have done away with their term altogether.

Zélée Rocks. 62°57' S, 57°15' W. A group of 4 rocks, some of which are above water, and others near the surface, in the Bransfield Strait, WNW of Turnbull Point, d'Urville Island, about 27 km N of Prime Head (the northernmost part of the Antarctic Peninsula). On Feb. 27, 1838, when FrAE 1837-40 was sailing up to Trinity Peninsula from the N, they discovered this feature, and roughly charted it. Dumont d'Urville named it Rocher de la Zélée (i.e., in the singular), after one of his two ships, the *Zélée*. On 1842 and 1847 maps of that expedition, however, the names Rochers de la Zélée and Îles de la Zélée appear, leading one to believe that the name Rocher de la Zélée may have been merely a typographical error. Dumont d'Urville plotted the group in 63°00' S, 57°08' W. On an 1861 Spanish chart it appears as Roca de la Zélée, but this is merely a translation from Dumont d'Urville's earliest chart. This feature has also, occasionally, been incorrectly identified as Hope Island or Hope Islands (the Hope Islands actually lie to the SE), notably by SwedAE 1901-04. FrAE 1908-10, on their 1912 chart, referred to them as

Récifs de la Zélée (which means the same thing). The name Zelee Rocks appears on British charts of 1921 and 1940 (but without accent marks), plotted in the same position as Charcot's Récifs de la Zélée. Between 1926 and 1932, the Discovery Investigations further charted them. The name Zelée Rocks (sic) appears on a 1943 U.S. Hydrographic Office chart. On a British chart of 1945, they appear in 62°55' S, 57°17' W. They appear on a Chilean chart of 1947, as Rocas Zélée, and on a 1963 Argentine chart as Roca Zélée (i.e., in the singular), but the name Rocas Zélée was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On a 1948 British chart, they appear as Zélée Rocks, as they do on a 1949 British chart (but plotted in 62°55' S, 57°19' W). Those were the coordinates (and, of course, the name) accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and they appear as such in the 1955 British gazetteer. The name appears as Zelee Rocks on a 1955 USHO chart (i.e., without any accents), and (spelled wrong) on a 1963 U.S. chart as Zellee Rocks. By the time of a 1962 British chart, the coordinates had been corrected, and, with the new coordinates, the feature appears in the 1977 British gazetteer. US-ACAN accepted these changes.

Zélée Subglacial Trench. 68°00' S, 145°00' E. Running NNE-SSW near the George V Coast, it forms the inland extension of the trough cut by the Mertz Glacier, and underlies the W boundary of Australian Antarctic Territory with Adélie Land. Delineated by the SPRI-NSF-TUD airborne radio echo-sounding program, 1967-79. Named by international agreement, for the *Zélée*. ANCA accepted the name on July 26, 1983.

The *Zélée II*. French launch used at Géologie Archipelago.

Goulet de la Zélée II. 66°40' S, 140°01' E. A very narrow and very deep marine passage between the two Buffon Islands, in the Géologie Archipelago. Named by the French for the *Zélée II*.

Ozero Zelënoe. 80°28' S, 29°31' W. A lake, fed by the melt stream the Germans call Lunströmsee, immediately SW of Mount Gass, in the W portion of the Shackleton Range. Named by the Russians.

Zellee Rocks *see* **Zélée Rocks**

Zeller Glacier. 80°55' S, 156°30' E. About 16 km (the Australians say 19 km) long, it flows WNW to enter the S side of Byrd Glacier just N of Mount Fries. Mapped from USN air photos, and named by US-ACAN in 1965, for Edward Jacob "Ed" Zeller (b. Nov. 6, 1925. d. Jan. 14, 1996, Lawrence, Kans.), geologist and geophysicist at McMurdo Station in 1959-60 and 1960-61, and later head of the Space Technology Center at the University of Kansas. ANCA accepted the name on Aug. 27, 1975.

Zemen Knoll. 62°32' S, 60°11' W. Rising to 453 m, in Vidin Heights, 320 m N of Radnevo Peak, 840 m SW of Miziya Peak, and 1.6 km W of Ahtopol Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, as Zemenska Mogila, after Zemen, the town in western Bulgaria. The name has been translated into English.

Zemenska Mogila *see* **Zemen Knoll**

Gora Zenit. 70°46' S, 11°51' E. The easternmost hill in Russeskaget, in the E part of the Schirmacher Hills, on the coast of Queen Maud Land. Named by the Russians ("the zenith mountain"). The Norwegians translated it as Zenitberget.

Zenitberget *see* **Gora Zenit**

Zenith Glacier. 71°52' S, 163°45' E. A glacier, 1.5 km W of Johnstone Glacier, it flows S from the S end of the Lanterman Range, in the Bowers Mountains. This important geological outcrop area was named by NZGSZE 1967-68 for the impressive view of much of the Bowers Mountains from the top (or head) of the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Punta Zenteno *see* **Cape Church**

Zentralpassage. 62°12' S, 58°58' W. A passage on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Zephyr Glacier. 69°28' S, 68°28' W. About 13 km long, it flows NNW from the SW side of Mount Edgell, into George VI Sound, toward the S of Cape Jeremy, on the Fallières Coast, on the W side of the Antarctic Peninsula. Surveyed by Fids from Base E in Dec. 1948, photographed aerially by USN in 1966, and surveyed again by BAS in 1971-72. Originally plotted in 69°28' S, 68°36' W, it has since been re-plotted twice. Named by UK-APC on Dec. 8, 1977, for the west wind, and it appears in the 1980 British gazetteer. US-ACAN accepted the name.

Mount Zeppelin. 64°27' S, 61°31' W. Rising to 1265 m (the British say about 850 m), 5 km SE of Eckener Point, between Graham Passage and Recess Cove, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-58. Named by UK-APC on Sept. 23, 1960, for Count Ferdinand von Zeppelin (1838-1917), German aeronautical engineer who, from 1894 until his death, perfected the large-scale rigid airship which bore his name. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Isla Zerabia *see* **Isla Evandro**

Bukhta Zerkal'naja *see* **Zerkal'naya Bay**

Zerkal'naya Bay. 67°40' S, 45°58' E. Between Cape Feoktistov and Cape Steregushchyy, in the Thala Hills of Enderby Land, about 4.8 km E of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and again by SovAE 1958. The latter expedition named it Bukhta Zerkal'naya (i.e., "smooth bay"). ANCA translated the name on July 31, 1972.

Ozero Zerkal'noe *see* **Zerkal'noje Lake**

Zerkal'noje Lake. 66°16' S, 101°03' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ozero Zerkal'noe. ANCA translated the name on Jan. 19, 1989.

Isla(s) Zeta *see* **Zed Islands**

Zetland Glacier. 78°01' S, 163°49' E. A small hanging glacier to the W side of Mount Alexandra, in southern Victoria Land. Named by US-ACAN and NZ-APC together, in 1994. The name Zetland is the old spelling for the Shetland Islands, in Scotland.

Îlot Zeus. 66°40' S, 140°01' E. A rocky island NE of Pétrel Island, at the extreme N of the Chenal Buffon, in the Géologie Archipelago. Named by the French in 1977, in association with Castor and Pollux, which are much smaller than this island (as the twins were in relation to the god Zeus).

Zeus Ridge. 64°35' S, 63°34' W. A ridge, heavily crevassed, steep-sided, and ice-covered, the main part of it rising to over 1675 m (the British say about 1250 m), it extends NW from Mount Français between the Achaean Range and the Trojan Range, in the central part of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in Aug.-Sept. 1955, and named by UK-APC on Sept. 4, 1957, for the Greek god. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Zhaojun Di. 77°05' S, 77°00' E. An area of land in the Ross Dependency. Named by the Chinese.

Gora Zhelannaja *see* **Zhelannaya Mountain**

Zhelannaya Mountain. 72°04' S, 18°28' E. A relatively isolated mountain, about 15 km N of Mount Karpinskiy, in the Russkiye Mountains of Queen Maud Land. Mapped by SovAE 1959, and named by the USSR that year as Gora Zhelannaja (i.e., "desired mountain"). US-ACAN accepted the translated name in 1971.

Utësy Zheltovskogo. 81°52' S, 162°30' E. A bluff, just W of Jacobs Peninsula, and SW of Cape May, at the Ross Ice Shelf. Named by the Russians.

Zhenxing Matou. 69°22' S, 76°22' E. A rock hill, just NW of Gushi Yan, in the Larsemann Hills. Named by the Chinese.

Zhenzhu Dao. 69°24' S, 76°04' E. An island in the Larsemann Hills. Named by the Chinese.

Zhenzhu He. 62°10' S, 58°36' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Zheravna Glacier. 62°33' S, 59°41' W. A glacier extending 2 km in an E-W direction, and 1.8 km in a N-S direction, and flowing S into McFarlane Strait between Ephraim Bluff and Sartorius Point. It is bounded on the W by Razgrad Peak, on the N by Momchil Peak, and on the E by Viskyar Ridge. Named by the Bulgarians on Nov. 4, 2005, for the settlement of Zheravna, in the eastern Balkans, in Bulgaria.

Mys Zherlovyj *see* **Flat Top Peninsula**

Cape Zherlovyy *see* **Flat Top Peninsula**

Podlëdnye Gory Zhigalova. 72°00' S, 51°00' E. A very isolated peak in the interior of Enderby Land. Named by the Russians.

Bukhta Zhilenko. 66°42' S, 127°27' E. A bay, SW of De Haven Glacier, in Wilkes Land. Named by the Russians.

Gora Zhil'naja *see* **Zhil'naya Mountain**

Zhil'najatoppen *see* **Zhil'naya Mountain**

Zhil'naya Mountain. 71°40' S, 12°38' E. Rising to 2560 m, it is the central mountain of the Svarthausane Crags, in the northernmost part of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers (but, apparently not named by them), from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966 as Gora Zhil'naya (i.e., "branching mountain"), for the several mountainous ridges coming out of this summit. US-ACAN accepted the translated name in 1970. The Norwegians call it Zhi'najatoppen.

Zhinu Hu *see* **Malachite Lake**

Zhonge Chedao. 69°22' S, 76°22' E. A road (i.e., a water channel) in the Larsemann Hills. Named by the Chinese.

Zhonghua Lu. 69°22' S, 76°22' E. A road (i.e., a water channel) in the Larsemann Hills. Named by the Chinese.

Zhongshan Station. 69°22' S, 76°23' E. Also known as Sun Yat Sen Station. The 2nd Chinese scientific station (*see* **Great Wall Station**), it was opened on Feb. 26, 1989, at the cove the Chinese call Zhongshan Wan, on Broknes Peninsula, in the Larsemann Hills, on the Ingrid Christensen Coast of Princess Elizabeth Land, next to Progress II Station (the Russian base), and named after Dr. Sun Zhongshan (Sun Yat Sen). It could accommodate 60 summer personnel and 25 wintering personnel. **1988-89 summer**: Gou Kun ((leader). **1989 winter**: Gao Quingquan (leader). **1989-90 summer**: Li Zhinpei (leader). **1990 winter**: Dong Zhaoquian (leader). **1991 winter**: Jia Genzheng (leader). **1992 winter**: Liu Shuyan (leader). **1992-93 summer**: Gao Zhensheng (leader). **1993 winter**: Tang Miaochang (leader). **1994 winter**: Yan Shouxain (leader). **1995 winter**: Qian Songlin (leader). **1996 winter**: Mi Wemming (leader). **1997 winter**: Mi Wemming (leader). **1998 winter**: Wu Yilin (leader). **1999 winter**: Li Guo (leader). **2000 winter**: Liu Shuyan (leader), Cong Kai (deputy leader). Leaders unknown after 2000. In 2006-07, a major rebuilding program was completed.

Zhongshan Wan. 69°22' S, 76°23' E. A cove indenting Broknes Peninsula, in the Larsemann Hills. Named by the Chinese ("Sun Yat Sen cove"). Zhongshan Station is here.

Zhuangshi Shan. 69°23' S, 76°16' E. A hill in the Larsemann Hills. Named by the Chinese.

Gora Zhukovskogo. 70°38' S, 67°16' E. A nunatak, due W of the Amery Peaks, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Zichy-Woinarksi, Brian Casimir. More commonly known as Brian Woinarski. b. May 5, 1930. Officer-in-charge at Mawson Station in 1965.

Ziegler Point. 79°21' S, 83°00' W. A high rock point, or spur, on the SE side of the Gross Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Ernest L. Ziegler, USN, equipment operator at McMurdo during OpDF 66 (i.e., 1965-66).

Zielony Balonik Cove. 62°09' S, 58°11' W. Between Cinder Spur and Boy Point, on the Bransfield Strait, on the S side of King George Island, in the South Shetlands. Named by the Poles in 1980, after the famous literary cabaret, Zielony Balonik (i.e., "green balloon"), active in Krakow about the turn of the 20th century. Founded in 1905 by Tadeusz Boy-Zelenski (*see* **Boy Point**), it was Poland's first such cabaret, and closed in 1912.

Ziezi Peak. 62°33' S, 59°38' W. A rocky peak rising to 320 m, in the SE extremity of Breznik Heights, 400 m S of Drangov Peak, 600 m W of Kormesiy Peak, and 1.3 km E of Viskyar Ridge, and overlooking Targovishte Glacier to the W. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Dec. 15, 2006, for Ziezi, the mythical son of Shem, grandson of Noah, and out of whom came the Bulgars.

Isla Zigzag *see* **Zigzag Island**

Obryv Zigzag. 74°15' S, 67°33' E. A bluff, NW of Mount Twigg, near the head of the Lambert Glacier. Named by the Russians.

Ozero Zigzag. 70°43' S, 11°25' E. A small lake on the W side of Krokevasfjellet, in the Schirmacher Hills, on the Princess Astrid Coast of Queen Maud Land. Named by the Russians. The Norwegians translated this as Krokevatnet.

Zigzag Bluff. 85°18' S, 163°30' W. A rock bluff near the foot of the Herbert Range, overlooking the Ross Ice Shelf, about 8 km NW of the terminus of the Axel Heiberg Glacier. Amundsen was probably the first to see it, in 1911, on his way to the Pole. ByrdAE 1928-30 roughly mapped it. Visited by the Southern Party of NZGSAE 1961-62, and geologist Vic McGregor (*see* **McGregor Glacier**) of that party named it for the peculiar folding of its marble. NZ-APC and US-ACAN both accepted the name.

Zigzag Gully. 62°39' S, 61°04' W. A steep, sinuous, narrow gully, trending N-S down to South Beaches, 1.7 km S of Chester Cone, Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993. Last plotted by the UK, in late 2008.

Zigzag Island. 63°36' S, 59°52' W. A small, deeply indented island with steep cliff faces (hence the name given by UK-APC on Sept. 23, 1960; in plan, it resembles zigzags), close off the S coast of Tower Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956-57. It appears on a British chart of 1962. US-ACAN accepted the name. The Argentines call it Isla Zigzag.

Zilch Cliffs. 74°58' S, 134°55' W. A series of steep cliffs that mark the E extremity of McDonald Heights, near the coast of Marie Byrd Land. Photographed aerially by USAS 1939-41, and mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. Cdr. (later Cdr.) Charles Herbert Zilch (b. Nov. 15, 1928, Johnstown, Pa.), who entered the U.S. Navy in April 1946, was officer in charge of the meteorological support unit during OpDF 1966 (i.e., 1965-66), and retired in June 1971.

Zilva Peaks. 66°45' S, 65°23' W. Conspicuous twin peaks rising to 2100 m between the 2 arms of Drummond Glacier, near the head of that glacier, on the Loubet Coast, on the W coast of Graham Land. Roughly surveyed by Fids from Base E in 1946-47. In 1956-57 FIDASE photographed the feature from the air, and Fids from Base W conducted a ground survey. From these efforts, FIDS cartographers mapped it in 1959. Named by UK-APC on July 7, 1959, for Solomon Sylvester Zilva (1884-1956), Polish-born British biochemist of the Lister Institute of Preventive Medicine, in London (1915-46), and a pioneer in Vitamin C. He helped in the calculation of sledging rations for many British expeditions between World War I and World War II. US-ACAN accepted the name in 1964. A 1960 U.S. Hydrographic Office chart has it, in error, as Cape Bellue.

Mount Zimmerman. 73°18' S, 167°10' E. A broad mountain, rising to 1010 m, and ice-covered with the exception of steep rock cliffs that form its N face. It is bounded by the termini of Meander Glacier, Mariner Glacier, and Boyer Glacier, in the E part of the Mountaineer Range, on the Borchgrevink Coast. Named by US-ACAN in 2005, for Herman Beryl Zimmerman, geologist and oceanographer who worked for NSF in several high-level capacities from 1977 to 2005. He made 4 trips to Antarctica, on ice coring-related work. NZ-APC accepted the name on Sept. 12, 2005.

Zimmerman Island. 66°26' S, 110°27' E. A mainly ice-free island about 0.6 km SE of Werlein Island, in the Windmill Islands. Delineated from air photos taken by OpHJ 1946-47, and mapped from these photos and from photos taken during Operation Windmill, 1947-48. Named by US-ACAN in 1963, for John R. Zimmerman, meteorologist at Wilkes Station in 1958. ANCA accepted the name on Oct. 23, 1962.

Mount Zimmermann. 71°20' S, 13°20' E. A large mountain rising to 2325 m, 5.5 km N of Ritscher Peak, in the N part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Zimmermannberg, for the vice-president of the Deutsche Forschungsgemeinschaft (German Research Society). US-ACAN accepted the name Mount Zimmermann in 1966. The Norwegians call it Zimmermannfjellet.

Zimmermann Berg *see* **Mount Zimmermann**

Zimmermannberg *see* **Mount Zimmermann**

Zimmermannfjellet *see* **Mount Zimmermann**

Zimzelen Glacier. 64°27' S, 61°18' W. A glacier, 3.7 km long and 2.5 km wide, on Península Péfaur, E of Krapets Glacier and W of Blériot

Glacier, it flows northward into the E arm of Salvesen Cove, on the Danco Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Zimzelen, in southern Bulgaria.

Zinberg Glacier. 72°21' S, 96°04' W. A glacier flowing ENE into Morgan Inlet between Tierney Peninsula and the wedge-shaped promontory ending in Ryan Point, on the E side of Thurston Island. Named by US-ACAN in 2003, for Cpl. Eugene Zinberg (b. Dec. 14, 1924, Brooklyn, son of Russian-Jewish immigrants, lawyer George Zinberg and his wife Frieda. d. Feb. 1, 2004, Brooklyn), U.S. Army photographer with the Eastern Group of OpHJ 1946-47.

Zinc. Has been found in Antarctica.

Mount Zinkovich. 81°08' S, 158°21' E. A pointed peak rising to 2280 m above sea level, at the N side of the head of Silk Glacier, 6 km N of Mount Frost, in the Churchill Mountains. Mapped from USN air photos, and named by US-ACAN in 1965, for Lt. Col. Michael C. Zinkovich, USAF (b. Nov. 12, 1918, NH. d. May 30, 2002, Winter Park, Fla.), commanding officer of the 1710th Aerial Port Squadron, which furnished airlift support between NZ and Antarctica, and from McMurdo Sound inland to Eights Station, Byrd Station, and Pole Station, during OpDF 1962 (i.e., 1961-62). ANCA accepted the name on Aug. 27, 1975.

Zinsmeister Ridge. 78°27' S, 85°15' W. A high, rugged mountain ridge, 14 km long, running NE from Schoening Peak, in the Vinson Massif, in the Sentinel Range. Jagged peaks, 2000 to 3000 m above sea level, surmount this ridge, which separates Hinkley Glacier from the upper part of Dater Glacier. Named by US-ACAN in 2006, for William John Zinsmeister (b. May 6, 1943, Nogales, Ariz.), of the department of earth and atmospheric sciences at Purdue University, a USAP researcher into the paleontology (molluscan fauna) of Seymour Island between 1975 and 1995.

Zircon Point. 67°23' S, 49°06' E. A small point extending into the S part of Khmara Bay, in Enderby Land. Named by ANCA on July 26, 1983, for zircons collected from pegmatites in this area. Zircons are particularly common here.

Zircons. Are found here, especially in the Reinbolt Hills of Enderby Land.

Mount Zirzow. 83°08' S, 49°06' W. Rising to 1615 m, 6 km N of Mount Mann, at the E edge of the Lexington Table, in the Forrestal Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Cdr. Charles F. "Chuck" Zirzow (b. Dec. 19, 1922, Chicago. d. July 3, 1997, Fairfax, Va.), USN, assistant chief of staff to the commander, U.S. Naval Support Force, Antarctica, 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Zittel Cliffs. 80°40' S, 25°59' W. Rising to about 1400 m, between the heads of Cornwall Glacier and Glen Glacier, in the NW part of the Du Toit Nunataks, in the Read Mountains, in the Shackleton Range. Surveyed and mapped by BCTAE in Oct. 1957, photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for German paleontologist Karl Alfred von Zittel (1839-1904), who specialized in fossil sponges. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Ziyang Hu *see* **Lake Ferris**

Ziyun Shan *see* **Gentner Peak**

Zlatograd Rock. 62°37' S, 60°06' W. A rocky peak rising to 250 m, and forming the E extremity of Bowles Ridge, it is located 1.25 km ENE of Atanasoff Nunatak, 1.9 km SE of Sliven Peak, and 3.7 km NW of Godech Nunatak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, as Zlatogradski Kamak, for the town of Zlatograd, in the Rhodope Mountains of southern Bulgaria. The name has been translated into English.

Zlatogradski Kamak *see* **Zlatograd Rock**

Zlatolist Hill. 63°44' S, 58°47' W. An ice-covered hill rising to 956 m in the N foothills of the Detroit Plateau, 5.03 km WNW of Mount Schuyler, 7.09 km NE of the Aureole Hills, 7.2 km E of Tinsel Dome, and 19.98 km S of Ledenika Peak (which is in the Srednogorie Heights), it surmounts Russell West Glacier to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarian on Dec. 6, 2010, for the settlement of Zlatolist, in southwestern Bulgaria.

Zlidol Gate. 63°44' S, 58°38' W. A horseshoe-shaped saddle, rising to over 800 m, separating the Detroit Plateau to the W from Trakiya Heights to the E, it projects into Russell West Glacier to the N, with its S approach from Victory Glacier narrowing to 500 m. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Zlidol, in northwestern Bulgaria.

Zmood, Ian John. Known as John Zmood. b. May 3, 1945. Upper atmosphere physicist at Mawson Station in 1973. He established the auroral radar project there.

Znamenskiy Island. 70°14' S, 161°51' E. A high, nearly completely circular, ice-covered island, 4 km long, in Rennick Bay, just N of the terminus of Rennick Glacier, in Oates Land. Discovered, photographed, and charted by SovAE 1958, and named by the Russians as Ostrov Znamenskogo, for the hydrographer, K.I. Znamenskiy (1903-1941). US-ACAN accepted the translated name Znamenskiy Island in 1965, and NZ-APC followed suit.

Ostrov Znamenskogo *see* **Znamenskiy Island**

Znepole Ice Piedmont. 63°52' S, 58°33' W. An ice piedmont (it is actually a glacier, flowing southeastwards into the Prince Gustav Channel), 7.5 km wide, extending 13 km in a NW-SE direction, S of Victory Glacier, and NE of Dreatin Glacier, on Trinity Peninsula, it is bounded by Kondofrey Heights to the N and (to the W) by the narrow, rocky ridge, 5.2 km long, that features Mount Bradley. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the region of Znepole, in western Bulgaria.

Znosko Glacier. 62°06' S, 58°29' W. South of Crépin Point, between (on the N) Wegger Peak and Kapitan Peak, and (on the S) Admiralen Peak and Komandor Peak, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for geologist Jerzy Tadeusz Znosko (b. 1922).

Zodiac Landing Craft. Fast, sturdy, rubberized, inflatable, and highly versatile boats which take passengers from the cruise ships to the land. The Mark II was 14 feet long, and the Mark III was 16 feet, powered by 9 and 25 hp outboard motors.

Zoe Automatic Weather Station *see* **Megadunes A**

Zograf Peak. 62°39' S, 60°09' W. A peak with precipitous and ice-free N slopes, and rising to about 1050 m on Friesland Ridge, it is linked by a saddle to the N rib of Lyaskovets Peak, 1.6 km NNW of that peak, 3.75 km S by W of Maritsa Peak, 1.7 km SSE of Kuzman Knoll, 4.15 km E by S of the summit of Pliska Ridge, and surmounting Huron Glacier to the N, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Bulgarian monastery, St George of Zograf, on Mount Athos.

Zohn Nunataks. 74°58' S, 72°49' W. Three nunataks, the largest being Cheeks Nunatak, rising to about 1310 m, in the SW part of the Grossman Nunataks, ESE of the Lyon Nunataks, where Elsworth Land meets southern Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968, and also from U.S. Landat images from 1973-74. Named by US-ACAN for Harry L. Zohn, Jr., USGS topographic engineer, a member of the joint USGS-BAS geological party to the Orville Coast in 1977-78. UK-APC accepted the name on Feb. 15, 1988.

Zoller Glacier. 77°53' S, 162°18' E. In the Cathedral Rocks, between Emmanuel Glacier and Darkowski Glacier, it flows N into Ferrar Glacier in southern Victoria Land. Charted by BAE 1910-13. Named by US-ACAN in 1964, for Capt. John Edward Zoller, Jr. (b. Nov. 4, 1919, Illinois, but raised partly in Flint, Mich. d. May 12, 1989, Beaufort, SC), USN, United Methodist chaplain at Little America in 1957. NZ-APC accepted the name. Capt. Zoller, whose Canadian father was also a Methodist minister, later served in Vietnam.

Zolotov Island. 68°40' S, 77°52' E. Off Mule Peninsula, about 1 km S of Hawker Island, in the S part of the Vestfold Hills. First mapped by Norwegian cartographers in 1946, from air photos taken by LCE 1936-37. Re-photographed aerially during OpHJ 1946-47, and again by SovAE 1956, and by ANARE in 1957 and 1958.

Named by the Russians as Ostrov Zolotova. The name was translated by ANCA.

Ostrov Zolotova *see* **Zolotov Island**

Zonda Glacier. 69°33' S, 68°30' W. Flows WSW for 13 km between Föhn Bastion and Zonda Towers, into George VI Sound, on the W coast of the Antarctic Peninsula. The glacier was included in a Dec. 1948 survey by Fids from Base E, and in a 1971-72 BAS survey, and was photographed aerially by USN in 1966. Several features in this area were named after the world's winds, and UK-APC named this one on Dec. 8, 1977, for the zonda, the warm, dry wind descending the E slopes of the Andes. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Zonda Towers. 69°34' S, 68°18' W. A rock ridge, trending E-W for 6 km, on the S side of Zonda Glacier, between that glacier and Eureka Glacier, on the Rymill Coast, on the W side of the Antarctic Peninsula. The E section of the ridge rises to about 825 m, and is notable for 4 rock towers, hence the name given by UK-APC on Dec. 8, 1977, in association with the glacier. Photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1971-72. US-ACAN accepted the name. It appears in the 1980 British gazetteer. This was the site of the Argentine refugio known as Nogal de Soldán.

Zoraida Automatic Weather Station. 74°10' S, 162°54' E. An Italian AWS, at an elevation of 884 m, installed in Feb. 1987, due N of Mount Borgstrom, in the Eisenhower Range of Victoria Land.

Zornitsa Cove. 62°34' S, 60°51' W. A cove, 7 km wide, indenting the N coast of Livingston Island for 3.1 km between Rowe Point and Scesa Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlements of Zornitsa, in southeastern, northeastern, and southwestern Bulgaria.

Zotikov Glacier. 85°02' S, 169°15' W. A tributary glacier, 13 km long, it flows NE from Mount Fisher in the Prince Olav Mountains, and runs into Liv Glacier just E of Hardiman Peak. Named by US-ACAN in 1966, for Russian exchange glaciologist Igor A. Zotikov (d. Aug. 23, 2010, of cancer), at McMurdo in 1965.

Nunatak Zub. 70°43' S, 64°13' E. Immediately SE of Mount Brown-Cooper, at the S extremity of the Bennett Escarpment, in the Prince Charles Mountains. Named by the Russians.

Ozero Zub *see* **Zub Lake**

Zub Lake. 70°45' S, 11°44' E. About 0.8 km long, 1.5 km ESE of Tsentral'naya Hill, between Sundsvassheia and Russeskaget, in the Schirmacher Hills of Queen Maud Land. Mapped by SovAE 1961, and named by the Russians as Ozero Zub (i.e., "toothed lake"), presumably for its shape when viewed in plan. US-ACAN accepted the translated name Zub Lake in 1970. The Norwegians call it Tannvatnet (which means the same thing). The Indians call it Lake Priyadarshini.

The *Zubarevo*. Soviet sealer in at the Balleny Islands from Dec. 9, 1986, to Jan. 7, 1987, in company with the *Zacharevo*. They took 1970 crabeater seals and 172 leopard seals. Then they moved on to the coast of George V Land, from Jan. 19, 1987, to Feb. 2, 1987, where they took 2041 crabeaters and 476 leopards.

Gora Zubastaja. 67°23' S, 49°11' E. A nunatak in the Fyfe Hills, just E of Zircon Point, and S of Dingle Dome, in Enderby Land. Named by the Russians.

Gora Zubchataja. 70°30' S, 64°58' E. A peak on the Crohn Massif, W of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians. Originally plotted in 70°23' S, 64°58' E, it has since been replotted.

Shel'fovyj Lednik Zubchatyj *see* **Zubchatyy Ice Shelf**

Zubchatyy Ice Shelf. 67°13' S, 49°05' E. A small ice shelf bordering the S side of Sakellari Peninsula, in Enderby Land. Plotted by Russian cartographers from air photos taken by SovAE in early 1962. The ice front is serrated when viewed in plan, and the Russian name Shel'fovyj Lednik Zubchatyj means "toothed shelf-ice bay." ANCA translated the name on March 23, 1967, and US-ACAN accepted that translation in 1971.

Zubek Cliff. 62°03' S, 58°28' W. A sheer cliff, rising to about 300 m above sea level, in the S part of Three Musketeers Hill, within Domeyko Glacier, at Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Krzysztof Zubek, meteorologist with PolAE 1976-77 and PolAE 1977-78.

Nunataki Zub'ja. 82°28' S, 26°19' W. An isolated group of nunataks, inland from Coats Land. Named by the Russians.

Bahía Zubov *see* **Zubov Bay**

Zubov Bay. 65°42' S, 65°52' W. An indentation, 4 km wide, in the E coast of Renaud Island, between Laktionov Island and the Vize Islands, and N of Jurva Point, in the Biscoe Islands. Its coasts are cliffs of ice. Photographed aerially by FIDASE in 1956, and also by ArgAE 1956-57, and first shown accurately, but (apparently) not named, on their (i.e., the Argentines') chart of 1957. Named by UK-APC on July 7, 1959, for Nikolay Nikolayevich Zubov (1885-1960), Russian oceanographer (the first ever Russian professor of oceanography, at Moscow, in 1932), author of numerous works on sea ice in the Arctic, explorer, naval officer in the Battle of Tsushima, and commander of a torpedo boat during World War I. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Bahía Zubov, but ChilAE 1961-62 named it Bahía Marcial Mora, after the minister of foreign relations Marcial Mora Miranda who, in 1940, with President Pedro Aguirre Cerda, fixed the longitudinal limits of the Argentine Antarctic Territory at between 53°S and 90°W. It appears as such on their chart of 1962, and was the name accepted by the Chilean gazetteer of 1974.

Gora Zubova. 70°29' S, 65°26' E. A peak, 5 km SE of Mount Kirkby, in the Porthos Range of the Prince Charles Mountains. Named by the Russians for N.N. Zubov (*see* **Zubov Bay**). It is distinctly possible that this is one of the Webster Peaks (q.v.).

Zucchelli, Mario. b. July 13, 1944, Crevalcore, Bologna. After graduating in 1970, in nuclear engineering, he worked on a fast nuclear reactor in Bologna for 5 years, and in 1975 was appointed director of the prestigious Brasimone Research Center. In 1987 he became head of the Italian Atomic Energy Commission's Antarctic project, and led 15 Antarctic expeditions (for example, 1987-88, 1988-89, 1990-91, 1991-92, 1993-94-until Dec. 1993, 1994-95-until Dec. 1994, 1995-96, 1996-97, 1997-98). He left direct Antarctic research in April 2003, to become president of Italy's national program of Antarctic research, and died on Oct. 24 of that year. The Italian scientific station in Antarctica is named after him (*see* **Baia Terra Nova Station**).

Zucchelli Station *see* **Baia Terra Nova Station**

Zuckerhut *see* **Mount Zuckerhut**

Mount Zuckerhut. 71°25' S, 13°27' E. A small peak, rising to 2525 m, 3 km SE of Ritscher Peak, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. GermAE 1938-39 discovered and photographed it aerially, and Ritscher named it Zuckerhut (i.e., "sugarloaf"). US-ACAN accepted the name Mount Zuckerhut in 1970. The Norwegians call it Sukkertoppen (i.e., "the sugar peak"). The Russians call it Pik Rihtgofena.

Cabo Zufriategui *see* **O'Neal Point**

Zuhn, Arthur A. b. Oct. 31, 1911, Mount Pleasant, Iowa, son of farmer William A. Zuhn and his wife Neel (known as Neelie). Physicist on the shore party that wintered-over in 1934 at Little America during ByrdAE 1933-35. He died in Feb. 1986, in Peoria, Ill.

Zuhn Bluff. 72°17' S, 98°02' W. A steep, north-facing bluff, standing about 8 km ESE of Mount Bramhall, in the Walker Mountains of Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47, and originally plotted in 72°13' S, 98°08' W. Named by US-ACAN in 1960, as Zuhn Peak, for Arthur A. Zuhn. It was later re-plotted and re-defined.

Zuhn Peak *see* **Zuhn Bluff**

Zukriegel Island. 65°54' S, 65°48' W. A small island, 1.5 km long, E of Rabot Island, between that island and the Hennessy Islands, in the Biscoe Islands. Photographed aerially by ArgAE 1956-57, and first accurately shown, but (apparently) not named, on their chart of 1957. Named by UK-APC on July 7, 1959, for Josef Zukriegel (1889-1945), Czech geographer who specialized in sea ice studies. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

The *Zulawy*. Polish vessel in Antarctic waters in 1980-81. Skipper was Leon Skelnik.

Isla Zuloaga *see* **Isla Chaigneau**

Zumberg Nunatak *see* **Cape Zumberge**

Cape Zumberge. 76°14' S, 69°40' W. A steep rock cliff, in the form of a cape, marking the SW

end of the Orville Coast, and projecting from that coast into the W side of the Ronne Ice Shelf, just S of the Hauberg Mountains, in Ellsworth Land. This is almost certainly the rock feature reported as being 50 km N of the westernmost station occupied by Hugo Neuberg, et al, who saw it from a distance, from the NW side of Korff Island (now called Korff Ice Rise), during an IGY traverse from Ellsworth Station in Jan. 1958. They plotted it in 78°00' S, 67°50' W, and named it Zumberge Nunatak, for geologist and glaciologist James Herbert "Jim" Zumberge (b. Dec. 27, 1923, Minnesota. d. April 15, 1992, Los Angeles), president of Southern Methodist University from 1975 to 1980, and of the University of Southern California from 1980 to 1991, and also chairman of the Committee on Polar Research (later the Polar Research Board), 1972-76; president of SCAR, 1982-86. He directed research on the Ross Ice Shelf, 1957-64. It appears (erroneously) as Zumberg Nunatak, on a 1963 U.S. Hydrographic Office chart. Between 1965 and 1967, USGS, working from USN air photos, concluded that, whereas there is no feature in the coordinates given by the IGY party, this cape, which lies somewhat farther to the N, is the only rock feature lying in that direction, and so, in 1969, it was named Cape Zumberge, by US-ACAN, and with corrected coordinates, a name and situation accepted by UK-APC on Dec. 20, 1974. It appears as such on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1976 British gazetteer.

Zumberge Coast. 78°00' S, 74°00' W. That portion of the E coast of Ellsworth Land, overlooking the W part of the Ronne Ice Shelf from Cape Zumberge to the S entrance point of Hercules Inlet. Mapped by USGS from USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, in association with the cape. It was further mapped from U.S. Landsat images taken in Jan.-Feb. 1974, and from radio echo-sounding flights made by BAS personnel from Siple Station, in Marie Byrd Land, in Jan. 1975. It appears on the 1976 USGS satellite image map of the Ellsworth Mountains. UK-APC accepted the name on Nov. 13, 1985.

Zumberge Nunatak *see* **Cape Zumberge**

Zuncich Hill. 75°50' S, 142°51' E. A broad, ice-covered hill rising to 1075 m, between the heads of Siemiatkowski Glacier and El-Sayed Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Joseph L. Zuncich, USNR, LC-130F Hercules aircraft navigator in Antarctica during OpDF 1968 (i.e., 1967-68).

Punta Zúñiga *see* **Devils Point**

Zuniga Glacier. 74°34' S, 111°51' W. Flows WNW into the Dotson Ice Shelf, between Jeffrey Head and Mount Bodziony, on the W side of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from air photos taken by OpHJ 1946-47 and by USN, 1966. Named by US-ACAN for Mike Zuniga, chief aviation storekeeper, USN, who was in Antarctica 7 times between 1960 and 1978.

Zurn Peak. 75°44' S, 115°40' W. A rocky peak rising to 1515 m from the N edge of Toney Mountain, about 6 km NE of Richmond Peak, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976 for Walter Adam Zurn (b. Dec. 3, 1929, Mo.), scientific leader at Pole Station in 1972.

Punta Zurueta. 62°35' S, 59°53' W. A point on the NW coast of Half Moon Island, in the South Shetlands. Named by the Argentines. Saddleback Ridge is on this point.

Zvegor Saddle. 78°09' S, 86°00' W. At an elevation of about 2500 m above sea level, 840 m N of Eyer Peak, between that peak and Mount Press (which lies 3.66 km to the NNE), in Probuda Ridge, 5.19 km NE of Mount Anderson, 4.31 km E by N of Mount Bentley, and 6.5 km SSW of Mount Toddin the north-central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Zvegor, in northeastern Bulgaria.

Zverino Island *see* **Meade Island**

Lake Zvezda. 68°32' S, 78°27' E. A large, irregular-shaped lake, 0.8 km SE of Lake Cowan, in the E sector of the Vestfold Hills. Photographed from the air by OpHJ 1946-47, and mapped from new air photos taken by SovAE 1956 and by ANARE in 1957 and 1958. Named by the Russians as Ozero Zvezda (zvezda means "star" in Russian). ANCA translated it, and US-ACAN accepted the translated name in 1974.

Ozero Zvezda *see* **Lake Zvezda**

Ostrov Zvuchnyj *see* **Zvuchnyy Island**

Zvuchnyy Island. 68°30' S, 78°07' E. In the W part of Langnes Fjord, in the Vestfold Hills, just NW of Partizan Island. Mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37. Photographed again by OpHJ 1946-47, by SovAE 1956, and by ANARE in 1957 and 1958, and named by the Russians as Ostrov Zvuchnyj (i.e., "sonorous island"). ANCA made the translation on Nov. 27, 1973.

Zwar, Meredy Jane. She wintered-over as chef at Casey Station in 1991, at Mawson Station in 1994, and at Davis Station in 1997.

Zwiesel Berg *see* **Zwiesel Mountain**

Zwiesel Mountain. 71°43' S, 12°08' E. A large, complex, and highly dissected mountain (or rather, mountainous area), rising to 2970 m, it forms the N portion of the Pieck Range, between the Humboldt Graben in the W and the Westliche Petermann Range and the Südliche Petermann Range in the E, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Zwieselberg (i.e., "forked mountain"). US-ACAN accepted the translated name Zwiesel Mountain in 1970. The Norwegians call it Zwieselhøgda.

Zwieselberg *see* **Zwiesel Mountain**

Zwieselhøgda *see* **Zwiesel Mountain**

Zyagaimo-ike. 69°01' S, 39°36' E. One of the small lakes on East Ongul Island, at the E side of the entrance to Lützow-Holm Bay. Mapped from ground surveys and air photos taken by JARE 1957. Named for its shape by the Japanese on June 22, 1972 (the name means "potato pond").

Lednik Zybkij. 66°48' S, 89°06' E. A glacier, just to the W of Gaussberg, on the W side of Posadowsky Bay, on the coast of Wilhelm II Land. Named by the Russians.

Zykov Glacier. 70°37' S, 164°46' E. A valley glacier, about 35 km long, in the Anare Mountains, flowing NW to reach the coast of Oates Land in the area between Cape Williams on the one hand and Cooper Bluffs and Cape North on the other. Discovered and photographed by SovAE 1958, and named by them as Lednik Zykova, for trainee navigator Yevgeniy Zykov (*see* **Deaths**, 1957). US-ACAN accepted the translated name Zykov Glacier in 1964.

Zykov Island. 66°32' S, 93°01' E. A small island, about 1.5 km S of Haswell Island, between Fulmar Island and Buromskiy Island, in the Haswell Islands, off the coast of Queen Mary Land. Discovered and mapped by Mawson during AAE 1911-14, and mapped again by SovAE 1956. In 1958 they named it Ostrov Zykova, for Yevgeniy Zykov (*see* **Zykov Glacier**). ANCA accepted the translated name Zykov Island, on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Lednik Zykova *see* **Zykov Glacier**

Ostrov Zykova *see* **Zykov Island**

Zyodo-daira. 67°58' S, 44°05' E. A circular flat area surrounded by hills in the area of Cape Ryugu, on the coast of Queen Maud Land. Mapped from air photos taken by JARE in 1962 and from ground surveys conducted in 1978-79. Named by the Japanese on March 22, 1979. The name means "paradise flat."

Zyodo-ike. 67°58' S, 44°05' E. A small pond in Zyodo-daira, in the area of Cape Ryugu, on the coast of Queen Maud Land. Mapped from air photos taken by JARE in 1962 and from ground surveys conducted in 1977-78. Named by the Japanese on March 22, 1979.

Bibliography

There are other books mentioned in this encyclopedia that are not listed below. They will be found under the relevant subject heading.

Aagaard, Bjarne. *Fangst og Forskning I Sydishavet*. Oslo: Gyldendal Norsk, 1931.

Abramson, Howard S. *Hero in Disgrace: The Life of Arctic Explorer Frederick A. Cook*. New York: Paragon House, 1991. 252 pp. Maps. Plates. Notes. Bibliography. Index. As far as the North Pole goes, this book "proves" that Cook got there first.

Adams, Harry. *Beyond the Barrier with Byrd: An Authentic Story of the Byrd Exploring Expedition*. Chicago: M.A. Donahue, 1932. Illus. 16 plates. There was a 2nd edition, cheaper, no illus.

Adams, Richard, and Ronald Lockley. *Voyage Through Antarctica*. London: Allen Lane, Penguin Books, 1982. 160 pp. Photos. Illus. by Peter Hirt-Smith. The account of the two authors' 2 months as tourists on the *Lindblad Explorer*. This book was published in the U.S. by Knopf, in 1983.

Ainley, David G. *The Adélie Penguin: Bellwether of Climate Change*. New York: Columbia University Press, 2002. Illus. by Lucia de Leiris. 310 pp. Maps. Tables.

_____, Robert E. LeResche, and William J.L. Sladen. *Breeding Biology of the Adélie Penguin*. Berkeley: University of California Press, 1983. 241 pp. Photos. Illus. Many tables. Based on a 15-year study of an Adélie penguin rookery on Ross Island.

Airey, Len. *On Antarctica*. Highmount, NY: Highmount Books, 2001. 260 pp. Illus. by John Elliot.

Albert, Marvin H. *The Long White Road: Sir Ernest Shackleton's Antarctic Adventures*. New York: D. McKay, 1957.

Alberts, Fred G., editor and compiler. *Geographical Names of the Antarctic*. Washington, DC: United States Board on Geographic Names/National Science Foundation, 1980. 959 pp. Foreword. The Antarctic Geographic Name Problem. Policy Covering Antarctic Names. Article on mapping. Bibliography. Excellent list of abbreviations. The body of the book is an alphabetical listing of most of the Antarctic place names given up to 1979, complete with cross-references. The typical entry gives co-ordinates, where it is to be found, when it was discovered, charted, and mapped, and for whom it was named. An astonishing research effort.

Alexander, Caroline. *The* Endurance*—Shackleton's Legendary Antarctic Expedition*. London: Bloomsbury, 1998. 214 pp., illus. No index. This is a beautiful book, well told, with plenty of b/w pictures. Knopf of New York published it in America, in 1998.

_____. *Mrs Chippy's Last Expedition (1914–15)*. London: Bloomsbury, 1997. About Shackleton's cat on the *Endurance* expedition. Photos by Frank Hurley.

Amundsen, Roald. *Mitt Liv som Polarforsker*. Oslo: Gyldendal Norsk, 1927. Published in English by Doubleday, Page, of New York, in 1927, as *My Life as an Explorer*.

_____. *Sydpolen*. Kristiania [Oslo]: Jacob Dybwads, 1912. 2 vols. Translated into English by A.G. Chater, and published in London in 2 vols in 1912, by John Murray, as *The South Pole: An Account of the Norwegian Antarctic expedition in the Fram 1910–12*.

ANARE. The History of the ANARE Club. Melbourne, 1992. 213 pp., illus. Foreword by Phil Law.

Antarctic Bibliography. Washington, DC: Library of Congress/National Science Foundation. 13 vols. Lists all material published on Antarctica from 1962 to 1984. Later references are being compiled in *Current Antarctic Literature*, also published by the Library of Congress/NSF. For literature before 1962 there is the *Antarctic Bibliography 1951–61*, published by the Library of Congress, and *Antarctic Bibliography*, published by the U.S. Navy, listing all references prior to 1951.

Antarctic Journal of the United States. Published quarterly in March, June, Sept., and Dec., with a thick annual review issue as well (Division of Polar Programs, National Science Foundation, Washington, DC). Established in 1966 by editor K.G. Sandved as a natural successor to the *Report of the Commander, U.S. Naval Support Force, Antarctica*. It reports on U.S. activities in Antarctica, and related activities elsewhere, and on trends in the U.S. Antarctic Program (formerly USARP). Guy G. Guthridge replaced Sandved as editor from the March/April 1972 issue. It used to be bi-monthly, and much thicker than it is now, and went quarterly at the beginning of 1976. Guthridge was replaced in early 1977 by a series of editors, notably Richard P. Muldoon, and from June 1980 by Winifred Ruening.

Antarctic Magazine. A New Zealand quarterly put out by the New Zealand Antarctic Society in Christchurch. It has been called this since 1956. Before that (Aug. 1950 through the last quarter of 1955) it was the *Antarctic News Bulletin*.

The Antarctic Photographs of Herbert Ponting—Exhibition's Catalogue. A Scott Polar Research Institute publication, produced by Antarctic Treaty Consultative Meeting XXIX, 2006. 54 pp. b/w photos of Scott's BAE 1910–13. Introduction by Prof. Julian Dowdeswell, director of the Scott Polar Research Institute.

Aramayo Alzérreca, Carlos. *Historia de la Antártida*. Buenos Aires: Editorial Hemisferio, 1949. 390 pp.

Armitage, Albert B. *Cadet to Commodore*. London: Cassell, 1925. 307 pp. There are 2 chapters on Scott's expedition.

_____. *Two Years in the Antarctic*. London: Edward Arnold, 1905. 315 pp. Illus.

Armstrong, Jennifer. *Shipwreck at the Bottom of the World: The Extraordinary True Story of Shackleton and the* Endurance. New York: Crown, 1998.

_____. *Spirit of* Endurance. New York: Crown, 2000.

Armstrong, Terence. *Illustrated Glossary of Snow and Ice*. Cambridge, England: Scott Polar Research Institute, 1973.

Army Observers Report of Operation Highjump, Task Force 68, U.S. Navy. Washington, DC: War Department, 1947.

Arnold, Anthea. *Eight Men in a Crate*. UK: Bluntisham Books—Erskine Press, 2007. The story of Shackleton Base (q.v.).

Arnold, H.J.P. *Herbert Ponting: Another World*. London: Sidgwick & Jackson, 1975. 128 pp. Illus.

_____. *Photographer of the World*. London: Hutchinson, 1969. 175 pp. Illus. Biography of Herbert Ponting.

Aubert de la Rüe, Edgar. *Les Terres Australes*. Paris: Presses Universitaires de France, 1953. 126 pp. Illus.

Aurora Australis. Cape Royds, Antarctica: BAE 1907-09, 1908. 1 vol. 120 pp. 2 prefaces by Shackleton (editor-in-chief). George Marston, editor. Dedicated to the Misses Dawson-Lambton. 100 copies printed. "Published at the Winter Quarters of the British Antarctic Expedition, 1907, during the winter months of April, May, June, July 1908. Illustrated with lithographs and etchings by George Marston. Printed at the sign of 'The Penguins' by Joyce and Wild. Latitude 77°32'S, Longitude 166°

12'E. Antarctica." It has a couple of penguins as the logo. This was the expedition's magazine, similar to the *South Pole Times* of Scott's 1901-04 BNAE (which Shackleton had edited), except that *Aurora Australis* was a book, a memento of the expedition, an anthology more than anything. At first the book was to be called *Antarctic Ice Flowers*, and the intention was to sell it on return to England. But it did not sell. Day created the board covers from Venesta packing cases, smoothed these down and then bound the books. The title page has a lithograph of the aurora (not the ship, but the aurora autralis of the title), with two sailing ships on top. It contains articles such as "The Ascent of Mount Erebus," by David; "Trials of a Messman," by Priestley; "A Pony Watch," by Putty [Marston]; "Southward Bound," a poem by Lapsus Linguae [Marshall]; "An Interview with an Emperor," by Mackay; "Life Under Difficulties," by Murray [this being the life history of the rotifer (q.v.)]; "An Ancient Manuscript," by Shellback [Wild]; "Bathybia," by Mawson; 2 poems by Nemo [Shackleton]—"Erebus" and "Midwinter Night." In 1909 Heinemann, the publishers, brought out a limited edition of 300 copies of *The Antarctic Book* as a 3rd volume to the deluxe edition of Shackleton's narrative of the expedition, *Heart of the Antarctic*. Portions of *Aurora Australis* are in this. *See also* the entry Books in the main body of this encyclopedia.

Austbø, Johan. *Olav Bjåland*. Oslo: Fonna, 1945. 109 pp. Illus.

Austin, Oliver Luther, Jr., editor. *Antarctic Bird Studies*. Washington, DC: American Geophysical Union of the National Academy of Sciences, 1968. 262 pp.

_____. *Shackleton of the Antarctic*. Tallahassee: Eothen Press, 2002.

Baum, Allyn. *Antarctica: The Worst Place in the World*. New York: Macmillan, 1966. 151 pp. Photos. Index.

Beaglehole, J.C., editor. *The Journals of Captain Cook*. Cambridge, England: Hakluyt Society, 1955.

Béchervaise, John M. *Arctic and Antarctic: The Will and the Way*. Huntingdon, England: Bluntisham Books, 1995. Biography of John Rymill.

_____. *Blizzard and Fire: A Year at Mawson, Antarctica*. Sydney: Angus & Robertson, 1963. 252 pp. Illus. Maps.

Begbie, Harold. *Shackleton: A Memory*. London: Mills & Boon, 1922.

Behrendt, John C. *Innocents on the Ice: A Memoir of Antarctic Exploration, 1957*. Boulder: University Press of Colorado, 1998.

_____. *The Ninth Circle: A Memoir of Life and Death in Antarctica, 1960–62*. Albuquerque: University of New Mexico Press, 2005.

Belanger, Dian Olson. *Deep Freeze*. Boulder: University Press of Colorado, 2006. 494 pp. Index. Illus. A terrific read about the early years of Operation Deep Freeze.

Bennet, G. *Beyond Endurance*. London: Secker & Warburg, 1983.

Bernacchi, Louis C. *Saga of the* Discovery. London and Glasgow: Blackie and Son, 1938. 240 pp. Illus.

_____. *To the South Polar Regions*. London: Hurst & Blackett, 1901. 348 pp. Illus., with photos taken by the author.

_____. *A Very Gallant Gentleman*. London: Thornton & Butterworth, 1933. 240 pp. Illus. Maps. This was the first biography of Capt. Oates.

Bertram, Colin. *Arctic and Antarctic: The Technique of Polar Travel*. Cambridge, England: W. Heffer, 1939.

Bertrand, Kenneth J. *Americans in Antarctica 1775–1948*. New York: American Geographical Society (Special Publication #39), 1971. 554 pp. Plates. Terrific maps. Extensive notes. Bibliography. Index. Fine introduction by the author, and superb chapters on the early American sealers in the South Shetlands, including Nat Palmer. There is a 38-page chapter on USEE 1838-42, 50 pages on ByrdAE 1933-35, and 75 pages on USAS 1939-41, one of the most detailed accounts of this expedition ever written. A masterpiece of research and easy reading.

Bickel, Lennard. *Shackleton's Forgotten Argonauts*. Melbourne: Macmillan, 1982.

_____. *Shackleton's Forgotten Men: The Untold Tragedy of the* Endurance *Epic*. New York: Thunder's Mouth Press, 2001. Foreword by Shackleton's son. 241 pp. Illus. No index. No bibliography. Actually, despite the book's subtitle, the story of the Ross Sea Party has been told many times before.

_____. *This Accursed Land*. Melbourne: Macmillan, 1977. 210 pp. Published in the U.S. by Stein & Day, New York, in 1977, as *Mawson's Will*.

Billing, G., and Guy Mannering. *South: Man and Nature in Antarctica*. London: Hodder & Stoughton, 1964. 207 pp. Text by Billing, illus. by Mannering.

Bixby, William. *The Impossible Journey of Sir Ernest Shackleton*. Boston: Little, Brown, 1960. Children's book. No index. No bibliography. It details the *Endurance* expedition (BITE 1914-17).

Boletín del Instituto Antártico. Argentine periodical since May 1957. Published intermittently.

Bonner, W.N., and D.W.H. Walton, editors. *Antarctica*. Oxford: Pergamon Press, 1985. Part of the "Key Environment" series.

_____, and R.I. Lewis-Smith. *Conservation Areas in the Antarctic*. Cambridge, England: SCAR/Scott Polar Research Institute, 1985. 299 pp.

Borchgrevink, Carsten E. *First on the Antarctic Continent*. London: Newnes, 1900. 333 pp. Illus. Maps. The story of BAE 1898-1900, with Borchgrevink staking his claim.

_____. *Naermest Sydpolen Aaret 1900*. Copenhagen: Gyldendalske Boghandel, 1905. This entertaining book was also published in Kristiania [Oslo], Norway, in 1905, by Nordisk Forlag. 562 pp. Illus. Maps.

Bowden, Tim. *The Silence Calling: Australians in Antarctica 1947–97*. Sydney: Allen & Unwin, 1997. 593 pp. Index. Illus. Foreword by Phil Law. Quite an astonishing book, the only criticism one hears is that it is weak on the men themselves (but this criticism seems to come from the men themselves). It is very, very good on the early days of ANARE, George Dixon and all that, but (and this is, perhaps a criticism of something that was unavoidable) gets a bit bogged down when dealing with the administrative side of ANARE. There are some appendices, by far the best and most useful being a list of all ANARE winterers. It is a book I value greatly, because John Lavett gave me a copy of it.

Bowman, Gerald. *Men of Antarctica*. New York: Fleet, 1958. 191 pp. Illus.

Brent, P. *Captain Scott and the Antarctic Tragedy*. New York: Saturday Review Press, 1974. 223 pp.

Brewster, Barney. *Antarctica: Wilderness at Risk*. Melbourne: Sun Books, 1980.

Brosse, Jacques. *Great Voyages of Discovery—Circumnavigators and Scientists, 1764–1843*. Paris: Bordas, 1983. Translated into English by Stanley Hockman and published in the U.S. by Facts on File Publications, New York, in 1983. 232 pp. A big coffee-table book with plenty of illustrations. Index. Bibliography (not exhaustive, by any means, and mostly French books). Two appendices, one biographical and one geographical. There is not much in the book relating to Antarctica, of course (given the date constraints), but there are 3 good chapters on Captain Cook, and a particularly interesting one on Cook's 2nd voyage, 1772-75. Also a one-page article on von Bellingshausen, and

two featuring Dumont d'Urville's pre–Antarctic career. The last section deals exclusively with Antarctica, et les grands voyages de Dumont d'Urville, Wilkes, et Ross.

Brown, Michael. *Shackleton's Epic Voyage*. New York: Coward-McCann, 1969.

Brown, R.N. Rudmose. *A Naturalist at the Poles: The Life, Work and Voyages of Dr. W.S. Bruce, the Polar Explorer*. London: Seeley, Service, 1923. 316 pp. 38 illus. 3 maps. 5 chapters by W. Burn Murdoch.

_____, J.H. Harvey Pirie, and Robert C. Mossman. *The Voyage of the* Scotia. Edinburgh: W. Blackwood, 1906. 375 pp. Maps. These 3 gentlemen were on the expedition.

Bruce, William S. *Polar Exploration*. London: Williams & Norgate, 1911. 286 pp. Illus.

Bryant, Herwil M. *Antarctic Journal*. 1939–41. Unpublished. 179 pp. Illus. This is a gem, full of fascinating insight into USAS 1939-41. Courtesy of Mr. Bryant's son, Steve Bryant.

Bull, Henryk J. *The Cruise of the* Antarctic *in the South Polar Regions*. London: Edward Arnold, 1896. 243 pp. Illus by W. Burn Murdoch.

Burke, D. *Moments of Terror—The Story of Antarctic Aviation*. Sydney: New South Wales University Press, 1994.

Burns, Robin. *Just Tell Them I Survived*. Crows Nest, N.S.W.: Allen & Unwin, 2001. Foreword by Louise Crossley. Written by a woman who has been there, about women in Antarctica.

Burrows, Polly. *The Great Ice Ship* Bear*: Eighty-nine Years in Polar Seas*. New York: Van Nostrand Reinhold, 1970. 104 pp. Illus.

Bursey, Lt. Cdr. Jack. *Antarctic Night: One Man's Story of 28,224 Hours at the Bottom of the World*. New York: Rand McNally, 1957; London: Longmans, Green, 1958. 256 pp. 10 b/w photos and 1 map.

Burton, Robert, and Stephen Venables. *Shackleton at South Georgia*. England: Robert Burton, 2001. A booklet, privately printed.

Butson, A.R.C. *Young Men in the Antarctic. A Doctor's Illustrated Diary (1946–1948)*. Ontario: The Battered Silicon Dispatch Box, 2010. 340 pp. Illus. Maps. This is an astonishingly detailed diary of Dr. Dick Butson's life at Base E in 1947, and consequently invaluable to the researcher. This is not a politically correct book, and will not only delight, but will also shock and offend. Dr. Butson's observations about people can be quite cruel, but he is remarkably honest. The pictures are great, and plentiful.

Byrd, Richard E. *Alone*. New York: G.P Putnam's Sons, 1938. Decorations by Richard E. Harrison. Printed in blue lettering. Dedicated by Byrd to his wife, M.A.B. (Marie Ames Byrd). Preface by Byrd. 12 chapters. 296 pp. An honest account (so it seems) by an honest guy (so it seems) of his time alone at Bolling Advance Weather Station in 80° 08° S, in 1934. Told in a crisp, humorous, interesting way. Useful research material for small details.

_____. *Discovery*. New York: G.P. Putnam's Sons, 1935. This is *the* book on ByrdAE 1933-35. 405 pp.

_____. *Exploring with Byrd*. New York: G.P. Putnam's Sons, 1937. 241 pp. Illus.

_____. *Little America*. New York: G. P. Putnam's Sons, 1930. 422 pp. Good index. Foreword by Byrd. 4 maps, including a very useful one of Little America and the Bay of Whales, as those features were in 1928-30. Appendix of all personnel on the expedition, including those not on the shore party. This is *the* book on ByrdAE 1928-30.

Caine, Hall. *The Woman Thou Gavest Me*. London: Heinemann, 1913. Novel. 600 pp. 116 chapters. The character of Martin Conrad is based on Shackleton (and a bit of Scott, too).

Calvert, Patricia. *Sir Ernest Shackleton: By Endurance We Conquer*. New York: Benchmark Books, 2003.

Cameron, Ian. *Antarctica: The Last Continent*. Boston: Little, Brown, 1974. 256 pp. Index. Bibliography (which, incidentally, does not list Bertrand's masterpiece). Illus. Maps mostly done by Tom Stalker-Miller. No foreword. The incomplete and inaccurate "Principal Expeditions" appendix ends, mysteriously, at 1958. Incidentally, the author is really the very successful Donald Gordon Payne (b. 1924, London), who preferred pseudonyms, but who did write the book *Walkabout*, later filmed in Australia. Mr. Payne is himself a suitable candidate for a biography.

Campbell, L.B., and G. Claridge. *Antarctica: Soils, Weathering Processes and Environments*. Amsterdam: Elsevier, 1987. 386 pp. Illus.

Campbell, Lord George. *Log letters from the* Challenger. London: Macmillan, 1876. 448 pp.

Canepa, Luis. *Historia Antártida Argentina: Nuestros Derechos*. Buenos Aires: Imprenta Linari. 1948. 100 pp.

Caras, Roger A. *Antarctica, Land of Frozen Time*. Philadelphia: Chilton Books, 1962. 210 pp. Good map insert. Special charts by A. Peter Ianuzzi. Index. Brief bibliography (not much good). Very detailed appendix on the Antarctic Treaty, and an interesting one on philately, as well as others. Photos and illus. There is a good table on IGY stations, but be wary of the one on expeditions. It is too rushed to be of much value, and is badly edited. By and large though, it is a good book to start off with, and the author has a nice, committed style of writing.

Carrington, Hugh. *Life of Captain Cook*. London: Sidgwick & Jackson, 1939. 324 pp. Maps.

Carter, Paul A. *Little America: Town at the End of the World*. New York: Columbia University Press, 1979.

Chapman, Walker, editor. *Antarctic Conquest: The Great Explorers in Their Own Words*. Indianapolis: Bobbs-Merrill, 1965. Selected and introduced by Walker Chapman. 365 pp. Illus. Index. Part I deals with Terra Australis Incognita, 1506–1777; Part II with the whaling and sealing era, 1821–1839; Part III is called Toward the Magnetic Pole, 1841–1874; Part IV is The Heroic Age, 1896–1920; Part V is The Age of Mechanized Exploration, 1930 to the present (the present, of course, being 1965). There is some interesting material, especially in Part I. Although the idea was good, this book is unsatisfying, with no real focus. Walker Chapman was really a man of many aliases, the remarkable Robert Silverberg (b. 1935, New York).

_____. *The Loneliest Continent*. Greenwich, CT: New York Graphic Society, 1964. 279 pp. Illus.

Charcot, Jean-Baptiste. *Autour du Pôle Sud*. Paris: Ernest Flammarion, 1912. Illus. 2 vols.

_____. *Le* Français *au Pôle Sud*. Paris: Ernest Flammarion, 1906. 486 pp. Illus. This book was translated into English by A.W. Billinghurst, and published by Bluntisham Books, of Huntingdon, England, in 2004, as *Towards the South Pole Aboard the* Français, with an introduction by Maurice Raraty.

_____. *The Voyage of the* Why Not? *in the Antarctic*. London: Hodder & Stoughton, 1911. A bizarre title, in that they translated the name of the *Pourquoi Pas?* as well.

Chaturvedi, Sanjay. *The Polar Regions*. Cambridge, England: Scott Polar Research Institute, 1996. Examination of geopolitics in Arctic and Antarctic regions.

Cherry-Garrard, Apsley. *The Worst Journey in the World*. London: Constable, 1922. 2 vols. One of the classics of exploration, it was re-published in 2003 by Pimlico, of London.

Chester, Sharon. *Antarctic Birds and Seals: a Pocket Guide*. San Mateo, CA: Wandering Albatross, 1993.

Child, Jack. *Geopolitics and Conflict in South America: Quarrels Among Neighbors*. New York: Praeger, 1985. 196 pp.

Chipman, Elizabeth. *Women on the Ice: A History of Women in the Far South*. Melbourne: Melbourne University Press, 1986.

Christensen, Lars. *Such Is the Antarctic*. London: Hodder & Stoughton, 1935. 265 pp.

Christie, E.W. Hunter. *The Antarctic Problem*. London: Allen & Unwin, 1951. 336 pp.

C.I.A. Polar Regions Atlas. Washington, DC: Central Intelligence Agency, 1978. 66 pp. Maps, color illus., and diagrams. Large format book with some interesting appendices. Half the book, of course, is about the Arctic.

Clark, Joseph G. *Lights and Shadows of Sailor Life, as Exemplified in 15 years Experience, Including the More Thrilling Events of the U.S. Exploring Expedition, and Reminiscences of an Eventful Life on the "Mountain Wave."* Boston: B.B. Mussey, 1848. 324 pp. Well, the title more than says it all.

Clarke, Peter. *On the Ice*. Boston: Burdette, 1966. 104 pp. Index. Glossary.

Coleman-Cook, John. Discovery II *in the Antarctic: The Story of British Research in the Southern Seas*. London: Oldhams, 1963. 255 pp. Illus.

Colvocoresses, George. *Four Years in a Government Exploring Expedition*. New York: Cornish, Lamport, 1852. 371 pp. Tells of the USEE 1838-42.

Composite Gazetteer of Antarctica. SCAR. At the 22nd SCAR meeting, it was decided that Italy would be responsible for gathering together all the world's existing and ongoing Antarctic gazetteers, and that they (Italy) would collate, assemble, and produce a constantly updated database of all Antarctic features, under the editorship of Alessandro Salladini. A truly extraordinary (but highly flawed) effort, without which major parts of this book could never have been compiled so thoroughly. In 2009 the task was handed over to the Australians.

Cook, Frederick A. *Through the First Antarctic Night 1898–1899: A Narrative of the Voyage of the* Belgica *Among Newly Discovered Lands and Over an Unknown Sea About the South Pole*. New York: Doubleday & McClure, 1900. Reprinted in 1980 by C. Hurst & Co., in Canada, with 478 pp., the original introduction by Frederick A. Cook, M.D., and a new introduction by Gaston de Gerlache, son of Adrien de Gerlache, leader of BelgAE 1897-99, the expedition Cook was writing about. Illus.

Cool Antarctica. Web page. Outstanding pioneer research, they have made numerous breakthroughs, for example they were surely the first to get all the crew of Shirase's 1910-12 expedition. Much, much more.

Craddock, Campbell, editor. *Antarctic Geoscience*.

Madison: University of Wisconsin Press, 1982. 1216 pp.

Crane, David. *Scott of the Antarctic—A Life of Courage and Tragedy in the Extreme South*. London: HarperCollins, 2005.

Crawford, Janet. *The First Antarctic Winter*. Christchurch, N.Z.: South Latitude Research, 1998. The story of Borchgrevink's BAE 1898-1900, as told by Louis Bernacchi's granddaughter, this is only the third account of this expedition (see this Bibliography under Borchgrevink and Bernacchi).

Crossley, Louise. *Explore Antarctica*. Melbourne: Australian Antarctic Foundation, 1995; New York: Cambridge University Press, 1995.

Daigle, Joseph Austin, and Corinne LaRocca Kavaya. *Little America III*. Anaheim, CA: privately printed, 1988. A nice little book, 90 pp, by one of the crew of the *Bear* during USAS 1939-41. Illus.

Darlington, Jennie, and Jane McIlvaine. *My Antarctic Honeymoon*. New York: Doubleday, 1956. 284 pp. Illus. by Peter Spier.

David, M. Edgeworth. *Professor David: The Life of Sir Edgeworth David*. London: Edward Arnold, 1937. 320 pp. Illus.

Environmental Data Inventory for the Antarctic Area. 1984. 53 pp. Book of charts, maps, and data, put together by NESDIS (National Environmental Satellite, Data and Information Service) of the NOAA (National Oceanic and Atmospheric Administration), and is composed of 4 sections: geophysical, meteorological, oceanographic, and glaciological. It was available from the National Oceanographic Data Center, NOAA/NESDIS, E/OC21, Washington, DC 20235. The data were international, and the book told where you could find the data that it inventoried.

Evans, E.R.G.R. *British Polar Explorers*. London: Collins, 1943.

_____. *Zum sechsten Erdteil*. Berlin: Ullstein, 1923. 410 pp.

Fisher, Margery Turner, and James Fisher. *Shackleton and the Antarctic*. London: James Barrie Books, 1957. Reprinted in the U.S. in 1958 by Houghton Mifflin, Boston. Illus. with photos, and with drawings by W.E. How, who served with BITE 1914-17 (under Shackleton). Bibliography. Index. The U.S. version has 559 pp. There is a Shackleton chronology and a set of notes referring to the text. There is also an appendix about the scientific results of Shackleton's expeditions, and another on Shackleton's writings. There is also a useful appendix on Shackleton's men.

Frazier, Paul W. *Antarctic Assault*. New York: Dodd, Mead, 1958. 237 pp. Illus.

Freeman, Andrew A. *The Case for Dr. Cook*. New York: Coward-McCann, 1961. 315 pp. Illus.

Hayter, Adrian. *The Year of the Quiet Sun: One Year at Scott Base*. London: Hodder & Stoughton, 1968. 1919 pp.

Heacox, Kim. *Shackleton: The Antarctic Challenge*. Washington, DC: National Geographic Society, 1999.

Headland, Robert K., compiler. *Chronological List of Antarctic Expeditions and Related Historical Events*. Cambridge, England: Cambridge University Press, 1989 and 1990. 730 pp. Bibliography. Maps. Graphs. Photos. Index. This handbook from the Scott Polar Research Institute is a major expansion of the work done by Brian Roberts (see below). There are about 3,300 entries, showing events, names, and sources; also present are a brief history and summary of the Antarctic Treaty. Bob Headland began compiling a revised 2nd edition, with his usual thorough and informative entries updated from where he had left off (1988–89), but, sadly, was only able to update it to the 1999-2000 season. After a delay of many years, the new edition was finally printed in 2009, by London antiquarian bookseller Bernard Quaritch, and sold for $200. The trouble is, this new edition purports to be an update to 2009, but that's not what it is. It updates only to the year 2000. Someone (obviously not Headland) has tacked on the last 10 years' worth of expeditions to 2009 in the most woefully inadequate way, simply a cut-and-paste job hoping for the best (and not getting it)—not a fitting tribute to Mr. Headland.

_____. *The Island of South Georgia*. Cambridge, England: Cambridge University Press, 1985. 250 pp. Illus.

Henderson, Daniel. *The Hidden Coasts: A Biography of Admiral Charles Wilkes*. New York: W.M. Sloane, 1953. 306 pp.

Henriksen, Bredo. *Polarfareren Hjalmar Johansen og Skien*. Skien: Eget, 1961. 131 pp. Illus.

Herbert, Wally. *A World of Men*. London: Eyre & Spottiswoode, 1969. 232 pp.

Hillary, Sir Edmund. *No Latitude for Error*. London: Hodder & Stoughton, 1961. 255 pp. Illus. The story of BCTAE 1955-58.

Hince, Bernadette. *The Antarctic Dictionary: A Complete Guide to Antarctic English*. Victoria, Australia: CSIRO, 2000. 408 pp. Foreword by Sir Ranulph Fiennes. One of the most unusual and well-researched books to come onto the Antarctic market in recent years, and, as such, quite fascinating.

Hobbs, W.H. *Explorers of the Antarctic*. New York: Field, 1941. 334 pp.

Hoflehner, Josef, and Katharina Hoflehner. *Frozen History—The Legacy of Scott and Shackleton*. Christchurch, N.Z.: Hedgehog House, 2004. Story of the pioneer's bases and huts.

Hooker, Joseph Dalton. *The Botany of the Antarctic Voyage of H.M. Discovery Ships* Erebus *and* Terror *in 1839–1843*. London: Reeve, 1844–60.

Hooper, Meredith. *The* Endurance*: Shackleton's Perilous Expedition in Antarctica*. New York: Abbeville Kids, 2001.

Howgego, Raymond John. *Encyclopedia of Exploration, 1850–1940*. Potts Point, N.S.W.: Hordern House, 2006. Indexes. Not illus. Worldwide explorers.

Hoyt, Edwin P. *The Last Explorer*. New York: John Day, 1968. 380 pp. Illus. About Byrd.

Huntford, Roland. *Scott and Amundsen*. London: Hodder & Stoughton, 1979. Published in the U.S. as *The Last Place on Earth*, by G.P. Putnam's Sons, NY in 1980. 665 pp. 35 chapters. Extensive notations and bibliography (many Norwegian books listed). Good index. Maps. Excellent photos. First rate research by a talented and entertaining author. The first real chapter is a sketchy account of Antarctic exploration to the end of the 19th century. The next three describe the early life of Amundsen. Chapter 6 describes BelgAE 1898-1900. Chapter 14 describes the *Fram*. Chapters 9–13 tell of Scott and BNAE 1901-04. The second half of the book tells of the race to the Pole between the two men in 1911. The book is brisk, tense, you can't put it down. It reads like a novel. The author is so scathingly anti–Scott that one has to ask why.

_____. *Shackleton*. London: Macmillan, 1986. 452 pp. Illus.

_____, and Gary Fisketjon, editors. *The Amundsen Photographs*. New York: Atlantic Monthly Press, 1987. 224 pp. Illus.

Hurley, Frank. *Argonauts in the South*. New York and London: G.P. Putnam's Sons, 1925. 290 pp.

_____. *Shackleton's Argonauts: A Saga of the Antarctic Ice-Packs*. Sydney: Angus & Robertson, 1948.

_____. *South with* Endurance*: Shackleton's Antarctic Expedition, 1914-1917: Photographs of Frank Hurley*. London: Bloomsbury, 2001, and Simon & Schuster published the same year in New York. Bloomsbury published a paperback in 2004.

Hussey, Leonard Duncan Albert. *South with Shackleton*. London: Sampson Low, 1949. 182 pp.

Marret, Mario. *Antarctic Venture*. London: William Kimber, 1955. 218 pp. Originally published in French as *Sept hommes chez les pingouins*, by R. Julliard, in 1954.

Marston, George Edward, and James Murray. *Antarctic Days*. London: Melrose, 1913. Illus. Introduction by Shackleton.

Marvin, Ursula B., and Brian Mason, editors. *The Catalogue of Meteorites from Victoria Land, Antarctica, 1978–1979*. Washington, DC: Smithsonian Institution, 1980.

Mason, A.E.W. *The Turnstile*. New York: Scribner's, 1912. A novel, a silly one, really (unlike some of Mason's). One of the leading characters is Capt. Harry Rames, who goes to Antarctica for 3 years. This is quite undoubtedly based on Scott and BNAE 1901-04. The ship is the *Perhaps* (based on the *Discovery*). Capt. Hemming, based on Shackleton, is introduced in Chapter 28. Chapter 32 gives a summarized and accurate picture of Antarctic history up to the time of Rames. Edward VII Land is called Rexland.

Mason, Theodore K. *The South Pole Ponies*. New York: Dodd, Mead, 1979. 202 pp. Introduction by Sir Peter Scott.

_____. *Two Against the Ice—Amundsen and Ellsworth*. New York: Dodd, Mead, 1982. 192 pp. Illus. Maps. Bibliography. Index.

Mateev, A.K. *Coal Deposits Abroad: America, Antarctica*. Moscow: Nedra, 1974. 234 pp. In Russian. Tremendously exciting book.

Mawson, Douglas. *The Home of the Blizzard: Being the Story of the Australasian Antarctic Expedition 1911-14*. London: Heinemann, 1915. 2 vols.

Mawson, Paquita. *Mawson of the Antarctic*. London: Longman's, 1964. 240 pp. Illus. Foreword by Prince Philip.

Maxwell, W.B. *Spinster of This Parish*. London: Thornton Butterworth, 1922. This is a novel with Antarctic involvement.

May, John. *The Greenpeace Book of Antarctica*. London: Dorling Kindersley, 1988. 192 pp. Illus.

McCormick, Robert. *Voyages of Discovery in the Arctic and Antarctic Seas*. London: Sampson Low, Marston, Seals & Rivington, 1884. 2 vols. Illus.

McElrea, Richard, and David Harrowfield. *Polar Castaways*. Christchurch, N.Z.: Canterbury University Press, 2004. The story of the Ross Sea Party during BITE 1914-17. This is *the* book on the subject.

McGonigal, David, and Dr. Lynn Woodworth. *Antarctica and the Arctic: The Complete Encyclopedia*. Willowdale, Ontario: Firefly Books, 2001. 608 pp. Index. Illus. Foreword by Sir Edmund Hillary. Despite the ill-advised sub-title, this is a beautiful book, and extraordinarily well done.

McGuinness, Charles John. *Nomad*. London: Methuen, 1934. 289 pp., plus front matter. 11 illus.

McPherson, John G. *Footprints on a Frozen Continent*. Sydney: Hicks Smith, 1975. 151 pp.

McWhinnie, Mary Alice, editor. *Polar Research to the Present and the Future*. Boulder, CO: Westview Press, 1978.

Mear, Roger, and Robert Swan. *In the Footsteps of Scott*. London: Jonathan Cape, 1987. 306 pp. Illus.

Mellor, M., editor. *Antarctic Snow and Ice Studies*. Washington, DC: American Geophysical Union, 1964. 277 pp. Illus.

Olsen, Magnus L. *Saga of the White Horizon*. Lymington: Nautical, 1972. 199 pp. Illus. About Ellsworth.

Ommanney, F.D. *South Latitude*. London: Longmans, Green, 1938. 308 pp. Illus.

Operation Deep Freeze I—Task Force 43. Paoli, PA: Dorville, 1956. Compliments of the Ingalls Shipbuilding Corporation. 202 pp. Black and white and color. Heavily pictorial. Brief index. Stacked full of valuable information and rare photos, it is nonetheless not as well developed as the later annuals (see below). This is the story of Task Force 43, First Phase, 1955-56. Narrative by Joseph E. Oglesby, JOC, USN. Layout and art by Catherine M. Marriott. Under the supervision of Cdr. Robin M. Hartmann, USN, Task Force information officer. This was the official record of the first of the Operation Deep Freeze missions, and the first of many such annuals, e.g. *Operation Deep Freeze III*, printed in 1958, by the same corporation. In 1961 was published *Operation Deep Freeze 61–Task Force 43*, printed by the Cruise Book Firm, Burdette & Co., 120-130 Tudor Street, South Boston, Mass. 226 pages were packed with color and black and white photos. Editor was Lt. Cdr. James S. Hahn; associate editor was Lt. (jg) Steve Schmidt. It had a roster of personnel on Deep Freeze 61, including Ensign Dick Page, who loaned me this book almost 30 years later, in time for the 1st edition of *Antarctica: An Encyclopedia*. An invaluable record.

Orrego Vicuña, Francisco. *Antarctic Bibliography*. Santiago: Institute of International Studies, University of Chile, 1987. Deals mostly with legal, political, and mineral aspects.

_____. *Antarctic Mineral Exploitation: The Emerging Legal Framework*. Cambridge, England: Cambridge University Press, 1988. 450 pp. Illus.

Orvig, S., editor. *Climates of the Polar Regions*. Amsterdam: Elsevier, 1970.

Oulié, Marthe. *Charcot of the Antarctic*. London: John Murray, 1938. 235 pp. Illus. *See also* Emmanuel, Marthe.

Owen, Russell. *The Antarctic Ocean*. London: McGraw-Hill, 1941. 254 pp. Maps.

Palmer, James T. *Antarctic Mariner's Song*. New York: Van Nostrand, 1868. 92 pp. Illus.

_____. *Thulia: A Tale of the Antarctic*. New York: Samuel Colman, 1843. 72 pp. Illus.

Parfit, Michael. *South Light: A Journey to the Last Continent*. New York: Macmillan, 1986. 320 pp.

Parker, Bruce C. *Environmental Impact in Antarctica*. Blacksburg: Virginia Polytechnic, 1978. 390 pp. Illus.

Parsons, Anthony, editor. *Antarctica: The Next Decade*. Cambridge, England: Cambridge University Press, 1987. 164 pp. Illus.

Paterson, W.S.B. *The Physics of Glaciers*. Oxford: Pergamon Press, 1969. 250 pp. Illus.

Pawson, Ken. *Antarctica*. Manitoba: Whippoorwill Press, 2001. A terrifically well written book by one of the Fids. There won't be a dry eye at the end of the book.

Pearce, Cliff. *The Silent Sound: The Story of Two Years in Antarctica and the First Winter Occupation of Alexander Island*. Sussex: The Book Guild, 2004. The title refers to the George VI Sound. Index. Bibliography. Maps. Illus.

Poesch, Jessie. *Titian Ramsay Peale 1799–1885 and His Journal of the Wilkes Expedition*. Philadelphia: American Philosophical Society, 1961. 214 pp. Illus. Endpapers. Index. This is Vol. 52 of the memoirs of the APS. There is a reference section at the back of the book, but little pertains to Antarctica, and that includes the bibliography. The first part (120 pp.) is a detailed biography of the naturalist. The next 82 pp. are his diaries of the USEE 1838-42, presented for the first time in their entirety. Only Chapters 7, 8, and 9 relate to the Wilkes Expedition, and there is not much on Antarctica, but what there is is dynamic. The book is altogether of a quaint interest.

Il Polo. 1946–. Semi-annual Italian periodical.

Ponting, Herbert G. *The Great White South*. London: Duckworth, 1921. 305 pp.

_____. *With Scott to the Pole*. London: Bloomsbury, 2004. Ponting's photos of BAE 1910-13. Foreword by Sir Ranulph Fiennes.

Pool, Beekman H. *Polar Extremes: The World of Lincoln Ellsworth*. Fairbanks: University of Alaska Press, 2002. Illus.

Porter, Eliot. *Antarctica*. London: Hutchinson, 1978. 168 pp. Illus.

Potter, N. *Natural Resource Materials of the Antarctic*. New York: American Geographical Society, 1969.

Poulsom, Lt. Col. Neville W., in collaboration with Rear Admiral J.A.L. Myres. *British Polar Exploration and Research: A Historical and Medallic Record with Biographies, 1818–1999*. London: Savannah Publications, 2000. 729 pp. Illus. Bibliography. This book was developed from *The White Ribbon* (1968). The first half of this remarkable book is about the winners of the Arctic medal, and the second half is about the winners of the Polar Medal, most of them Antarcticans. This second half is really an A—Z collection of names, with minute biographies. The author has a very authoritative style, which is enjoyable to contemplate but a little alarming when his information is wrong.

Poulter, Thomas C. *Meteor Observations in the Antarctic Byrd Expedition II, 1933–35*. Menlo Park, CA: Stanford Research Institute, 1955. 2 vols.

Powell, George. *Notes on South Shetland*. London: R.H. Laurie, 1822. 15 pp.

Priestley, Raymond E. *Antarctic Adventure, Scott's Northern Party*. London: Fisher, Unwin, 1914. 382 pp. Illus.

_____, Adie, R.J., and Gordon de Q. Robin, editors. *Antarctic Research*. London: Butterworth's, 1964. 360 pp. Foreword by Prince Philip.

Provisional Gazetteer of the Ross Dependency. Wellington: New Zealand Geographical Board, 1958. This had 4 supplements—1960, 1963, 1963 (again), and 1965.

Pyne, Stephen J. *The Ice: A Journey to Antarctica*. Iowa City: University of Iowa Press, 1986. 428 pp. Illus.

Quam, L.O., editor. *Research in the Antarctic*. Washington, DC: American Association for the Advancement of Science, 1971.

Quartermain, L.B. *New Zealand and the Antarctic*. New Zealand Government, 1971. 268 pp. Illus, Index. Appendixes, Maps. For the early chapters, he is not to be trusted for detailed information. When it comes to the BCTAE and later N.Z. involvement, he knows what he's talking about it, and it's reasonably authoritative, but prone to lack of editing. One major drawback, shared by many British books, is that the men only get their initials given, i.e., last name but no first name. This damages a book, casting, as

it does, the characters as shadows, rather than as real human beings.

_____. *South from New Zealand*. New Zealand Government, 1964. 78 pp.

_____. *South to the Pole*. London: Oxford University Press, 1967. 481 pp.

_____. *Two Huts in the Antarctic*. New Zealand Government, 1963. 85 pp. Illus.

Quigg, Philip W. *A Pole Apart: The Emerging Issues of Antarctica*. New York: New Press, 1982. 299 pp.

Rainaud, Armand. *Le continent australe*. Paris: Armand Colin, 1893. 490 pp.

Raling, Christopher, editor. *Shackleton*. London: BBC, 1983.

Ralston, K. *A Man for Antarctica: The Early Life of Phillip G. Law*. Melbourne: Hyland House, 1993.

Ravich, Mikhail, and D.S. Solovyev. *Geology and Petrology of the Mountains of Central Queen Maud Land, East Antarctica*. USSR: 1966. 438 pp. The English translation was done by the U.S. Department of Commerce in 1969.

Readers' Digest. *Antarctica: Great Stories from the Frozen Continent*. Sydney: Reader's Digest Services, 1985. 319 pp. Maps. Bibliography. Index. There are 3 sections in this large format, colorful, and informative book: The Continent and its Wildlife, The Explorers (which includes 13 special features), and The Antarctic Atlas and Chronology, a sort of appendix which includes a Who's Who of Antarctic exploration. The book is a gem. In 1988, when the first edition of this book was being compiled, this author called Reader's Digest U.S. headquarters, and spoke to someone who handles their books who swore there was no such work; Reader's Digest had never done a book on Antarctica! The New York bookshop that specializes in old Reader's Digest books also thus swore. I eventually found it at Wake Forest University Library, in Winston-Salem, NC. The important detail is: it was published in Sydney, Australia.

Reboux, Michel. *Demain l'Antarctique*. Paris: Maison Mame, 1959. 186 pp. Illus.

Reynolds, Jeremiah N. *Address on the Subject of a Surveying and Exploring Expedition to the Pacific Ocean and the South Seas*. New York: Harper, 1836. 300 pp.

Richards, R.W. *The Ross Sea Shore Party, 1914-17*. Cambridge, England: Scott Polar Research Institute, 2003. Story of the "other part" of Shackleton's BITE 1914-17.

Richardson, Sir John, and John Edward Grey, editors. *The Zoology of the Voyage of HMS* Erebus *and* Terror. London: E.W. Janson, 1844-75. 2 vols.

Richdale, L.E. *A Population Study of Penguins*. Oxford: Clarendon Press, 1957. 195 pp. Illus.

_____. *Sexual Behavior in Penguins*. Lawrence: University of Kansas Press, 1951. 316 pp. Illus.

Richter, Søren. *Great Norwegian Expeditions*. Oslo: Dreyers, 1954. 231 pp. With chapters by Thor Heyerdahl and Hjalmar Riiser-Larsen.

Riffenburgh, Beau. *Nimrod: Ernest Shackleton and the Extraordinary Story of the 1907-09 British Antarctic Expedition*. London: Bloomsbury, 2004. 352 pp. This book was released in NY by the same publishers, the same year, but as *Shackleton's Forgotten Expedition: The Voyage of the Nimrod*. Maps. B/w photos.

_____ (editor). *Encyclopedia of the Antarctic*. Rutledge: 2006. 1408 pp. 2 vols.

Riiser-Larsen, Hjalmar. *Femti År for Kongen*. Oslo: Gyldendal Norsk, 1957. 271 pp. Illus.

_____. *Mot Ukjent Land*. Oslo: Gyldendal Norsk, 1930. 166 pp.

Riley, Jonathon. *From Pole to Pole*. Chippenham, Wilts: Antony Rowe, 1989. Biography of Quintin Riley, the author's father

Ritscher, Alfred. *Deutsche Antarktische Expedition 1938-1939*. Leipzig: Kochler & Amerlang, 1943. Illus.

Rivolier, Jean. *Emperor Penguins*. London: Elek, 1956. 131 pp. Illus. Translated by Peter Wiles from the French original, *Les Manchots Empereurs de Terre Adélie* (1956).

Roberts, B.B. *Edward Wilson's Birds of the Antarctic*. London: Blandford Press, 1967.

Roberts, Brian. *Chronological List of Antarctic Expeditions*. Not a book, but rather a couple of highly respected articles in the *Polar Record* (q.v.). It was first published in the 2nd edition of a manual called *The Antarctic Pilot*, in 1948, and then again in 1959, much corrected and added to, in Vol. 9, Nos. 59 and 60, of the *Polar Record*. In No. 59 most expeditions from the earliest times to 1900 are covered, and the list covers sub–Antarctic expeditions as well. It contains a lot of British material difficult for American researchers to be allowed access to by certain British polar custodians. The typical entry is one or two lines long, perhaps with notes, and lists year, nationality, commander, and vessel. Part II continues from 1900 to IGY (1957-58). This was the work that inspired Bob Headland's monumental books.

Robertson, Robert B. *Of Whales and Men*. New York: Knopf, 1954. 299 pp. Illus.

Robinson, D., editor. *Huskies in Harness—A Love Affair in Antarctica*. Sydney: Kangaroo Press, 1995. Tom Maggs' essay, "A Love Affair in Antarctica," about man and his best friend, is quite wonderful.

Ronne, Edith M. "Jackie." *Antarctica's First Lady: Memoirs of the First American Woman to Set Foot on the Antarctic Continent and Winter-Over*. Beaumont, TX: Clifton Steamboat Museum & Three Rivers Council, 2004. 407 pp. Illus. Maps. No index. There are 18 chapters, in the form of a diary. This is a very illuminating account of a very important expedition, RARE 1947-48, but more than that, it is a compelling and well-told story of women in Antarctica in the early days. This book was given to me by the author and her daughter, and so I will treasure it.

Ronne, Finn. *Antarctic Command*. Indianapolis: Bobbs-Merrill, 1961. 272 pp. Illus.

_____. *Antarctic Conquest: The Story of the Ronne Expedition, 1946-1948*. New York: G.P. Putnam's Sons, 1949. 299 pp. Illus.

_____. *Antarctica—My Destiny: A Personal History by the Last of the Great Explorers*. New York: Hastings House, 1979. 278 pp. Illus. Photos. Maps. Index. 22 chapters. Introduction by Lowell Thomas. The foreword gives a brief history of Ronne's early life. The first 5 chapters tell of ByrdAE 1933-35. The next 2 are a history of exploration in Antarctica. The next 3 are about USAS 1939-41. There are 5 chapters on RARE 1947-48, one on polar aviation, 4 on IGY, one about Ronne's life in the 1960s, and an epilog. Interesting yarn from one of the greats.

Ross, James Clark. *A Voyage of Discovery and Research in the Southern and Antarctic Regions*. London: Murray, 1847. 2 vols. Illus.

Rothblum, Esther D., Jacqueline S. Weinstock, and Jessica S. Morris, editors. *Women in Antarctica*. New York: Haworth Press, 1998; New York: Harrington Park Press, 1998.

Rouch, Jules. *Le pole sud: histoire des voyages antarctiques*. Paris: Ernest Flammarion, 1921. 249 pp.

Rubin, Jeff. *Antarctica*. London: Lonely Planet Publications, 2005. Travel guide, with some potted history thrown in. The Lonely Planet books are always outstanding—accurate, no nonsense, and fun.

Rubin, M.J., editor. *Studies in Antarctic Meteorology*. Washington, DC: American Geophysical Union, 1966.

Rusin, N.P. *Meteorological and Radiational Regime of Antarctica*. Leningrad: Gidrometeoizdat, 1961. 355 pp. Illus. In Russian.

Russell, Clark W. *The Frozen Pirate*. New York: Phoenix, 1887. A novel, a fun read in its day, about a merchant ship in the South Shetlands (or at least very near that group) in 1801, and how they discover a frozen pirate.

Rymill, John. *Southern Lights*. London: Chatto & Windus, 1938. 296 pp. Illus.

Sanderson, Marie. *Griffith Taylor: Antarctic Scientist and Pioneer Oceanographer*. Ottawa: Carleton University Press, 1988. 147 pp. Illus. No index.

Savours, Ann, editor. *Edward Wilson's Diary of the* Discovery *Expedition*. London: Blandford Press, 1966. 416 pp.

_____. *Penguins, Past and Present, Here and There*. New Haven: Yale University Press, 1976. 150 pp. Index. Color and b/w photos. Diagrams. Short, annotated bibliography. Preface. 8 chapters.

_____. *Scott's Polar Journey and the Weather*. Oxford: Clarendon Press, 1926. 31 pp.

Simpson-Housley, Paul. *Antarctica: Exploration, Perception, and Metaphor*. New York: Routledge, 1992. 131 pp.

Siple, Paul A. *A Boy Scout with Byrd*. New York: G.P. Putnam's Sons, 1931. 165 pp.

_____. *90° South*. New York: G.P. Putnam's Sons, 1959. 384 pp. Index. Published simultaneously in Toronto, by Longmans, Green. Foreword by John Tuck. This is the story of the setting up of Pole Station in 1956-57. 30 chapters. Interesting appendices on moments in South Pole history. 8 interesting maps of the continent, showing its exploration development over the years, a graph showing the advance of human beings southward, a couple of maps of international claims, a map of the aurora zone, several photos — many in full color — and other diagrams. In this book will be found, of course, the complete list of all the men who built Pole Station.

_____. *Scout to Explorer*. New York: G.P. Putnam's Sons, 1936. 239 pp.

Skelton, Judy. *The Antarctic Journals of Reginald Skelton—"Another Little Job for the Tinker."* Cheltenham, Gloucestershire: Reardon, 2004.

Smith, Andy. His web page on Halley Bay has to be seen to be believed. It is an astonishing work of reference, and interesting, to boot. I have lifted much material from here, with Mr. Smith's permission, but have cross-checked all relevant elements (not that such a cross-checking was necessary).

Smith, G. Barnett. *The Romance of the South Pole*. London: Thomas Nelson, 1900. 235 pp.

Smith, Michael. *I Am Just Going Outside: Captain Oates—Antarctic Tragedy*. Staplehurst, Kent: Spellmount, 2002. The first biography of Oates in 30 years.

_____. *Sir James Wordie—Polar Crusader*. Edinburgh: Berlinn, 2004. The first full-length biography of Wordie.

_____. *An Unsung Hero—The Remarkable Story of Tom Crean*. London: Headline, 2000.

Society Expeditions Cruises, Inc. *Falklands, South Georgia and Antarctica*. Seattle, WA, 1988. This is not a book, in the true sense of the word, just a professional and entertaining 202 pages of information bound together very attractively by this cruise operator to form the expedition notebook. In other words, when one went on a Society Expeditions cruise to Antarctica, one got, among other things, one of these notebooks. A must for the serious student as well, it came with bibliography (quite extensive, but, unfortunately, not an integral part of the book). The chapters are easy to read, and cover scientific, historical, flora and fauna, the Antarctic Treaty, and an article on the International Whaling Commission.

Solomon, Susan. *The Coldest March—Scott's Fatal Antarctic Expedition*. New Haven, CT: Yale University Press, 2001.

Soudry du Kerven, Mme. *Dumont d'Urville: Sa vie intime pendant son troisième voyage autour du monde*. Paris: G. Téqui, 1886.

The South Polar Times (London). 1902–1904, 1911–1913; Smith Elder. For details on this journal, see the entry under that name (*South Polar Times*) in the main body of this book.

Sparks, John, and Tony Soper. *Penguins*. London: David & Charles, 1967. Published in New York, by Facts on File. Reprinted in 1987. 246 pp. Index. Bibliography. Illus. by Robert Gilmore. In the 1987 edition there is an appendix on penguins in captivity. Section 8 is Species Notes, a nice overview. There is an introduction and 8 chapters. It is easy to read, a great introduction to sphenisciformes. A classic reference work. Color and b/w photos, and diagrams.

Sparrman, Anders. *A Voyage Round the World with Captain James Cook in HMS* Resolution. London: Robert Hale, 1953. Published posthumously.

Speak, Peter. *William Speirs Bruce: Polar Explorer and Scottish Nationalist*. Edinburgh: National Museums of Scotland, 2003. Illus. The first complete biography of Bruce.

Stephenson, Jon. *Crevasse Roulette: The First Transantarctic Crossing 1957-58*. Dural, N.S.W.: Rosenberg, 2009.

Stewart, John. *Antarctica: An Encyclopedia*. Jefferson, NC: McFarland, 1990. This was the first edition. The current work is the expanded 2nd edition.

Stonehouse, Bernard. *Animals of the Antarctic: The Ecology of the Far South*. London: Peter Lowe, 1972. 171 pp.

_____. *The Last Continent*. Norfolk, England: Shuttlewood Collinson, 2000. 278 pp.

_____, editor. *The Biology of Penguins*. London: Macmillan; Baltimore: University Park, 1975. 555 pp. 25 contributors to *the* book on penguins (although not the most interesting, or exciting, by far), including the Müller-Schwartzes (q.v.), who wrote on the study of 24 penguin rookeries on the Antarctic Peninsula; J.W.H. Conroy, who wrote on penguin populations in Antarctica; G.G. Simpson, who wrote on fossil penguins; D.G. Ainley, on Adélies; one on chinstraps by 3 authors; another one on the Adélies by H. Oelke; and several other chapters. There is also an introduction by Stonehouse himself. There are bibliographies after each chapter. Diagrams. Author and subject indices. Exhaustive.

_____, editor. *Encyclopedia of Antarctica and the Southern Oceans*. Hoboken, NJ: John Wiley. 391 pp. B/w maps and photos. Actually the "encyclopedia" itself consists of a mere 297 pages of oddly arbitrary entries, and in large print at that, with plenty of white space, and errors galore. The rest is filler. Retail price $315.

Stroud, Mike. *Shadows on the Wasteland: Crossing Antarctica with Ranulph Fiennes*. London: Penguin, 1994. 223 pp. Illus.

Sullivan, Walter. *Assault on the Unknown*. New York: McGraw-Hill, 1961. 460 pp. About IGY.

_____. *Quest for a Continent*. New York: McGraw-Hill, 1957. 372 pp. Illus. This was, for many years after its publication, *the* book on Antarctica.

Triggs, Gillian D., editor. *The Antarctic Treaty Regime: Law, Environment and Resources*. Cambridge, England: Cambridge University Press, 1987. 239 pp. Illus.

Turley, Charles. *The Voyages of Captain Scott*. New York: Dodd, Mead, 1923. 432 pp. Map. Index. Introduction by J.M. Barrie. Scott's message to the public is contained in full. This book is retold from *The Voyage of the* Discovery and *Scott's Last Expedition*.

Turrill, W.B. *Joseph Dalton Hooker: Botanist, Explorer, and Administrator*. London: Thomas Nelson, 1963. 228 pp. Illus.

Tyler, David P. *The Wilkes Expedition: The First United States Exploring Expedition (1838–1842)*. Philadelphia: American Philosophical Society, 1968.

Vaeth, J. Gordon. *To the Ends of the Earth*. New York: Harper & Row, 1962. 219 pp. Illus. Maps. This is a children's book about the North and South Pole explorations of Roald Amundsen. It has a short bibliography of books written by the explorer.

Vaughan, Norman D., and Cecil B. Murphey. *With Byrd at the Bottom of the World: The South Pole Expedition of 1928–1930*. Harrisburg, PA: Stackpole Books, 1990. 208 pp.

Veel, Haakon Anker. *Roald Amundsen; Slekt og Miljø*. Halden: E. Sem, 1962.

Victor, Paul-Émile. *Man and the Conquest of the Poles*. New York: Simon & Schuster, 1963. 320 pp. Illus. Endpapers. Maps. Index. The original French version, *L'homme à la conquête des poles*, was published in 1962, by Librairie Plon, Paris. Translated into English by Scott Sullivan. "The Story of Polar Exploration from the Exploits of the Ancient Greeks to the Voyages of Today's Nuclear Submarines, by the Famous French Explorer who has spent more than 14 Years in the Arctic and Antarctic." Most of it is about the Arctic, but the material that there is on the Antarctic is fact-packed, unpadded, and good for the layperson. There are 28 chapters altogether. One is about Cook; another tells, in a couple or pages, about the sealers of the 1820s; another tells of Ross, Wilkes, and the other navigators of the period. There is a page or so about the *Belgica* and other expeditions of the late 19th century, and Scott and Charcot share a chapter (which is a little odd, in anyone's book). Another chapter is called "The First Man at the South Pole." There are a few pages on Byrd's first two expeditions, two-thirds of a chapter on Operation Highjump, and one on IGY.

Villiers, Alan J. *Captain James Cook*. New York: Scribner's, 1967. 307 pp. Illus.

_____. *Sea Dogs of Today*. New York: H. Holt, 1932. 325 pp.

_____. *Whaling in the Frozen South*. Indianapolis: Bobbs-Merrill, 1925. 302 pp. Illus. No index. The story of the 1923-24 Norwegian whaling expedition led by Carl Anton Larsen in the *Sir James Clark Ross*, as told by one of the laborers from Tasmania (*see* Villiers in the main part of this book). An erudite, observant, and astute account of a typical trip on a Norwegian factory ship, written by an author with a refreshing lack of "ego" (this is disappointing in a way, as one would like to know more about an obviously fascinating author). Fun descriptions of penguins.

Viola, Herman J., and Carolyn Margolis, editors. *Magnificent Voyagers: The U.S. Exploring Expedition 1838-1842*. Washington, DC: Smithsonian Institution Press, 1985. 303 pp. Illus. Index. 3 appendices — the landings of the expedition, a chronology, and characteristics of the vessels. It is astonishing that in a book that implies thoroughness, there is no list of personnel. This is the story of the Wilkes Expedition, of course, and only Chapter 7 is relevant to Antarctica. Chapters 9 and 10 are about Wilkes the man.

Von Bellingshausen, Fabian. *The Voyage of Captain Bellinghausen [sic] to the Antarctic Seas, 1819-21*. London: Hakluyt Society, 1945. Ed. by Frank Debenham. Illus. Map. 2 vols in one.
